**Über dieses Buch**

Dies ist ein digitales Exemplar eines Buches, das seit Generationen in den Regalen der Bibliotheken aufbewahrt wurde, bevor es von Google im Rahmen eines Projekts, mit dem die Bücher dieser Welt online verfügbar gemacht werden sollen, sorgfältig gescannt wurde.

Das Buch hat das Urheberrecht überdauert und kann nun öffentlich zugänglich gemacht werden. Ein öffentlich zugängliches Buch ist ein Buch, das niemals Urheberrechten unterlag oder bei dem die Schutzfrist des Urheberrechts abgelaufen ist. Ob ein Buch öffentlich zugänglich ist, kann von Land zu Land unterschiedlich sein. Öffentlich zugängliche Bücher sind unser Tor zur Vergangenheit und stellen ein geschichtliches, kulturelles und wissenschaftliches Vermögen dar, das häufig nur schwierig zu entdecken ist.

Gebrauchsspuren, Anmerkungen und andere Randbemerkungen, die im Originalband enthalten sind, finden sich auch in dieser Datei – eine Erinnerung an die lange Reise, die das Buch vom Verleger zu einer Bibliothek und weiter zu Ihnen hinter sich gebracht hat.

**Nutzungsrichtlinien**

Google ist stolz, mit Bibliotheken in partnerschaftlicher Zusammenarbeit öffentlich zugängliches Material zu digitalisieren und einer breiten Masse zugänglich zu machen. Öffentlich zugängliche Bücher gehören der Öffentlichkeit, und wir sind nur ihre Hüter. Nichtsdestotrotz ist diese Arbeit kostspielig. Um diese Ressource weiterhin zur Verfügung stellen zu können, haben wir Schritte unternommen, um den Missbrauch durch kommerzielle Parteien zu verhindern. Dazu gehören technische Einschränkungen für automatisierte Abfragen.

Wir bitten Sie um Einhaltung folgender Richtlinien:

+ *Nutzung der Dateien zu nichtkommerziellen Zwecken* Wir haben Google Buchsuche für Endanwender konzipiert und möchten, dass Sie diese Dateien nur für persönliche, nichtkommerzielle Zwecke verwenden.

+ *Keine automatisierten Abfragen* Senden Sie keine automatisierten Abfragen irgendwelcher Art an das Google-System. Wenn Sie Recherchen über maschinelle Übersetzung, optische Zeichenerkennung oder andere Bereiche durchführen, in denen der Zugang zu Text in großen Mengen nützlich ist, wenden Sie sich bitte an uns. Wir fördern die Nutzung des öffentlich zugänglichen Materials für diese Zwecke und können Ihnen unter Umständen helfen.

+ *Beibehaltung von Google-Markenelementen* Das "Wasserzeichen" von Google, das Sie in jeder Datei finden, ist wichtig zur Information über dieses Projekt und hilft den Anwendern weiteres Material über Google Buchsuche zu finden. Bitte entfernen Sie das Wasserzeichen nicht.

+ *Bewegen Sie sich innerhalb der Legalität* Unabhängig von Ihrem Verwendungszweck müssen Sie sich Ihrer Verantwortung bewusst sein, sicherzustellen, dass Ihre Nutzung legal ist. Gehen Sie nicht davon aus, dass ein Buch, das nach unserem Dafürhalten für Nutzer in den USA öffentlich zugänglich ist, auch für Nutzer in anderen Ländern öffentlich zugänglich ist. Ob ein Buch noch dem Urheberrecht unterliegt, ist von Land zu Land verschieden. Wir können keine Beratung leisten, ob eine bestimmte Nutzung eines bestimmten Buches gesetzlich zulässig ist. Gehen Sie nicht davon aus, dass das Erscheinen eines Buchs in Google Buchsuche bedeutet, dass es in jeder Form und überall auf der Welt verwendet werden kann. Eine Urheberrechtsverletzung kann schwerwiegende Folgen haben.

**Über Google Buchsuche**

Das Ziel von Google besteht darin, die weltweiten Informationen zu organisieren und allgemein nutzbar und zugänglich zu machen. Google Buchsuche hilft Lesern dabei, die Bücher dieser Welt zu entdecken, und unterstützt Autoren und Verleger dabei, neue Zielgruppen zu erreichen. Den gesamten Buchtext können Sie im Internet unter `http://books.google.com` durchsuchen.

This is a reproduction of a library book that was digitized by Google as part of an ongoing effort to preserve the information in books and make it universally accessible.

# The Road Traffic Act.

THE Minister of Transport has been exceptionally busy since the Road Traffic Act became law, not only in consultation with the officials of the Ministry, but in holding Conferences with important organisations connected with road transport and motoring, with motor manufacturers, insurance companies, and with the Trade Unions whose members are employed on road transport, as well as other bodies whose interests may be involved. A good deal of headway has been made and just recently Mr. Herbert Morrison, Minister of Transport, invited members of the Press to meet him to hear what had been done. Unfortunately, in our opinion, too much is left to the Minister of Transport and his powers under the Act are so great that within the limits prescribed by the Act he has full power to make regulations which may inflict great hardship on the road transport industry unless great care is exercised and consideration given to those associations and organisations which represent the various branches of road transport. The Minister of Transport stated that owing to the great amount of preliminary work it had been found necessary to postpone the operation of the first part of the Act to December 1st instead of November 1st, the date originally intended. For instance the order which deals with the construction and use of motor vehicles generally, which has been issued by the Minister of Transport, will take the place of forty existing regulations and orders and it is obvious that the views of all interested parties have to be obtained and considered before such an order can be issued. It is stated that the discussions with the insurance companies, on insurance against third party risks, have made good progress and it is expected that Part 2 of the Act will be brought into operation at the beginning of next year. This also applies to Part 3, which amends the existing highway law and includes the new highway code which is now being drawn up by the experts associated with the Minister of Transport. This highway code has to be approved by resolution of both Houses of Parliament and the clauses will not be compulsory, although they will have great weight and every user of the roads will undoubtedly find it to his advantage to be fully conversant with them and to conform to them as far as is practicable. Mr, Morrison does not expect Part 4, which deals with the licensing of public service vehicles, to come into operation before April 1st, 1931, although it is hoped that the Traffic Commissioners will have been appointed by the end of November. Part 5, which gives Municipalities power to run motor omnibus services without applying specifically to Parliament, is also expected to come into force on the same date.

At the meeting with representatives of the Press certain statements were made and have been variously reported in different press organs. For instance it has been stated in more than one newspaper that it will be compulsory on all heavy motor vehicles, both for passengers and goods transport, to have pneumatic tyres. This, we understand, is not correct so far as goods vehicles are concerned, although as in the past, every inducement will be made to owners of heavy goods vehicles to fit pneumatic tyres in place of solid rubber tyres. It will be remembered that similar action was taken with regard to steel tyres and to-day these are to all intents and purposes abolished from the roads. There is no doubt that increasing pressure will be exerted in favour of pneumatic tyres but this we understand is as far as any order issued by the Minister of Transport is likely to go. The effect and full meaning of Clause 19 is still a source of anxious enquiry and in this issue we give a further explanation of what is likely to be the effect, following a letter from one of our readers which appears in our correspondence columns. That the clause will have a very serious effect upon all long distance road traffic is quite certain and attempts to get round the hours for which drivers may be employed are not likely to be successful. It is one of those unfortunate

Digitized by Google

cases where the innocent may suffer for the guilty few and the result of some employers working their drivers for long hours without adequate rest, is that the entire industry is penalised by having drastic restrictions made which cannot fail to have the most serious effect on the organisation of its business. There is one thing certain, and that is that our readers who are engaged in road transport for their livelihood will find it necessary to reorganise their business in many directions and they will need to watch with especial care the regulations which are shortly to be issued by the Minister of Transport.

# Comment on Current Topics.

## The Tragedy of the Airship.

As we write these words the funeral procession of the heroes of the ill-fated R.101 is passing through London on its way to Cardington for the interment of the bodies of those who were the victims of this awful tragedy. We add our tribute of homage to those which have been paid by the whole world to these gallant men who have laid down their lives for the advancement of air transport and whose loss we have been mourning during this past week, since the terrible news first broke upon the world. The collapse of the R.101 is a three-fold tragedy, the greatest being the loss of human life, including men who were technical experts in airship construction, perhaps holding between them an unrivalled knowledge of this branch of transport. It is a tragedy in itself that this able group of men should all have perished after the years of experimenting and gaining knowledge which had placed them in the front rank of aeronautical engineers. The second tragedy is the loss of the magnificent airship itself, representing an enormous sum of money and five years of intensive labour and experimental work. The third tragedy is that signified by the title of this note for it is indeed the tragedy of the airship. While we have nothing to say about the cause of the disaster at this time, we cannot help voicing our own views that the result must be to call a halt to airship construction, until the whole subject of lighter than air vessels has been exhaustively considered. There has always been a strong and educated body of opponents of the airship who have made their views known persistently. Those of us who, although not experts, have had the opportunity of going over and carefully inspecting both our great airships, R.100 and R.101, have realised how flimsy to the layman has of necessity been the structure and materials of which these gigantic vessels are composed. The result must be that except under ideal conditions the airship must be at the mercy of the elements and any hidden weakness in the framework must inevitably lead to disaster. We trust that after the full investigation which is to be made into the cause of the disaster the whole subject of lighter than air vessels as opposed to heavier than air vessels will be thoroughly explored before any fresh expenditure is made, or new work undertaken.

## Co-ordination of London Passenger Transport.

In this issue we give particulars of the scheme for the co-ordination of road passenger transport announced by the Minister of Transport, who has been holding many Conferences with representatives of the various bodies concerned in the passenger transport of London. The scheme which has been outlined follows the financial investigation made for several months by Sir William McLintock, the well-known chartered accountant, who was appointed by the Government for this purpose and it also follows the rejection of the Bill which had been all but passed in the last Government for dealing with this tremendous subject. The first thing which strikes us is the fact that the authority which it is proposed shall control all London passenger transport is not to be a municipal body but a Committee of business experts, in this respect approximating very closely to the plan adopted in the Bills which were thrown out by the Labour Government.

## The Institute of Transport—New Session.

On Monday, the 13th inst., Sir Arthur Stanley, the new President of the Institute of Transport delivered his Presidential Address at the opening meeting of the new session. The Address, an abstract of which appears in this issue, deserves the careful attention of all our readers, because Sir Arthur Stanley, while holding a distinguished position in the transport world, is not actively associated with any one branch and has been able to look at the subject in its broadest aspect and his views may therefore be considered an impartial summing up of the situation. His review of the present position of transport, covering rail, road, canal, and air, shows how closely the different branches of transport are interwoven and how essential a close measure of co-operation is in the best interests of the industry as a whole. His statement of the railway situation does not give much scope for optimism in spite of every effort which has been made to cope with the problem of decreased traffic, and with the prospect of constantly increasing competition through air transport as a new factor in the problem the difficulties of the railway officials are likely to be still further accentuated. His summing up of the transport situation gives food for thought to those who have not already realised that the trend of events, in the shape of Government restrictions and regulations, pointed to a greater measure of unification, with the danger of nationalisation still further ahead. As we believe wholeheartedly that the less the Government interferes with commerce and industry, the better for the country, we feel very strongly that it will be a bad day for all concerned when the whole transport of this country is unified under Government control and competition is eliminated. The provisos and safeguards suggested by Sir Arthur Stanley read well on paper, but in actual practice they are likely to be very broken reeds on which to lean for support. We are afraid the day is past when it is any good to suggest that Government should leave the industry to fight its own battles and work out its own salvation, but we do suggest, in the interests of commerce and the public generally, that competition should not be eliminated and that transport, under necessary regulations, should be allowed to carry on its work and serve the community as it has done in past years.

## British Association of Shipping and Forwarding Agents.

In our August issue we gave full particulars of the registration of this Association following its incorporation and in the report of the meeting given in this issue reference is made to this new step forward giving the Association a corporate existence and enabling it to develop its activities on broader and more influential lines. We need hardly say that we wish the Association full success in its work and our object in writing this note is to urge upon every shipping and forwarding agent his duty to support the work of the national body and so make it stronger to look after the interests of this important section of transport.

## Furniture Warehousemen and Removers' Association—Autumn Conference.

We draw the special attention of every member of the removal and warehousing trade to the autumnal conference of the Association to be held on November 5th and 6th next, in London. Full particulars of the programme will be found on page 9, and it is hoped that a large gathering of members from all parts of the country will take part in the proceedings. A special obligation rests upon the London members who are the hosts of the Association on this occasion and who should make every effort to be present and to give the Conference their active support.

## Visits to the Port of London.

An innovation, which is to be heartily commended and upon which the officials of the Port of London Authority are to be congratulated, was the inauguration of a series of visits for the public, covering a clear week, to enable them to see something of the great Port in the midst of which they live, but of which they see very little during the ordinary course of their lives. Those of us who have had the opportunity from time to time of visiting the Port and going over its warehouses and seeing its shipping facilities and its great docks, know that it is a liberal education in itself and it was therefore an exceedingly good idea to give the general public an opportunity of forming their own judgment of the great Port of London upon which they are largely dependent for their food supplies. We hope that the successful results of this experiment will justify the Authority in arranging for further visits of a similar kind and that the example will be followed by others of our great ports.

## Volume Twenty-Seven.

The month of October marks the beginning of a new year for this journal and the present volume—No. 27, comes at a time when vast changes are about to take place in all forms of transport. For good or ill Government control on road transport has been growing with ever increasing strength and the burden of taxation and the pressure of restrictions and regulations has made the lot of the road transport contractor anything but a happy one. In the railway world although the Government have done their best to lighten the burden of the railway companies in more than one respect, they are still suffering under the trade depression which seems to grow ever deeper and more far-reaching. The road transport powers which were granted to them by Parliament have enabled them to develop a road policy and organisation and to effect certain much needed economies with respect to small branch lines which had been for years past a liability instead of an asset to the railway systems with which they were connected. The Minister of Transport is now busily engaged in drafting regulations and orders which will have a very serious effect on transport generally and there never was a time when there was greater need for constant vigilance and for increased service on the part of a trade paper such as the *The World's Carriers and Carrying Trades' Review*. This will be our aim and our policy during the ensuing twelve months.

# Obituary.

## Sir Sefton Brancker.

Air Vice-Marshal Sir Sefton Brancker, K.C.B., A.F.C., whose tragic death in the ill-fated R101 we deplore, in company with a host of those who were privileged to know him, was an outstanding personality in that branch of transport with which he had been so long associated. During his term of office as President of the Institute of Transport, in 1928/29, by his virile personality he brought Civil Air Transport to the front as a branch of transport worthy to rank with the older forms and no section of his friends will mourn his loss more sincerely and feel his absence more acutely than those with whom he came into such close contact in the Institute of Transport.

THE LATE SIR SEFTON BRANCKER.

Sir Sefton Brancker was born in 1877 and had, therefore, only reached the age of 53, but during this period he had lived a life full of activity and enterprise. Educated at Bedford and Woolwich, he obtained a Commission in the Royal Artillery in 1896 and served throughout the South African War, where he was wounded and mentioned in Dispatches. He served in India from 1903-1912 and while there he made his first flight as a military observer in 1910. From that time onwards his interest in everything to do with air transport grew with the passing years and his great energy and enthusiasm had a marked effect in the development of civil aviation, with which in his later years he was so closely connected, as the Director of Civil Aviation in the Air Ministry.

During the Great War he held various important positions, beginning as Deputy Director of Military Aeronautics, then Director of Air Organisation, and finally Controller-General of Equipment and Master-General of Personnel on the Air Council.

After the war, in order to develop civil aviation, he resigned his military position in 1919 to join the Aircraft Manufacturing Co., which had been formed by Mr. G. Holt Thomas. His services to the Air Ministry could not long be spared, however, and in 1922 Sir Sefton was appointed Director of Civil Aviation and threw himself whole-heartedly into the work of establishing and developing this section of the Air Force. In this important position he travelled extensively, wherever possible by air, and in 1924 he flew to India to survey the route for the projected long-distance air service. In 1919 Sir Sefton was created K.C.B. and was appointed Air Vice-Marshal in 1924, finally being elected to the highest honorary position in the transport world, as President of the Institute of Transport in 1928.

## W. N. Wright.

In past years Mr. William Newton Wright was a familiar figure at the meetings of the Furniture Warehousemen and Removers' Association and it is with regret that we record his death, at the age of 75, after an illness of several months' duration. He was the senior partner in the firm of Wright and Pankhurst, Transport & Removal Contractors, of Rye, an old-established firm founded some 80 years ago by his father. When the railway was made to Rye he was appointed its agent and built up an extensive business as a carrier and removal contractor. Mr. W. N. Wright was joined by his cousin, Mr. T. G. Pankhurst, about 30 years ago, and the business was then still further extended and additional accommodation was taken. Mr. Wright was for several years a Director of the Rye Gas Company and he also served on the Rye Harbour Commission. He was for a short time a member of the Old Rye Board of Guardians.

# Personal Notes.

**A "Karrier" Appointment.**—Karrier Motors, Ltd., Huddersfield, have appointed Mr. G. Martin Gamble, A.M.I.Mech.E., as Sales Manager. He was formerly associated with the Company from 1910 to 1919, acting as their first Midland Agent in Birmingham and later joining them in Huddersfield on the sales staff, subsequently being appointed Sales and Advertising Manager. Owing to the rapid development of the business the transfer of the Works from Colne Road to the present site took place during this period, and he inaugurated the Sales Department of which he is again in charge. Mr. Martin Gamble has had long and varied experience. From 1905 to 1910 he was associated with T. C. Aveling & Co., Ltd., of Birmingham, and from 1919 to 1930 he was with Harris & Hasell, Ltd., of Bristol and London, and was for seven years London Director and Manager.

MR. G. MARTIN GAMBLE.

**Mr. George R. Stratton's New Appointment.**—The many friends of Mr. George R. Stratton, M.Inst.T., who since September, 1926, has been Municipal Sales Representative for Karrier Motors, Limited, Karrier Works, Huddersfield, will be interested to learn that he has just been appointed Manager of the firm's Municipal Department. Whereas, in the past, Mr. Stratton has concentrated on the passenger side of the industry, he will, in future, deal also with Municipal goods vehicles which range, in the case of Karrier Motors, Limited, comprises Road Sweepers, Street Washers, Gully Emptiers, Refuse Collectors, Tower Wagons, Breakdown Lorries and Tippers of varying types and capacities. Prior to Mr. Stratton joining the company, he was for a number of years General Manager of the Sunderland and District Transport Co., with which concern he had been connected for nineteen years, and previous to that he ably filled the position of Engineer to the St. Marylebone Borough Council.

MR. G. R. GREENBERGH.

**G. R. Greenbergh. New Diesel Lorry.**—Mr. G. R. Greenbergh, who was for many years with the "Sentinel" Waggon Works, Ltd., of Shrewsbury, and who for the past two years has been with Kerr, Stuart & Co., Ltd., of Stoke-on-Trent, engaged in introducing the Diesel lorry, has recently taken up a position with Walker Bros. (Wigan), Ltd. A new Department has been formed under the title of Pagefield Commercial Vehicles, Leybourne House, Regent Street, Stoke-on-Trent, and a new type of lorry, to be known as the Pagefield-Gardner Diesel lorry, has now been placed on the market.

**Ministry of Transport Appointments.** — Mr. Herbert Morrison, Minister of Transport, has appointed Mr. Aubrey Clark to be his Private Secretary in place of Mr. G. F. Stedman who has been promoted, and Lord Ponsonby, Parliamentary Secretary to the Minister of Transport, has appointed Mr. S. S. Wilson to be his Private Secretary in place of Mr. Aubrey Clark.

**Thomas A. Chambers, of Dublin.**—Owing to continued ill-health, Mr. Thomas A. Chambers, who is so well known to members of the furniture warehousing and removal industry, has been compelled to retire from active business. For many years past he has held an important position with the firm of Anderson, Stanford & Ridgeway and has been the representative of the Dublin Centre at the meetings of the Furniture Warehousemen & Removers' Association, in which capacity he has always taken a great interest in trade matters and by his breezy, brusque, and yet genial manner he endeared himself to those with whom he came in contact. We learn with regret that he is in very straitened circumstances and we are glad therefore to know that the Association is raising a fund from amongst the members to assist him in his need. Mr. Victor Brown, the well known Treasurer of the Association, is taking an active interest in this matter and will be pleased to receive and acknowledge contributions which may be sent to him by those who knew and appreciated the work done by Mr. Chambers.

MR. A. E. WILDEY.

**P.L.A. Canadian Tour.**—As announced in our September issue, Mr. A. E. Wildey, Public Relations Officer, Port of London Authority, is now touring Canada in the interests of the trade of the Port of London and in pursuance of the policy of the Authority of maintaining personal contact with overseas traders, particularly those in the British Empire. Mr. Wildey will deal with the subject either by way of address, lantern lecture or cinematograph film. He will attend meetings, which have been arranged by various Canadian Boards of Trade and Chambers of Commerce in the principal cities and towns from Quebec to Vancouver as well as in Newfoundland.

**Trowbridge Tyre and Rubber Co. (1929), Ltd. Changes in Head Office Staff.**—Mr. Donald G. Cameron has been appointed Sales Manager for the Trowbridge Tyre and Rubber Co. (1929), Ltd. Prior to his joining this Company in May last, many agents and users will no doubt remember him as occupying the position of London Sales Manager of the Seiberling Company. Mr. W. A. Starley will continue to act in his capacity as Southern Regional Sales Manager. The position of Manager of the firm's Service Department has been entrusted to Mr. Thomas Holden, who for many years has acted as Assistant Sales Manager of the Company.

**Obituary.**

Mr. Joseph Walker, the managing director of the road transport firm of Rigg Brothers, of Radcliffe, where he was one of the best known business men, died recently at Blackpool. He was 54 years of age.

# The Institute of Transport.

## Presidential Address.

The first ordinary meeting of the 1930-31 Session of the Institute of Transport was held in the Lecture Theatre of the Institution of Electrical Engineers, London, on Monday, October 13th last, the Chair being taken by Sir Josiah C. Stamp, G.B.E., D.Sc., LL.D., the retiring President.

There were present, amongst others, the incoming President of the Institute, The Hon. Sir Arthur Stanley, G.B.E., C.B., M.V.O.; Past President: Mr. Roger T. Smith; Vice-President: Mr. A. L. Barber; Members of Council: Messrs. A. W. Arthurton, F. G. Bristow, J. McDonnell, Major Frank Bustard, A. L. Castleman, W. H. Gaunt, F. Handley Page and O. C. Power. Others who had intimated their intention to be present were: Past-Presidents of the Institute:—The Rt. Hon. Lord Ashfield of Southwell; Sir Lynden Macassey, K.B.E., K.C., and Sir Henry Maybury, G.B.E., K.C.M.G. Former Vice-President:—Sir Herbert Walker, K.C.B. Vice-Presidents:—Mr. R. Bell, C.B.E.; Mr. J. H. Follows, C.B.E., M.V.O., and Mr. Sidney E. Garcke. L.M. & S. Railway Company:—Sir John F. Beale, K.B.E.; Major Ralph Glyn, M.P.; Mr. A. E. Pullar, and Sir Harold Hartley, C.B.E., F.R.S. L. & N.E. Railway Company:—Mr. C. H. Newton. G.W. Railway Company:—Mr. Laurance Currie. Southern Railway:—Sir Charles L. Morgan, C.B.E., and Mr. J. W. Wild. Metropolitan Railway:—Mr. A. I. Belisha, and Mr. H. S. Chapman. Kindred Societies, etc.:—Commander F. P. Armstrong (Secretary, Royal Automobile Club); Mr. J. Beckett (Secretary, Municipal Tramways and Transport Association); Mr. W. Ashley Cummins (Assistant Secretary, Dock and Harbours Association); Mr. G. Cole Deacon (Secretary, Railway Companies Association); Mr. W. W. Grierson (President, Institution of Civil Engineers); Brig.-General Magnus Mowat, C.B.E. (Secretary, Institution of Mechanical Engineers); Mr. Loughman Pendred (President, Institution of Mechanical Engineers); Mr. Wallace B. Riche (Secretary, Roads Improvement Association); Mr. P. F. Rowell (Secretary, Institution of Electrical Engineers), and Mr. A. de Turckheim, O.B.E. (Secretary, Tramways, Light Railways and Transport Association).

THE HON. SIR ARTHUR STANLEY, G.B.E., C.B., M.V.O., PRESIDENT, INSTITUTE OF TRANSPORT.

Before proceeding to the business of the meeting, Sir Josiah Stamp, in well-chosen words, referred to the terrible disaster which had befallen the Airship R101, and expressed the great loss the Institute of Transport had sustained in the tragic death of Air Vice-Marshal Sir Sefton Brancker, a Past-President of the Institute. The audience then stood in silence in memory of the gallant men who had fallen.

The proceedings opened with the passing of the usual votes of thanks for services rendered during 1929-30, and the Chairman then presented the Premium Awards in respect of the past Session, which were as follows:—

**Railway (Operating) Gold Medal.** Donor: The Railway Companies Association. To Mr. Ashton Davies, O.B.E., for his paper on "The co-ordination of transport."

**Railway (Engineering) Gold Medal.** Donor: The Railway Companies Association. To Sir Henry Fowler, K.B.E., for his paper on "Locomotive repairs."

**Road Transport (General) Gold Medal.** Donor: The Commercial Motor Users' Association. To Professor R. G. H. Clements for his paper on "Road engineering in relation to road transport."

**Aerial Transport Gold Medals.** Donors: Sir Henry White-Smith, C.B.E., and the Bristol Aeroplane Co., Ltd. To Herr Martin Wronsky for his paper on "German commercial air transport." To Mr. F. Handley Page, C.B.E., for his paper on "The achievements and possibilities of air transport."

**Water Transport Gold Medal.** Donor: The Dock and Harbour Authorities Association. To Mr. W. E. Tapper for his paper on "Causes of, and precautions against, congestion at ports, with special reference to the best methods of preventing congestion of traffic at ports."

**Institute Graduate Silver Medal.** To Mr. D. A. Lamb for his paper on "Vocational tests by the German Railway Company.

**"Modern Transport" Premium.** Donor: "Modern Transport." To Mr. F. L. Hick (Graduate) for his paper on "Excursion and special passenger traffic."

Sir Josiah C. Stamp then inducted his successor, The Hon. Sir Arthur Stanley, G.B.E., C.B., M.V.O., placing on his shoulders the Presidential Chain of Office welcoming him to the highest position in the gift of the Institute.

The new President then invited the acceptance by Sir Josiah Stamp of a memento of his year of office as President of the Institute.

### Presidential Address.

**THE HON. SIR ARTHUR STANLEY, G.B.E., C.B., M.V.O.,** then arose amid applause to deliver his Presidential address.

He prefaced his address by asking the members to accept his few remarks not as that dignified and rather alarming thing called a Presidential address, but only as some thoughts and suggestions that had occurred to him in the course of his somewhat long association with tramways and various forms of motor transport. He had no real claim to represent either the tramway interests or those who were engaged in various branches of transport by motor, both public and private, except from the fact that he had, for many years, had the honour of being President of the Tramways, Light Railways and Transport Association, and Chairman of the Royal Automobile Club.

Of all the developments which had taken place in the post-war period, perhaps those associated with transport were the most interesting. The war had much to do with the phenomenal progress of road and air transport, but whereas developments of the road vehicle were in accord with commercial requirements, those associated with the aeroplane were calculated to enhance its value as a fighting unit rather than as means of improved communication. The last twelve years had witnessed the perfection of the former and the gradual improvement of the latter as an instrument of commercial transport. As a consequence of these improvements, the railways had lost their virtual monopoly in transport.

### The Position of the Railways.

The Railways Act of 1921 was doubtless a well-intentioned measure, but in the light of present-day facts its shortcomings were becoming manifest. The merging of the weak with the strong had artificially stimulated smaller railway systems and they were a burden on their more efficient and important partners, and further schemes of co-ordination and fusion would undoubtedly lead to their disappearance. The Act also provided for the regulation of charges with a view to the acquisition of a standard revenue, but statutory enactments, worthy though they be, practically prevented the railways from being administered in the same manner as ordinary commercial undertakings. The railways had failed to secure their standard revenue and there could be little hope of a surplus wherewith to secure a reduction in railway rates so long as large volumes of traffic continued to be diverted to road transport with the additional threatened competition by air. Unfortunately the authors of the Act appeared to have ignored the fact that rates could not economically be fixed at a figure beyond what the traffic would bear.

Digitized by Google

The railway companies had now secured the right of carrying goods and passengers by road irrespective of whether the traffic was to use the rail, and the agreements which they had since entered into with passenger-carrying undertakings had confirmed their oft-expressed desire to secure co-ordination rather than to indulge in extensive competition. On the goods side the railways had not yet made extended use of their road-carrying powers and had taken the wiser course of improving their freight services, and in so far as road transport was concerned, it was difficult to see in what manner they could do more. On the other hand, there must be many branch lines which could not be remunerative and which should forthwith be closed, and Parliament should assist the railways by passing an Act enabling them to close branch lines where, in the opinion of the Railway Rates Tribunal or the Minister of Transport, such action appeared justified.

In general it would seem that the railways must rely increasingly on efficient organisation and effective salesmanship. It was possible that the future would witness a much greater exploitation of the road vehicle in the pursuit of economies in railway goods traffic working. An extension of the container system in conjunction with fast goods trains might in time reduce the volume of long-distance traffic which now went by road. It seemed imperative that the rail and road interests should come to some businesslike agreement. Investigation might well indicate the possibility of increased profits from the carriage, in containers, of otherwise road-borne goods at a cost well below the price charged for haulage by road. The business could still remain in the hands of the road transport undertaking, and though the traffic would be transported by rail at a reduced rate the railway company would still gain from the carriage of freight that would otherwise use the highway. Co-operation between the carrying interests, and the adjustment of charges to meet special circumstances, would together in the long run, enable traffic to find its best and most economical channel, and at the same time, to yield fair profit to the transport agencies. Transport was a commodity which the railways must sell in the face of growing competition. Were the railways satisfied that they had the right type of man to exploit their commodity, and had they taken steps to educate him in the art of salesmanship?

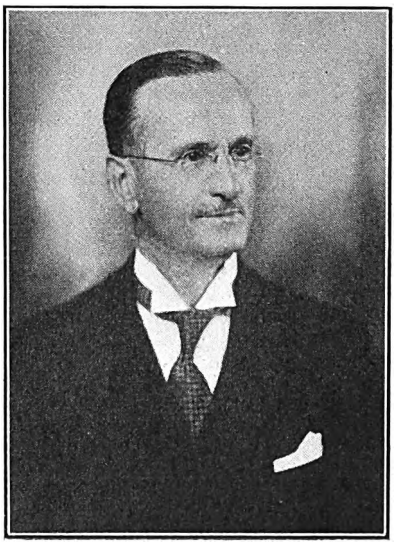
The railways must be relied upon as the main arteries for the bulk of the passenger and merchandise traffic of the Kingdom. Should long-distance or any other road services be proved to be more economical than railway services, the railways must still be maintained.

### ROAD TRANSPORT.

Road transport would certainly increase and the fact that its development would inevitably lead to increased taxation, demanded that it should be subject to proper control and supervision.

He welcomed the provisions of the Road Traffic Act. It remained to be seen to what extent the area traffic commissioners, to be appointed under the Act, would be successful in securing the inter-working of railway traffic with the bus services on the outer rim of the large cities, without which substantial relief to street congestion would not be secured. The successful working of the Act would depend upon the impartiality, goodwill and discretion exercised by the traffic commissioners who would possess almost unlimited powers over the conduct of the passenger road-carrying industry. It was to be hoped that whilst encouraging the extension of the services of the large and well-regulated undertaking, they would not ignore the claims of the small operator who, in many instances, had done pioneer work and whose interests should consequently be safeguarded.

Apart from the question of hours of work and speed of vehicles, the Act was not applicable to those engaged in the haulage of goods by road, but it would seem that many of those so engaged would welcome such an extension of State regulation with a view to ensuring the mechanical fitness of the vehicle and the *bona fide* character of the operator. On the other hand many others representative of old-established undertakings, deprecated an appeal for State interference and preferred to carry on their businesses in their own way and, if necessary or advisable, make their own arrangements for co-operation with the railways, as had those associated with the passenger-carrying side of the industry. In other words, they would prefer to remain independent and suffer present disabilities than face what they regarded as the irksome restrictions of State regulations. And who should blame them? When it was remembered that it was within the power of any commercial or industrial firm to introduce its own fleet of vehicles, the moment it seemed desirable so to do, it was possible to conceive the harmful effect upon the professional road haulier of any disturbance by legislation with his normal methods of business. Moreover, State regulation was likely to depreciate rather than improve his position in any negotiations he might undertake with the railways.



MR. A. WINTER GRAY, SECRETARY, INSTITUTE OF TRANSPORT, TO WHOM THE RETIRING PRESIDENT PAID A HIGH TRIBUTE OF PRAISE.

### INLAND WATERWAYS.

Turning to the question of inland waterways, the President said it was probably true to say that little or nothing had been done to improve the waterways since their construction well over a century ago. A few of the canal enterprises, however, had been maintained in a state of efficiency and were still able to hold their own with the railways, whilst a notable step was taken some eighteen months ago in the amalgamation of certain waterways in the Grand Union Canal system.

Mr. Neville Chamberlain's Committee, in a report published in 1921, expressed the opinion that some of the more important canals, if given a fair chance and put under unified and competent management, could be capable of playing a very important part in the transport system of the country and recommended the formation of seven groups in which canal control and operation would be taken over by public trusts.

### UNIFICATION OF THE RAILWAYS?

In his final remarks Sir Arthur Stanley referred again to the railways. Despite the provisions of the Railways Act, charges could not be raised above a level dictated by the influence of competing methods of transport in those traffics susceptible to competition, and by the ability to pay in the case of those traffics which alone could be carried by rail. That fact, coupled with the need for maintaining wages and conditions of service at a reasonable scale, might lead ultimately not only to the unification of the railways, but to the organisation of all branches of transport, both of goods and passengers, under one central administration. In some quarters complete unification was regarded as inevitable. In such event the total abolition of competition would need a counterbalance in the shape of adequate safeguards in the public interest. If wisely directed on commercial lines, unification would be productive of substantial economies in traffic operation. The step would, therefore, be of considerable advantage from the national point of view, always provided that the revised organisation was kept free from political influences. Commercial principles must prevail. The transport executive must be a business executive with its finances unaffected by those of the State, and its property remaining in the hands of the shareholders. In such manner would it be possible to build up a sound and profitable undertaking operating in all interests of its proprietors and the public, co-ordinated services by rail, road and air. It might be that the future of transport lay largely in the air. If so, the central authority must have the necessary powers to secure developments in that element.

Mr. Roger T. Smith, a Past-President of the Institute, proposed a hearty vote of thanks to Sir Josiah Stamp for his services during his year of office as President, and referred in eloquent terms to the prestige which he had conferred on the Institute in that office; this was received with acclamation. Mr. Smith then proposed a vote of thanks to Sir Arthur Stanley, the new President, for his inaugural address and this was received in the same enthusiastic manner. Sir Josiah Stamp and Sir Arthur Stanley both briefly responded.

At the close of the meeting the President held a reception and light refreshments were served.

# Co-ordination of London Passenger Transport.

The Minister of Transport recently met in successive conferences representatives of the various bodies concerned with the provision of passenger transport in and around London. He was accompanied by the Parliamentary Secretary to the Ministry and the bodies represented were the following:— the local authorities owning tramways in the London Traffic Area, namely, the London County Council, Middlesex and Hertfordshire County Councils, the County Boroughs of Croydon, East Ham and West Ham and the Barking, Bexley, Dartford, Erith, Ilford, Leyton and Walthamstow Councils, the Underground Group of Railway, Tramway and Omnibus Companies, the Metropolitan Railway, The Association of London Omnibus Proprietors, Messrs. Thomas Tilling, Messrs. Tillings and British Automobile Traction Company and the four Amalgamated Railway Companies.

Mr. Morrison thanked the Authorities and the Companies for the assistance which in general they had given to Sir William McLintock in the inquiries which he had been conducting on behalf of the Government, and explained that while these inquiries were not yet in all respects complete, the Government proposed to proceed at once with the object of introducing legislation, and to open discussions at a very early date. In view of the admitted urgency of the matter it was desirable that there should be no avoidable delay.

He said that he had always felt that there was an urgent need for a wide measure of co-ordination of the undertakings engaged in passenger transport in the London area. Recognition of this need had not been confined to any one political party or to any one group of interests concerned in London Transport. It had been recommended in varying forms by successive Commissions and Committees who have considered the question of Transport in London, culminating in the Report of the London and Home Counties Traffic Committee issued in 1927 and widely known as the "Blue Report." Where there had been some differences of opinion was as to the measures to be adopted to bring about the desired end. In other words there had been a general unity of opinoin as to the end to be achieved, but considerable diversity as to the means.

When he came into Office this subject formed one of his first pre-occupations. Mr. Morrison recalled the announcement which he made in Parliament on the 2nd December, 1929. In that statement the Government had outlined its policy as follows:—

(i) That uneconomic and unnecessary competition must be eliminated.

(ii) That the objects in view could best be achieved by securing unification under public control of passenger transport by omnibus, tramway or local railway in the London Traffic Area. A single and simple form of public ownership should, therefore, be substituted for the complicated net work of separate private and municipal interests now existing.

(iii) The principle of public ownership should be combined with the principle of commercial management, thus ensuring the advantages of vigorous business enterprise.

The Government believed that by this means London Passenger Transport as a whole could be made a sound business proposition, ensuring a safe and reasonable return to the capital invested in it, by the elimination of waste and a steady and progressive development of the facilities required in the public interest.

The Government accordingly proposed to create a new statutory public body, which would embrace:—

the railway, omnibus and tramway undertakings controlled by the Underground Electric Railway Company of London Limited;

the Metropolitan Railway;

the Tramway undertakings owned by Local Authorities within the London Area: and

other omnibus undertakings operating within the London Area.

This new body would be charged with the future management, operation and maintenance of one consolidated undertaking, and with the duty of making provision for further facilities as and when required.

It was not to be assumed that the above list of undertakings was necessarily exhaustive. There might be other undertakings allied to those mentioned which for various reasons it might be deemed necessary or expedient to acquire.

Dealing with the position of the Suburban lines of the Amalgamated Railway Companies, the Minister said that in view of the fact that they are inextricably bound up with the main lines there would be great difficulties in bringing these lines into any scheme of unified ownership, and that the Government did not contemplate that the existing ownerships should in this case be disturbed. Arrangements should, however, be made which while having proper regard to the public interest would be fair to the Amalgamated Companies and would enable the Suburban lines, which play an important part in carrying London's passengers, to discharge their proper function in a fully correlated scheme of transport.

In proposing the transfer of these public transport services to public ownership under a body of the nature mentioned the Government was not taking a leap in the dark. Already Parliament had recognised the necessity in many cases of entrusting essential national or local services to public bodies of this nature, such as the Port of London Authority, Metropolitan Water Board and the Central Electricity Board.

The Minister proceeded to deal with certain leading aspects of his proposals.

He said that he had given very careful consideration to the nature of the Traffic Authority. He started with a bias in favour of a joint municipal body representative of the Local Authorities in the area, but in the end he came to the conclusion that for this particular task it would not be the appropriate type of Authority. He had himself served on a number of indirectly elected *ad hoc* bodies functioning in Greater London. They had done very good work, but he did not regard them as a fully satisfactory instrument of local administration, and much less could he regard such a body as being suitable for conducting a huge business enterprise requiring day-to-day decisions on matters such as would confront the proposed combination of transport undertakings. It would be difficult for leading members of the Local Authorities to find time to serve on a new joint municipal body if it were established, and its numbers would inevitably make it unwieldy. Further, his own experience of joint authorities was that there was too much "joint" and not enough "authority" about them. If there had been a directly elected municipal body covering a wide area already in existence, the situation might have been different.

The Government of course recognised that the constitution of the board was a matter of the greatest importance. While they had not come to final conclusions as to its precise composition they aimed at combining business-like management with public ownership by the creation of a small Board consisting of persons of proved business capacity. Every effort would be made to secure the services of a Chairman who would combine business acumen and vigour with wide knowledge and experience, and who could be trusted to ensure that the appointment of officers of the Board would be governed by considerations of efficiency.

The Government intended that the Board would be such as would command the confidence both of the investing public and of the users of transport in London, and that proper contact should be maintained between the Board and public opinion. Such a Board should function as freely as possible from political interference so far as questions of management were concerned.

Provision would be made in the Bill for securing fair and proper treatment for officers and employees of the undertakings to be taken over. He was anxious to utilise the experience and abilities which existed in the present undertakings.

Mr. Morrison said that it would be undesirable in advance of the discussions, to lay down definitely the sphere of operation of the Traffic Board. It was, however, fairly obvious that all passenger services by road which served London and its immediate surroundings must be concentrated in the hands of the Board. At the same time regard should be had to the provision of through facilities where public convenience so demanded, and it might, therefore, be undesirable to define too rigidly the area over which the Board might operate, or to limit their activities entirely to the area, whatever it might be, for which they would be responsible. Long distance road services between London and provincial centres would require to be considered in relation to the functions and powers of the new Board only in so far as they might compete with the services to be provided by the Board by picking up and setting down passengers within a prescribed distance of London.

The new Authority would have no interest in extending particular forms of transport. It would have no tramway, tube or omnibus bias. Its transport policy would be determined by technical fact and the pubilc interest. It would be able, as no present undertaking could, to look at London passenger transport as a whole. Any attempt to solve the problem on the basis of a private monopoly would involve setting up an elaborate superstruction of official regulation, check and control.

The Minister invited the various parties to appoint representatives to continue discussions in detail.

# Road Traffic Act.

## Some Further Notes on Clause 19.

By R. P. Bailey.

Secretary, National Road Transport Employers' Federation; London Cartage and Haulage Contractors' Association.

It is apparent from the many questions which have arisen that there is considerable difficulty as to how Clause 19 of the Act can be operated.

It is important to consider that the primary object of the clause is to protect the public against the risks which arise in cases where the drivers of motor vehicles are suffering from excessive fatigue, and with this object in view it sets out *inter alia* that :—

(a) A man shall not drive a vehicle for more than a maximum of eleven hours in any period of twenty-four hours commencing two hours after midnight;

(b) A driver shall have ten consecutive hours for rest in any period of twenty-four hours calculated from the commencement of any driving period;

(c) Any time spent by a driver on other work in connection with a vehicle or load carried thereby, shall be reckoned as time spent in driving :

These are the principal factors. "A" and "B" are fairly explicit but attention might be drawn to a distinction as between the twenty-four hour periods. "A" definitely prescribes it as between 2 a.m. and 2 a.m. whilst in "B" it is calculated from the commencement of the driving period.

It is upon the construction of "C" that doubts appear to arise and it is admitted that there is some ambiguity as to the interpretation to be placed on the words "other work in connection with the vehicle," and these doubts can now only be determined by a Court of Law. The main question arising is as to whether a relief driver travelling on a vehicle and doing no work of any kind until he actually takes over is doing work in connection with a vehicle or its load. I have sought advice upon this point and I have framed my replies to the following questions in accordance therewith.

It should be clearly understood that although the Act limits the driving time to eleven hours in a twenty-four hour period that actual period of employment can be spread over 14 hours.

The following questions cover all the points which have been addressed :—

(1) What actually can a driver do in his rest hours and can he be travelling to a distant point to relieve a driver who would then have completed his eleven hours driving?

There is only one answer to this question. The ten hour rest period is entirely at the disposal of the driver and the employer can make no claim upon the driver's services during that period.

(2) Would it be in order under the Act to send a driver with an urgent load from say South Wales to Lancashire and to send a relief driver by train to take over say at Manchester?

The point of the question is, would the time spent by the relief driver in travelling by train be deemed to be "driving time"? Yes! It would be regarded as time spent in connection with the vehicle and if the measure of such time was say four hours up to the time of taking over the vehicle that relief driver must not spend more than seven hours in driving and this, of course, must be broken by half-an-hour's rest. This answer applies whether the travelling is done by train, char-a-banc or any other method.

(3) Would it be in order for a relief driver to actually travel on the vehicle which it is intended he shall take over at the end of the two 5½ hour shifts if he has express written instructions that he must not under any circumstances do any work on the vehicle until he relieves the other driver?

No! The relief driver having received "written instructions" emphasises the fact of his "employment," and those instructions being to the effect that he is to take over the vehicle at a specified time demonstrates that his employment is in connection with the vehicle.

If a relief driver is sent with the vehicle his time counts from the time he joins the vehicle and as this would correspond with the time of the first driver both their driving periods would expire at the same time even although the relief driver may not have touched the wheel during that period.

(4) Would conditions outlined in the previous questions be brought within the working hours as laid down in the Act if the driver travelling as an intended relief was paid a travelling allowance even although he would be resting and not performing any work?

Yes! The position would in no way be altered by the substitution of the term "travelling allowance" for "pay." The man would be deemed to be in employment.

(5) Do these conditions apply to the Owner Driver?

Yes! Absolutely.

# British Industries Fair.

## Birmingham, February 16th to 27th, 1931.

More than a hundred new exhibitors in the forthcoming Birmingham Section of the British Industries Fair are taxing to the utmost the resources of the eleven-acre permanent building on the City boundary.

Closer grouping of exhibits, on the system introduced two years ago, and now almost completed, under a gradual process, in order to avoid disturbance to business at the Fair, has had many advantages in the economic use of space, as well as in bringing allied or inter-dependent industries to nearer relationship.

The schedule of British goods displayed exclusively in Birmingham comprises: Engineering, Electricity, Gas, Power Plant, Machinery, Heating and Cooking, Hardware, Ironmongery, Brassfoundry, Metals, Building, Public Works, Roads, Mining, Transport and allied industries.

The Heavy Section of the Fair, since its inception, has been accepted as a barometer of rise and progress in the staple industries of the country. Next February's display in Birmingham will, in like manner, register the remarkable advances recently made in the electrical industries. This Section will be of far larger dimensions than ever before, close upon a hundred important firms taking part.

# Road Vehicles—Great Britain.

A return has been issued by the Ministry of Transport giving particulars of the number of motor vehicles registered for the first time under the Roads Act, 1920, during the month of July, 1930. Copies (Price 2/6d.) can be obtained from His Majesty's Stationery Office, Adastral House, Kingsway, W.C.2.

The number of new motor vehicles registered was 29,018 compared with 34,332 in July, 1929, the figures for the several classes being :—

| | July 1930 | July 1929 |
|---|---|---|
| Cars taxed on horse power | 13,448 | 16,271 |
| Cycles | 9,429 | 10,895 |
| Hackney Vehicles | 1,111 | 1,454 |
| Goods Vehicles | 4,555 | 5,271 |
| Other Vehicles | 475 | 441 |
| | 29,018 | 34,332 |

The return shows the number of each class of vehicle registered for the first time by each licensing and registration authority analysed in detail according to various taxation scales, e.g., motor cars under headings of horse power, goods vehicles under headings of unladen weight, hackney vehicles under headings of seating capacity, etc.

# Road Traffic Act.

## Some Suggestions and Criticisms.

(By a Special Correspondent.)

Much has been written concerning the new Act but few constructive criticisms have appeared in print. The first difficulty will be for the motorist to learn the standard desired by the authorities. The impending issue of the Highway Code will be a great assistance and it will also do much to suppress the vexatious local standards, and idiosyncrasies, from which motorists have suffered in the past.

Immediate regulations are required for traffic in the open country, on the question of "right of way" at cross roads, the main road traffic must be given priority unless all traffic is to be slowed up unnecessarily, the onus, in case of an accident, should rest on the car entering the main road.

To stop those drivers who habitually hold the crown of road and the practice of "cutting in," the roads should be divided into traffic ways by white lines; for example, a narrow road can be divided into three lines of traffic, no vehicle being allowed to use the centre section, except it is overtaking and passing; this would not only expedite the flow of traffic but would make the roads safer. These regulations are in force in California and in other States in America and have met with universal approval.

The regulation of traffic in towns is a special subject, which requires not only high technical knowledge, but also a careful study of the particular eccentricities of the town in question. For instance, the Traffic Authorities of Los Angeles, which is probably the best regulated traffic in the world, and the town in which the percentage of cars to people is higher than in any other, is entirely different from that of New York in one simple thing, viz., that in New York the vast bulk of the traffic runs North and South, the length of the City, with comparatively little cross-road traffic, whereas, in Los Angeles many of the cross-streets carry almost as heavy a volume of traffic as the main road. This entails careful regulation of the automatic signs, which are such a boon to pedestrians as it prevents them dropping carelessly off the pavement into the traffic stream, and leads to traffic being almost silent as regards motor horns, a thing which surprises many visitors to the City.

An increase is required in the number of places in London, where a turn to the right is forbidden; where this has been enforced there has been much less congestion.

A great deal can be done by minor regulations, which would entail no hardship on any reasonable driver and which would be generally acceptable. I refer to prevention of dazzle by correct adjustment of head lights, adoption of "dipping" head lights, the unnecessary brilliancy of some side lights. The use of mechanical signalling to show stop, turn Right and Left not only to following traffic but for the benefit of oncoming vehicles and policemen on point duty. This device is compulsory in Berlin and aids the police enormously.

It is to be hoped that the staff to be appointed under the new Traffic Act, will be travelled men who have gained their "traffic sense" under widely varying conditions, and who can view traffic problems such as are mentioned above in the light of an extensive practical experience. We cannot afford the time or money to repeat the experiments which for good or evil have been tried out elsewhere.

# Institute of Transport.

## Suggested Continental Tour and Congress, 1931.

The Council of the Institute of Transport has considered a proposal that next year, in place of a Congress in this country, a Continental Tour and Congress should be arranged and be open to all classes of members of the Institute; also that ladies be permitted to accompany members as unofficial participants.

It is suggested that the tour should take the form of inspections of Italian transport undertakings and works and visits to certain centres of transport and cultural interest in Italy; that the party should leave London on a Saturday afternoon towards the end of May or early in June, 1931, and that the tour should occupy approximately 16 days.

The following provisional itinerary has been proposed:—

London to Como, *via* short sea service, Basle, thence by day-light travel through the delightful scenic route—Lucerne, Brunnen, Altdorf, Andermatt, Goschenen (for St. Gotthard Tunnel), Bellizona, Lugano and Chiasso; Milan; Venice; Florence; Rome; Genoa; Turin; return to London *via* Paris.

While it is not possible at this date to give an estimate of the cost of the tour every endeavour would be made to arrange terms which would not be beyond the means of the younger members in particular. Two classes of travel and hotel accommodation would be available. It will be appreciated that more favourable facilities are usually procurable for a large party than for a small one.

The offices of the Institute are at 15, Savoy Street, Victoria Embankment, London, W.C.2.

# Furniture Warehousemen and Removers' Association.

## Autumnal Meeting in London, November 5th and 6th, 1930.

The Bi-Annual meeting of members of the Furniture, Warehousemen and Removers' Association will be held at the Hotel Victoria, Northumberland Avenue, London, W.C.2., on November 5th and 6th, next.

The programme which is subject to variation is as follows:

Wednesday, November 5th.

General Meeting. Amongst other matters on the Agenda are the following:—

Extraordinary General Meeting.

*Morning Session.*

11.30 a.m. (a) To consider and adopt (with or without modifications) revised Articles of Association.

(b) Report of Special Sub-Committee re non-members advertising for Return Loads.

*Afternoon Session.*

2.30 p.m. (c) Railways and Removals Traffic.

4.0 p.m. (d) Suggested Issue of Certificates of Membership to Members of the Association.

(e) Proposition re Conferment of Degrees.

(f) Suggestions as to augmenting the Benevolent Fund.

*Open to non-members by invitation of members.*

6.30 p.m. Reception.

7.0 p.m. Dinner and Musical Entertainment. Evening Dress (Optional). Members and Ladies Tickets, 12/6 each (excluding wines).

The following gentlemen have accepted an invitation to be the guests of the Association and to speak at the Dinner; Sir Francis Goodenough (President of the Incorporated Sales Managers' Association, and Chairman of the Government Committee on Education for Salesmanship); Mr. Frank Pick, Ll.B., M.Inst.T. (Managing Director, The London Underground Railways, and the London General Omnibus Co., Ltd.

Thursday, November 6th.

9.45 a.m. Visit to A.E.C. motor works at Southall, Middlesex.

1.15 p.m. Lunch at Holborn Restaurant, London, W.C.1., at the invitation of the London Centre.

As this is a most important Association gathering, it is hoped that there will be a large attendance of Members and their Ladies. Members are particularly urged to make it a pronounced success.

Digitized by Google

# Progress Made with the Development of the Heavy Oil Engine.*

**By W. Vane Morland, A.M.I.Mech.E., M.I.A.E., M.Inst.T.,**

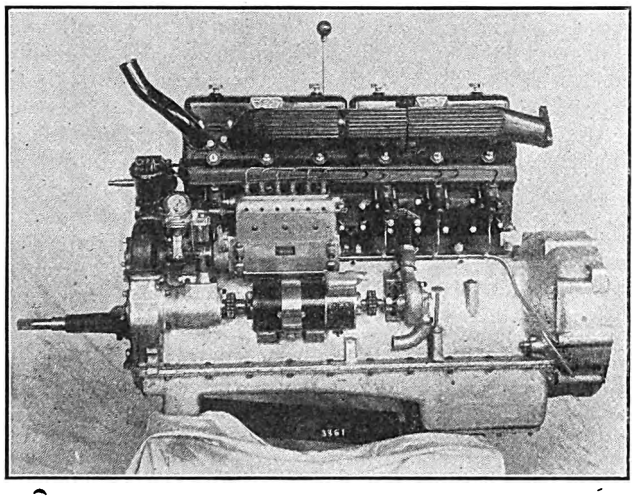
**General Manager and Engineer, County Borough of Walsall Tramway and Motor Services.**

IN introducing the subject the author stated that the use of the term Diesel was in a descriptive sense only as there was no well-defined line of demarcation between the various types of so-called Diesel engines.

Proceeding, Mr. Morland reviewed briefly the development of the internal combustion engine from the year 1876, showing how latterly the Diesel engine had made tremendous progress as a motive power for ships. After referring to the enormous progress and development made during the war period, when the entire resources of the automobile industry were concentrated on the production of motor vehicles and aircraft, he mentioned that as a result of the experience gained during the war motor manufacturers found themselves in possession of a wealth of reliable petrol vehicle data with which to fashion new instruments of transport.

He then went on to say:—

To-day, Britain has definitely outstripped the remainder of the world in the provision of road transport ser-



OUR ILLUSTRATION SHOWS A NEAR SIDE VIEW OF THE A.E.C. HEAVY OIL ENGINE (ACRO LICENCE) SHORTLY TO BE PRODUCED BY THE ASSOCIATED EQUIPMENT CO., LTD.

vices, whilst her Automobile manufacturing industry is among the most progressive and properous in her thousand and one trades and activities.

And now, at a time when it had begun to appear that no more radical changes could be expected in the development of the road transport industry, history is again repeating itself, and the Diesel engine, that little understood form of mechanical energy, has entered the field of road transport to compete with the petrol engine for the eventual supremacy.

It was sheer necessity that urged the German Automobile Engineers to redouble their efforts to develop a highly efficient Diesel engine for road transport purposes. Bottled up and remote from the oil fields as they were during the great war, the Diesel offered a substantial measure of relief in the sense that it could consume a comparatively low grade of fuel oil. The increasing reliability, efficiency, and the economic advantages of these engines, focussed the serious attention of the British road transport industry in 1928, when it was made known that the Dewar Trophy was awarded to the Mercedes Benz Diesel engined lorry for the most meritious performance of the year by an internal combustion-engined vehicle. The remarkable performance of this vehicle had previously engaged the attention of the author, and he was able to report to the General Managers at their annual meeting at Portsmouth, in 1929, that the data available indicated that the fuel costs of operating a double-deck bus in this country with a similar type of engine would be approximately ½d. per bus mile. The subsequent practical experiments by the Sheffield Corporation with a Mercedes Benz Diesel-engined bus, and the subsequent experiments of the Walsall Corporation have proved this calculation to be correct.

The Gardner engine, as installed in one of the Walsall Corporation buses, is a high-speed compression-ignition oil engine of English manufacture. The author understands that similar-engined buses are being completed for the Sheffield and Leeds Corporations, and that one or both of these may be available for the Conference.

The engine is the 4-cylinder type developing 38 brake horse power at 1,000 revolutions per minute rising to 50 B.H.P. at 1,300 R.P.M. The governor cuts in at approximately 1,350 R.P.M. this being the maximum number of R.P.M. which is permitted at present. The engine is installed in a four year old Dennis "E" type chassis (fitted with a 32-seater single-deck body) with of course the petrol engine removed. It was intended to fit a 6-cylinder engine but this was found impossible on the Dennis "E" type owing to restrictions of space.

The following table shows the comparison of the fuel costs:—

| | | Total £ |
|---|---|---|
| Single-deck petrol engined omnibus running 100 miles per day for 300 days per annum:— | | |
| Average number of miles per gallon | 8. | |
| Average petrol cost per bus mile | 1.625 pence. | |
| Cost of petrol | 1/1 per gallon | 203 |
| Single-deck heavy oil-engined omnibus running 100 miles per day for 300 days per annum:— | | |
| Average number of miles per gallon | 18. | |
| Average oil fuel cost per bus mile | .222 pence. | |
| Cost of oil fuel | 4d. per gallon | 28 |
| Saving per annum | | £175 |

With a fleet of 100 single-deck heavy oil-engined motor omnibuses, the saving of fuel would be £17,500 per annum, of which it should be noted that £6,250 is represented by taxation when using petrol, the oil fuel of course being tax free.

Assuming that petrol was tax free, the saving on present prices would be £11,250 per annum per 100 vehicles in commission.

The consumption of lubricating oil is also superior to that of a petrol engine, largely owing to the lower working temperature of the engine, whilst the quality of the lubricating oil remains good for a longer time because it is not subjected to such high temperatures.

The storage of fuel oil does not entail the same difficulties as those of petrol. The fire risk on vehicles and in confined buildings such as garages is reduced to a minimum, as the flash point of the fuel oil is about 170° F.

The Associated Equipment Company, of London, one of the largest and best known concerns in the British Automobile manufacturing industry, have for some considerable time devoted a good deal of energy and considerable proportion of their extensive experimental shops to the evolution of suitable high-speed oil engines for road transport purposes, which have culminated in a number of engines being built on what is known as the Acro system. Extensive endurance tests have been carried out with these engines installed in lorries, and sufficient experience has now been gained to justify the company in putting the first hundred of these vehicles into production for immediate sale to the road transport industry. The author recently tested out one of these oil-engined vehicles which was carrying a load of 6½ tons when a speed of over 40 m.p.h. was obtained. The general performance of the machine proved to be exceedingly gratifying.

The Acro system employed in these engines may be regarded as a sort of half-way house in the sense that it belongs neither to the precombustion chamber of engine, nor to the open combustion chamber type. In this system the combustion chamber is divided into two parts of approximately equal volume.

One part of the combustion chamber is directly in connection with the cylinder bore, and the other part is contained in a separate chamber or cell fitted in the cylinder

* Extracts from paper read at the Annual Conference of the Municipal Tramways and Transport Association at Harrogate.

Digitized by Google

head, and connected to the other by means of a short restricted passage; the shape of the whole combustion chamber being roughly that of an egg in an egg cup.

The fuel from the atomiser is sprayed into that part of the combustion chamber which is connected directly with the cylinder, and the spray is aimed towards the passage connecting the two parts of the combustion chamber. The fuel is injected shortly before the end of the compression stroke, the actual amount of advance depending upon the speed at which the engine is running, and varies from about 12 degrees to 25 degrees before the dead centre is reached. The compression ratio employed is 15.5, as compared with about 5.1 for a petrol engine, and the heat of compression is sufficient to ignite the oil. A short interval of time elapses between the commencement of injection and the moment of ignition, but ignition starts before the whole of the fuel has been admitted into the combustion chamber, and the maximum pressure is reached a few degrees after passing top dead centre. Practically no fuel is burned within the air cell, almost all the combustion taking place within the main combustion chamber, which connects directly with the cylinder.

For starting the engine from dead cold, a heater plug is provided in each cylinder. This consists of a short coil of high resistance wire, which is so placed as to lie just in the outer edge of the fuel spray. This coil is heated electrically when starting up, the current being cut off as soon as the engine is running. Once the engine is hot, or even warm, it is quite unnecessary to utilise the heater plugs, as the engine will fire the moment it begins to turn over. Starting is effected by means of an electric starter, as owing to the high compression pressure and the small flywheel which is necessary on a high-speed vehicle engine, it is not possible to crank the engine by hand fast enough for starting.

The A.E.C. Acro engine has a speed range of 300 to 3,000 R.P.M., the maximum power being obtained at about 2,500 R.P.M., at which speed an output of over 100 H.P. has been obtained.

It will be appreciated that, in the short confines of this Paper, the author is unable to review all the heavy-oil engines which are now being built in this country.

From the general data available he has compiled the following table of the comparative fuel costs.

| | | Total £ |
|---|---|---|
| Double-deck petrol-engined omnibus running 100 miles per day for 300 days per annum:— | | |
| Average number of miles per gallon | 6. | |
| Average petrol cost per bus mile | 2.166d. | |
| Cost of petrol | 1/1 per gallon | 270 |
| Double-deck heavy oil-engined omnibus running 100 miles per day for 300 days per annum:— | | |
| Average number of miles per gallon | 10. | |
| Average oil fuel cost per bus mile | .40d. | |
| Cost or oil fuel | 4d. per gallon | 50 |
| Saving per annum | | £220 |

With a fleet of 100 double-deck heavy oil-engined motor omnibuses, the saving of fuel would be £22,000 per annum, of which it should be noted that £8,333 is represented by taxation when using petrol, the oil fuel of course being tax free.

Assuming that petrol was tax free, the saving on present prices would be £13,667 per annum per 100 vehicles in commission.

The author does not wish to create the impression that the stage of development which has been reached entitles Local Authorities or the large Motor Omnibus Companies to immediately press the manufacturers for delivery of large fleets of heavy oil-engined motor omnibuses for inter-town or city services. It should be remembered that the latest types of petrol-engined buses have reached an exceedingly high stage of refinement, and any attempt on the part of the operators to inflict on the public a vehicle in any way inferior will be strongly resented. The conditions obtaining in the operation of motor omnibuses on heavy trafficked town routes are such as to require a highly efficient and refined vehicle, and the heavy oil-engine has not yet reached that high stage of refinement. If any attempt is made to force the pace, and place considerable numbers of more or less immature models on the streets, there is a real danger that hostile criticism may strangle the use of these engines for passenger work, and so retard normal development and progress.

On the other hand, the road haulage industry have no such fears as such a highly refined engine is not so necessary. The Diesel engine, during the process of refinement, should in the main, serve its apprenticeship in their service. It should also be given a sufficiently lengthy trial in long-distance motor coach or country motor omnibus services, and experimentally, by local authorities, to allow the manufacturers time and breathing space to perfect suitable oil-engines for large capacity passenger vehicles on heavy-trafficked town routes.

Whilst in its fight for the supremacy of the roads the heavy oil-engine will be materially assisted by its amazing fuel economy, there is still another factor, its immunity from fire, which will weigh heavily in its favour. The fire risk of the oil-driven vehicle is in fact negligible.

If and when the heavy oil-engine can displace the petrol-engine in road transport industry generally an enormous saving can be effected in the Nation's bill for imported fuel. That the Diesel engine could become an enormous economic force in the gas industry may be realised from the Board of Trade returns relating to gas undertakings in Great Britain. These disclose that out of 17,887,000 tons of coal carbonised for gas production, some 215,138,000 gallons of tar are made. This would produce approximately 86,000,000 gallons of oil for use if a suitable type of Diesel engine could be evolved for this purpose. Probably a further 60,000,000 gallons would be forthcoming from the coke ovens of the country, or a grand total of 146,000,000 gallons of oil for use in the road transport industry. If and when the low temperature carbonisation of coal comes into its own, this grand total would be greatly increased, as the low temperature processes yield about two and a half times as much the amount of oil for every ton of coal carbonised. It requires little imagination to see what an important part the Diesel might easily play in the rehabitation of the economic structure of the coal industry and of the country generally.

Whatever may be the future of the electric tramcar or the trolley bus few will be disposed to deny that the internal-combustion engined motor omnibus is destined to find an ever increasing use in the Municipal passenger transport systems both at home and abroad. It remains to be seen how far the Local Authorities and the road transport industry generally will support the Automobile manufacturers of this country in the development of the Diesel engine.

It is such factors as prejudice or encouragement which will fashion the future of this remarkable engine, and will decide whether the petrol age has reached its twilight.

## Ballast, Sand and Allied Trades Association.

In the half-yearly report presented at the Half-Yearly General Meeting of the Ballast, Sand & Allied Trades Association, held at Olympia, on September 18th, last, it is recalled that at the first meetings in connection with the formation of the Association held in February and March last, the necessity for the Association was evidenced by reason of the undesirable practices obtaining in the distribution of sand and ballast, and it was agreed that the loading line and delivery ticket system appeared to be a method of putting an end to these practices. It was therefore decided to adopt this system as a basis of the Association. A General Meeting held on April 10th, last, approved the Constitution, Rules and Regulations governing the Association.

The membership numbers 100, comprising 83 Full Members and 17 Associate Members. The opinions of those who have put the system into operation have been taken the Report states, and it is generally agreed that the benefit derived greatly outweighs any extra trouble involved. The element of uncertainty which has hitherto existed in loading to unmarked lorries is eliminated and the receiver of materials is satisfied by knowing that he is obtaining correct measurement. The task of making the Association applicable equally to merchants loading from their own stocks of materials, or who load direct from barges at wharf, is under consideration.

58,200 Association tickets and 654 loading line plates have been issued to members, and 55 printing blocks and rubber stamps of Association badge.

The Report adds that the degree of success the Association can hope to achieve must largely depend upon the members putting the loading line and delivery ticket system into practice.

The offices of the Association are at 124, Tottenham Court Road, London, W.1.

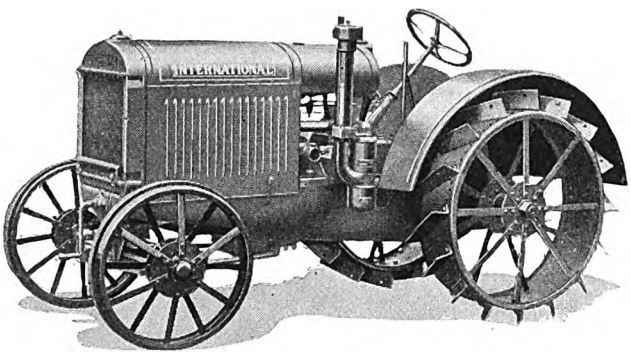
# World Agricultural Tractor Trials in Berkshire.

World demonstrations of agricultural tractors were held on land attached to the farm of Mr. A. T. Loyd, of Lockinge House, near Wantage, at Ardington on September 16th to 19th. The demonstrations were organised by the Institute of Agricultural Engineering, University of Oxford, and the Royal Agricultural Society of England.

The machines taking part in the demonstration numbered thirty-one. The best way of dealing with the machines is to divide them into four groups following the example of one part of the official report, namely:—paraffin tractors, petrol tractors, diesel oil tractors and semi-diesel tractors. The great majority of machines in the first two groups were American, those in the third group (petrol); Aveling and Porter, Blackstone, Marshall, McLaren, Mercedes Benz (diesel); Lanz and Munktells (semi-diesel) were described in last months *World's Carriers*. The others are for the most part well known and need little description.

Work at the public demonstration consisted entirely of ploughing and as this was so universally good in quantity and quality nothing need be said on the performance of individual tractors. It should be noted that during recent

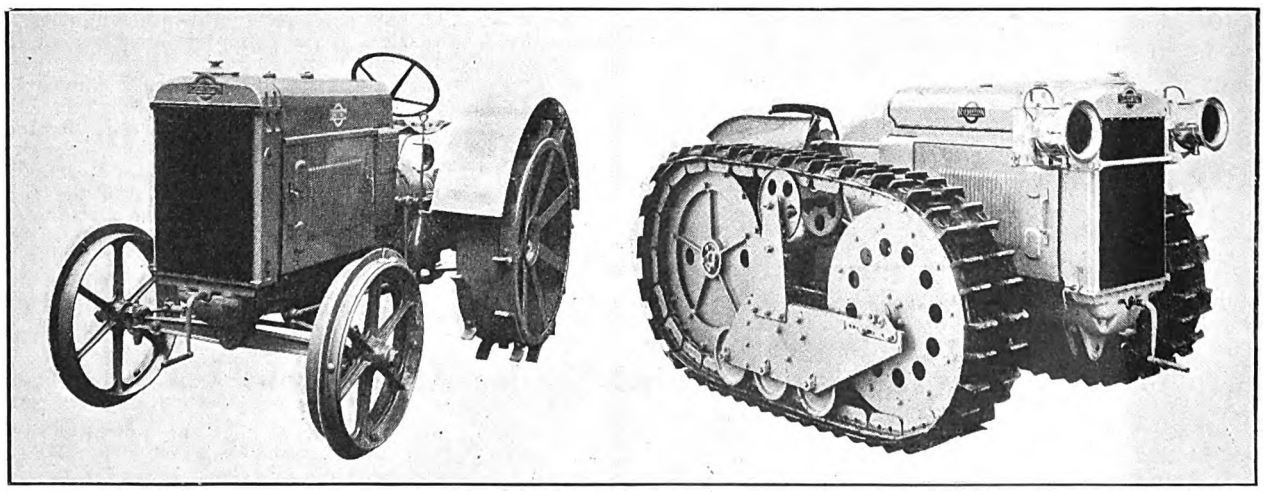


TRACTORS ENTERED FOR THE WORLD AGRICULTURAL TRACTOR TRIALS BY THE INTERNATIONAL HARVESTER COMPANY OF GREAT BRITAIN LTD., 259, CITY ROAD, LONDON, E.C.1. LEFT: THE 10-20 GEAR DRIVE TRACTOR, AND RIGHT: THE "FARMALL" TRACTOR.

British and in the last Continental, except one in each case. Classified according to these groupings the following machines took part in the demonstrations:—Paraffin: Austin 11/15 (France); Rushton Standard (Great Britain); International Harvester Co., Farmall, International 10/20; International 15/30 (U.S.A.); Massey-Harris Wallis 12/30; Massey-Harris Wallis 20/30 (U.S.A.); Case "C"; Case "L" (U.S.A.). Petrol: Citroen (France); Austin 12.5/20 (France); Caterpillar "Ten"; Caterpillar "Fifteen"; Caterpillar "Twenty"; Caterpillar "Thirty"; Caterpillar "Sixty" (U.S.A.); Latil (France); Rushton Roadless (Great Britain); Linke (Germany). Diesel: Mercedes Benz (Germany); McLaren Benz (Great Britain); Marshall (Great Britain); Blackstone and Aveling and Porter, A.G.I. Products (Great Britain). Semi-diesel: Munktells 15/22; Munktells 20/30 (Sweden); Hofherr-Schrantz (Hungary); Lanz (Germany). The Case, Austin, Fordson (paraffin); Austin, Citroen, Latil, Linke in France. The American machines all came in the tests in this group. They include the Case "C"; Case "L"; Massey-Harris Wallis 12/20; Massey-Harris Wallis 20/30; International Harvester Co., Farmall; International 10/20; International 15/30. These American machines were all successful with perhaps the Case having the largest number of points to its credit. The results of these trials and tests would seem to indicate that the construction of the paraffin tractor has considerably improved.

years great strides have been made in the improvement of ploughs and this had much to do with conditions at Ardington.

The paraffin tractor comprised the most important group because this type is the best known and the most widely used in Britain. By including the Fordson, manufactured in Ireland, we have ten machines, seven American, one British—the well-known Rushton which was well above its work—and the Austin, a British machine manufactured



TWO OF THE MODELS ENTERED FOR THE WORLD AGRICULTURAL TRACTOR TRIALS BY THE RUSHTON TRACTOR COMPANY (1929), LTD., FOREST ROAD, WALTHAMSTOW, LONDON, E.17.

Digitized by Google

In the petrol group, the American machines again predominated, there being five Caterpillars entered by the Caterpillar Tractor Co., California, one British—the Rushton—and one German, the Linke. The only wheeled tractor in the group was the Austin 12.5/20 (France). Petrol tractors are not much used on land work in this country on account of the high cost of fuel, but as they are economical in other respects there is no reason why they should not providing farmers can be induced to give them the test. Two other machines in this group were of French make and designed to combine the functions of land and road work. One, the Latil, is an excellent machine of four wheel drive, pneumatic tyres for the road and special spud wheels folding over for land work. It will haul a three or four furrow plough and a gross load of 10 tons at 15 miles per hour on the road. The other, the Citroen-Kegresse, is more in the nature of a ploughing or land appliance and a light lorry, its road load being about 4 tons gross at 11 or 12 miles an hour. It has two ordinary front wheels and a rear rubber track by which it can also be used as a private car and traverse rough fields.

The land and road outfits are very important, especially in sugar beet growing areas where a machine is required to plough and till the soil and haul off the crop in autumn under difficult conditions. But at a demonstration limited to ploughing these machines had no opportunity in doing justice to themselves. The ploughing which they did was of first class quality. Nevertheless, in an appliance costing more than a single purpose machine on account of its dual capacity required more scope in which to justify itself.

The third and fourth group of tractors—those consuming fuel oil—came in for much attention. The full-diesel were mainly British machines and the semi-diesel Continental. One full diesel, the Aveling and Porter, is the most promising of its kind. It starts by means of an electric starter and has a 4-cylinder diesel 4 stroke engine. Others were:—Blackstone (4-cylinder) and Marshall (single-cylinder); McLaren Benz (2-cylinder), a combined British and German make, and the Mercedes Benz, a single-cylinder German machine. Included in the semi-diesel class were two tractors by Munktells of Sweden; Hofherr-Schrantz (Hungary) and the German Lanz.

One point on which there is room for improvement in the paraffin tractor concerns the escape of paraffin into the crankcase thereby spoiling lubrication. Though in some machines this weakness has been greatly overcome it still presents difficulties in others.

The attendance was good, especially on the first two days. On the second day it was estimated that between three and four thousand people were there. Enquiries on the part of buyers were encouraging all round and numerous sales were made.

There was a big contrast between the trial held at Lincoln in 1919 and 1920 and Shrewsbury in 1922. Then, most of the tractors were still in the experimental stage and most of the implements were unsuitable. At Ardington, except for the fuel oil machines, there were no experiments, while implements were much more suitable. One fact is worthy of notice, however, namely: that the machines which came out best in the earlier trials were the ones that stood the test in the interval and with one or two exceptions came best out of the 1930 tests. Trials such as these are necessary periodically—not too often on account of the expense—in order to let farmers know what is being done.

## The Massey-Harris Tractors.

The Massey-Harris tractors which put up such a creditable performance at the recent tractor trials at Ardington, near Wantage, are supplied in two sizes, namely, 12/20 h.p. and 20/30 h.p. The 12/20 model has a four cylinder engine, 3⅞ in. bore by 5½ in. stroke and the 20/30 h.p. model has a four cylinder engine, 4⅜ in. bore by 5¾ in. stroke and both are designed to run either on petrol or paraffin. Ignition is by high tension magneto with impulse starter. The oiling system of the smaller model is a combination of force feed and splash and for the larger model, positive gear driven and splash. Both engines are governed. Cooling is by radiator with screen and centrifugal pump. Power is transmitted through a twin disc three plate clutch to a three speed gear box with one reverse in the smaller model and to a two speed gear box and one reverse in the larger model. A special feature of the Massey-Harris tractor is the "U" frame which provides both strength and lightness as well as perfect alignment of all the working parts. The transmission to the driving wheels is entirely gear. The differential is carried in front of the rear axle. The differential bevel gears and spur pinions are assembled as a unit and can be transposed so as to get two wearing surfaces to the teeth thereby giving double life to the gears and effecting a material saving in replacement. A belt pulley is mounted on the sliding gear shaft. It is bolted to a flange and can be removed if desired when doing field work. The power is transmitted to the pulley through one pair of bevel gears only, which eliminates loss of power in transmission to a minimum. The driving wheels are mounted on Timken adjustable taper roller bearings as are also the front wheels.

**Finger Posts to Sales.**—"If advertising is dropped it will be found that sales drop too," is the opinion of Mr. Harold Eley, Advertising Manager of the Dunlop Company, given in his book, "Selling by Post," just published by Pitmans. In this and in a companion book, "Hire Purchase," by Mr. Eley and Mr. Howard Withey, the whole processes of these two rapidly growing sales methods are interestingly described. Mr. Eley emphasises the importance of linking up advertisements with window displays and of backing up all announcements with service and quality. "Press advertising must receive your attention if you aim at complete success," is his advice.

**The Institute of the Motor Trade.**—The Tenth Examination of the Institute of the Motor Trade will be held in London and the Provincial Centres on November 28th next, commencing at 10 a.m. The Council are offering Gold, Silver and Bronze Medals for the three Candidates securing the highest number of marks in the 1930 Examinations (April and November). Candidates desirous of presenting themselves must give notice to the Secretary on or before the 1st November. Full particulars and Entry Forms can be obtained on application to the Secretary, The Institute of the Motor Trade (Inc.), 157, Great Portland Street, London, W.1.

## ROAD TRAFFIC ACT—CLAUSE 19.

*To the Editor of* THE WORLD'S CARRIERS.

SIR,—We read with a good deal of interest your article in your current issue by Mr. R. P. Bailey on Clause 19 of the Road Traffic Act, but the article does not refer in any way to a point which must be of considerable importance to nearly every firm in the Road Traffic Industry, and we are sure it would be much appreciated if you could see your way to publish further information in your next issue.

Briefly, what exactly can a Driver do in his rest hours, and can he be travelling to a distant point to relieve a Driver who would have then completed his 11 hours driving? It is quite a common occurrence to have exceedingly urgent traffic which has to be transported over a considerable distance as for instance replacement parts for Colliery Winding Gear, where the delay of a few hours might mean a number of men being unemployed.

1. Would it be in order under the Act to send a Driver with an urgent load from say South Wales to Lancashire, and to send a Relief Driver by train to take over the vehicle say at Manchester?
2. Would it be considered that a Driver travelling by train to take over a vehicle some distance away was performing work within the meaning of the Act?
3. Would the same Law operate if the Driver travelled by Road Vehicle to a distant point to relieve another Driver?
4. Would it be in order for a Relief Driver to actually travel on the vehicle which it was intended he should take over at the end of two 5½ hour shifts if he had express written instructions that he must not, under any circumstances, do any work on the vehicle until he entirely relieves the other Driver?
5. Would conditions outlined in the previous questions be brought within the working hours laid down in the Act if the Driver travelling as an intended relief was paid a travelling allowance even although he again would be resting, and not performing any work?
6. If a Relief Driver is permitted to rest on a vehicle, would it be held as necessary to provide him with a bunk for sleeping purposes?

Yours faithfully,
VENN & MCPHERSON, LTD.
Wm. C. Venn, Director.

East Usk, Newport, Mon.
18th September, 1930.

## AUTOMOBILE ENGINEERING TRAINING COLLEGE. AN INVITATION.

*To the Editor of* THE WORLD'S CARRIERS.

SIR,—From the very kind letters I received after the recent visit of Members of the Council of the Motor Agents' Association to the College, I think our methods of training proved of considerable interest, and I am, therefore, taking the opportunity of Motor Show week to entertain any members of the Trade who are visiting London and who can spare the time to call upon us.

May I, therefore, extend, through your excellent Journal, a cordial invitation to all members of the Trade to visit the College during Motor Show week and examine its training. I can assure them of a warm welcome and an interesting hour.

For the benefit of those who are strangers to London, the College is situated in Sydney Street, Kings Road, London, and the 49 omnibus from Olympia stops outside its doors. The College can be seen under working conditions from 9.30 a.m to 12.45 p.m. and from 2 p.m. to 5 p.m. Monday to Friday.

Yours faithfully,
C. H. ROBERTS.
Principal.

Automobile Engineering Training College,
Engineering Works: Sydney Street,
Kings Road, Chelsea,
London, S.W.3.
26th September, 1930.

## A WARNING.

*To the Editor of* THE WORLD'S CARRIERS.

SIR,—It would be in the interests of your readers in the London area to keep a sharp look out for a person who is still visiting motor vehicle and accessory makers, impersonating Mr. Park of Parks of Portsmouth Ltd. Although he does not place any orders, he takes a keen interest in all the latest chassis, etc., and usually departs with a little financial assistance. He generally advises the firms that he does not know much about the mechanical side of the question, but has to do the "paying out."

Yours faithfully,
PARKS OF PORTSMOUTH LIMITED.
Geo. A. Park, Director.

Haslemere Road, Southsea.
26th September, 1930.

# New Omnibus and Motor Coach Services.

**An Official Warning.**

THE Minister of Transport makes the following announcement:—

The Minister's attention has been drawn to the fact that in various parts of the country a number of new omnibus and motor coach services have been started during the past few months, which in many cases do not appear to meet any obvious public need.

The institution of some of these new services may be due to a desire on the part of operators to establish a claim to consideration under the conditions which will obtain when the new system of licensing and control of public service vehicles set up under Part IV. of the Road Traffic Act, 1930, comes into operation. Again, some local authorities may be granting licences to ply for hire in a somewhat wholesale manner on the assumption that, as their functions as licensing authorities will shortly come to an end, the exercise of further control on their part is unnecessary.

In his speech on the Third Reading of the Bill in the House of Commons on the 23rd July, the Minister asked local authorities who are licensing authorities to exercise their powers with care and responsibility right up to the time when the provisions of Part IV. of the Act come into force. The Minister feels it necessary to repeat the warning which he gave on the same occasion that the Traffic Commissioners will not be bound by the action of licensing authorities or of operators of public service vehicles in the past, and least of all as regards licences to ply for hire which have been issued, or services which have been established during the last few months.

# "Avon-Seiberling."

THE Avon India Rubber Company, Limited, of Melksham, Wilts., tyre and rubber manufacturers in this country since 1885, announce that an arrangement has been made with the Seiberling Rubber Company, of Akron, U.S.A., under which the Avon Company—in addition to their own manufacture of Avon tyres and rubber goods—shall have the exclusive right of manufacturing and selling Seiberling tyres (under the brand "Avon-Seiberling") in the United Kingdom and the Irish Free State. This arrangement involves no change in the wholly British capital and control of the Avon Company or Works, which remain unaltered under the direction of the Board of Directors.

The technical knowledge, methods of organisation and tyre processes of the two Companies will be pooled and utilised in their common interest. Until the operation of the McKenna Duty, American-made Seiberling tyres were freely sold here and enjoyed a very high reputation for efficiency and durability. The Giant Pneumatic type was remarkably successful, and as from October 1st, last, the Avon Company will market tyres of the same construction under the dual brand "Avon-Seiberling."

Motor tyres will continue to be made and sold under the Avon mark but, as the agreement provides for a full exchange of test and technical data, Avon Motor Tyres henceforth will be made largely under new processes and improved specifications. Dealers and users alike will appreciate the importance of this announcement when it is remembered that, apart from the established reputation of Seiberling tyres in this market and in the States, the Seiberling Company of Akron command exceptional resources of research, manufacture and test.

# Motor Coach and Bus Notes.

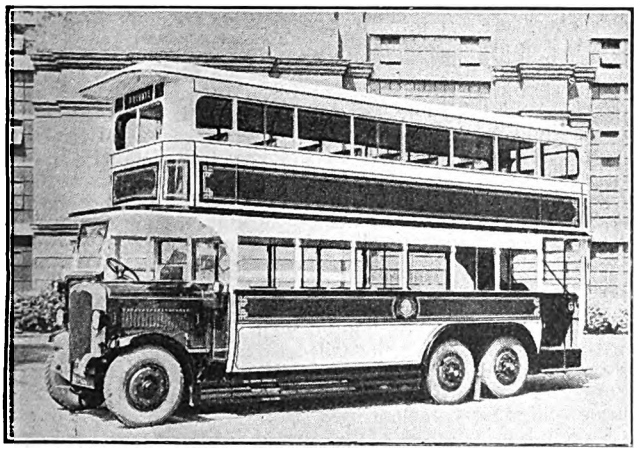
**Members of the Municipal Tramways and Transport Association Visit the Works of Karrier Motors, Limited.**—The final day's proceedings of the Municipal Tramways and Transport Association Congress, which was held at Harrogate from September 24th to 26th, included a visit to Huddersfield. The whole party was conveyed from Harrogate by road, and among the omnibuses employed were Karrier double-deckers of both the four and six-

KARRIER "MONITOR" DEMONSTRATION OMNIBUS WHICH CONVEYED CONFERENCE DELEGATES TO AND FROM KARRIER MOTORS WORKS.

wheel types ("Monitor" and "Consort" models) belonging to the Huddersfield Corporation. A number of the delegates took the opportunity of calling at Karrier Works, through which they were shown by members of the staff, and the photograph which we reproduce was taken during the delegation's visit.

**Albion Buses for South Africa.**—For several years a fleet of Albion buses has been operated by the Cape Electric Tramways in the Cape Town district, and the Albion Motor Car Co., Ltd., of Glasgow, have received an order recently from the Cape Electric Tramways for a further six Albion buses for use in connection with their tramway system at Port Elizabeth.

**A Guy Six-Wheeled Double-Decker for Hull.** — We illustrate a Guy six-wheeled double-deck petrol bus, which is one of twelve 64-seaters for Hull. Guy Motors, Ltd.,



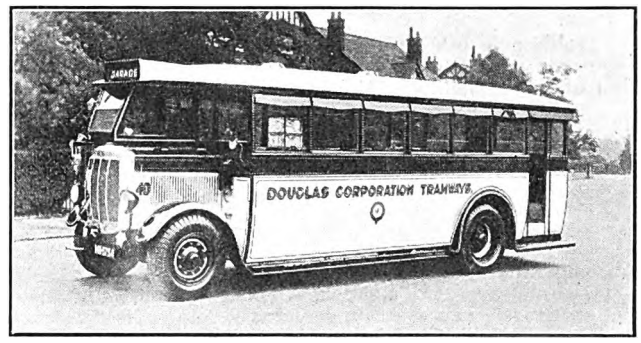
ONE OF A FLEET OF TWELVE GUY SIX-WHEELED DOUBLE DECK BUSES FOR HULL.

Fallings Park, Wolverhampton, inform us that the bodywork is by the Brush Electrical Engineering Co., Ltd.

**Petrol Buses Make Profit.** — Lancaster Corporation, which up to a few months ago operated electric battery driven buses, now has only petrol buses. Up to the end of August working expenses were 8.52d. per mile and loan charges 2.5d. per mile, making a total of 11d. per mile in all. The income in the same time was about 11.12d. per mile.

**Manchester's 220 Buses.**—Further Manchester tramway routes are to be abandoned in favour of motor buses, this decision being no doubt encouraged by the great increase of traffic which has resulted by the conversion of the 53 circular route. Mr. R. Stuart Pilcher considers that on the 47 and 48 Altrincham services and the 49 Sale Moor service, buses will be equally successful. Associated with Manchester in the running of these services are a number of local authorities, and it will be impossible to complete the conversion unless they all agree. Buses to seat fifty passengers, he considers, could do the work now done by the trams without any increase in the intermediate fares. There is a constant demand, states Mr. Pilcher, for more express buses but the effect on the tramways has been such that on March 31st last the service of trams had to be restricted. The public evidently prefer the buses and are prepared to pay higher fares in order to travel in them. This process of reducing the tramway mileage cannot go on indefinitely as to take off more trams and reduce the service to less than the present ten minutes would not be efficient. Four times as many buses are in use on Manchester Corporation routes than there were four years ago. Then the number of Corporation buses was 51, to-day 220 are in use.

**T.S. Buses for Douglas Corporation Tramways.**—Our photograph shows one of a number of 34-seater single-deck petrol-electric omnibuses which T.S. Motors, Ltd., of Maidstone, have recently supplied to the Douglas Corporation. The chassis is T.S. Motors, Ltd., latest type T.S.17A., and embodies Servo operated four-wheel brakes, C.A.V. "MVR" type electric lighting equipment and pneumatic tyres, 38 in. by 7 in. twin rear, 36 in. by 8 in.



ONE OF T.S. MOTORS, LTD., 34-SEATER SINGLE-DECK OMNIBUSES RECENTLY SUPPLIED TO THE DOUGLAS CORPORATION TRAMWAYS.

single front. It its design the motor and dynamo have been so arranged to give the lowest possible floor line and, wherever possible, weight has been reduced without sacrificing efficiency. The firm also produce the petrol-electric as a 6-wheeler as operated by municipalities and companies, including the Wolverhampton Corporation and the Merseyside Touring Co., Ltd., of Islington, Liverpool. The bodies of this recent order were constructed by the Northern Counties Motor and Engineering Co., Ltd., of Wigan, and some of the main features include semi-bucket seats and Strachans patent drop windows.

**A Comprehensive Bus Time Table.**—We have received from the East Yorkshire Motor Services, Ltd., of Hull, a copy of their Bus Time Table which came into force on October 1st. Information contained in this publication should result in the travelling public taking a closer personal interest in the activities of this well-known operating company. East Yorkshire Motor Services, Ltd., were incorporated on the 5th October, 1926, to take over two small companies which had between them a fleet of 34 motor omnibuses, used mainly in the vicinity of Hull. Since that date considerable headway has been made in providing road transport services over an extensive area, which now stretches northwards from Hull to Scarborough and westwards to York and Leeds. The fleet now numbers 153.

**The Motor Hirers' (Car, Coach & Omnibus) Association.**—We are informed that Mr. M. Logette has resigned his office as Chairman of this Association, a position which he has occupied for the past six years. Mr. Logette has done splendid service in this important position and his addresses at the annual meetings have proved of great value to the members. He has dealt with the important questions which have been under review in a masterly way and has shown a grasp of his subject, giving

Digitized by Google

evidence of very careful preparation and a full knowledge of the points at issue. As is well known Mr. Logette is a Director of G.B. (Motor Tours), Ltd., 72, Great Portland Street, London, W.1.

**Recent Guy Deliveries.** — Amongst recent deliveries made by Guy Motors, Limited, Fallings Park, Wolverhampton, into their West of England territory, are the following:—Mr. Good, of Seaton, Devon, who has been running Guy vehicles for a number of years and has sent Guy Motors several repeat orders, has put into service a 26-seater six-cylinder Guy "Conquest" coach to operate between London and Exmouth. A Guy 26-seater four-cylinder all-weather coach has also been ordered by Mr. Good.

**Sunderland's Bus Fleet.**—An additional shed to accommodate Sunderland Corporation's increasing fleet of motor buses is to be erected at the Fulwell depot at a cost of £1,085.

**Boon to Busmen.**—A canteen and recreation rooms for employees of the United Automobile Services, Ltd., have been opened in Ashington. There is a billiard room and buffet, the latter in charge of a former conductress; and only non-intoxicants are served. About 200 employees are being catered for.

**Councillor's New Post.** — Councillor J. J. Fletcher, Chairman of Sunderland Socialist Party, has been appointed Outside Traffic Manager for the Cestrian Company of Chester-le-Street, which is developing its London bus service.

**Timing Buses Like Trains.**—Police-Supt. T. Dale, of Newcastle, speaking to a Pressman recently in regard to the proposed great bus station in the Haymarket, said: "We mean to handle the buses like trains. There will be huge time-table boards from which intending passengers will be able to tell at a glance which is their bus, the time it leaves, and from which part of the station."

**Trackless Trolley Vehicles.** — In order to prepare a report on transport by trackless trolley vehicles, a deputation of the Manchester Corporation Transport Committee has been appointed to visit a number of towns to investigate the subject.

**Licences Granted.**

The Watch Committee of the Cheltenham Corporation has granted the application from Messrs. Cliffs, Ltd., for five bus licences for their service between London and Llanelly.

The Watch Committee of the Ripon Corporation has granted the application from the United Automobile Services, Ltd., for the licensing of 28 further vehicles.

The Watch Committee of the Brighton Corporation has granted an application from the Olympic Motor Services, Ltd., for licences for two express coaches for service between Portsmouth and Chatham via Brighton.

The Watch Committee of the Lowestoft Corporation has granted a licence to the Eastern Counties Road Car Co., Ltd., for a saloon bus operating on a long-distance service between Lowestoft and Felixstowe.

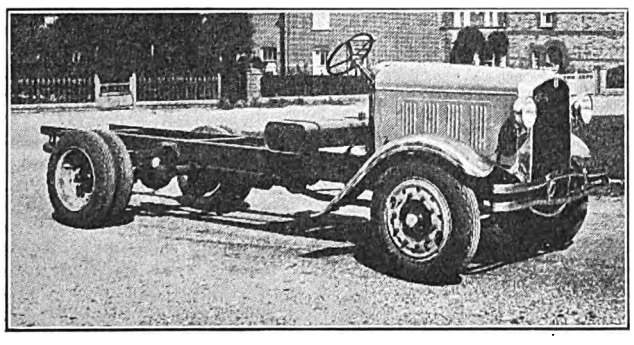
The Licensing Committee of the Dartford U.D.C. has granted licences to the Maidstone and District Motor Services, Ltd., for two saloon omnibuses, and to the Orange Coaches (Chatham) for six vehicles.

The Watch Committee of the Oldham Corporation has granted permission to "M. & H." Motors, Ltd., Blackpool, to run an Oldham-Blackpool service, in conjunction with an existing service operated by Mr. J. H. Robinson, Union Street, Oldham, subject to the fares being 100 per cent. in excess of those charged on tramway or bus services operated by the Corporation.

The Watch Committee of the Oldham Corporation has granted bus licences to the undermentioned in respect of motor coaches, subject to such vehicles plying for hire in connection with journeys which are not regularly scheduled services running on defined routes, so that the licensees shall only convey passengers whose seats are booked in conjunction with proprietors of motor buses who are licensed in the borough:—Mr. William Riding, 7 Kirkham Avenue, Blackpool; The Central Garage Co. (Marsden), Ltd., High Street, Uppermill; Messrs. Onward Motors, Ltd., Milton Street, Hyde; "M. & H." Motors, Ltd., Lytham Road, Blackpool.

# The 2½-3 Ton Gilford.

Comparatively recently the Gilford Motor Co., Ltd., 465-471a, Holloway Road, London, N.7, have placed on the market an entirely new six cylinder chassis known as the A.S. 6. It is supplied either for goods or passenger transport, the goods model having straight frame, whilst the passenger model has a dropped frame and several other slight modifications. The chassis is essentially for high speed work and with this object in view it is fitted with a six cylinder engine. The cylinder bore is 3⅝ in. and stroke 4½ in. and the R.A.C. rating is 31.5 h.p. The engine develops 35 b.h.p. at 1,000



THE GILFORD 2½-3 TON CHASSIS.

r.p.m., 50 b.h.p. at 1,500 r.p.m., 65 b.h.p. at 2,000 r.p.m. 78 b.h.p. at 2,500 r.p.m. and 85 b.h.p. at 3,000 r.p.m. The crankcase and gear box form a single unit. The carburetter is a Zenith and the electrical equipment including lighting and starting is the Bosch, the magneto and dynamo being tandem mounted on the nearside.

Power is transmitted through a single dry plate type clutch to the four speed gear box. The ratios are top 1 to 1, third 1.76 to 1, second 2.84 to 1, first 5.35 to 1 and reverse 6.25 to 1. All the gear shafts are short, of large diameter and are carried by heavy Timken roller bearings. Positive drive for the speedometer is provided and if required a power driven tyre pump can be fitted at extra cost. There is a transmission brake immediately behind the gear box, hand operated.

The propeller shaft is tubular and is made in two short lengths, connected and supported at the centre of the chassis by a spherically seated ball bearing carried on a cross-member. The propeller shafts are connected to the gear box main shaft, centre carrier and differential worm shafts, through Hardy Spicer universal joints of special oil-seal type. The rear axle is overhead worm driven.

The straight frame is of deep channel section of high tensile steel and suitably braced. The front cross member is dropped and to it the front of the engine is supported by bracket and pivot pin whilst the flywheel casing is supported by a second cross-member by brackets provided with rubber pads to insulate the engine from unnecessary vibration. Semi-elliptic springs are fitted, the front springs being anchored at their rear ends and shackled at the front ends, and the shackles are fitted with silent block bushes and a feature is that shackles and anchor brackets are built up so that they may be easily dismantled.

With regard to the braking: the wheel brakes are of the internal expanding type housed well inside the front wheels. In the braking system the Gilford patent compensating gear is incorporated which correctly distributes the power to the front and rear wheels. The brake cross-shafts are carried on self-aligning ball bearings.

Engine lubrication is of the forced feed constant level type, the oil being pumped from the oil reservoir or pan and forced through to the main crankshaft bearings and thence to the connecting rod bearings by way of holes drilled in the crankshaft. The pistons, valves and valve tappets are spray lubricated. Tecalemit automatic central lubrication is adopted for the chassis.

The wheels are detachable ten stud pressed steel fitted with 32 in. by 6 in. straight sided heavy duty pneumatic tyres, singles front, twin rear. Steering is cam and lever, the cam being mounted on ball thrust bearings. The petrol tank holds 25 gallons.

The equipment includes a detachable bumper, dimming head-lights and positive drive speedometer and clock. The price of the chassis including fully enclosed cab and front wings is £595.

# Commer Cars for 1931.

**Improved Models—Considerable Price Reductions.**

Numerous improvements to engines and chassis of all models, additions to equipment and price reductions amounting in some cases to as much as £100 have been announced by Commer Cars, Ltd., in their 1931 programme.

The 1931 models are as follows:

G.2 chassis 40/50 cwt.
G.3 chassis 3 ton.
G.4 chassis 4 ton.
G.5 chassis 5 ton.
G.6 chassis 6/7 ton.
6 T.K. (Invader) 20 passengers.
N.F.6 (Avenger) 32 passengers.

Four six-cylinder and three four-cylinder models are listed. The 20-passenger 6 T.K. "Invader" and the 32-passenger N.F.6 "Avenger" are bus or coach chassis. These as well as the G.2., 40/50 cwt. and the G.6., 6/7 ton goods chassis all have six-cylinders engines and four-speed gear-boxes, those on the "Invader" and the G.2 being fitted with a silent third ratio.

The G.3 and G.4 and the G.5 of three, four and five tons capacity respectively are goods vehicles with unusually powerful four-cylinder engines. Front wings are now inclusive in the chassis specification.

Although the price of the 6 T.K. "Invader" remains at £495, greater value is offered for money. Dipping headlights and shock absorbers, for instance, which were formerly extras are now part of the standard equipment.

Modifications to the engine include improvements to pistons, valves and the lubrication system. This model is now equipped with 32 in. × 6 in. reinforced tyres, and the G.2 with 32 in. × 6 in. Truck tyres.

The N.F.6 "Avenger" 32-seater bus chassis and the G.6 6/7 ton goods chassis both incorporate a number of detail engine improvements designed to give enhanced performance. The prices remain unaltered.

The chassis of the G.2 has been strengthened to permit of an increase in the maximum load from two tons to fifty hundredweight, and this will in future be known as the 40/50 cwt. chassis. With a six-cylinder engine developing over 65 H.P., improved for 1931, four-speed gear-box, with "Silent Third" and Marles steering, it is now also equipped with Servo brakes. Despite these improvements its price has been reduced by £20 to £445.

The G.3 three-tonner, a four-cylinder vehicle which in the main follows the lines of the former 23 G.N., is this year fitted with an entirely new and much longer radiator which not only enhances its appearance but provides better cooling. This important modification has also been introduced on the G.4 and the G.5.

Considerable reductions have been announced in the prices of the G.4 and the G.5. The former, hitherto known as the 4 G.N. now sells for £680 with solid tyres and £725 with pneumatics—a reduction of £70 and £100 respectively.

Correspondingly large cuts have been announced in the prices of the G.5 (formerly the 5 G.N.) which now sells at £725 and £795 on solid and pneumatic tyres respectively.

That the Commer concern should be able to announce such reductions at a time of unprecedented trade depression is a remarkable instance of the benefits of rationalisation. For like other members of the Combine of which it forms a part, it has completely re-organised its works on the most up-to-date "flow production" lines.

As part of this extensive works re-organisation scheme at the Commer works the body building shop has been considerably enlarged. In the past this concern has concentrated more on special, make-to-order bodywork. It is now to supply standard body types at highly competitive prices.

Commer Cars are exhibiting at the Scottish Show (November 7-15th) and both on their own Stand (No. 113) and on a number of dealers' stands will be showing a comprehensive range of the new season's models.

# Round the Lancashire Associations.

**Liverpool C.M.U.A.**—At the September meeting of the Liverpool Area Committee of the Commercial Motor Users' Association, presided over by Mr. A. C. Bloomer, consideration was given to the requirements of the Heavy Motor Car Draft Order of 1930, particularly in its application to eight wheeled vehicles. Otherwise the business was of purely domestic interest.

**Institute of Transport.**—Mr. F. G. Bristow addressed the opening meeting of the Manchester, Liverpool and District branch of the Institute of Transport at Manchester on October 3rd, on "The Road Traffic Act, 1930." The next meeting will be on Friday, November 7th, when, at the Adelphi Hotel, Liverpool, Mr. W. V. Wood, Vice-President, L.M.S. Railway, will speak on "The Economic Position of Railways."

**Lancashire and Cheshire Joint Road Transport Council.**—The dispute concerning the wages and hours of Lancashire and Cheshire carters and motormen has been referred to an arbitration board. The employers through their numerous associations claimed that the cost of living figures had reached the point when a reduction of 2s. in wages was due in accordance with the existing agreement. The proposed rates are:—One horse drivers, 49s.; two horse drivers, 54s.; stable or garage hands, 49s. Mechanical Vehicle Drivers.—Up to 1 ton, youths, 39s. (not to load more than 15 cwt.); up to 1 ton, adults, 49s.; 1 ton and under 2 tons, 53s.; 2 tons and over, 59s.; wagon assistants and loaders, 49s.; steam wagon drivers, 62s.; steam wagon second man, 51s. The Lancashire and Cheshire Joint Road Transport Council, after a full review of the situation, decided to refer the disputed issues to a special tribunal consisting of Sir Henry Morris, chairman (President, Industrial Court), Mr. J. Cromwell Holme, employers' nominee, and Mr. J. Jagger, nominee of the Transport and General Workers' Union. The award is likely to be known before the end of the month.

**Manchester Transport Owners' Association.**—Certain alterations to the list of scheduled booking offices were proposed at a meeting of the Motor Coach section of the Manchester Transport (Owners') Association a few days ago, when the list of approved booking offices was reviewed in the light of the past season's working of the co-ordination scheme. These alterations will be submitted to the Manchester Watch Committee for approval. It was reported that an arrangement had been made with the Chief Constable so that on special occasions, such as football matches, when it is necessary to charge below the standard minimum rate of 2/6d., a special form of permit will be issued on application to the Chief Constable to each coach plying from a scheduled booking office.

**Liverpool Road Transport Employers' Conference.**—Protracted negotiations between the Liverpool and District Road Transport Employers' Conference and the Liverpool and District Carters' and Motormen's Union regarding the insertion in the working agreement of an optional clause whereby motormen engaged in up-country work should be paid on the accumulative week system and in return receive one week's holiday annually with pay, have not borne fruit. As a result the employers have terminated their agreement with the Union. It is understood that the employers had no option but to take this course, owing to the fact that their proposals were submitted to mass meetings of the men on three occasions and were rejected each time. The Road Transport Employers' Conference comprises representatives of the Liverpool Cart and Motor Owners' Association, Liverpool and District Short Cart and Motor Owners' Association, the Motor Transport Employers Federation, and the following trades:—Flour millers, wholesale provision merchants, coalowners, and seed, oil and cake dealers.

**Institution of Petroleum Technologists.**—The next General Meeting of members of the Institution of Petroleum Technologists will be held at the House of the Royal Society of Arts, John Street, Adelphi, London, W.C.2, at 5.30 p.m. on November 11th. Light refreshments will be provided at 5 p.m. for members and visitors attending the meeting. The offices of the Institution are at Aldine House, Bedford Street, Strand, London, W.C.2.

**New A.A. Headquarters in Kent.**—The Automobile Association has transferred its County Headquarters in Kent from High Street to Fanum House, London Road, Maidstone. The accommodation includes a handsome reception room for the use of members, and adequate arrangements have been made for dealing with all matters relating to home and foreign touring, the issue of routes, legal assistance and other A.A. services.

# Institute of Transport.

## Metropolitan Graduate and Student Society.

The opening meeting of the Session 1930-31 of the Institute of Transport Metropolitan Graduate and Student Society was held at the Institution of Electrical Engineers, London, on October 7th, last.

**MR. A. F. E. BELCHER,** Grad.Inst.T. (G.W.R.), chairman of the Society presided, and in opening the proceedings said he did not think he could let another moment pass without referring to the tragic death of Sir Sefton Brancker who was to have honoured the members with his presence that evening, and who only on the preceding Friday had written to the Secretary to the effect that he would have to undertake the journey to India in the R101. He was sure they were all agreed that the Institute of Transport and the Metropolitan Graduate and Student Society had lost a true and valued friend and their heartfelt sympathy went out to Sir Sefton Brancker's family in their sad bereavement.

They were honoured by having with them that evening Sir Arthur Stanley, the President of the Institute of Transport (applause), and as Sir Arthur needed no introduction he had much pleasure in asking him to address the members.

**THE HON. SIR ARTHUR STANLEY,** who was received with applause, said that on that his first appearance at any assembly of members of the Institute of Transport he desired to associate himself with what the chairman had said regarding the terrible disaster which had occurred.

When he received a list of those who had kindly signified their intention of being present that evening the first name he saw was that of Sir Sefton Brancker, and when later he saw that Sir Sefton was going to India his regret was very great that he was not to have the pleasure of seeing him with them that evening, and now his great regret was that Sir Sefton had to put off his engagement with the Institute and was not with them that night. Sir Sefton Brancker, Lord Thomson and the other brave men who lost their lives must have known when they were embarking on the voyage that there was in it a certain element of risk, but that counted as nothing in comparison with the knowledge and scientific results which they hoped to achieve from the voyage. They were, in the highest sense of the word, pioneers; they were of the same breed as the men who had made the British Empire, and they fell as truly in the service of their country and the world at large as did any of our gallant heroes during the war.

He thought that their Chairman in introducing him to the meeting threatened the members that he was going to deliver an address, and it was true that the chairman qualified that by saying that it was to be a short address (laughter). But he could assure the members that his remarks would not partake of anything so formidable as to be in the nature of an address.

He wanted to say only a few words to them that evening. He felt very greatly honoured when the invitation was extended to him to become the President of the Institute of Transport and to follow Sir Josiah Stamp and the other gentlemen bearing illustrious names who had filled the office of President. Perhaps he did not quite see why he had been selected for the honour, but he thought it might be because there was in the Institute, and he imagined also in the Metropolitan Graduate and Student Society, perhaps so large a preponderance of railway men that they wanted to choose somebody who was not a railway man. He could not claim the intimate knowledge all those present had or were acquiring of the actual niceties and difficulties of transport. For a good many years he had been President of the Tramways and Light Railways Association on the one hand, and Chairman of the Royal Automobile Club on the other, and he dare say that they were thinking that to be Chairman of the R.A.C. did not give him much claim to speak for transport. But he had been interested in the problems of transport, and it had been a very special pleasure to him when at the commencement of the Institute of Transport he found himself honoured by being elected one of their Vice-Presidents.

He was very pleased when the Institute of Transport was founded because he had seen the value of such Institutions. He had seen their value first of all in the Tramways and Light Railways Association.

Take the question of study, which he understood to be the real and main object of the Metropolitan Graduate and Student Society. It was quite certain that nothing was going to pay more those who indulged in study and research in transport. These were not very bright days, but he thought there was one thing that was certain, absolutely certain to go ahead, and must from the necessities of the case and that was all questions of transport.

He did feel that all who were engaged in the most fascinating study of transport could look forward, more he thought than people engaged in any other branch of industry or commerce, to the certainty that their profession was going not only to hold its own but was going to go ahead.

He had mentioned study. The other object of their Society was, he understood, to enable them to meet together and indulge in social intercourse and in getting to know one another. He was perfectly certain that social intercourse made things easier for them. They got to know one another and realised with whom they were dealing.

There was one thing which had always struck him in the transport world and that was that there seemed to be unnecessary and unwise competition between the various forms of transport. Of course in the days not so very many years ago, the railways had to a great extent a monopoly of transport, but new methods of transportation by water and by air had come along, and of course there was the road, and these, to a certain extent, had been looked upon as rivals and competitors. He believed that a Society such as the Metropolitan Graduate and Student Society enabled them to see that healthy rivalry was a good thing and that an undue and unnecessary feeling of competition was not good. It was very much better for the Students to learn, as they did in the Institute, to look upon transport as a whole, and instead of fighting one another to see how one means of transport could be worked in with another, and that he believed was one of the greatest services the Institute of Transport and the Graduate and Student Society could possibly render to the Community at large. He thought that all of those engaged in transport did not realise all the time that what they had really got was a commodity to sell, and that they wanted to put their goods in their shop window in a manner most likely to attract the attention of the passer-by.

He felt sure that if they all worked together, as it seemed probable now they were going to do in London, whether they liked it or not (laughter), if they worked together in a common class, not one particular class of transport, but in transport as a whole, he felt certain that the result not only to the community but to themselves was going to be very satisfactory.

He would like, in conclusion, to remind them of one thing and that was that the members of the Graduate and Student Society were the coming big men of the transport industry and would have the future of the Institute of Transport in their hands, and he did ask them to look upon the future of the Institute as a very serious and solemn trust as they would have the power of influencing all questions of transport which were so vital to the country and to our trade and commerce.

**THE CHAIRMAN,** proposing a hearty vote of thanks to Sir Arthur Stanley for his presence that evening and for his address, said that Sir Arthur had given them all food for thought and much help and encouragement to the Society.

The Metropolitan Graduate and Student Society was established in October, 1921, and in 1924 the membership totalled 207, but during the following three years the membership fell off and in 1927 it was as low as 109. But the Society had always been fortunate in possessing an active committee and a very energetic Secretary in Mr. G. F. King, and at present the membership was 214, the highest on record. He would like to record also the spendid assistance the Society had always received from Mr. Winter Gray and his staff (applause).

The primary object of the Metropolitan Graduate and Student Society was the promotion and encouragement of a knowledge of transport, and during each month of the session papers were read dealing with as wide a scope as possible—railways, docks, canals, roads and, by no means last, air transport, and he was sure that it would be found that the papers to be read during the forthcoming session were very varied and in some cases the lectures would be illustrated with lantern slides. The papers read before the Society created a considerable amount of discussion and brought the younger members of the Institute into closer touch with one another, which was, of course, most desirable, as it was hoped that these young men would hold important positions in their great industry.

Another activity of the Society was to arrange visits from time to time to various transport concerns and this gave members the opportunity of seeing transport operations under actual working conditions. Several members of the Society had been awarded the silver medal of the Institute and no less than fifty members had been successful in passing examinations of the Institute, and those who had not passed the examination should go right ahead with their studies and sit for the appropriate examination in due time.

The vote of thanks was seconded by Mr. A. G. Course and carried with acclamation.

# Scottish Motor Exhibition.

## November 7th to 15th.

The 29th annual Scottish Motor Exhibition will be held at Kelvin Hall, Glasgow, from November 7th to 15th next. We print below particulars of some of the exhibits in the Commercial Vehicle Section, Garage Equipment Section and Accessories and Components Section.

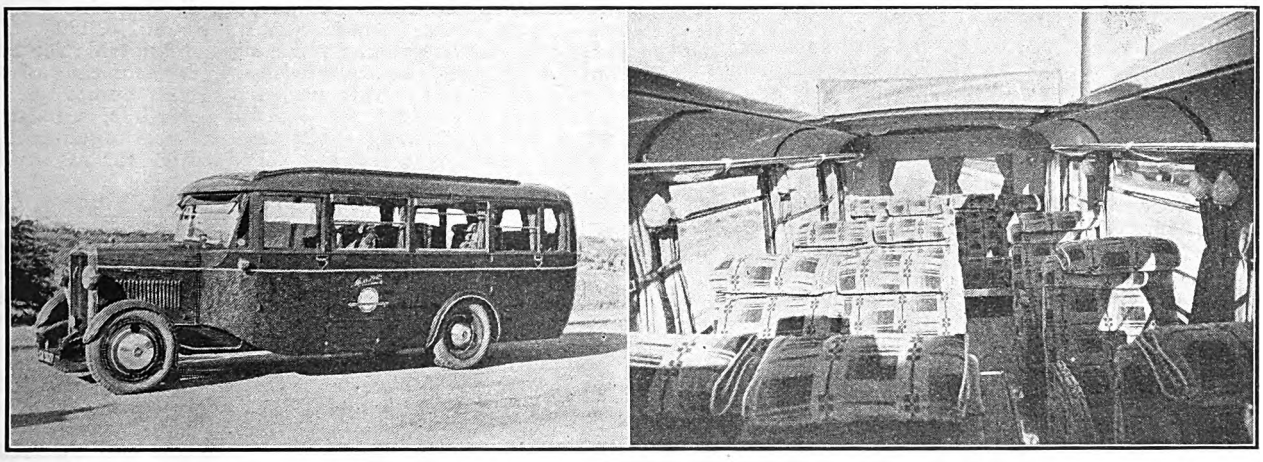
**Armour & Melvin, Ltd.,** Newlands Garage, Newlands, Glasgow. Stand No. 104. The exhibit comprises the 1931 Singer Junior van, and it is anticipated that other Singer commercial models will be shown, but no particulars were decided upon at the time of going to press.

**William Arnold,** Upper Brook Street, Manchester. Stand No. 115. The exhibits comprise an A.E.C. "Regal" chassis with "Arnold" rear entrance, 32-seater bus, with special streamline front, also an Albion chassis with "Arnold" 32-seater front entrance bus.

well "Crimsangere" oil for gears and back axle—a great advance on ordinary gear oil for worm-drive lubrication. Speedwell constant feed lubricator and oil storage equipment.

**Challenge Oil Co., Ltd.,** Howard Works, Stoke Newington, London, N.16. Stand No. 199. The exhibits comprise Super Challenge motor oils, Challenge motor oils and greases, Petroleum jelly and French chalk.

**Commer Cars, Ltd.,** Luton. Stand No. 113. The exhibits comprise two "Invaders," one of which is a



EXTERIOR AND INTERIOR VIEWS OF MR. MICHAEL ANTONELLI'S "COMMER INVADER" COACH.

**Associated Equipment Co., Ltd.,** Windmill Lane, Southall, Middlesex. Stand No. 134. The exhibits comprise an A.E.C. "Regal" 32-seater rear entrance, long distance coach; bodywork by Duple Bodies & Motors, Ltd. An A.E.C. "Mammoth" 7/8 ton flat platform lorry, sold to G. Paterson & Sons, of Haddington, and an A.E.C. 90 h.p. 6-cylinder heavy oil engine (manufactured under Acro licence). An illustration of this engine appears in our report of the paper read by Mr. G. Vane Morland at the Annual Congress of the Municipal Tramways & Transport Association.

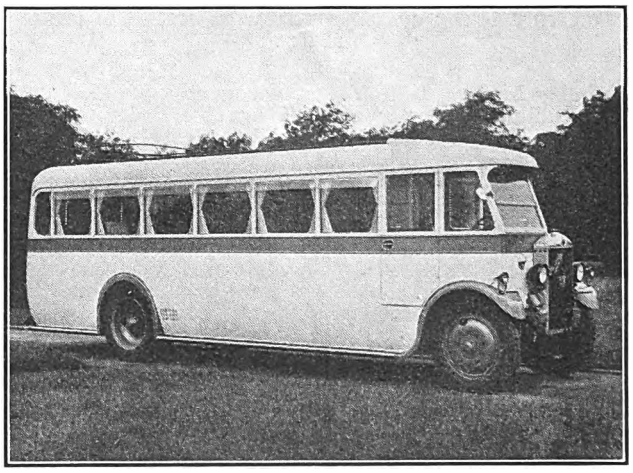
**Avon India Rubber Co., Ltd.,** 120, Howard Street, Glasgow, C.1. Stand No. 167. The exhibits comprise Avon-Seiberling giant pneumatic tyres, heavy duty motor tyres, normal motor tyres, Democrat motor tyres and motor trade sundries.

**S. F. Bowser & Co., Inc.,** Windsor House, Victoria Street, London, S.W.1. Stand No. 15. This firm are showing a very wide range of petrol and oil equipments suitable for modern service station, garage, commercial and private use. Their exhibits are to include the latest types of petrol metering dispensing units approved by H.M. Board of Trade, a special one-gallon piston-type petrol pump for the convenience of small commercial users. Advantage is being taken of the Exhibition to introduce to the public and the trade alike the latest Bowser lubricating oil fountain. This is a four point unit but has all the advantages of the well-known Bowser eight point fountain. A point that will appeal to many users is that this new equipment is an Empire product—being built by S. F. Bowser Company, Ltd., in Toronto, Canada.

**British Goodrich Rubber Co., Ltd.,** 50, Pall Mall, London, S.W.1. Stand No. 154. The exhibits comprise British Goodrich "Gilt Edged" super pneumatic tyres, this being the firm's super line recently introduced on the market, which has created considerable interest; standard pneumatic tyres, accessories for the motor industry and Woodmilne foot pumps.

**British Oil and Turpentine Corporation, Ltd.,** 71, Commerce Street, Glasgow, C.5. Stand No. 158. The exhibits comprise a complete range of Speedwell motor oils including Speedwell "A," "Sans Egal," "Sans Egal Zero," "White Ideal" (racing oil), "Nuford," "Z" (Medium) Commercial, "Heavy Lorry," etc. Speedwell "Crimsangere" (Light) for chassis lubrication and Speed-

coach, the property of Mr. Michael Antonelli, Primrose Garage, Dunoon, and the other "Invader" is a bus belonging to Mr. Scott, Woodside Garage, Aberdeen, in addition they are showing a G2 lorry. Mather & Son are exhibiting on their own stand an "Invader" sun-saloon, the property of Mr. Walker, of Aberdeen, also a G.6 type (6/7 ton) three-way tipper and a G.4 type brewer's lorry and G2 type (40/50 cwt.) end tipper. An "Avenger" long distance coach will also be shown on Chas. Roberts & Company's stand and a G.3 type (3 ton) drop-sided lorry will be seen on Messrs. Bryson Bros. stand; on the same stand will also be seen an "Invader" and "Avenger" chassis whilst the G.2, G.4. and G.6 vehicles will be available for demonstration purposes.



A CROSSLEY 6-CYL. DE LUXE COACH.

**Crossley Motors, Ltd.,** Gorton, Manchester. Stand No. 144. The exhibits comprise a 50-seater double decker, an example of the Crossley "Condor" double decker, as supplied to such Corporations as Leeds, Rochdale, Aberdeen, Manchester, etc., will be on view. The body is the

Digitized by Google

Crossley "Lowbridge" type with an overall height of approximately 13 ft., accommodating 50 passengers, 24 in lower saloon and 26 in upper saloon. A 32-seater six-cylinder Service omnibus; this is the standard 32-seater Crossley service omnibus. The chassis is the well known six-cylinder type. The 32-seater body is upholstered in leather throughout. Special cantrail ventilation is provided. Front entrance with rear emergency door. A 28-seater six-cylinder de luxe coach, this is upholstered in moquette and has all the latest modern features. A 38/110 h.p. six-cylinder single-deck chassis is also shown.

**Dunlop Rubber Co., Ltd.,** Fort Dunlop, Birmingham. Stand No. 177. A new and improved Dunlop Clipper tyre will be a feature of this firm's exhibit and there will also be a display of the "Fort" Dunlop covers and Dunlop standard tyres. All the latest types of Dunlop wheels, including the bolt detachable disc, steel artillery and wire wheels, will also be shown. The Dunlop Company is also making a feature of commercial vehicle tyres, the well-known giant pneumatic and giant balloon being exhibited, as well as the Trakgrip—for soft and marshy ground—and a range of solid tyres.

**Englebert Tyres, Ltd.,** 162, Great Portland Street, London, W.1. Stand No. 155. The exhibits comprise a full range of the firm's giant pneumatic tyres for commercial vehicles, in both the high pressure and balloon types.

**A. & D. Fraser,** 39/49, Bothwell Street, Glasgow, C.2. Stand No. 102. This firm being distributors for Morris trucks the exhibits will comprise a Morris-Commercial 32-seater forward-control "Dictator" bus; one-ton standard van; standard 30-cwt. chassis, with special lorry body built by themselves, and a Morris-Commercial 35/40 chassis mounted with petrol carrying tank wagon.

**Glasgow & Paris Motor Garage and Repairing Co., Ltd.,** Avenuepark Street, Maryhill, Glasgow. Stand No. 132. The exhibits comprise a Latil 6-ton chassis type B5, Latil 10-ton tractor with winch, Latil 5-ton tractor with trailer and a Latil cattle float, also a 20/30-cwt. "Delahaye" delivery van and "Delahaye" 15-cwt. traveller's brougham.

"LATIL" 10-TON CHASSIS FITTED WITH SPECIAL ADHESION DEVICE.

**Halley Motors, Ltd.,** Yoker, Glasgow. Stand No. 129. The exhibits comprise a 37/95 h.p. 6-cylinder De Luxe Halley "Chieftain" 26-seater pullman coach. Bodywork by Thomas Harrington, Ltd., Brighton. A 30/85 h.p. 4-cylinder standard Halley "Conqueror" 36-seater rear entrance omnibus, bodywork by W. J. Smith & Co., Ltd., West Bromwich. A 30/85 h.p. 4-cylinder special forward control 5-ton Halley lorry model E.F.2., lorry body and cab by exhibitors. A 30/85 4-cylinder 4-ton Halley chassis model P.9.H. A 26/40 h.p. 4-cylinder 3-ton Halley lorry model D.F.2, lorry body by exhibitors. A 24/36 h.p. 4-cylinder Halley refuse collection vehicle, dustless refuse collection body and twin telescoping hydraulic end tip gear by Bromilow & Edwards, Ltd. Halley 40/115 h.p. 6-cylinder engine type 10H., and a 4 speed and reverse gear box as fitted to all Halley single deck bus models.

**Jack & Renwick,** West Silvermills, Edinburgh. Stand No. 114. This firm, who are distributors for Scotland of the International Harvester Co., of Great Britain, Ltd., are exhibiting a model AW-2 "Six Speed Special" chassis with 4-cylinder engine, 30-cwt. carrying capacity. A model S-24 chassis, 4-cylinder engine, 2-ton carrying capacity. A model A5 chassis, 6-cylinder I.H.C. engine, 4-ton carrying capacity (or 26 seats). Model "20" Industrial tractor, pneumatic tyres all round, 30 by 5 front, 40 by 8 rear, sub frame and spring hitch, cab with front and rear mudguards, etc.

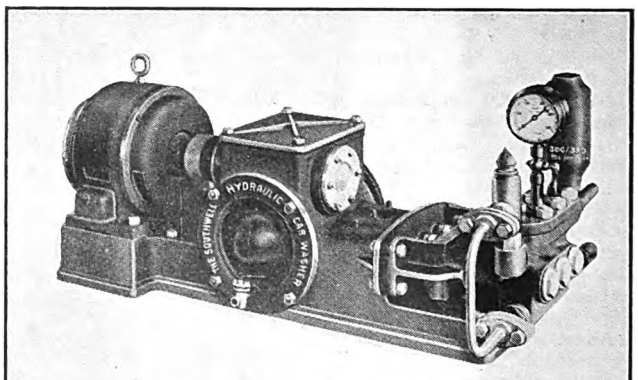
**Chas. Macintosh & Co., Ltd.,** Cambridge Street, Manchester. Stand No. 165. The exhibits comprise a display of solid N.A.P. and truck tyres.

**McLay's Garage, Ltd.,** Kirkintilloch. Stand No. 123. This firm being distributors of Morris commercial vehicles their exhibits will comprise a new 15-cwt. Morris commercial van with new radiator, streamlined dash and body, larger body, enclosed cab, 5 lamps, 12 volt starter and lighting set, mechanical tyre pump, etc. A new improved one-ton Morris Commercial standard van. A new improved 35/40-cwt. commercial truck with special coach-built body and a new 50-cwt. Leader chassis.

**Price's Patent Candle Co., Ltd.,** Battersea, London, S.W.11. Stand No. 203. The exhibits comprise a complete range of their "Motorine" high class lubricants. Handy Motorine taps for the use of purchasers of oil in drums. "Zero" radiator Glycerine, for which this firm have been appointed sole selling concessionaires, will also be exhibited.

**Redline Motor Spirit Company, Ltd.,** Waterloo House, 16, Charles Street, London, S.W.1. Stand No. 170. The exhibits comprise pumps and equipment suitable for bulk storage of petrol, together with a number of cans of the various brands of petrols marketed by this Company. In addition there will be a section for motor oils, included in which will be exhibited oil storage cabinets together with sample drums marketed, also there will be various sample grade oils.

**Charles Roberts & Co., Ltd.,** Horbury Junction, Nr. Wakefield. Stand No. 105. The exhibits comprise a single deck coach of the service type on an A.J.S. chassis, accommodating 32 passengers. This is equipped with an emergency door and all the arrangements inside comply with the transport regulations. The second vehicle shown is a single deck 28-seater long distance coach on a "Commer" chassis. Special attention has been given to the design of this vehicle so that it will comply with the new Road Act Regulations.



THE "SOUTHWELL" WORM DRIVE HIGH PRESSURE CAR WASHER EXHIBITED BY SIMPKINS ENGINEERING WORKS.

**James Robertson,** 95, West Nile Street, Glasgow, C.1. Stand No. 10. The exhibits will include B.E.N. 2-Gun washer, polisher and axle stands. Black & Decker drills, ½ in. and ⅝ in. refacers, De Luxe engine kit, precision engine kit, board of decarbonishing equipment, grinders and sander. Bradbury 8-ton and draw presses. Tecalemit lubrigun. Weaver ambulance, cranes; tow pole; hydraulic, Lo-way and Hi-lift jacks; 28-ton press; brake reliner; rim stripper; wheel aligner; drain pan bucket pump; drive-over; and rotary hoist.

**Rossleigh, Ltd.,** 32, Shandwick Place, Edinburgh. Stand No. 126. The exhibits comprise a Dennis 2-ton forward drive lorry, Dennis 30-cwt. van, Dennis 6-ton forward drive lorry, Dennis 6-cylinder Dart coach and a Dennis 6-cylinder Lance or Arrow coach.

**Shell-Mex, Ltd.,** Shell Corner, Kingsway, London, W.C.2. Stand No. 204. The exhibits comprise the new automatic Shell visible pump, sealed Shell motor lubricating oil cabinets, and other exhibits illustrate the use of Shell motor spirit, Shell lubricating oils and car polishes, also specimens of oils and packages.

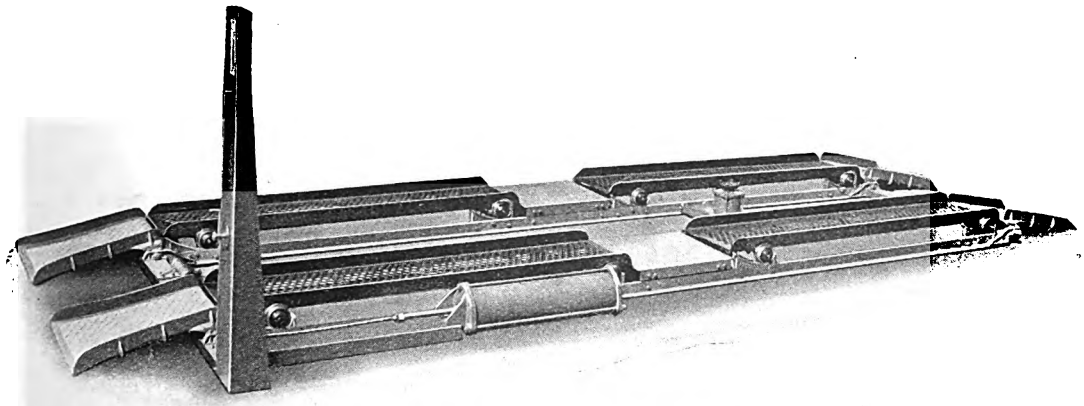
**Simms Motor Units, Ltd.,** Percy Buildings, Gresse Street, Rathbone Place, London, W.1. Stand No. 187. The exhibits comprise the well known Simms products:—High tension magnetos, battery ignition, flexible magneto couplings, flexible dynamo couplings, flexible couplings

Digitized by Google

for all purposes. "Jurid" flexible couplings for cardan shaft drives. Magnetic petrol gauges, magneto conversion sets for Fords. Magneto spare parts, suitable for Simms and practically all makes of magnetos. Impulse starter couplings, patent "Vortex" air cleaner, magnetic oil filter, super-oiler for top cylinder lubrication and automatic advance and retard.

Simpkins' **Engineering Works,** Gedling, Nottingham. Stand. No. 11. The exhibits comprise a two gun "Southwell" worm drive high pressure car washer. In this car washer all working parts are totally enclosed. Automatic lubrication from sump in crankcase, works silently. The "Southwell" Junior one gun car washer is suitable for the smaller garage and the private motor owner. "Southwell" Super Electric. (*For illustration see page* 20.)

Stobcross **Motor Co., Ltd.,** Minerva Street, Glasgow. Stand No. 141. The exhibits comprise a fairly comprehensive range of Bean commercial vehicles.



THE TECALEMIT FOUR WHEEL BRAKE TESTER.

**Tecalemit, Ltd.,** Mitre House, Scrubbs Lane, Willesden, London, N.W.10. Stand No. 14. The exhibits comprise a standard bulk lubricating compressor, knapsack lubricating compressor, positive feed compressor, airline Lubrigun, Electrogun, airline Lubrigun and air compressor combination, giant pneumatic lubricating compressor, electric gear flusher, penetrating oil sprayer (hand operated), penetrating oil sprayer (air operated), oil delivery unit, gun filler attachments, Brakometer (4 wheel brake tester), car ramps, lifts, Autolave car washer, garage Highlift Jacks, also systems of high pressure lubrication, lubricant and other accessories.

John I. Thornycroft & **Co., Ltd.,** Thornycroft House, Smith Square, London, S.W.1. Stand No. 146. The exhibits include a double deck bus mounted on their "BC" Forward control double deck chassis, also a new 4-ton lorry, and a 50-cwt.

**John C. Todd,** 14, Mayfield Road, Edinburgh. Stand No. 140. The exhibits will comprise a selection of Reo commercial motor vehicles.

**Town & County Motor Garage, Ltd.,** 19, Justice Mill Lane, Aberdeen. Stand No. 108. This firm who are distributors for Willys Overland Crossley vehicles exhibits will comprise a 30/35-cwt. Manchester with tipping body. Willys Commerce saloon. Willys Commercial 30-cwt. coach body by Mumford, Ltd., and Manchester long wheel base 2-tonner.

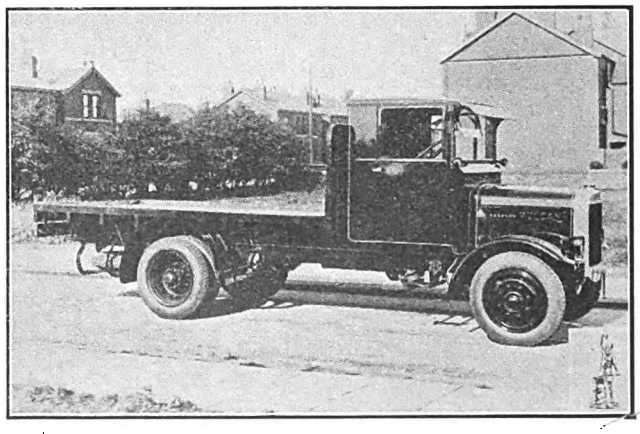
**Vulcan Motor & Engineering Co. (1906), Ltd.,** Crossens, Southport. Stand No. 131. The exhibits comprise the Vulcan 50/60-cwt. model which can also be obtained with either normal or forward control, it is shown as a forward control detachable sided lorry. Vulcan 40/45-cwt. forward control model (which is also obtainable with normal control) is shown as a detachable sided lorry. Vulcan 30/35-cwt. normal control model (also obtainable with forward control) is shown as a hand screw tipper. The Vulcan "Emperor" double deck omnibus chassis which is fitted with the Vulcan "Monarch" 6-cylinder engine. A smaller edition of this engine rated at 37.2 h.p. is fitted in the "Prince" 32-seater omnibus chassis.

**C. C. Wakefield & Co., Ltd.,** Wakefield House, 30 & 32, Cheapside, London, E.C.2. Stand No. 178. The exhibits comprise a full range of "Castrol" oils and greases. Four new Wakefield products will be shown:— Castrol "Swanshot ST," Castrol "Unijoynt" compound, and Castraulic. For chassis lubrication by oil gun, the Wakefield patent oil gun has been produced, this is 16½ in. long. A display of Wakefield grease guns and nipples, grease canisters, oil tanks, oil drums, taps and stands, and every modern lubrication accessory including "Oilit," the Wakefield light lubricating and rust preventing oil for magnetos and all other delicate car mechanisms.

**Westfield Autocar Co., Ltd.,** 108/110, Lothian Road, Edinburgh. Stand No. 127. The exhibits comprise one Morris Commercial "Dictator" coach chassis, Morris Commercial Leader truck, 35/40 cwt. van and a one-ton van. Also one Morris 8-cwt. van. This firm are distributors for Morris Commercial Cars, Ltd., for the City of Edinburgh (with the exception of Leith) also the counties of Midlothian, Haddington and Linlithgow. Also distributors for Morris Motors, Ltd., for the whole area above mentioned, including Leith.

We regret that we are unable to give any information about some of the well known vehicles which will be exhibited but at the time of going to press these had not come to hand. Amongst such firms should be mentioned T.S. Motors, Ltd., London and Maidstone, Stand No. 109. Maudslay Motors, Ltd., Coventry, Stand No. 111. Daimler Co., Ltd., Coventry, Stand No. 130. Leyland Motors, Ltd., Leyland, Lancs., Stand No. 142. Bean Cars, Ltd., Tipton, Staffs., Stand No. 145.

A VULCAN "EMPEROR" 51-SEATER DOUBLE-DECK OMNIBUS.



A VULCAN 50/60 CWT. LORRY.

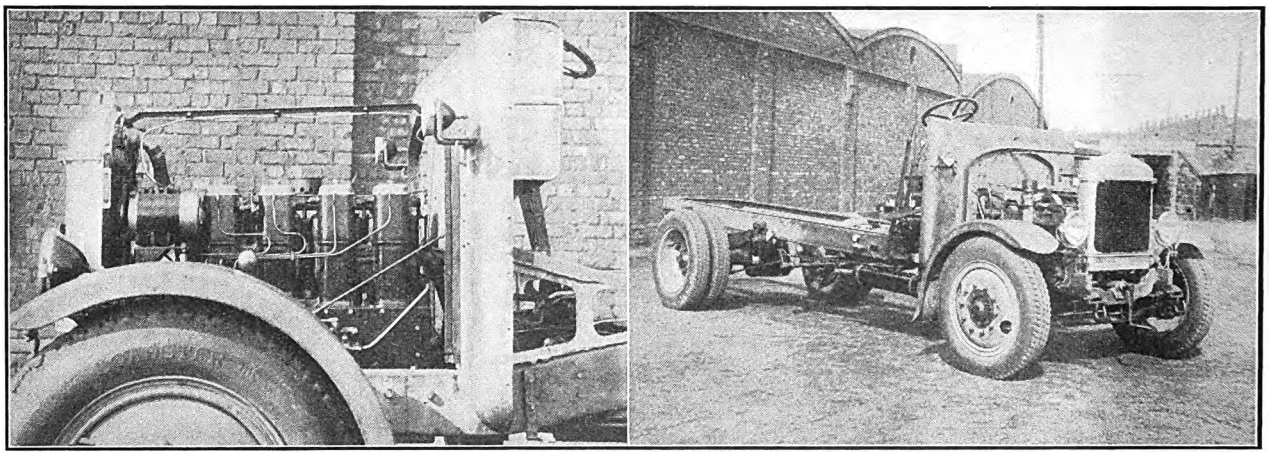
Digitized by Google

Amongst firms showing in the Accessories and Components Section whose details have not been received are the following:—Henley Tyre & Rubber Co., Ltd., London, Stand No. 152. Chloride Electrical Storage Co., Ltd., Manchester, Stand No. 153. Goodyear Tyre & Rubber Co. (Great Britain), Ltd., Wolverhampton, Stand No. 166. Palmer Tyres, Ltd., London, Stand No. 180. Glico Petroleum Co., Ltd., London, Stand No. 181. Anglo-American Oil Co., Ltd., London, Stand No. 190. Accessories (Edinburgh), Ltd., Edinburgh, Stand No. 191. Sternol, Ltd., London, Stand No. 195. Pirelli, Ltd., London, Stand No. 196.

# A New Heavy Oil Engined Commercial Vehicle.

## The Pagefield-Gardner 5-6 ton Diesel Lorry.

Messrs. Walker Bros. (Wigan), Ltd., makers of the Pagefield Commercial Vehicles, have recently placed on the market a new 5-6 ton heavy oil engined vehicle, called the Pagefield-Gardner Diesel Lorry. With the exception of the power unit, the chassis is a standard Pagefield throughout. The following is a brief specification, fuller details of which we hope to give in our November issue. The engine installed is a Gardner 4-cylinder 36 H.P. of the heavy oil consuming compression ignition type, having a bore and stroke of 4¼ in. × 6 in. respectively. The fuel pump is of the Bosch type. Forced fuel lubrication is employed, circulation of cooling water is by pump. Transmission of engine power is through a large diameter Ferodo faced cone clutch to a 4-speed and reverse gear box, thence by propeller shaft to a live back axle of the double reduction type, with spiral bevel gear for the first and plain spur gears for the second. Two sets of brakes are provided; the foot brake operating on a drum mounted on the tail-shaft of the gear box, the hand brake operating internal-expanding shoes in drums attached to each rear wheel. The frame is mounted upon semi-elliptic springs fore and aft. Road wheels are of steel mounted upon pneumatic tyres 38 in. × 7 in. front and rear. Wheel base and track dimensions are 14 ft. 9 in. and 5 ft. 9 in. respectively. Overall length 21 ft. 6 in., overall width 7 ft. 5 in. Total length of body space provided is 14 ft. 0 in.



THE PAGEFIELD-GARDNER 5-6 TON DIESEL LORRY.

Chassis price complete with tyres, lighting equipment and mechanical tyre pump, £1325.

# Traffic Control.

The continuous growth in the number of motor vehicles in this country is gradually intensifying the problem of regulating and directing motor traffic, carried out to a large extent in country districts by the road patrols of the principal motoring organisations. Tentative suggestions have been made from time to time for the formation of a new and official body of men to be engaged solely as traffic police, but nothing has ever come of them, and the idea has been condemned in certain influential quarters. The problem of handling adequately the tremendous amount of traffic on our main roads remains, therefore, partially unsolved.

Where traffic points are under the control of the patrols of the motoring organisations, the work is efficiently carried out. This is borne out by the fact that the Royal Automobile Club has provided, at the request of the police authorities, R.A.C. Guides to undertake the work of traffic regulation, in twenty-three towns in different parts of the country.

That there are still very many cross roads and other points where a traffic regulator of some description is required is obvious. The police cannot provide the necessary number of men to staff all such points, and as a consequence, the R.A.C. is continually receiving requests to "station a man here" or "post a man there."

During the past six months, the R.A.C. has been asked to provide patrols at a very large number of different points. It must be obvious, however, that there is a limit to the resources of any organisation supported by voluntary subscriptions. The R.A.C. from the funds provided by its members, maintain something like a battalion of men on the road; at least fifty per cent. of whom are engaged on traffic control. The whole of the motoring public takes advantage of, and profits from, the service thus provided, but only a certain proportion pays anything towards its upkeep.

As an organisation very deeply concerned in the question of traffic regulation and direction, the R.A.C. would point out to motorists generally, that increased support would permit of practically every important traffic point in the country being taken over by a patrol, with a consequent improvement of very great magnitude in the safety of the roads.

## League of Nations and Transport.

The League's Committee on Communications and Transit adopted several resolutions and reports to the Council. The Committee proposes the summoning of a European Conference for the purpose of concluding an international agreement on the unification of road signalling, the taxation of foreign motor cars and an agreement between the customs authorities to facilitate the cancellation of undischarged or lost triptychs. The Committee emphasised the desirability of gradually suppressing level crossings. As regards air transport the Committee recommends greater freedom for regular international transport and, further, that the present pool system of air co-operation should be extended and improved by bilateral or multilateral agreements with a view to eliminating unfair competition and increasing the economic efficiency of international air traffic.

# Olympia Motor Show.

## October 16th to 25th.

### What some of our Advertisers are Showing.

**Automotive Products Company,** Brock House, Langham Street, London, W. 1. Stand No. 235. Exhibits comprise:—Timken Axles, Hercules Engines, Hannum Steering Gears, Borg and Beck Clutches, Purolator Oil Filter, Autoduct Link-V-Belting, Cleveland Graphite Bronze Bushings.

New Type Borg & Beck Single Dry Plate Clutch, embodying pressed steel cover. Included in this exhibit is new Drive Plate Assembly known as the Star Type, which has a flexible centre of new design incorporated, and has been developed primarily to help overcome tortional and periodical vibration of the engine and transmission.

Purolator Oil Filter. This is an instrument of simple and robust design, and should appeal both to the manufacturer and private owner, inasmuch as there is no special knowledge required to instal same. These instruments are being made in the Leamington factory, and are extremely reliable and at the same time moderate in price.

**Avon India Rubber Company, Ltd.,** Melksham, Wilts. Stand No. 472, Grand Hall Gallery. Chief interest in the Avon Programme for 1930-1 centres in the recent announcement of a "technical liaison" between this old-established British house—tyre and rubber manufacturers since 1885—and the Seiberling Rubber Company of Akron, U.S.A. The Sieberling tyre has a world-wide reputation and in effect this new association opens up a British source of supply for it, since Avon Tyres are now being made to Avon-Seiberling specifications and largely under Seiberling processes. Motorists will be quick to appreciate the importance of this announcement when it is remembered that the Seiberling Company are acknowledged leaders in the tyre world and command exceptional resources of research, manufacture and test. Mr. Frank A. Seiberling himself is an outstanding pioneer of the industry, who made his first tyre in 1898 and has since produced more than 50,000,000.

With such a reinforcement of manufacturing experience and advanced technique, allied with all that is best of British material and workmanship, Avon Tyres cannot fail to be better than ever and to build up a rapidly-increasing demand. The Avon Company remains an independent entity, employing wholly British capital and labour under its own Board of Directors.

Users of Avon car tyres will be glad to known that there are no "outward and visible" changes in the range. Tread patterns, for example, are unaltered and the Olympia exhibit features chiefly the broken triple-ribbed pattern with elongated shoulder-buttresses, introduced at last year's Show for the well-base balloon group. These tyres are particularly handsome and well proportioned and there is choice of a standard grade for average touring purposes or a "Heavy Duty" type for arduous service.

A new and unique tyre of quite unusual interest is the "Road-Racing" Cover, offered in certain sizes ranging from 27 by 4.00 to 31 by 5.25. These tyres were used by Mr. Victor Gillow when he won the Saorstat Cup (first day's race) in this year's Irish Grand Prix, and their tenacious road-grip undoubtedly assisted the "spectacular cornering" which was such a sensational feature of his driving. Avon Road-Racing Tyres have been severely tested at Brooklands, too. Their casings are of immense strength and all component parts are highly heat-resistant.

Rubber Sundries and Accessories form attractive features of the display and there is also an instructive showcase of tyre sections at various stages of the building-up process, revealing those "hidden treasures of quality construction" which are so cleverly explained in "Tyres —by Avon," a 40-page photogravure book of valuable tyre data, of which visitors may have a complimentary copy on request.

**Chloride Electrical Storage Company, Ltd.** Stand No. 446. Batteries for starting, lighting and ignition on motor cars are displayed by The Chloride Electrical Storage Company, Limited, makers of the famous Exide batteries, who occupy Stand No. 446 in the Gallery. The Chloride Company's factory at Clifton Junction, near Manchester, is the largest battery making plant in the British Empire. At Olympia there are shown Exide Monobloc batteries in moulded multi-compartment containers, designed both for mounting on the running board and for chassis fitting. The running board types are fitted with nickel-plated holding down bolts and moulded lid, and are of minimum weight and bulk for a given capacity. The smart finish is everything that can be desired for running board mounting, and enables the expense of an outer polished wood box to be dispensed with. Electrically, and in internal design, the Monobloc batteries are identical with other Exide types, and possess the abundant engine starting ability which has made Exide batteries famous. In addition, they are fully capable of meeting all the lighting, ignition and other requirements imposed by modern accessories.

**Coventry Chain Company, Limited,** Spon End Works, Coventry. Stand No. 425. The Company's exhibits comprise:—**Two six-cylinder Engines,** on which duplex Roller chains are used to drive the camshafts and auxiliaries. Both engines are of the overhead valve type and exemplify very clearly the adaptability of the chain drive, since in one the camshaft is situated in the crank-case, and in the other it is overhead. Typical Chain Drives for cam and auxiliary shafts, as fitted by English and Continental automobile manufacturers. Samples of single Roller, duplex Roller, triplex Roller, quadruplex Roller, and Inverted Tooth Chains. Samples of replacement Chains for American and Continental automobiles. Automatic Tensioners for camshaft and auxiliary drives. Chain Couplings for auxiliary shafts and accessories. Cutters for the machining of Roller and Inverted Tooth Chain Wheels.

**Henley's Tyre & Rubber Co., Ltd.** Stand No. 468. There will be exhibited:—Henley Green Line Balloon Tyres with buttressed walls—the latest in tyre construction. Henley Central Rib Pattern Reinforced Balloon and Heavy Duty Tyres with buttressed walls. Medium Pressure and High Pressure Tyres in Central Rib Pattern. The new green Henley Inner Tubes, ring shaped, in addition to the popular priced red Inner Tubes.

**M.C.L. and Repetition, Ltd.** Stand No. 225, Gallery. There will be on view typical sets of Lighting and Starting Equipment. Dynamos and Starting Motors of various sizes covering all sizes of engines, together with suitable Switchgear Lamps and Batteries will be displayed. In addition a Running Set will demonstrate the functioning of the various items of the Set, particularly the M.C.L. Automatic Controller which regulates the charging of the Dynamo to suit the needs of the Battery. Headlamps will be demonstrated embodying Twin Filament Bulbs to meet the non-dazzle problem. Another demonstration will show an M.C.L. Starting Motor turning over a modern car engine from rest. The M.C.L. Starting and Lighting Equipment will be found fitted to many of the Engines exhibited in the Marine Section. Apart from the design of special Switch Gear and the elimination of all Aluminium Parts on the Dynamos and Starters, the equipment follows the general principles of the well known M.C.L. Car Lighting Equipment which employs an Automatic Control for reducing the output when the Batteries are fully charged.

**Pyrene Company, Limited,** Brentford, Middlesex. Stand No. 353. Exhibits comprise:—Pyrene Fire

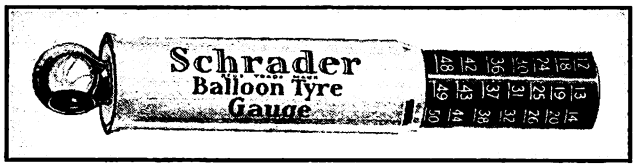
THE PYRENE FIRE EXTINGUISHER.

Extinguisher. The latest improved model embodies a double-acting rotating pump which enables it to be operated in any position. It does not depend on air or gas pressure. Projects a powerful continuous jet of fire killing liquid, which contains no acid and is non-damaging. No more liquid than is necessary to put out the fire need be used. The Pyrene Extinguisher is easily refilled. "Standard" Model in Polished Brass, and Nickel, Black or Chromium Plated finish. The "Junior" Model for Light Cars. Operates on the same principle and is supplied in Nickel or Chromium Plated finish. Both Models supplied filled and complete with Bracket. Phomene Fire Extinguisher. Projects foam on the surface of burning liquids which completely blankets the flames.

Digitized by Google

Particularly suitable for the protection of Garages, Oil Stores, and other places where inflammable liquids are used or stored in bulk.

**A. Schrader's Son, Inc.** Stand No. 260, National Hall Gallery. The Schrader tyre valve will be shown in its many and varied forms suited to different classes of use, from the smallest of cars to the heaviest of bus and goods vehicles. The principle embodied is the same throughout,



THE SCHRADER BALLOON TYRE GAUGE.

and spare "insides," interchangeable in all cases, will be shown as available to motorists in neat cases containing half-a-dozen ready for instant use. A large range of accessories for the Schrader valves will be on view, these including angle extensions for greater convenience in inflation, special pump connectors and a valve repair tool. Another and equally well known speciality is the Schrader tyre pressure gauge, which also will be shown in various forms, calibrated for low, medium or high pressure tyres. One model is of special appeal to garage proprietors; it has a dual "footing," or end for application to the tyre valve, and calibrations in one pound graduations from 10 to 60 lb. in one case and in five pound graduations for 60 to 160 lb. in the other case, thus making one and the same gauge suitable for use with all kinds of tyres, from those of a pedal cycle to the giant pneumatics of a 10-ton lorry. Garage proprietors are also catered for in a cabinet for counter display known as the Reddy Seller; shaped externally to represent a large Schrader pressure gauge it contains shelves for a variety of valves, gauges and valve accessories.

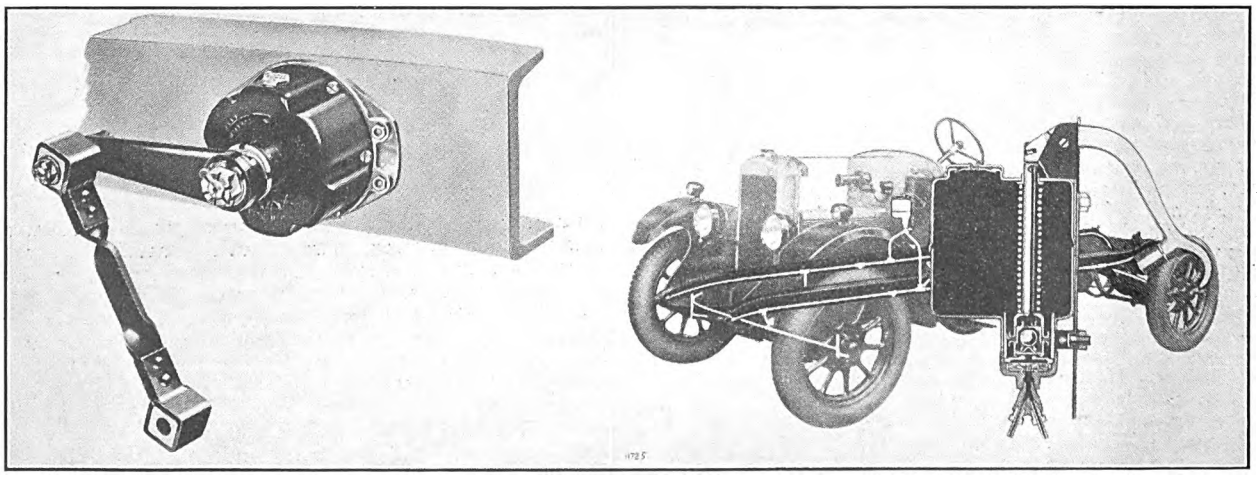
**Shell-Mex, Ltd.** Stand No. 210. The Shell Stand this year has been devoted entirely to the reception of our visitors. The Shell representatives will be pleased to meet you, and discuss any problems appertaining to the lubrication or fuelling of your car, and any other points dealing with the famous Shell products. There will be a full range of literature dealing with the motor car, and lubrication charts of various makes of cars can be had on the Stand.

**Skefko Ball Bearing Co., Ltd.** Stand No. 143. The various types of Bearings exhibited are as follows:—The S.K.F. Single Row Deep-groove Non-filling Slot type of Ball Bearing capable of taking combined radial and thrust loads; the S.K.F. Single Row Cylindrical Roller Bearing designed for dealing with heavy loading at high speeds; the S.K.F. Taper Roller Bearing which type is used extensively for automobile front hubs and other applications; S.K.F. Magneto type Ball Bearings and S.K.F. Steel Balls. Special section drawings showing methods of application of various types of Ball and Roller Bearings to automobile components are also exhibited.

**Tecalemit, Ltd.,** Scrubbs Lane, Willesden, N.W.10. List of Exhibits on Accessories Stand No. 347:—Tecalemit Systems of Central Lubrication. High Pressure Lubricating systems (Tecalemit, "Tecazerk," "Alemite," "Dot," "Ex-a-gun," and "Lub" Patents. Tecalemit Automatic Guns types 4A, 3A, 2A, etc. (pressure 5,000 lbs. per sq. in.). Tecalemit "Hook-on" guns, type T.26 and No. 1. "Tecazerk" "push-on" type guns, types 4B, 3B, 2B, 7MC, 10MC, etc. (pressure 5,000 lbs. per sq. in.). "Alemite" Guns. "Lub" Guns. "Dot" Guns. "Ex-a-Guns." Junior Lubricating Compressors. Appropriate Nipples for all above systems, extensions, elbows, "Quick-fix" nipples, etc. Tecalemit Pure Solidified Oil in "Easy Filler" tins, 4 ozs., 1 lb., 2 lbs., and 5½ lbs. Type R.B., H.M.P. Non-Separator Lubricant in "Easy Filler" tins and bulk. Tecalemit Special Lubricant, for Hypoid Gears. Tecalemit "Tecraphine," Graphite Lubricant in "Easy Filler" tins and bulk. Tecalemit Central Lubrication Oil. Tecalemit Penetrating Oil. Tecalemit "Goldengear," gear oil in tins and bulk. Tecalemit Spring Armour (all steel) fitted with lubricating nipples. Grouped Nipple equipment. Viblock Hose Clips. Tecalemit Electric Clock. Tecalemit Electric Revolution Counters. Tecalemit Oil Filters. Tecalemit Air Filters. Tecalemit Petrol Filters. Tecalemit Electric Petrol Pumps. Carbosolve Carbon Remover. Fire Extinguishers. Tecalemit Speedometer.

List of Exhibits on Garage Equipment Stand No. 562:—Standard Bulk Lubricating Compressor on wheels, hand operated. Capacity 17 lbs. lubricant. Can be used on all high pressure systems. Knapsack Lubricating Compressor. Can be strapped to operator's back and easily moved from place to place. Lubricant capacity 11 lbs. Positive Feed Lubricating Compressor. Suitable for lubricant of very heavy consistency. Airline Lubriguns, air operated. Capacity 25 lbs. lubricant; can be used on all high pressure systems. Readily portable. Electroguns, electrically operated. Capacity 25 lbs. lubricant. Can be used on all high pressure systems. Airline Lubriguns and Compressed Air Portable Complete Units. Giant Pneumatic Lubricating Compressor. Capacity 100 lbs. Can feed as many grease lines as are required. Gear Flushers, electric and air operated, for flushing out back axles and gear boxes. Penetrating Oil Sprayers, air and hand operated. For spring lubrication and removing body squeaks. Oil Delivery Unit. The apparatus offers the most convenient means of filling gear boxes and back axles. Gun Filler Attachments for quick, clean filling of hand and power lubricating equipment. Brakometer Four-Wheel Brake Tester. Automatically registers efficiency of braking system on any car. Portable ramps to facilitate car lubrication and chassis repairs. Lifts. Hydraulic car hoists to accommodate all British and foreign cars. Free-Wheel and Drive-on Types. Autolave Power car washing plant; 2 and 4 Gun models. Garage High Lift Jack (Hydraulic).

**Triplex Safety Glass Co., Ltd.,** W.1. Stand No. 203. The Triplex exhibit at Olympia will be of special interest in view of the possible developments in connection with the new Traffic Act. Windows, wind screens and motor boat glass will be on view as well as one of the Triplex weight testers which puts the glass "through it" before it is considered fit for the general market.



LEFT: THE LUVAX HYDRAULIC SHOCK ABSORBER. RIGHT: LUVAX-BIJUR CENTRAL CHASSIS LUBRICATING SYSTEM.

Digitized by Google

**C. A. Vandervell Co., Ltd.**, Acton, London, W.3. Stand No. 392. Exhibits comprise a representative range of C.A.V. Electrical Production and Car Equipment, including 1931 models and new productions. C.A.V. Car Dynamos with standard and special provisions for incorporating with engine designs, including assemblies with coil ignition and extended magneto drives. C.A.V. Starter Motors with standard drives, and also with special pinion engagement devices, switch and solenoid controls. C.A.V. Coil Ignition System with switch and pilot light controls, also separate engine-driven distributors and coil units. C.A.V. Switchboards and Flush Fitting Panels with ignition controls and switch locks. C.A.V. Batteries. 1931 range of Lighting, Starting and Ignition Types incorporating all-moulded containers and including representative models with C.A.V. Patent Threaded Rubber Insulators, also replacements for American and Continental cars. C.A.V. Spot Lights, Interior, Dash, Instrument, and Inspection Lamps, including C.A.V. Nife Portable Handlamps. C.A.V. Special Blue-Star Headlamp Bulbs and official C.A.V. replacements. Luvax Hydraulic Shock Absorbers in sizes suitable for all car types, demonstrated to show valve control of spring recoil. Luvax Bijur Central Chassis Lubrication System. Pressure oiling from driver's seat for all chassis points. (*For illustration see page* 24.)

# Casual Labour in the Transport Industry.

Motor haulage and cartage conditions in the port of Liverpool are succinctly but adequately surveyed in a valuable report which has been prepared by Mr. F. G. Hanham of the Ministry of Labour. This report deals fully with the whole range of casual employment of Merseyside, the information being produced by diligent co-operative inquiry of all concerned, employers as well as employees. There is a section in the report headed "Road and Rail Transport." Mr. Hanham mentions the existence of at least three local employers associations catering for different specialised users of road vehicles with a co-ordinating conference for wages purposes. He makes the observation that horse cartage is still used to an appreciable extent, but in recent years there has been a great change in the demand for carters, resulting in a surplus never likely to be re-absorbed in the industry.

"The main factors tending to eliminate horse cartage in the area are:—(1) Extension of railways to quayside; (2) Greater facilities for overside deliveries; (3) Recent development of warehousing at the quayside; (4) Growth of motor road transport. Of these, the most important is mechanical road transport.

Liverpool, he says, has been described as the home of heavy haulage. The more rapid movement of mechanically driven vehicles has increased the efficiency of the individual unit for most types of journey, thus reducing the number of units required for the transportation of a given volume of goods. "A more important phase of this growth, however, is the development of mechanical road transport as a serious competitor to the carriage of goods by rail. The increase of a direct through service between the ship's side and the factory has resulted in fewer handlings of cargo at each end and reduced the local cartage from the docks or warehouses to railway stations.

Motor transport direct from the docks has increased from 177,000 tons in 1922 to 373,000 tons in 1929. To these figures should be added the tonnage transported direct to the quay for export, in order to ascertain the total weight of goods hauled by motor transport to and from outlying districts.

"The changing methods of road transport have not necessary benefited the local haulage industry because much of the traffic lost on the railway has also gone from the carts; it has not gone to local motors but rather to the up-country man.

"One employer (not a cartage contractor but doing his own cartage) states that formerly he had thirty horses to cart goods to the railway stations, but now he has only four. His goods are now mainly conveyed by motor transport and he estimates that 90 per cent. are delivered in "foreign" motors. This percentage is not applicable to the port as a whole. Nevertheless it is generally admitted that the outside contractor is securing an appreciable proportion of the road transport of goods from the dock.

"The owners of steam wagons and motor lorries coming from the Lancashire towns with merchandise for shipment endeavour through the 'back loading' agencies to obtain a return load and thus avoid light running. By taking back loads from the quay or warehouse they cover running costs of the return journeys. One of the main reasons for this loss of trade to firms outside the area is the non-application of the 48-hour accumulative week which is in force at Manchester and most other neighbouring centres. In the counties of Lancashire and Cheshire (except Merseyside) 48 hours constitute a normal week's work on an accumulative basis; time worked over and above 48 hours accumulative in one week, counts as overtime, and not on the basis of actual time worked in addition to each normal day; overtime for the first six hours is paid at ordinary rates and afterwards at time and a quarter rates."

In Liverpool overtime is calculated on a daily basis; for men in the motor section from 5.30 p.m. and for carters from 5 p.m. In each case, ordinary day rates are paid up to 7 p.m. and afterwards at time and a quarter rates. Consequently overtime rates become payable on many long journey deliveries, thereby increasing the costs of local firms as compared with those of competitors from outside the area.

Most employers have a permanent staff of carters with, in some cases, a small margin of horses without men. One prominent employer states: "I think it wrong to have casual carters. Each man tends to handle horses differently and the horse becomes a bad worker."

Information from employers demonstrates that the number of men in regular employment has decreased during the past ten years; e.g., one warehouse owner states that he only employs 25 carters and motormen as against 40 to 50 carters previously, and another firm of teamowners only had 18 against 36. This tendency to reduce permanent staffs does not necessarily indicate an increase in casual employment, but merely a reduction of staff to meet the decreased demand for local cartage and haulage. A number of cartage firms have gone out of business and in other cases, men formerly on the permanent staff, have been put on a casual basis.

The trade union rule that "motors having trailers attached and being employed on journeys within a ten mile radius of Liverpool and Birkenhead Town Halls, must carry a third man in charge of same" was mentioned by several employers as a factor making for casual employment. Sometimes a trailer was used on long distances, and on other days within the ten mile radius, consequently the trailer man was engaged on a casual basis and when required for the short distance journeys.

"One hundred carters and motormen were interviewed, and the analysis shows that in most cases the men were formerly in constant work as carters or motormen. They have drifted into the casual category owing to the loss of their regular job and the general slackness in the transport industry. Ninety-one of the men interviewed were within this category and the ages at which they became casually employed were:—19 years of age and under, five; 20-24 years of age, 12; 25-34 years of age, 28; 35-44 years of age, 16; over 45 years of age, 30."

**Barford & Perkins' Diesel Motor Rollers.**—Agricultural & General Engineers, Ltd., Aldwych House, Aldwych, London, W.C.2, have sent us a copy of a new catalogue published by their associated company, Barford & Perkins, Ltd., Peterborough, which gives full particulars and illustrations of that firm's comprehensive range of diesel engine motor rollers of weights from nine to eighteen tons. This catalogue No. 1,000, which is free upon application, gives in concise and well-presented form, the latest and most up-to-date points in road roller design and is profusely illustrated from original photographs and diagrams.

**A Busy Firm.**—The D.P. Battery Co., Ltd., of Bakewell, is, and is likely to remain, very busy. The chief development has been in the increasing use of Kathanode batteries for electric traction, including platform trucks, mining locomotives, standard gauge shunting locomotives, electric vehicles for Municipal Cleansing Departments, and delivery vehicles for handling milk, beer, laundry and other goods, also the very large high capacity batteries fitted in submarines by the British, European and South American Naval Authorities. Orders in hand at the present time for Kathanode batteries include four large ones for standard gauge locomotives in India.

# Air Transport Notes.

**Handley Page Bulletin.**—The September issue of the "Handley Page Bulletin" contains a report of a demonstration of slots at Le Bourget. The demonstration was given by Captain J. H. Cordes. The aeroplane was the Handley Page Gugnunc fitted with auto-control slots, interconnected auto-lift slots and wing flaps and interceptors. The tests were designed to show that the aeroplane fitted with these safety devices was as nearly foolproof as it is possible to make an aeroplane. Captain Cordes deliberately committed every possible fault without the machine tending to get out of control or to adopt a dangerous attitude. It was generally conceded after the demonstration by the spectators that they had witnessed the completest and most convicing demonstration of the advantages of auto-slots that has ever been given. Recent developments make it possible to-day to announce that the Handley Page slotted wing is now in use on the civil aircraft of almost every country in the world.

**Pocket Air Liner for Empire Services.**—A new light air liner, the Westland "Wessex," which is particularly suitable for the feeder services of the Empire air routes, or as a luxury air taxi, was demonstrated at the Hanworth Air Park recently. It has been built at the Westland Aircraft Works at Yeovil and is a small 3-engined cabin-monoplane which carries five passengers with comfort and safety. Besides its suitability for air transport work, the machine is an ideal type of private aeroplane for the business man who can afford to employ a pilot and demands the maximum safety and reliability. The saloon of the "Wessex" is equipped with the aids to comfort usually found in an expensive motor car. It is upholstered in leather and there are adjustable headrests to the chairs, sliding windows, pockets and elbow rests. With its three 110 h.p. Genet-Major engines, the "Wessex" is capable of cruising at 95 miles per hour for 5½ hours. In the event of one engine failing, the machine can still fly strongly, and even climb strongly, with full load, on the remaining two engines. The first four machines of the type have been sold to the Belgian national air service transport company, the S.A.B.E.N.A., and they are being placed in service on the London-Brussels air route, and internal lines in Belgium.

**New Air Services in South Africa.**—A new aviation concern, to be known as the United Air Transport Company, is being formed at Capetown to operate transport lines between Capetown, Windhoek, Johannesburg, Durban and Lourenco Marques with probable extensions to Rhodesia and the Belgian Congo. The service up the west coast will probably act as a "feeder" to the proposed Imperial Airways service and passengers will be charged at the rate of approximately fourpence halfpenny a mile.

**Cape to Cairo Airway Agreement.** — The Egyptian Government and the Imperial Airways have arrived at a temporary agreement with regard to the proposed Cape to Cairo air service. This is subject to future Egyptian legislation.

**Australian Airways.**—A Sydney message says that the National Airways announce that satisfactory progress has been made during the present year. No flight has been delayed owing to defective machines and 1,131,600 miles have been flown over. The dividend for the half year was at the rate of eight per cent. per annum.

**Portuguese Air Services.**—A contract has been signed between the Portuguese Government and two Portuguese air companies for the monopoly of national air services from Lisbon to Paris, Madeira, Cape Verde, Guinea and the Azores, besides internal air services at Angola and Mozambique. Before December 22nd, 1931, the companies and the Government are to agree upon mail contracts. The time to be allowed for putting the service on the various lines into operation from the date on which the Government communicates to the companies its desire for such lines to be established, varies from four months to four years.

**Berlin-Nanking Air Line. Ambitious Service Being Planned.**—A Nanking message says that it is hoped to establish a bi-weekly aeroplane service from Berlin to Nanking next April. The aeroplanes, which it is reported will carry 15 passengers, would follow the route of the Trans-Siberian Railway. Negotiations are proceeding with the Soviet Government to secure their consent to this service.

**Manchester Air Services.**—The Airport Committee of Mancester Corporation and Northern Air Lines are planning extension to the Barton Aerodrome. The present fleet of aeroplanes numbers sixteen. It is proposed to augment the fleet by twelve new machines. These will be delivered early next year and it is expected that full use will be made of them. Recently the number of private and commercial planes wishing to land has so increased as to have made it necessary to have a fully equipped control tower from which landings can be systematised. The aerodrome itself is to be extended to make the landing accommodation better. The experimental air service which links up Liverpool, Manchester and Birmingham with Croydon, has been suspended for the winter months. Owing to the shorter hours of daylight it is not considered practicable to give adequate connections with the Armstrong-Siddeley air liners of the cross-channel route, without the introduction of night flying.

**Aviation Congress.**—The Ninth International Juridical Aviation Congress was held at Budapest towards the end of last month. There was a distinguished gathering of local notabilities and diplomatists. In declaring the Congress open Count Khuen Hedervary pointed out that its chief task was to pursue the work commenced at the Paris Congress of 1909. They had to draw up an International Air Code. The rapid development of aviation was accumulating legal problems which called imperatively for solution—in particular from the point of view of air traffic over the seas and the whole regime of the seaplane. The question of offences committed on aircraft in the course of international journeys also had to be considered. M. La Pradelle (France), President, thanked the Hungarian authorities for their hospitality. Herr Wegerdt, Germany; M. Friis, Denmark; M. Talamon, France; M. Pittard, Switzerland; M. Tomosanyi, Hungary; and Senhor Moraes Barros, Brazil, were elected Vice-Presidents. The Congress in the course of the proceedings once more emphasised the principle of the freedom of air traffic over the seas, special regard being had for inland States. Another resolution affirmed that floating "aircraft islands" on the sea should in every case be established under the sovereignity of an individual State which should be responsible for the regulation of their use. There should be no differential treatment of aircraft on account of their nationality. The intention to establish floating islands on the high seas should be notified to all States, and in case of dispute the League of Nations should be appealed to.

**Nanking Government and Aviation Imports.**—A Nanking message says that instructions have been sent by the Ministry of Finance to the Inspector General of Maritime Customs that all aeroplane parts and accessories are to be exempted from import duty for five years.

**New Air Mail Service. To Bolivia and Peru in Twelve Days.**—Air mails which left London on Saturday, September 20th, for Bolivia and Peru were, for the first time on this route, carried by aeroplane direct to La Paz and Lima, where they arrived shortly after mid-day on October 2nd. This is the first time the air mail service has been carried beyond Santiago by French aeropostal planes and it will, in future, be a weekly service.

**The Question of Establishing a National Air Transport Service in the Irish Free State.**—The question of establishing in the near future a national air transport service in the Irish Free State is coming well to the front, and the Government authorities have been urged to take action in the matter, which is considered to be one of great importance for the country and its future progress. In Dublin, last month, there was placed on exhibition a new Gypsy Moth aeroplane, ready for use, and requiring only oil and petrol to set it in motion. Colonel Russell, the well-known aviator, gave a simple and instructive description of this aeroplane to the large number of interested people who were attracted by the novel exhibit. He explained that at the Baldonnel Aerodrome one could learn to operate a flying machine in about half a dozen hours. It was as simple as learning to drive a motor car. There was no mystery and no difficulty about flying. It was a matter of only a few years until aeroplanes would be as common as ships, and when merchandise would be carried in aeroplanes from one place to another. The Irish Aero Club were doing their best to get the Free State Government authorities to set up a national air transport service. The Club were desirous of having a regular daily air service established between Dublin and England, so that it would form the nucleus of a national air service in the future, which would expand.

# British Association of Shipping and Forwarding Agents.

An ordinary general meeting of the British Association of Shipping and Forwarding Agents was held at 97, Cannon Street, London, E.C.4, on October 8th last.

**MR. A. W. HEARD** (Jones, Heard & Co., Ltd., Newport, Mon.), the Chairman of the Association, presided, and was supported by two of the Vice-Chairmen, Mr. M. E. Duffett (J. D. Hewett & Co., Ltd., London) and Mr. Norman N. Bird (Herbert Watson & Co., Ltd., Manchester). There was a good attendance of members.

**Announcement of Incorporation.** The Chairman said that when at Nottingham it was decided to establish the British Association of Shipping and Forwarding Agents, which decision was subsequently confirmed at the meeting held in Birmingham, it was then decided to take immediate steps to obtain the Incorporation of the Association. It was found, however, that under the new regulations of the Board of Trade it was necessary before Incorporation could be obtained for an association to have been in existence for two years, no doubt to establish the fact that the Association applying was a competent body to receive Incorporation. The legal advisers to the Association arranged with the Board of Trade on the 14th July last for Incorporation, and Memorandum and Articles of Association had been circulated to all members. It was his pleasure to report that the British Association of Shipping and Forwarding Agents was now an Incorporated body.

The Council of the Association had dealt with certain correspondence on behalf of the industry with satisfactory results.

**Date of Annual General Meeting.** The Chairman said that in order to fall into line with arrangements that had been made by the London Shipping and Forwarding Agents' Conference to hold the Annual Dinner of that Conference on January 13th next, the Council of the British Association of Shipping and Forwarding Agents had approved of the suggestion that they should call their next Annual Meeting for January 13th, 1931, in order that members attending that meeting should have the opportunity of attending also the Dinner of the London Shipping and Forwarding Agents' Conference. Personally, he thought the suggestion was an excellent one, and in due course members would receive full particulars of the Dinner of the London Conference and he hoped that as many as possible would make it a point to attend the Dinner. The suggestion was made in accordance with the wishes of Mr. M. E. Duffett, the President of the London Shipping and Forwarding Agents' Conference.

The meeting adopted the suggestion unanimously.

**Discrimination in Steamship Companies' Handling Charges.** The Chairman said that, as most of the members were aware, the Council of the Association had conducted considerable correspondence with various shipping lines and others in connection with the discrimination in the charges of steamship companies as against the shipping and forwarding agent. Trouble had arisen particularly in Hull and also in other places including Manchester, Swansea and, he thought, London also had received one or two complaints. The Council had decided that the proper course to adopt would be to deal with the question, in the first instance, through the Chamber of Shipping, and steps had been taken to obtain the assistance of the Chamber, and they hoped shortly to hear that the Chamber had been able to take some line of action which would enable shipping and forwarding agents to establish the fact that they were entitled to be permitted to exist and that they should not be wiped off the map by the steamship owners.

**International Federation of Shipping and Forwarding Agents.** The Chairman said that the British Association of Shipping and Forwarding Agents was, as members were aware, affiliated to the International Federation of Shipping and Forwarding Agents. The International Federation held a Congress in Antwerp in June last and their delegate to that meeting was Mr. F. J. Gerson, who had been good enough to attend to watch over the interests of the British Association of Shipping and Forwarding Agents.

Mr. F. J. Gerson, responding to an invitation from the Chairman to say a few words on the Congress of the International Federation, reminded the members that a full description of the meeting together with a report of the proceedings had appeared in the July issue of *The World's Carriers and Carrying Trades' Review*, and he did not think there was anything further he could say regarding that Congress.

The Chairman said that the International Federation had decided to constitute a Court of Arbitration, and Mr. M. E. Duffett, Mr. F. J. Gerson and Mr. W. B. Woolley had been appointed by the British Association of Shipping and Forwarding Agents to act as arbitrators in connection with the proceedings of that Court.

The Association decided, a short time ago, to invite the International Federation of Forwarding Organisations to hold a Congress meeting in London in 1932, when they hoped to be permitted to extend hospitality to members of the International body who came to London. That pleasure had, however, been postponed until 1933 in view of arrangements already made by the International Federation on the Continent. The British Association of Shipping and Forwarding Agents hoped, in due course, to make such arrangements as would enable them to entertain suitably members of the International Federation when they visited London in 1933.

Mr. F. H. S. Rouse (The American Express Co., Inc.), the Hon. Treasurer of the Association, reported on the financial position, and this was considered by all members to be very satisfactory.

A member of the Association reported that a certain steamship company running from a port at which his firm had an agency had asked them to sign a bond in the following terms:—"In connection with the Holding Bond demanded by H.M. Customs and given by you in connection with the clearance of goods arriving by your steamers, we hereby undertake to indemnify you against all claims which may be made upon you in respect of goods cleared through Customs by ourselves and to keep you covered for all undertakings which you have given to H.M. Customs in this matter."

This matter, the Chairman continued, had received very careful consideration by the Council, and the unanimous conclusion come to was that shipping and forwarding agents were under no obligation to sign such a Bond, and the Council recommended that members should not sign anything of such a nature. The Bond was of a wide nature and the ship owners appeared to desire to shelve their own responsibility and foist it on to the shipping and forwarding agents.

The meeting then concluded.

* * * *

A Council Meeting of the British Association of Shipping and Forwarding Agents, at which Mr. A. W. Heard presided, preceded the meeting reported above.

# London's New Dock.

London's new timber dock, the Lavender Dock, has just been brought into commission. The first ships to use it were the s.s. "Dea" and s.s. "Neath Abbey" with cargoes of softwood from Kara Sea ports.

The Lavender Dock is the latest addition to the Surrey Commercial Docks system and has been developed from two ponds known as the Lavender and Acorn Ponds, in which for more than a century oregon pine and other imported timbers which season when immersed in water have been stored.

The new quay is long enough to accomodate seven average-sized timber vessels. Alongside the discharging berths are sheds of the latest design capable of storing some 30,500 tons of timber. Altogether the Port of London Authority now have sheds covering 70 acres for the storage of timber at the Surrey Commercial Docks and a further 69 acres for open storage.

Over 2,000,000 tons of timber are brought into the Port of London annually, over a quarter of the total imported into the United Kingdom.

# London Shipping and Forwarding Agents' Conference.

A meeting of the Council of the London Shipping and Forwarding Agents' Conference, was held at the London Chamber of Commerce on Wednesday, October 1st, last, **MR. M. E. DUFFETT** (Messrs. J. D. Hewett & Co., Ltd.), the President of the Conference, presided.

There were present:—Mr. J. B. Ballantyne (Messrs. J. B. Ballantyne & Co.), Mr. H. Gilbert (Messrs. G. W. Sheldon & Co., Ltd.), Mr. C. McEwan (Messrs. Thos. Cook & Co., Ltd.), Mr. G. Perry (The British Commercial Transport Co., Ltd.), Mr. F. H. S. Rouse (The American Express Co., Inc.), Mr. E. W. Turvey (Messrs. Nunzi & Co., Ltd.) and Mr. E. N. Westfield (Messrs. Chas. Atkins & Nisbet, Ltd.).

It was reported that Mr. Frank J. Gerson (Rosenberg, Loewe & Co. Succrs., Ltd.), had expressed regret at his inability to be present.

The minutes of the meeting held on 4th July, 1930, were taken as read and signed.

Arising Out of the Minutes:

(a) *Export Rates on traffic delivered intermediately in London*:

The President reported that the new arrangement commenced to be effective on the 1st October, 1930, and would run for an experimental period terminating on 30th September, 1931. All interested firms have been advised.

(b) *Delay in Delivery of Goods per L.M.S. Railway*:

The President stated that a *precis* of all the complaints received as a result of the recent circular to members was sent in to the Chief Goods Manager of the Railway Company. In the course of a conversation which the Secretary had had with the Company's official a few days previously it was stated that in each case the members were quite satisfied with the explanations given them, and that, generally speaking, the delays had been attributable to minor mishaps outside the Railway Co.'s control, e.g., loss of labels, consignment notes, etc. If, however, any grave case is brought to notice, the Railway Company would like to be informed through the Conference, so that the cause of the trouble can be located.

Port Rates on Goods—*P.L.A. Discounts*:

Correspondence was read from a member firm in which the latter intimated their concern over a P.L.A. circular dated 15th August, in which appeared the following paragraph:—

> "In calculating the amount of discount, fractions of one penny will be disregarded and no discount will be allowed off any individual Bill of less than 1s. 8d."

The firm in question pointed out that this would operate to the detriment of many Forwarding Agents, who could not always arrange that their port rates would amount to 1s. 8d. or multiples of this sum, because for amounts like 3s. 3d. the discount would be 1d., 4s. 11d., 2d., and so on; and the benefit of the 5 per cent. reduction would be lost and would simply accrue to the P.L.A. A suggestion was made that the 5 per cent. on the monthly total, or some similar method. Representations were made to the Port of London Authority, but in reply they stated that the request could not be acceded to as under certain statutory obligations it was necessary to impose the conditions laid down in the circular in question.

*P.L.A. Handbook*: The Secretary stated that the latest Port of London Authority Handbook entitled "Export and Coastal Services," giving general information regarding the shipment of goods through the Port of London was now available, and that, in accordance with a resolution passed at an earlier Council meeting, a supply of 85 copies had been received by the Conference for distribution to members.

*Annual Dinner*—1930/31: The President informed the meeting that, at the General Meeting held in July last, a Dinner Committee consisting of Mr. J. B. Taylor, Mr. E. W. Turvey, Mr. G. Perry, and himself had been formed and had held one or two committee meetings, as a result of which arrangements had been made to hold the Annual Dinner on Tuesday, 13th January, 1931, at the Holborn Restaurant.

Membership:

An application for membership received from Messrs. Parry, Leon & Hayhoe (South Africa), Ltd., was considered and unanimously accepted.

The Pacific Coast Freight Forwarders and Customs Brokers Association:

It was reported that the last meeting of the American Section had considered a very lengthy letter received from the above-mentioned Association, giving details of its constitution, minutes of a previous meeting, etc., and asking for reciprocal information regarding the London Conference. The letter also indicated that the Association contemplated becoming a member of the International Federation of Forwarding Organisations, and asked the advice of the Conference in regard thereto. The reply sent by the Conference was read by the Secretary and considered to be very suitable.

A hearty vote of thanks to the Chairman concluded the business of the meeting.

# News from the Ports.

**Liverpool Shipping and Forwarding Agents' Association.** — At the October meeting of the Council of the Liverpool Shipping and Forwarding Agents' Association, arrangements will be made for the annual meeting of members, which usually takes place next month, November. The Council has received a large number of appreciative letters from members of the consular corps and others, speaking in laudatory terms of the Association's handbook which has been distributed to all the business outposts of the world. The Council now proposes to send a copy of the handbook to shipping and forwarding agents in Liverpool who are not attached to the Association, in the hope that they will consider it to be to their advantage to join up.

**Shipping Man to be Mayor.** — Mr. E. J. Hughes, of Wallasey, who will be Mayor of Wallasey in the coming year, is the principal of Messrs. E. J. Hughes and Co., shipbrokers, Fenwick Street, Liverpool. He was one of the founders of the Liverpool Shipping Staffs Association, and was Treasurer for many years.

**Evidence of Freight Anomalies.**—Attention is still being given by the commercial associations of Liverpool to the incidence of freight rates on the trade of the port, also on the effect of the dues on packed goods exported. Recently the Liverpool Shipping and Forwarding Agents' Association was asked to supply any information which might have come into its possession on the subject. That which has been submitted includes a number of glaring examples showing how Liverpool shippers are unfavourably placed in respect of general traffic, owing to competition exerted from the Port of Antwerp.

**Certificates of Origin.**—It is satisfactory to learn that the Spanish authorities have given further consideration to the question of "Certficates of Origin" for non-European goods shipped from U.K. ports to Spain. An official of the Spanish Government is to pay a visit to Liverpool to inspect the warehouse system, and it is hoped this will result in the granting of local facilities for the issue of Certificates in respect of non-European goods re-exported from Liverpool.

**Manchester Ship Canal Traffic.**—The Manchester Ship Canal Co. has supplied us with a summary of the approximate traffic return for the month of August. The approximate traffic receipts for the month amounted to £100,524 compared with £115,359 for the corresponding month of last year. The total receipts for eight months of 1930 were £892,405 as against £973,701 for the same period of 1929, a total decrease of £81,296. The August decrease is, of course, a considerable one, and is above the average for the first eight months of this year, but in view of the unsatisfactory condition of trade generally, it could hardly have caused much surprise if the shrinkage, as compared with last year, had been greater. It was in October last year that the reduced scale of charges came into operation, so that in October and the following months the comparisons with last year should be more favourable.

**Geo. W. Wheatley & Co., Ltd. Change of Address.**—We are informed by Geo. W. Wheatley & Co., Ltd., that owing to the expiration of the lease they have removed from 95, Upper Thames Street, where they have been established for so many years, to 10/12, Heddon Street, Regent Street, London, W.1. Their telephone number is now Regent 5234-5 and their telegraphic address "Wheatley, Piccy, London." Their Beak Street offices have also been removed to 17, Brewer Street, London, W.1.

**Montreal Harbour Board.** — An Ottawa message says that Mr. Joseph Rainville, Lt.-Colonel H. J. Trihey and Mr. John C. Newman, all of Montreal, have been appointed to the Montreal Harbour Board. Mr. Rainville will be the new Chairman.

**To Lecture at Hull.**—Mr. S. L. Jude, Secretary of the Liverpool Shipping and Forwarding Agents' Association intends to pay a visit to the Hull Traffic Association in December when he will deliver an address on "Shipping and Forwarding Conditions in the Port of Liverpool."

Digitized by Google

**Charges at Great Western Railway Company's Docks in South Wales.**—The Minister of Transport, after obtaining the advice of the Rates Advisory Committee, has made an Order continuing for a further period of 12 months beginning on the 2nd October last, the existing powers of charge of the Great Western Railway Company in respect of their harbour, dock and pier undertakings in South Wales (excepting Swansea) subject to the following modification:—The tonnage charge for tipping coal, inclusive of weighing, has been reduced from 6d. to 5½d. per ton.

**Liverpool Agents for Pacific Atlantic Line.** — E. H. Mundy & Co. (Liverpool), Limited, Royal Liver Buildings, Liverpool, have been appointed Liverpool Agents for the Pacific Atlantic Line—the new direct service of steamers under the American flag between the United Kingdom and North Pacific Ports.

**White Star Line's Birthday.** — The White Star Line which, under the official title of Oceanic Steam Navigation Company, was registered on September 6th, 1869, celebrated its 61st birthday last month. Mr. Thomas Henry Ismay, the founder, had set himself no light task; for competition in the North Atlantic was then very keen; but, within two years of the formation of the company the arrival in the Mersey of the "Oceanic," the White Star Line's pioneer ship, created a great sensation. The first "Oceanic," which entered the Liverpool-New York service in 1871, was of 3,807 tons; the second "Oceanic," which was completed in 1899, was 18,000 tons—the largest steamer in the world. To-day, the White Star Line still boasts the largest liner in the world—the "Majestic" of 56,621 tons. The spirit of the founder which inspires the management of to-day is indicated in the recent introduction of the M.V. "Britannic," the first giant motor vessel to sail in the North Atlantic trade; and a sister ship is being pushed forward which should enter service before the company's next birthday.

**Southampton Docks.**—The prevalent severe depression in trade has not affected the passenger activities at Southampton to any marked extent. In fact during August last a new record was established for the number of passengers dealt with in any one mouth, the total of 120,068 being nearly 3,000 in excess of the previous highest. On one day of that busy period the Cunard Company alone embarked approximately 3,200 voyagers in three ships at the docks, the majority of these travellers being bound for the United States. The latest addition to the fine fleet of Union-Castle mail steamers based at Southampton, the "Winchester Castle," commences her maiden voyage to the Cape on October 24th. Record quantities of Cape oranges have been received at the docks this season and a number of vessels have been chartered to transport the exceptionally large consignments awaiting shipment. The "Millais" with a freight of 114,500 cases oranges, etc., set up a record for this class of traffic, but the shipment represented only a small portion of the total quantity received during the season. Splendid discharging and distributive facilities at the docks permitted the performance of a smart piece of work when the Canadian Pacific liner, "Montclare," arrived on a Friday afternoon recently with thousands of boxes of pears for London and other principal markets. It was most important that the fruit should be at the various markets on the following morning so as to catch the week-end trade, and with the expeditious handling operations, ex ship, and direct rail facilities to destinations, the feat was successfully accomplished.

**A "Bridge Cruise."**—A novel feature is shortly to be introduced into ocean cruising by the United States Lines. When the liner "Republic" leaves Philadelphia on January 10th on a sixteen days cruise to the West Indies, she will have on board a party of 300 bridge enthusiasts. The cruise will be known as "The Bridge Cruise," and under the direction of Mr. Wilbur Whitehead, the famous American bridge expert, there will be an unusual programme of bridge events with trophies for the winners. The "Republic," which is to be temporarily taken out of the North Atlantic service, will make five cruises to the West Indies during the winter. They will each be of sixteen days duration and will include calls at Nassau, Kingston, Cristabel, and Havana.

**Tyne's Own "Traveller."**—Mr. Richard Aughton, general manager of the Tyne Improvement Commission, who has already visited a number of Continental ports, is touring France, Italy, and the Adriatic, and so continuing his work of bringing before shippers and others the facilities offered by the Tyne.

**Sunderland's Harbour Master.**—Capt. Wm. Anderson, Assistant Harbour and Dock Master at Sunderland since May, 1928, has now been appointed by the River Wear Commissioners to succeed Capt. J. B. Leask as Superintendent Harbour and Dock Master. Capt. Leask retired on September 30th owing to ill health. His successor is a native of Sunderland, and was formerly a master mariner with the Manor Steamship Co., of London.

**Wear Deep Water Quay.**—Formal sanction has been received from the Government for Sunderland Corporation's scheme for a deep water quay, estimated to cost £350,000. The Government grant is on the basis of 100 per cent. of the interest during construction, which will occupy two to three years; 50 per cent. of the interest during the next 12 to 14 years. The scheme involves the demolition of about 150 houses, for whose occupants alternative accommodation must be provided. Work will probably commence very shortly.

**Sir A. M. Sutherland on Trade Depression.**—Presiding at the annual meeting of the Tyne-Tees Steam Shipping Co., Ltd., held in Newcastle, Sir Arthur M. Sutherland, Bt., said that he could not as yet see any silver lining in the cloud of trade depression which was passing over the world. They had, he added, agreed to pay a premium of £10,000 in connection with the rebuilding of Gateshead Quay, besides becoming liable for an annual rental for 25 years. The dividend was at the rate of 1/- per share on the fully paid shares and 6d. per share on the part-paid issue.

**New Liverpool Shipping Service Inaugurated at Dublin.**—A new steamship service was inaugurated at Dublin on September 20th. The occasion was the initial visit to the Free State Capital of the steamer "Alondra," one of the five vessels of the Yeoward Line, Ltd., of Liverpool. It was the first visit of any of that Company's fleet. At Dublin passengers and visitors were entertained to luncheon. In the course of the proceedings, Mr. Raymond R. Yeoward, a director of the Company, said that this was the first visit of the "Alondra" to Dublin, and the venture, thanks to railway agents and tourist agents, was a success.

**Australian Freight Reduction.**—Following on a challenge from an independent company, the Associated Steamship Owners have reduced freights on their Brisbane-Sydney-Melbourne services approximately twenty-five per cent.

**Shipping Service Between Barcelona and Philippines.**—A Norwegian shipping company has inaugurated a service between Barcelona and the Philippines, with Yokohama as the terminus.

**New American Shipping Service.**—The New England Transatlantic Lines will begin a steamship service on November 20th between Boston and London and Antwerp. The vessels, which are of about 6,000 tons, will sail under the Norwegian flag and carry both freight and passengers. The line, not being subject to Shipping Board rulings, is free to make its own rates with New England shippers.

**London's Busy Little Dock.**—The dual distinction of being the smallest and, for its size, the busiest of London's maritime depots, belongs to the Regent's Canal Dock at Limehouse. Ships of every nation are berthed there while discharging and re-loading cargoes, and thousands of barges of every description go to and fro. The dock, which belongs to the Grand Union Canal Company, has recently eclipsed its previous record by dealing with no fewer than 45 ships and 720 barges in a week, all going in and out without mishap or incident. Small steamers are usually docked and discharged within five hours, while coal ships, carrying from 1,800 to 2,000 tons, are regularly relieved of their cargoes within ten hours of being berthed. Foreign ships docking on Friday are often discharged and reloaded ready for putting to sea the following day.

**The Port of Quebec.**—The Acting High Commissioner for Canada in London has received from the Quebec Harbour Commission a copy of its report for the year 1929, which can be consulted by persons interested at the Canadian Building, Trafalgar Square, London, S.W.1. The Report in question gives a summary of the facilities available for shipping in the Port. The steady increase in traffic which has been recorded annually during the past ten years was not maintained during 1929, the figures for which year are 10 per cent. less than those for 1928 in respect of exports. The decreased traffic, of course, is due to the postponement of grain marketing, and it is anticipated that 1930 will show a resumption of the former activity in the port. The construction of the Wolfe's Cove terminal facilities, undertaken in 1925 for the accommodation of deep-draught vessels progressed satisfactorily during the year, and it is expected that the new 40,000-ton C.P.R. Steamship "Empress of Britain" will be berthed at the new pier in the spring of 1931. The depth of water being provided at the wharf and in the approach channel will be 40 feet at low tide.

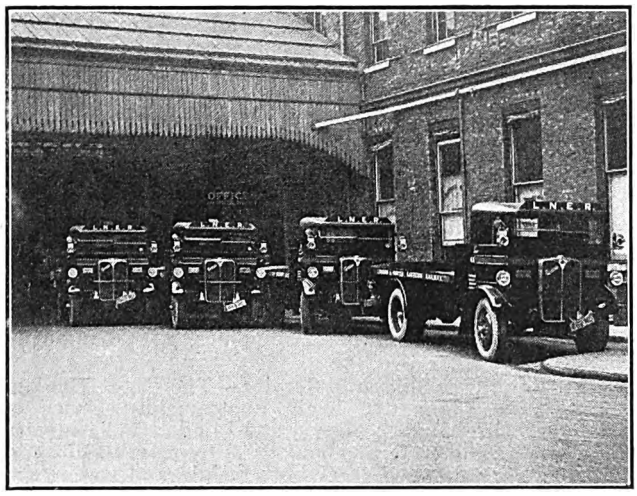
# Railway Notes and News.

**The Railway Barometer.**—The Railway Traffic Receipts of the four Group Railway Companies have now been published for the first 38 weeks of 1930 compared with the same period in 1929, and are as under:—

| | 1930 £ | 1929 £ |
|---|---|---|
| Passengers, Parcels, etc. ... | 56,257,000 | 58,581,000 |
| Merchandise, etc. ... ... | 45,457,000 | 48,573,000 |
| Coal, Coke, etc. ... ... ... | 24,652,000 | 26,319,000 |
| | 126,366,000 | 133,473,000 |

**L.N.E.R. Magazine.**—The October issue of the London and North Eastern Railway Magazine makes very interesting reading. Hints on accident prevention; Handling of bulk cargoes at British and continental ports; The old north Woolwich line; these are the titles of some of the articles. As usual this magazine is well illustrated.

**A.E.C. "Monarchs" for L.N.E.R.**—The Associated Equipment Company, Ltd., Windmill Lane, Southall, Middlesex, have supplied recently to the London and North Eastern Railway six short wheelbase "Monarch" 4 tonners. These



FOUR OF THE SIX A.E.C. "MONARCH" 4-TONNERS FOR THE L.N.E.R.

are all of the flat platform type and are fitted with A.E.C. standard cabs. Painted in the L.N.E.R. colours—blue with red bands and white lettering—they are exceptionally smart in appearance.

**"One Hundred Years of Railways."**—Mr. C. F. Dendy-Marshall in his book "One Hundred Years of Railways" written for the L.M.S. Railway, has set out to present in a popular way a brief history-narrative of how the Liverpool and Manchester Railway of 1830 became the L.M.S. Railway of 1930. The result is a highly interesting and not too technical story. The author pays glowing tribute to George Stephenson. "Atlogether," he says, "this railway is one of the finest monuments to human ingenuity and perseverance in the world, and marks George Stephenson out as one of the greatest men that ever lived. It was his supreme achievement." One chapter deals with the Rainhill Locomotive Trials of 1829, that aroused the interest of the whole kingdom and all through the book the clear description of the events and locomotives of these early Railway days, though perhaps causing some amusement, nevertheless calls forth admiration for the way in which these pioneers triumphed in the face of heartrending difficulties. The book is published by the London, Midland and Scottish Railway, price one shilling.

**Great Western Railway Magazine.**—The October issue of the Great Western Railway Magazine is rich in good things. "A Night with the News" is the title of a most interesting article. Every night 150 tons of news, hot from the Presses, leave Paddington Station to convey to the world in the West, South West and West Midlands of England and Wales but a few hours later all the latest happenings from Home and Abroad. This rapid distribution enables the newspapers to be delivered hundreds of miles away in towns and country in most cases before breakfast. Organisation and co-operation are the keynotes of its success. Every night between 12 and 2.0 a.m. over 100 motor vans slip into Paddington Station and there disgorge to a waiting staff over 10,000 bundles of London Daily Papers. Rapidly the cars are unloaded and motor trolleys, piled high with bundles, carry them swiftly along the platforms to the waiting trains, there to be weighed, checked and stowed by an expert staff.

**Liverpool and Manchester Railway Centenary Celebrations.**—Widespread interest was stimulated by the Railway Centenary celebrations held in Liverpool last month, both by the exhibits and pageant at the Wavertree Playground where some of the latest railway rolling stock was shown alongside some of the most ancient, and by the exhibition of model railway engines, historical records and prints, old time travel tickets, railway guides, etc., at St. Georges Hall. The Celebrations were organised jointly by the Liverpool Civic Authorities and the L.M.S. Railway. The Liverpool and Manchester Railway was officially opened on the 15th September, 1830, and was the first railway in the World to haul a regular throughout service of passenger trains by locomotives. Previously, locomotives for hauling passenger trains had only been used on isolated occasions; haulage by horses being the common practice. The Railway was projected in 1822 and a prospectus issued on the 25th November, 1824. Parliamentary powers were obtained in 1826. In 1829 the Rainhill Trials decided finally that engines should be the method of locomotion. These trials, which aroused the interest of the whole country, were won by George Stephenson's "Rocket." The line was opened on September 15th, 1830. In 1845 it was amalgamated with the Grand Junction Railway and in 1846, the London and North Western Railway was formed by the amalgamation of the London and Birmingham, Grand Junction, and Manchester and Birmingham lines. The amalgamation of the Companies forming the L.M.S. Railway took place on 1st January 1923. At the Centenary Celebrations there was an exhibition of British Railways embracing locomotives and rolling stock of the latest design. L.M.S. exhibits included "The Royal Scot," "Garratt" and other modern passenger and freight locomotives. The L. & N.E. Railway sent their High Pressure engine No. 10,000, the Southern, "The Lord Nelson" and the G.W. Railway a "King" Class locomotive. Visitors came from far and near to see this, the most comprehensive railway exhibition, ever seen in the country. The public, was not allowed to forget that mechanical road transport also has an interesting history, beginning with vehicles which, even to-day, are roadworthy. Messrs. John I. Thornycroft & Co., Ltd., sent to Liverpool from their works museum, Steam Van (No. 1) which a day or two before the celebrations, travelled the Liverpool streets under its own power and then took up a position at the Wavertree Playground close to Stephenson's Rocket. Steam Van No. 1, to give it its official designation, weighs 38 cwts. and is rated to carry one ton. During part of its journeyings in the city it was preceded by a man with a red flag just as in 1895 when it made its first trip from the Chiswick works to Cardiff. A representative of this journal was one of the passengers in the tour of the Liverpool streets. Despite its age, this steam van shows no signs of decrepitude. In fact one was agreeably surprised by the comfortable and speedy riding it afforded. The springing of the chassis was extremely resilient for a vehicle of its years. A company of about fifty, representing the municipality, the railways, and the organisers of the centenary celebrations, travelled from Liverpool to Manchester over the same route that was covered by the Northumbrian when it drew Wellington, Peel, Huskisson, and the rest of the distinguished company in its ornate but uncomfortable coaches. On arrival at Manchester the party entered motors and buses and drove to Liverpool Road, where a large crowd had assembled opposite Manchester's first railway station, a stone building now used as a goods depot by the London, Midland and Scottish Railway. Speaking at the Manchester Town Hall luncheon, Mr. E. B. Fielden, M.P., deputy chairman L.M.S. Railway said that in the last twenty years the motor bus had taken from the railways some large percentage of their passenger traffic. Some of that would, doubtless, never come back, because short distances were undoubtedly something that could be catered for more efficiently by the motor bus, But in regard to the more distant traffic, he thought that after the novelty of the motor bus had worn off, and in view of the cramped conditions in which the long journeys leave the passengers, they might look for a return to the railways of a great deal of that traffic. They were doing all that they could to hasten that return.

# Law Cases.

## DUTY OF TRAMWAYS COMPANY TO PROVIDE CLEAN CARS.

In the Circuit Court in Dublin, before Judge Gleeson, Miss Daisy O'Sullivan, of Albert Road, Dublin, sued the Dublin Tramways Co. for £30 damage to her clothing, which, she alleged, was done while she was a passenger in a tramcar on 26th December, 1929.

In her evidence plaintiff stated that on alighting, with her sister, from the tramcar, her sister noticed that plaintiff's coat and dress were stained. The stain penetrated to her underclothing. Where she had been sitting in the tramcar there was a black moist patch, and to that she attributed the damage to her garments, which, she said, were rendered absolutely useless to her.

In reply to Counsel for the Tramways Co., she said that she was not aware that the Company offered to have the garments cleaned.

In his evidence for the defence, the conductor of the tramcar said that there was not any foreign substance upon the seat which the plaintiff had occupied. He sat upon the place afterwards and his clothing showed no sign of stain.

Mr. J. Mooney, B.L., who appeared for the defendant Company, submitted that there had been no negligence. The Company did not pretend to provide a Rolls-Royce car, or other luxurious method of travel, and they were not insurers. In his opinion negligence should be proved in order to sustain an action of this kind.

Judge Gleeson said that upon the evidence he was satisfied that there was some liquid or sticky matter upon the seat in the tramcar, which stained the plaintiffs clothing while she was a passenger. He looked at the case from the woman's point of view, and found that the articles in question were diminished in value because of the stains. The case was an unusual and interesting one —the first of the kind, so far as he could remember. The garments were very nice. It was important that precautions should be taken nowadays against soiling the clothing of tramcar passengers. There was a failure on the part of the conductor to have carefully inspected the interior of the car, and there was no contributory negligence on the part of the plaintiff. As it was the duty of the Company to have clean cars for the accommodation of the public, he gave the plaintiff a decree for £8 8s. with costs.

Mr. Tobias, B.L., appeared for the plaintiff.

## ALLEGED NEGLIGENCE.

A case was heard in the Bow County Court recently before Judge Thompson, K.C., in which the plaintiff was Joseph Jeremiah Hunt, a boy of 11, who sued through his father as next friend, of 57 Brightlingsea Buildings, Limehouse, E., to recover damages against Messrs. Phillips, Mills & Co., Ltd., of 16 Wellington Street, Battersea, S.W. for alleged negligence. The plaintiff alleged that on June 22nd, 1928, the defendants were negligent in leaving a trailer which had been previously attached to a steam wagon in Narrow Street, Limehouse. It was alleged that the trailer was left unattended and likely to be an allure to children. One boy was inside the trailer when the plaintiff came up, and the sideboard of the trailer became detached as a pin was removed, which fell on the plaintiff and caused him personal injury. Alternatively, the plaintiff alleged that the trailer was left on the highway in such a condition that it was a nuisance. The defence was that they denied there was no one to guard the trailer, and also they denied that it was a nuisance.

The boy gave evidence as to how he was injured by the sideboard of the trailer falling on his head, it being let down, he said, by another boy who was in the trailer, who had taken a pin out.

Evidence was given for the defence that the steam wagon driver noticed that a wheel of the trailer was loose, so he left the trailer and went on with his work with the engine. He telephoned the firm's wheelwright who repaired the wheel, and while that was being done he fetched another load of waste paper with the engine. He did not leave the trailer unattended, as he waited the arrival of the wheelwright from Battersea.

The jury were absent for about half an hour when they intimated they could not agree, and his Honour sent them back. After a quarter of an hour they still said they were not agreed, and Judge Thompson asked them if they would go back again.

The foreman: We are asked to consider the common sense and not the question of law as applicable to the question of negligence. That seems to be a very wide one when you leave anything in the street unattended. If you leave a pencil in the street, it might be questioned whether you have got to stop there all day to mind it because of an accident. We will try and re-consider the question again, however.

A further half-hour elapsed and still the jury were not agreed, and Judge Thompson said it was his duty to discharge them, and the case would be adjourned for legal arguments as to whether the case should have gone to the jury.

The foreman said he was sorry, but they had tried their utmost as it was really a most serious question.

## INJUNCTION GRANTED.

At Liverpool recently Ribble Motor Services, Ltd., obtained an interim injunction restraining the Rawtenstall Corporation and the Ramsbottom Urban District Council from running omnibuses beyond the Burnley borough boundary, on any route between Stockport and Burnley, without fulfilling certain statutory requirements and giving the Ribble Motor Services an opportunity to object at a public inquiry.

It seems that defendants started running an extended bus service from Stockport, Bury and Rawtenstall to the Burnley Cattle Market instead of terminating their service at the Burnley borough boundary as hitherto. This had been done, it was alleged, without the sanction of the Ministry of Transport.

## FAILURE TO PAY INSURANCE CONTRIBUTIONS.

At Sunderland Police Court, Thomas Sweeny, trading as the Briary Vale Transport, and living in Tunstall Vale, Sunderland, was charged with failing to pay insurance contributions in respect of one of his employees. The prosecution stated that he had failed to pay £10 health insurance and five guineas unemployment insurance contributions.

Mr. Tindell-Green, for Mr. Sweeny, said there had been no intention to defraud, but business difficulties and worries caused the discrepancies. He would pay the arrears as soon as circumstances permitted.

The Bench made an order for the arrears to be paid within two months, and imposed a fine of £2 with £1 3s. 9d. costs.

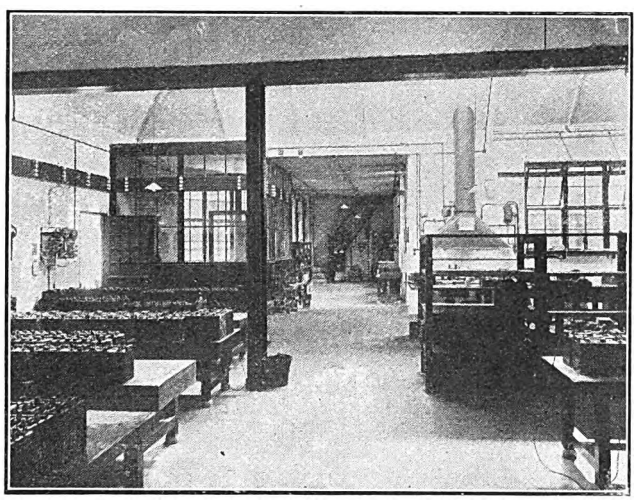
# Bristol's New Exide Depot.

## Distributing Centre for West of England.

The Chloride Electrical Storage Co., Ltd., Clifton Junction, near Manchester, has opened new and magnificently equipped premises for Exide Batteries at 16-18, Broadmead, Bristol.

The removal of the Exide Depot at Bristol from Victoria St. to 16-18, Broadmead, is more than just a change of address. It means the inauguration of increased facilities for battery servicing and distribution throughout the West of England.

Only by establishing Depots at strategic centres in the British Isles are the makers of Exide Batteries enabled to meet the immense demand. From the huge factory at Clifton Junction, near Manchester, consignments are sent by road and rail to the various depots, which act as distributors to the Exide Service Agents in their territory. These service



AN INTERIOR VIEW OF THE CHLORIDE ELECTRICAL STORAGE CO.'S NEW PREMISES AT BRISTOL.

agents are thus in their turn kept fully supplied and equipped to meet the needs of the local garages and battery dealers.

There are 600 Exide Service Stations in the British Isles, each employing skilled battery men trained at the Exide Works. Besides supplying new Exide batteries for every make of car or radio set, they also repair, recharge and overhaul batteries of every make, whether Exide or not.

Recently there has been inaugurated at all Exide Service Stations a two hour battery repair service, enabling car owners to have their worn out batteries of any make completely renovated, fitted with new fully charged plate groups and delivered ready for use within two hours. Obviously such a rapid service requires a highly efficient organisation behind it, and the immense popularity of the system among the general public has compelled the opening of the new Exide depot premises at Bristol.

The Depot formerly operating at Victoria Street was only established in 1924 but in those few years the business handled has assumed such proportions that larger premises became imperative.

The new Exide depot premises at 16-18, Broadmead, occupy a large frontage on the important thoroughfare connecting the Centre and East of Bristol. They comprise a showroom and sales department, a large stores, despatch department, and repair department, together with the accounts department, Managerial offices and canteen.

The front portion of the ground floor is occupied by the showroom and sales department, with two large windows on either side of the main entrance. To the left of the showroom a wide haulingway leads direct to the stores and despatch department, allowing the large lorries which bring loads of 10 and 12 tons from the Works, to unload at the door of the stores. Wireless batteries are stored on platforms or stillages until required while starter batteries and spare parts are kept in bins round the walls. A specially constructed celluloid stock room in one corner completely isolates this class of battery from the rest.

On the next floor above the stores, communicating by a ½ ton Medway lift are the power house and repair department, completely equipped with the most up-to-date electrical apparatus for charging batteries. There are benches for charging starter batteries at various rates and others for wireless L.T. and H.T.

A particularly interesting arrangement is the system of trickle charging adopted in order to keep the charged stock of batteries in first class condition and also for maintaining the fully charged groups of plates ready for the famous Exide "Two-hour battery repair service." There are seven panels for these trickle charge circuits which are fed with current from an "English Electric" motor generator set working from the Corporation mains, and a large Hewittic mercury arc rectifier is installed as a standby.

The repair department, adjacent to the power house, is equipped with the very latest apparatus for opening up and repairing car batteries in the shortest possible time—arrangements which are particularly essential for providing the two hour repair service.

On the same floor is a large canteen for the workmen with hot and cold water laid on and separate lockers for clothes. The front portion of the second floor is occupied by the offices; from the accounts department doors open to separate offices for the Manager, Assistant Manager, Cashier and Typists.

In addition to the ordinary Corporation lighting a "Keeplite" emergency lighting equipment installed in the showroom is arranged so that in the event of any interruption of the ordinary supply a separate lighting circuit fed with current from storage batteries is automatically and instantly switched into operation.

The new depot is now in full operation and consequently Exide Service Agents and dealers throughout the West Country have at their command unrivalled resources for efficient battery service to the public.

# Heavy Motor Car (Amendment) (No. 2) Order, 1930.

The Heavy Motor Car (Amendment) (No. 2) Order, 1930, came into force on October 1st and deals with the non-articulated eight-wheeler.

Under the new Order the expression "overhang" means in the case of a heavy motor car having eight road wheels under a non-articulated frame, the distance measured horizontally and parallel to the longitudinal axis of the vehicle between two vertical planes at right angles to such axis the one passing through that point of the vehicle (exclusive of any hood when down) which projects furthest to the rear, and the other passing through a point situated on the longitudinal axis of the vehicle and such that a line drawn from it at right angles to that axis will pass through the centre of the minimum turning circle of the vehicle.

In the case of any heavy motor car which complies in all respects with the following conditions, namely:—

(a) that it is provided with eight road wheels under a non-articulated frame;

(b) that all eight wheels are fitted with pneumatic tyres or tyres of a soft or elastic material and, in the case of a wheel fitted with resilient tyres other than pneumatic tyres, that the rim diameter of any such wheel is not less than 670 mm.;

(c) that it is so constructed that—

(i) under any conditions of loading when it is at rest upon a level surface, all eight wheels shall be in contact with the ground, and if any one wheel is lifted and supported at a distance of six inches above such surface the load borne by any wheel shall not be increased by more than 10 per cent.

(ii) the total weight of the heavy motor car together with its load, if any, shall at all times be such and so distributed that the weight transmitted to any strip of the surface upon which the vehicle rests contained between any two parallel lines drawn 2 feet apart on that surface at right angles to the longitudinal axis of the vehicle shall not exceed 10 tons;

(a) the overall length may amount to, but shall not exceed 30 feet;

(b) the weight borne by any one wheel may amount to, but shall not exceed 3¾ tons;

(c) the sum of the weights borne by all the wheels may amount to, but shall not exceed 22 tons;

(d) the weight of the heavy motor car unladen may amount to, but shall not exceed 11 tons.

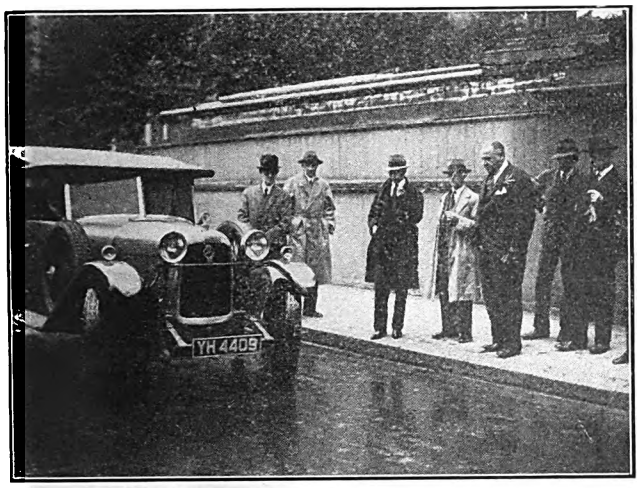
# A Non-Skid Road Surface.

We recently had the opportunity of inspecting a stretch of roadway with a really non-skid surface.

Accompanied by Mr. Manning, the Borough Engineer of Chelsea, and Mr. Pollard, of Messrs. Pollard, Ravenscroft & Co., Ltd., the suppliers of the non-skid material, a small party of pressmen visited a road which was laid down in June this year in Edith Grove, Chelsea.



AN UNSUCCESSFUL ATTEMPT TO SKID. EXTREME RIGHT, MR. MANNING AND MR. POLLARD, BAREHEADED.

In order that the material should have a thorough testing of its non-skid properties, the road was well watered before two of three members of the party took their cars along at various speeds in an endeavour to skid. The surface was all that was claimed and no skid was recorded by any member of the party.

By way of comparison, Fulham Road was next visited and after the surface had been watered the same enterprising motorists exhibited their prowess in the art of skidding with such marked success that an arrest was nearly made by the policeman controlling the traffic at the cross roads. Thanks to Mr. Manning, who is such a well-known figure in Chelsea, this disaster was narrowly averted.

The material used for the non-skid road referred to was a "one-coat" of Boeton asphalt on a concrete foundation.

Boeton asphalt is a natural asphalt mined in the Island of Boeton in the Dutch East Indies. The asphalt contains about 40 per cent. of bitumen, the remainder being formed of globigerines, microscopic in size, which are completely filled with bitumen. It is believed that the non-skid qualities of the material is due to this natural "filler" of shells, and so perfect is nature's mixture of bitumen and shell that a uniform quality can be guaranteed.

It is stated that the material is much cheaper to lay than ordinary asphalt and that it is ready for the heaviest traffic immediately after being rolled without any risk of the surface becoming wavy.

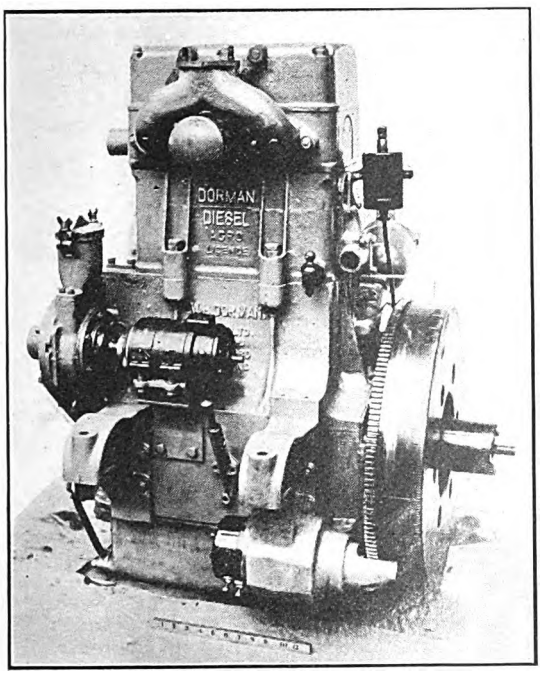
Another point is that the bitumen possesess unusual elastic and agglomerating properties enabling a large size stone to be used with it as aggregate, and as the use of stone of a large gauge is one of the secrets of making a non-skid surface, this is an important factor.

The suppliers of the material are Messrs. Pollard, Ravenscroft & Co., Ltd., 150, Southampton Row, London, W.C.1.

# Diesel Engines.

The development of Diesel Engines has been taken up by some of the oldest established manufacturers in this country and it is of interest to note that M.C.L. and Repetition Ltd., of Birmingham are well to the fore with starting equipment suitable for the Diesel engine.

Of course in certain cases starting by hand is the more obvious method, but in other cases where a self starter is desired, M.C.L. are in a position to advise and supply suitable gear. By employing two or more Starting Motors equally placed round the Flywheel, thus securing even distribution of pressure, even the largest of engines can be dealt with.



W. H. DORMAN & CO.'S DIESEL ENGINE FITTED WITH M.C.L. DYNAMO AND STARTER.

The accompanying illustration shows an engine produced by Messrs. W. H. Dorman & Co., Ltd., of Stafford fitted with M.C.L. Dynamo and Starter.

# Claims on Solid and Cushion Tyres.

The Tyre Manufacturing Industry observes with sympathy and some regret that the stress of competition in the transport world is unfortunately such as to lead to the habitual loading of heavy vehicles beyond their rated capacity. Without raising any question as to the necessity for this practice, the Tyre Industry cannot fail to regard seriously the fact that this also involves the loading of the tyres much in excess of the economic and practical limits as shown by manufacturers' schedules.

Although it is true that the service capacity of solid and cushion tyres has greatly increased, and is in fact greater to-day than ever before, demands are being made upon tyre manufacturers in increasing degree for allowances upon alleged unsatisfactory tyres which in reality could only have failed owing to this practice of overloading, arising out of conditions which are well known and generally admitted.

In these circumstances, the undernoted Tyre Manufacturers have reluctantly decided that it is necessary to protect themselves and also those vehicle owners who use their vehicles correctly by revising their present practice in the settlement of claims in the direction of greater equity towards all concerned.

In pursuance of this decision, the undernoted Tyre Manufacturers now give notice that as and from October 1st, 1930, they will not make any adjustment or allowance for alleged unrun mileage on any solid, cushion, or semi-pneumatic tyre, fitted to a vehicle rated to carry a net pay load of 5 tons or more, if such tyre has already covered a distance of 6,000 miles.

Claims on alleged unsatisfactory tyres which have run less than 6,000 miles will be examined, and if agreed, will be dealt with by the undernoted tyre manufacturers having regard to the individual circumstances in each case; Avon India Rubber Co., Ltd., Bergougnan Tyre Co., British Goodrich Rubber Co., Ltd., J. W. & T. Connolly, Ltd., Dunlop Rubber Co., Ltd., Henley's Tyre & Rubber Co., Ltd., Chas. Macintosh & Co., Ltd., Parker Tyre Co., Ltd., Pirelli Ltd., Poppe Rubber & Tyre Co., St. Helen's Cable & Rubber Co., Ltd., Trowbridge Tyre & Rubber Co. (1929), Ltd.

**New Midship Section for Tanker.**—The keel has been laid at Palmers Yard, Hebburn-on-Tyne, for the new 300-foot midship section for the Anglo-American oil tanker, "Saranac," sister ship of the "Cadillac," which was successfully repaired in this way at the same yard earlier in the year. The "Saranac," meanwhile, is continuing her work of carrying Pratts spirit to Great Britain. She will not be docked until early in the New Year after the launch of the new middle portion, and will be laid up in all for only about seven weeks.

# Some Interesting Leyland Vehicles.

One of the photographs we reproduce shows two of the many Leyland vehicles in the service of Carter, Paterson & Co., Ltd. These vehicles are 17 and 18 years old and they still perform their daily duties uncomplainingly with over 500,000 miles to their credit. Another vehicle is used by Mr. T. E. Short, of Halifax and is fitted with a furniture lift van. The advantage of this type of vehicle is that it can be employed as an ordinary platform vehicle for haulage work and for furniture removing when the lift van is used. This vehicle is over nine years old and has approximately 200,000 miles to its credit and the owner states that it is still in perfect condition. It has won several first prizes at demonstrations and it is shown prior to the judging at a recent demonstration when it was awarded the first prize for the cleanest and smartest motor wagon. Another Leyland vehicle, illustrated, was supplied to Jolly & Sons, Ltd., of Bath, for furniture removing, while the fourth illustration is one of the Leyland 4-ton long side type passenger machines adapted for goods transport. The body of this vehicle was built by Brookes Bros. themselves, and as will be seen they have made use of every available inch of space in construction. It is interesting to note that Brookes Bros. also operate a large fleet of motor buses, the majority being Leylands.

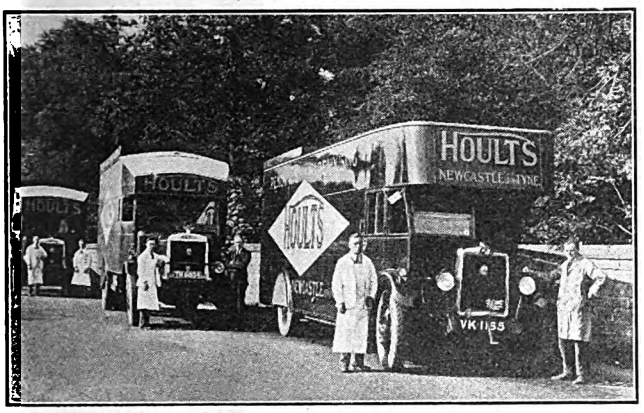
# News from all Parts.

**A Leyland "Tiger" for Furniture Removals.**—In order to be in a position to deal with any specially fast removal of furniture over a long distance, Messrs. Hoults, of Newcastle, recently added to their already extensive Leyland fleet a Leyland "Tiger" chassis, a product of Leyland Motors, Limited, Leyland, Lancashire. Although intended for passenger work, this chassis is readily adapable to moderately heavy goods transport and is specially suitable for furniture removal, owing to its speed and low loading. The machine in question (the foremost vehicle of the three



MESSRS. HOULTS "LEYLAND" VEHICLES REFERRED TO IN TEXT.

Leylands in the photograph) is fitted with a low-loading van with a capacity of over 1,200 cubic feet. This Tiger makes two journeys a week to London, loaded both ways, while journeys have been made as far north as Inverness, and south as Plymouth. The other two vehicles in the picture are Leyland 4-tonners.

**A Dennis Delivers Free Drinks.**—A free cup of an excellent coffee-and-chicory extract is willingly given to any one who cares to apply—in working hours!—to the

LYON'S NEW 2-TON DENNIS DEMONSTRATION VAN.

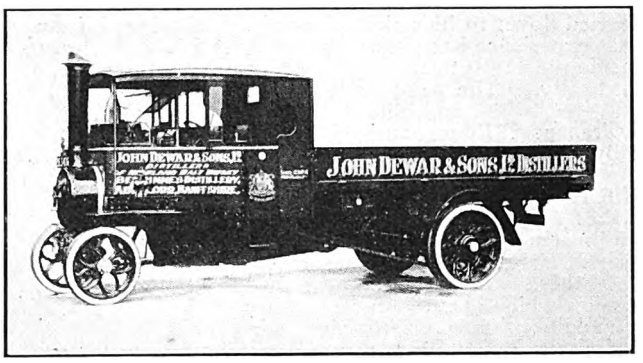
attendant in charge of the attractive vehicle shown in the accompanying photograph. This 2-ton van is a recent addition to Messrs. Lyons' Dennis fleet, and embodies coachwork by Messrs. Normand Garage. It is intended for demonstration work throughout the country, and in many a village as well as the principal towns, the free samples will be enjoyed.

**H. G. Burford & Co. Change of Address.** — H. G. Burford & Co., Manufacturers of "Burford" Commercial Motor Vehicles and specialists in Road Traction have removed the business from West Row and South Row, North Kensington, to larger and more suitable premises at Norfolk Works, Princes Road, Teddington, Middlesex.

**Institute of Transport Forthcoming Meetings.**—On November 10th next at 6.45 p.m. at the Institution of Electrical Engineers, London, the Annual General Meeting of the Institute of Transport will be held, and at 7 p.m. there will be a joint meeting with the Institution of Automobile Engineers and the Commercial Motor Users' Association, when Mr. C. le M. Gosselin (Member of Council) will read a paper entitled "Goods Carrying Vehicles," to be followed by a paper on "Passenger Carrying Vehicles" by Mr. G. J. Shave (Member). Lt.-Col. J. A. A. Pickard, D.S.O., will speak on "Accident Prevention" at a meeting for Graduates and Students at 6 p.m. on October 21st at the Institution of Electrical Engineers, and at the same time and place on November 18th there will be an informal meeting of members of the Institute, when Mr. R. E. Morley (Member) will speak on "The Classification of Goods by Merchandise Train."

**The Society of Engineers.**—The Society of Engineers (Incorporated), of 17, Victoria Street, S.W.1, is giving a dinner to Miss Amy Johnson, C.B.E., B.A., Hon. F.S.E., on Trafalgar Day, Tuesday, October 21st, at which she has kindly consented to give a talk on "The Attention that I Gave to Jason's Engine during My Flight." As far as accommodation will permit, members of any accredited institution may purchase tickets from the Secretary of the Society of Engineers. Price 13/6 each, or five for £3, exclusive of wines. The offices of the Society are at 17, Victoria Street, Westminster, London, S.W.1.

**A "Foden" for a Distillery.**—The Foden Overtype 5-ton Steam Wagon which we illustrate was recently delivered by Fodens, Limited, Elworth Works, Sandbach,



THE FODEN STEAMER REFERRED TO IN TEXT.

to Messrs. John Dewar & Sons, Ltd., for work at their Benrinnes distillery in Banffshire.

**Motor Law.**—The Automobile Association, Fanum House, New Coventry Street, London, W.1, have issued an alphabetical digest of the Statutes and Regulations affecting the owners of Private Motor Cars and Motor Cycles, including the Road Traffic Act, 1930. This digest has been compiled by the A.A. Legal Department. In due course a book dealing with the whole of the Law and the Regulations contemplated by the Act will be published by the Association. This will be available to every A.A. member free of charge.

**Sixth Annual Exide Fortnight.**—Among the outstanding Autumn trade activities is the sixth annual selling scheme launched by the makers of Exide batteries, on October 6th and ending on October 18th. All Service Agents and Wireless and Motor Dealers are eligible to participate. Two free competitions, on a big scale, one for the public and the other for the trade, have been organised in the endeavour to secure record breaking sales for Exide stockists. The public competition is a ballot to decide what are the most popular features of Exide batteries: First prize £250, second prize £100, third prize £50, with ten prizes of £10 each, ten of £5, and one hundred of £1. Entrance to the competition is entirely free and without obligation to make a purchase of any kind. Each dealer participating in Exide fortnight has a supply of entry forms for the ballot. For the trade there is a window dressing competition carrying cash prizes to the value of

Digitized by Google

over £250, both for firms and for the actual staffs and window dressers engaged. As in previous years this competition will be judged by well known authorities.

**Commer Vehicles.**—The Cement Marketing Co. have recently placed an order with Commer Cars, Ltd., Luton, for one G2 (two tons) and two G6 (6/7 tons) platform lorries. This is a repeat order.

**Chiesmans' New "Albion."**—Chiesmans, Ltd., of Lewisham, London, S.E.13, have recently added to their fleet of transport vehicles the 30-cwt. "Albion," which we illustrate. The body was built by Messrs. Stening, of Catford. Points of interest are that the body is separate

CHIESMANS' NEW 30-CWT. "ALBION."

from the cab and that, although wheel arches are shown, they are really dummies, a flat bottom van being required for the furnishing trade. The sides of the body are carried down to hide the principals. The firm inform us that experience has shown that at least 6 ft. 4 in. clearance inside the van is necessary to take wardrobes, springs, etc., vertically. The painting is done in the firm's usual red with red, white and blue stripes.

**Transport Education.**—The North-Western Polytechnic, Prince of Wales Road, Kentish Town, London, N.W.5, which was opened by H.R.H. The Prince of Wales last October, makes a special feature of providing courses of instruction in Transport. Successful classes in Rail Transport were held last year, and these are being repeated during the session which opened on September 22nd last. In addition, new classes are being held in "Modern Road Transport Operation" and "Economics of Road Transport" under the direction of Mr. H. Scott Hall, M.I.A.E., who has an extensive knowledge of the many forms of road transport. A copy of a brochure giving details of these classes will be sent upon application to Mr. A. R. Burnett-Hurst, M.Sc. (Econ.), F.S.S., Head of the Commercial Department of the Polytechnic.

**A Useful Reference Book of Replacement Parts for Motor Vehicles.**—Automotive Parts and Accessories, Component Manufacturers and Factors, of 332 & 334, Euston Road, London, N.W.1, have issued the 1930-31 edition of their Universal Catalogue and Standard Reference of Replacement Parts for Motor Vehicles. This publication is intended to assist the vehicle repairer out of the many difficulties he so often experiences in the matter of Spare Parts, and no effort has been spared to make it as up-to-date and complete as possible.

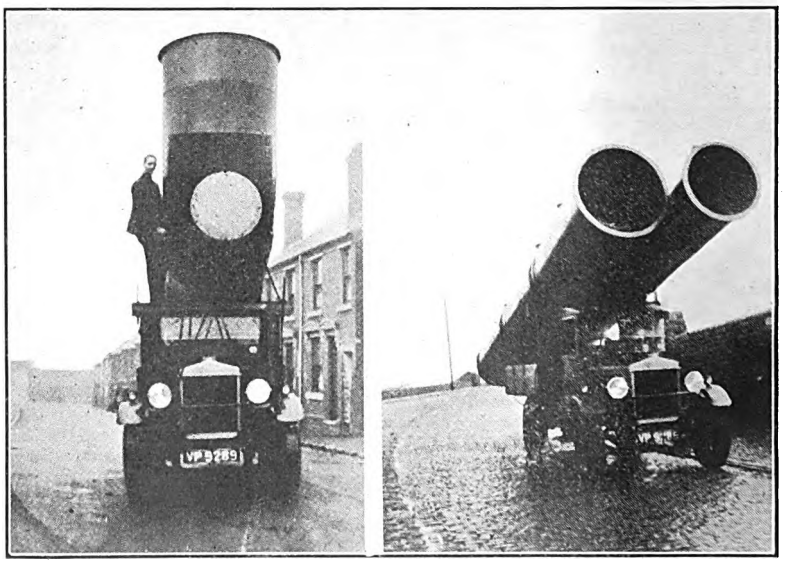
**British Mercedes-Benz, Ltd. Change of Address.**—We have been informed that the Mercedes-Benz Commercial Vehicle Department has been transferred to the premises at 111, Grosvenor Road, London, S.W.1, which is also the address of the Repair Depot.

**Hercules Engines.**—Automotive Products Company, 3, Berners Street, London, W.1, the sole European distributors of the Hercules Engines, have sent us a copy of Vol. I. No. I. of "The Hercules Heritage," published by the Hercules Motors Corporation, Canton, Ohio. The purpose of "The Hercules Heritage" is to present news—news of Hercules, news of Hercules customers, news of unusual Hercules uses—and to publish authoritative information on the manufacture and application of Hercules products. This issue is beautifully produced and contains many striking photographs; particularly excellent are those of typical engines and power units of the Hercules line. Automotive Products Company will be pleased to supply a copy of this brochure to any of our readers who will apply to them.

**Thomas Wallis & Co., Ltd. Change of Address.**—Thomas Wallis & Co., Ltd., of Holborn Circus, have recently removed their Furniture Depository from City Road to 223-227, Harrow Road, London, W.2, and their telephone No. is Abercorn 2200.

**Buenos Aires British Empire Trade Exhibition.**—The following cable was received last month by the Exhibition Management:—"To Follett Holt, Chairman London Committee Buenos Aires Exhibition.—Accompanied by Vice-Chairman and Secretary of British Chamber Commerce and Exhibition had audience to-day with General Uriburu, Argentine Government, who received us most cordially, authorising us to state this exhibition had the approval and would enjoy the support of his Government. The Minister of Finance expressed in similar cordial terms his goodwill and desire to assist us every way possible, emphasising importance of British commercial relations with this country and quoting slogan 'Buy from those who buy from us.' Foregoing creates every assurance that the exhibition is not only confirmed, but will enjoy support and assistance of the Argentine Government. Conditions in this country are tranquil, business as usual. Every confidence is manifested by the public in new Government, which has now been recognised by Supreme Court." (Signed) Gibson. Chairman, British Chamber of Commerce in Argentina. The London Office of the Exhibition has received a cable from Buenos Aires stating that the new Argentine Government have consented to issue an official decree giving protection to all patents, trademarks, etc., unregistered in the Argentine, for a period of six months and covering the duration of the Exhibition. As a token of goodwill towards the exhibition and a desire to further trade relations between the two countries, no finer gesture could be made by the new Argentine Government.

**A Tall Load for a "Manchester."**—Our illustration shows a Willys Manchester 30/35 cwt. lorry transporting steel pipes from Bilston to Halesowen, these loads forming part of a regular contract undertaken by Messrs. Bloomfield Motor Co., of Tipton. As can be seen, these pipes



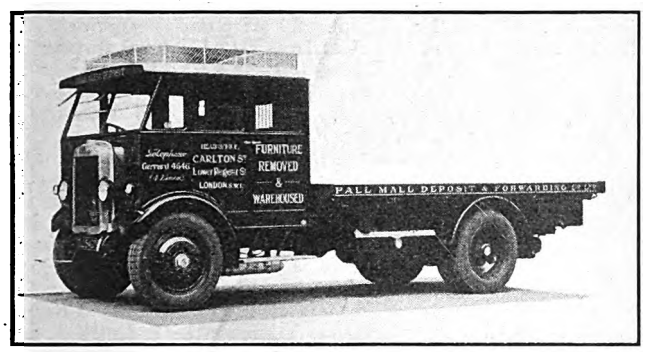
A WILLYS "MANCHESTER" 30/35-CWT. LORRY WITH AN UNUSUAL LOAD.

are of exceptional size and in certain places arrangements had to be made for the overhead tram power lines to be lifted so that the lorry could pass underneath with its load. The popular "Manchester" is one of the models marketed by Willys Overland Crossley, Ltd., Heaton Chapel, Stockport.

**The National "Safety First" Association. Drivers' Freedom from Accidents Competition.**—By arrangement with the National Safety First Association, the Postmaster-General has agreed to allow the entry of the whole of the Post Office motor drivers throughout the country,

Digitized by Google

for the current year's competition of the Association. The Competition is open to all paid (or professional) drivers and between 30,000 and 40,000 are already enrolled for the current year. A driver who completes twelve months continuous driving without blameworthy accident receives a certificate; after five consecutive such years a silver medal; and after ten consecutive such years a gold medallion. No award can be made until a driver has been duly entered for the Competition by his employer, and employers should encourage their drivers to take part. A leaflet giving full particulars of the Competition will gladly be sent upon application to:—The General Secretary, The National Safety First Association, Inc., 119, Victoria Street, London, S.W.1.



A LEYLAND "BISON" IN THE SERVICE OF THE PALL MALL DEPOSIT AND FORWARDING CO., LTD.

**A Fine Outfit.**—We illustrate a Leyland "Bison" lorry, purchased this year by the Pall Mall Deposit and Forwarding Co., Limited, Carlton Street, Regent Street, London, S.W.1. The cab, which is somewhat unique, is divided into two compartments, the forward one being for the driver and his mate, the latter controlling the trailer brake, whilst the rear compartment has accommodation for four other men. This lorry is usually used with a large lift van on it and drawing a trailer carrying a second lift van, and the firm often find it necessary to send a gang of, say, six men with the vans in order to carry out removal work. The coach builders are Messrs. Wm. & Thos. Robson, 60, Farringdon Road, London, E.C.

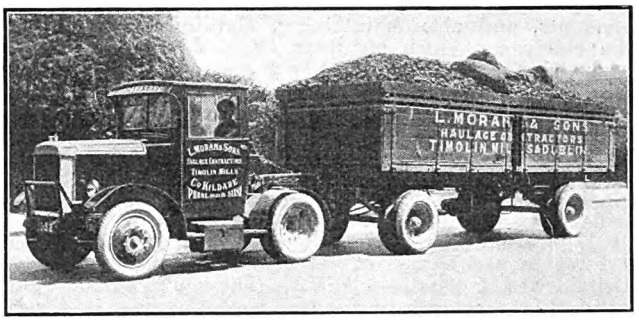
**A.E.C. "Mammoth" Lorry for well-known Transport Company.**—Our photograph shows a "Mammoth" A.E.C. lorry supplied by the Associated Equipment Company, Limited, Windmill Lane, Southall, Middlesex, to Curtiss & Sons, Ltd., the well-known removal contractors and shipping agents of London, Portsmouth, etc.

AN A.E.C. 110 H.P. 7-8 TON FLAT PLATFORM LORRY "MAMMOTH" MODEL FOR CURTISS & SONS, LTD.

**"Oiline" Lubricants.**—The Oiline Refining Co., Lubrication Specialists, South Road, Handsworth, Birmingham, have issued an interesting booklet containing full details of their lubricants. The "Oiline" Oil Chart of grades of oil recommended for various makes of commercial vehicles during both summer and winter is one of the features of this handy publication.

**The Motor & Cycle Trades Benevolent Fund.**—The Motor & Cycle Trades Benevolent Fund Stand at Olympia during the Motor Show is No. 204 in the National Hall, and a special campaign is being launched with the object of making a substantial increase in membership during the Show period. Fund Subscribers visiting the Show will receive a welcome reception at this Stand and if they have any trade friends who are not yet subscribers, they are asked to make an appointment with them at Stand No. 204 and take the opportunity presented of enrolling them in the Fund. The General Secretary of the Fund is Mr. A. H. Dawson and the offices are at 42, Bedford Row, London, W.C.1.

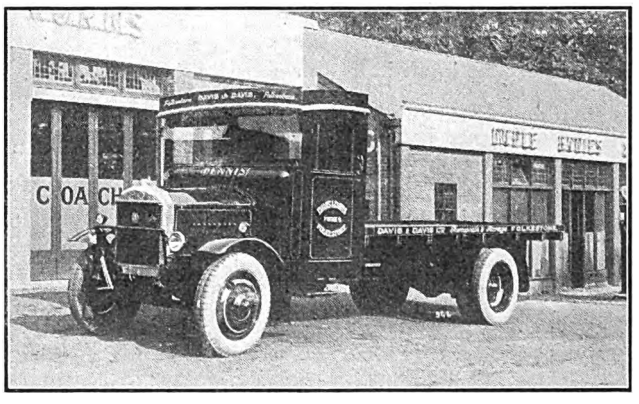
**Weight of Motor Vehicles.** — The Norfolk County Council has had under consideration the question of the increase in the weight of motor vehicles and loads on roads and decided to make representation to the Ministry of Transport with a view to the limitation of weights to be allowed on Class 1, Class 2 and Class 3 roads respectively.



A CHENARD-WALCKER TRACTOR AND TRAILER AT WORK IN THE IRISH FREE STATE.

**Chenard Walcker Tractors.**—Our illustration shows a 10-12 tons, 40 m.p.h. Chenard Walcker tractor with trailer in the service of L. Moran & Sons, Haulage Contractors, Trinolin Mills, Co. Kildare. Tractors and trailers of all types are supplied by Chenard-Walcker Tractors, Park Crescent, Clapham Park Road, London, S.W.4.

**A Duple Body on a Dennis Chassis.**—In the course of each year Duple Bodies & Motors, Limited, Motor Body-builders and Engineers, Edgware Road, The Hyde, Hendon, N.W.9, build quite a number of special Van and Lorry bodies and our illustration shows a special body built by the firm for Messrs. Dennis Bros., of Guildford, for their customer, Messrs. Davis & Davis, of Folkestone. The body is fitted with a totally enclosed driver's cab and all glazing is Lancegaye Safety Glass. The roof of the cab is boarded to enable goods to be carried on top if required. The platform is constructed with Chock Rails and is exceptionally strong. The vehicle is painted green with black wings and yellow lettering.



A DENNIS LORRY WITH A DUPLE BODY.

**Coal Required in Egypt.**—The Egyptian State Railways invite tenders, closing on December 16th, for the supply of 155,000 metric tons of colliery screened steam coal.

**The Institution of Welding Engineers.**—A meeting of members of the Institution of Welding Engineers will be held at The Institution of Mechanical Engineers, Storey's Gate, St. James's Park, London, on October 16th, at 7.45 p.m., when Mr. P. L. Roberts will read a Paper entitled "The Replacement of Castings by Weldings," illustrated by lantern slides. The offices of the Institution are at 30 Red Lion Square, London, W.C.1.

Digitized by Google

**Sixth International Road Congress, Washington.**—Mr. E. S. Shrapnell-Smith, C.B.E., Past-President of the Commercial Motor Users' Association, was the delegate of the Association to the Sixth International Road Congress held at Washington from October 6th to 11th last, and presented a joint Paper on the subject of "Highway transport, correlation and co-ordination with other methods of transport; adaption to collective and individual requirements."

**London Cartage and Haulage Contractors' Provident Institution.**—The Annual Dinner of the London Cartage and Haulage Contractors' Provident Institution, in aid of the funds, will be held at the Connaught Rooms, Great Queen Street, W.C., on Tuesday, the 25th November next, when the President, Mr. P. R. Turner, M.Inst.T., will preside. The Institution is established for the purpose of aiding its aged and necessitous members and their dependents, and also maintaining, clothing and educating the children of such members or of deceased members, where circumstances warrant such assistance. The Dinner will be followed by a short Concert and then by a Dance, and we appeal to our readers to support the Fund by being present and by inducing as many of their friends (both ladies and gentlemen) as possible to be present. The price of the tickets is fifteen shillings each, not including wine, and Mr. R. P. Bailey, the Hon. Secretary, will be glad to forward tickets upon application to him at 17 Water Lane, Great Tower Street, London, E.C.3.

**First Annual Dinner of the Travel Association of Great Britain and Ireland.** — H.R.H. The Duke of York has graciously accepted the invitation of the Earl of Derby, K.G., the President of the Travel Association of Great Britain and Ireland, to be the principal guest of the Travel Association at its first Annual Dinner at Grosvenor House on Wednesday, November 12th. Among those invited to be present at the Dinner will be Members of the Government, the Dominion Prime Ministers and High Commissioners, Foreign Ambassadors, the Lord Mayors of London, Dublin, Belfast, and Cardiff, the Lord Provost of Edinburgh, and representatives of the Foreign, American and Empire Press in London. The second Annual Meeting of the Travel Association will be held at the Board of Trade, Whitehall, in the afternoon, on the same day. The offices of the Association are at Kinnaird House, 1 Pall Mall East, London, S.W.1.

## MERSEYSIDE.

**Cartowners' Grievance.**—Very frequently Liverpool cartage and haulage firms are seriously inconvenienced by the Mersey Docks and Harbour Board rule forbidding goods for the Irish boats being dumped on to the landing stage and the Board could do a great deal to help the position by making some arrangement for carts to be given a fairly quick clearance. The trouble really starts at the dock—before the steamer leaves for the landing stage. If all the cargo cannot be got aboard, carts and lorries have to travel with their goods to the Liverpool landing stage and catch the boat immediately prior to sailing. A queue is formed and each vehicle must take its turn. Detention is sometimes a serious matter for the contractor and makes all the difference between doing the job economically and at a loss. Delays of two or three hours are not infrequent. If a space could be set aside near the Belfast or Dublin boats where goods could be dumped and thus enable the carts and lorries to move off, traffic congestion on the landing stage would be less pronounced and a considerable benefit conferred on the long suffering carriers. The classes of traffic mainly concerned are green fruit and provisions, and these, of course, are perishable goods which cannot be held over for the next boats.

**Lower Horse Hire Charges.**—The charge for the hire of horses by the Liverpool Corporation Health Committee to other departments of the Corporation has been reduced. No information is available as to whether there has been any change in the hire rates from private horse owners.

**Guide to New Traffic Act.**—Members of the Liverpool Cart and Motor Owners' Association may shortly expect to receive from the secretary, Mr. Allen Walter, a summary of the main provisions of the Road Traffic Act. Drivers will also be supplied with this information, it being Mr. Walter's idea to send to each member sufficient copies for distribution amongst his drivers.

**Casual Labour in Cartage and Haulage Trades.**—The general comment of Liverpool cartage and haulage contractors who have studied the report of Mr. F. G. Hanham, of the Ministry of Labour, on casual labour in the transport industry is that it is a very competent survey of the Merseyside conditions. As this report is summarised in another column, there is no need to recapitulate any of Mr. Hanham's observations here, excepting to mention the serious handicap from which Liverpool vehicle owners suffer through not enjoying the benefits, as do their confreres in the remainder of South-west Lancashire, of the 48-hour accumulative working week.

## MANCHESTER.

**Transport Training.**—In connection with the Manchester High School of Commerce, a special course of lectures for the Institute of Transport Graduateship and Associate Membership Examinations has been arranged. For the Graduateship examination there is a two year course which includes a series of three lectures on "Elements of Traffic Working":—(1) Railway, Mr. G. Seddon, A.M.Inst.T.; (2) Road, Mr. H. Howard Robinson, A.M.Inst.T.; (3) Water, Mr. R. W. Bradley, A.M.Inst.T. Preparation for the Associate Membership Examination is a one year course embracing:—Modern Railway Operation, Mr. G. Seddon, A.M.Inst.T.; Economics of Road Transport, Mr. H. Howard Robinson, A.M.Inst.T.; Law Relating to Transport, Mr. J. W. Thomas, B.Sc., Ll.B., Barrister-at-Law; Economics of Railway Transport, Mr. D. Halliwell, M.B.E., M.Inst.T.; Port Administration and Economics of Transport by Water, Mr. R. W. Bradley, A.M.Inst.T.

**Team Labour Contracts.**—Here is a list of firms, etc., whose tenders for the supply of team labour, required by the Manchester Corporation Paving Committee during the six months ending 31st March, 1931, has been accepted:—G. Massey & Sons, W. Riley, J. Holt, J. Crossland, Junr., G. Welsby, Mrs. G. Lear, W. Leigh, J. H. Peck & Sons, Ltd., A. Mountfield, T. Lamb, W. Hayes, J. Bray, R. Melling, W. Tonge, P. Lawless, S. Thorpe, C. Cooper, D. Clays, G. H. Brocklehurst, T. Seward, C. Knill, J. and G. Evans, G. Farrell, P. Doherty, Barber Bros., J. A. France, J. W. Street, G. Wilson, South Manchester Coal Co., G. Barrow, W. and S. Royle, D. Middleton, J. Biesty, C. G. Stephens, J. A. Shafto, W. R. Lee, J. Wharton, J. Walmsley, H. M. Evers, Mrs. S. A. Green, J. Bacon, W. Lancashire, E. and R. Hughes, and A. R. Hughes—all of Manchester; and A. Peck, Northenden. Haulage.—T. Maiden, Manchester.

**Useful Concession.**—As a result of a communication from Messrs. Cheetham, Robinson and Co., Ltd., road transport contractors, Manchester, the Nantwich Council has decided that for the convenience of carriers loading cheese, the market be kept open until 6.30 p.m. whenever, in the discretion of the Market Inspector, he considers it necessary to do so in order to effect the removal of the cheese.

**The Reason Why.**—Motor users have been wondering why the amber light of the automatic signals at Stretford shows a little longer than the other coloured lights. This is because the distance between King Street and Edge Lane is longer than at most crossings.

**Wages Situation at Heywood.**—Heywood Corporation after deciding to post notices of an intended reduction of 2s. per week in the wages of transport workers employed by the Corporation, received from the secretary of the employers' association a letter stating that trouble had arisen in certain districts through various corporations and co-operative societies and a few private firms failing to put the reduction in force. Consequently the whole question had been referred to arbitration. The Corporation has, therefore, decided not to take any further action until the arbitrators award is known.

## HULL.

**The Humber Bridge.**—A Bill to authorise the construction of a bridge across the river Humber, a short distance above Hull, is to be promoted in the ensuing session of Parliament, and the ex-Lord Mayor has been so confident as to prophesy that within three years time the bridge will be in service. The Minister of Transport is apparently as enthusiastic over it as the members of the Hull Corporation and he declared that he was disappointed with the negative attitude of the East Riding County Council. Sir Douglas Fox and Partners, the eminent engineers who made the original report, have been appointed consulting engineers to the scheme. As the present writer foreshadowed, the engineer to the Humber Conservancy Board has reported strongly against the scheme, because of the possible interference with the upper reaches of the river, and that body, together with the Aire and Calder Navigation Company, the chief owners of the port of Goole, will put up a strong fight when the Bill comes before the Parliamentary Committees at Westminster. Half a century ago a committee of the House of Lords rejected a proposal to make a tunnel under the Humber and one wonders whether history will repeat itself.

**Hull Development Committee.**—This body has been functioning for more than a year and there is no doubt it has rendered good service in bringing the port prominently before business men at home and abroad.

Digitized by Google

At the moment it is endeavouring to induce an aircraft manufacturing company, at present situated in the Midlands, to select Hull as the site for a new factory, and inducements are being held out to a large Trust to erect a copper refinery within its borders.

**Tramcars Not Yet Discarded.**—The sum of £10,000 is to be spent by the Hull Tramways Committee in making the necessary connections to enable tramcars to cross the new North Bridge. This is the principal bridge across the river Hull which bifurcates the city, and there are many people who think its erection should have been followed by the shutting down of the tramway service and the substitution of buses. As, however, the Committee recently spent a vast sum of money in relaying the whole of the tram tracks in East Hull it was felt it would be an unjustifiable waste to scrap them.

## NORTH-EAST COAST.

**"Safety First" in Newcastle.**—The recently appointed "Safety First" sub-committee of Newcastle Watch Committee has decided to immediately institute measures for public safety and the creation of increased traffic facilities; and is inviting the co-operation of the public in the matter of suggestions. Efforts will be made, by efficient notices, to preserve main routes for fast-moving traffic; and one-way streets, unilateral parking, and gyratory systems of diverting traffic are to be closely studied.

**My Lady's Choice.**—Mr. Albert A. Adams, who represents the motor body building industry in Newcastle Rotary Club, addressing his fellow members recently on "Road Carriages," said that the ladies were the principal ones to decide in the buying of a car, and they would have a vehicle that looked nice and was nice to sit in! Mr. Adams expressed the opinion that rail travelling would never be ousted by the motor coach. Railways might carry very few passengers in future on short journeys, but would always be preferred to the motor coach for long distances.

**Unilateral Systems.**—Newcastle is proposing to experimentally erect "Unilateral" traffic control signs on tramway standards in Grainger Street, Collingwood Street, and Pilgrim Street. Under this system, vehicles may stop only on one side of thoroughfares so marked; but the notices are put on each side for "Odd" or "Even" days, opposite sides of the street being thus used alternately to give equal treatment to tradespeople.

**Bus Ousts Train.**—Ten stations in the Alnwick-Coldstream section and four stations in the Hexham-Allendale section of the L.N.E.R. closed for passenger traffic on September 22nd, besides others in the York and Malton area. In each case adequate bus facilities have been provided; and the stations are being kept open for dealing with milk, parcels, and perishables, horses and cattle, and goods generally.

**Tyne Airport Project.**—Officials of the Air Ministry have reported on the White Mare Pool site, near Gateshead, as one of the most favourable on Tyneside as the airport for the area; while Sunderland is favoured as the military air station.

**Automatic Lights for L.N.E.R.**—The London & North Eastern Railway Co., having decided to adopt the new electric tri-coloured lights, is extending that system of signalling in the North-eastern area, in the interests of economy and efficiency alike.

## SOUTH WALES.

**Western Welsh Omnibus Company, Ltd.**—Good progress is being made by Messrs. Knot & Wells, Ltd., the contractors, and the Western Welsh Omnibus Co., Ltd., hope to be in their new garage (for 100 buses) at Ely, Cardiff, by the new year. The lower walls and the upper girders are up, and a good idea of the mammoth building is given of a structure that will include all modern equipments. The business of the Western Welsh has grown enormously, and the present year has been a record one in extended and new services, as well as the catering for private parties. This last department has shown such an improvement that a special fleet of 30-seaters has been kept going all the summer, week-end parties having been booked up months ahead. The new garage has been well earned by new business. In co-operation with Newport and Caerphilly, the Western Welsh Omnibus Co., Ltd. (in association with the G.W.R.) have taken over part of the services previously operated by the Cardiff Corporation. Extensive and important developments are being undertaken in the Bridgend area by the Western Welsh Omnibus Co., Ltd. Bridgend is the old capital of Glamorgan, and is a Western Welsh stronghold, being the centre of the Company's most prosperous services between Cardiff, Penarth, Porthcawl, and the mining towns of Maesteg, etc. The present bus station is compact and serviceable, but increasing business has brought about congestion, and a new bus station is to be erected. For this purpose, the market, a large area at the side of the present bus station, has been acquired, and the improvements will be made directly the local authorities can find a new and convenient site. This new bus station will not only improve the Company's running convenience, and offer an immensely improved accommodation for patrons, but will relieve the congestion of traffic in the narrow streets of the town by reason of the fact that one-way routes will be arranged, thus allowing quicker progress through and access to the centre. This development will coincide with that of the Bus, Train and Boat services on combined tickets at inclusive fares, and the advantage of association with the G.W.R. will become more effective and pronounced.

## NORTHERN IRELAND.

**Long Service.**—Mr. W. J. Bailie, traffic manager of the Great Northern Railway (Ireland), has resigned after 41 years in the service of the Company. He was made goods manager in 1924, and in 1926, when the posts of goods manager and superintendent-of-the-line were combined, he became traffic manager.

**Proposed Motor Legislative Committee.**—A meeting has been held in Belfast to establish a "Motor Legislative Committee" in Northern Ireland, representative of different organisations interested in motoring and the motor car trade. Assistance to the movement is being given by Mr. Victor Ferguson, chairman of the Ulster Division of the Motor Trade Association; Mr. H. Cecil Orr, area secretary of the Automobile Association; Mr. Charles Hurst, Mr. H. M. S. Catherwood, and Captain S. J. Hutchinson.

**Threat from Bus Passengers.**—Early last month steps were taken in the small town of Holywood, near Belfast, to form an Ulster Passengers' Combine, with the object of getting cheaper services. The idea was that members of the Combine should run their own bus or buses to and from Belfast at a reasonable fare, and take whatever profits were made. The organisers said it would not be necessary to apply to the Government for licences, as the Combine buses would be private vehicles, and not plying for hire. Before any Combine buses appeared on the road, however, the Ulster Ministry of Home Affairs warned local bus owners that the scheme could not be worked without a clear breach of the regulations made under Acts of Parliament, and if any bus owner should hire out a bus, and a breach of the regulations was committed with the vehicle, the licence of that vehicle would be at once revoked. The Combine scheme, the Ministry said, had been designed to destroy the system of control approved by Parliament. This warning had its effect, and no Combine buses have appeared up to the time of writing.

## IRISH FREE STATE.

**Bus Services in Limerick and Kerry.**—A new and improved bus service was begun in Limerick on September 15th, with an ample supply of new cars that are beautifully turned out, well lighted, neatly upholstered, and capable of seating 25 passengers. They are an addition to the fleet of the I.O.C. and are a decided acquisition to the Company catering for the requirements of the travelling public in the Limerick centre. Bus services in Kerry are also to be improved and extended, and the Tralee Chamber of Commerce has written to the I.O.C. on the subject, for further bus services are deemed to be desirable at Tralee in the public interests.

**Facilitating the Flow of Traffic in Dublin.**—A scheme for providing better facilities for the flow of motor vehicle and tramway traffic is now being undertaken in Dublin, where the work of removing the existing double sets of tramway lines from either side of O'Connell Bridge, connecting the most traffic congested streets in Dublin, and replacing them by single lines is now in progress. Undoubtedly, in due time, the altered track will afford great easement for traffic. The change is calculated to give a forty-foot roadway to all traffic passing from Westmoreland Street side over the bridge to O'Connell Street, Dublin's leading thoroughfare, while a fifty-foot roadway will be available for horse and motor traffic coming from the southern to the northern side of the bridge. All tramcars coming from the south side, when the scheme is completed, will be confined to a single line running over the bridge in the direction of O'Connell Street, and those going from the north side to the south will proceed by the single line laid at the eastern side of the bridge. As far as vehicular traffic is concerned this street improvement project must prove a boon to Dublin and its trade and commerce.

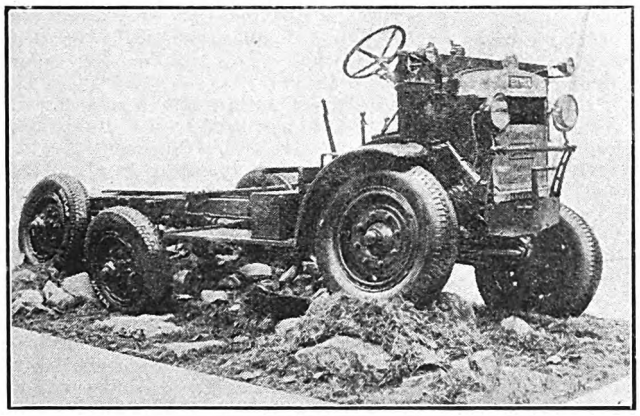
# Motor Notes.

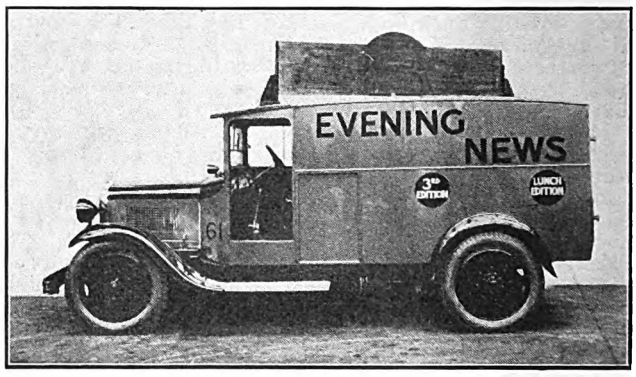
**Garner Military Six-wheeler.**—Garner Motors, Ltd., Tyseley, Birmingham, received recently a further repeat order from the British War Office for 21 Garner fully-articulated rigid six-wheelers. The chassis is of the forward drive type fitted with the Garner patented arrangement of engine accessibility whereby the wings swing forward, permitting instant and easy access to all working parts. The engine is of the four cylinder type with Ricardo head and dry sump lubrication. The front axle is centrally pivotted by a Garner patented system and a difference in front wheel level of 15½ inches is allowed. Both rear axles are overhead worm driven. Articulation is provided for in every respect. It is of interest to note that the well-known Model R.O. Garner Overtype 40/45 cwt. chassis is really the four-wheeled commercial edition of this successful six-wheeler.



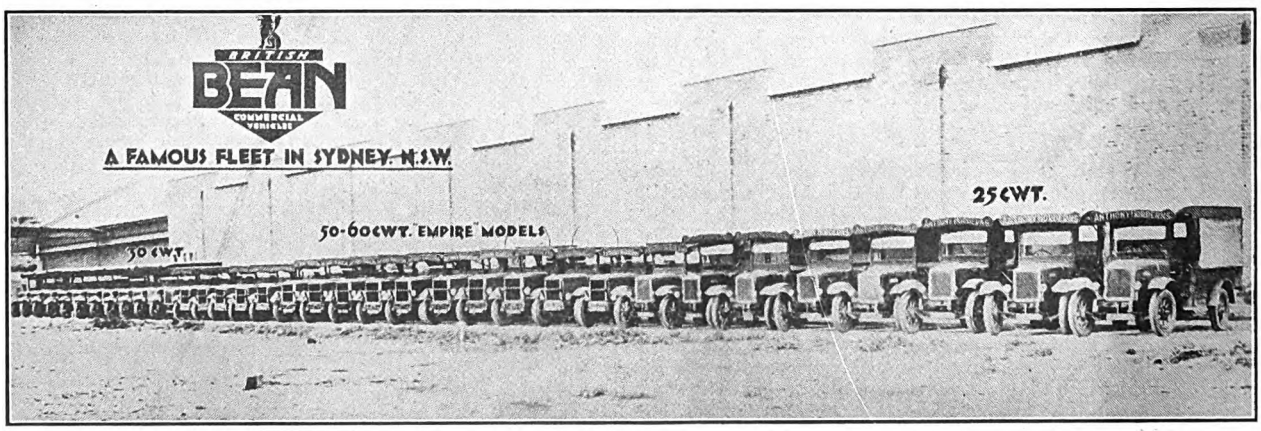
A GARNER MILITARY SIX-WHEELER.

**Motor Vehicles and our Export Trade.**—In view of the widespread desire that exists to increase our export business, the photograph which we reproduce, sent to us by Bean Cars, Ltd., Tipton, Staffs., will be of interest. It shows a fleet of "Bean" Commercial Vehicles operated by Anthony Horden, of Sydney, N.S.W. The Bean fleet totals 43 vehicles and includes 25, 30 and the larger 50/60 cwt. "Empire" models.

**Singer Industrial Motors.**—Since Singer & Co., Ltd., of Coventry, first entered the medium-weight commercial vehicle field with the exhibition of their two-tonner at Olympia last year, they have been experimenting in various developments of this model for work of a specialised nature. An example of these is a special fast-delivery newspaper van designed and built to the requirements of Associated Newspapers, Ltd., and now being delivered by the makers in quantities. Built on a special short wheelbase and with a rear axle ratio of 4.8 to 1, this model incorporates the power unit and four-speed gear box of the standard two ton chassis. With Marles steering gear and Dewandre servo operated brakes, perfect control is assured at speeds of well over a mile a minute. The body is specially constructed for newspaper distribution and to facilitate working at high pressure, no doors are fitted to the driver's cab. Double swing doors of full width allow easy access to the body of the van, the walls of which are lined with slats to protect the panels, while the special box lamp normally serving to illuminate the rear number can instantly be adapted for interior lighting. With a very complete specification, the van retails at £430. Upon request, the manufacturers will be pleased to give full specification of chassis and van body and to arrange demonstrations.



A "SINGER" FOR FAST NEWSPAPER DELIVERY.



A FLEET OF "BEAN" COMMERCIAL VEHICLES OPERATING IN SYDNEY, N.S.W.

**Willcox's Lubricants.**—W. H. Willcox & Co., Ltd., the well-known refiners of high-grade lubricants, 32-38, Southwark Street, London, S.E.1, have issued a new booklet dealing with the subject of lubrication. Included in this publication are tables giving details of Willcox's Lubricants to meet the lubrication requirements of most of the better known makes of cars, lorries, etc. The firm's aim and ambition is correct lubricants and correct lubrication.

**Commercial Ambroleum.**—Messrs. Sternol, Limited, well known as the manufacturers of Ambroleum, the gear lubricant, which attained such popularity in the early days of motor transport, have recently introduced Commercial Ambroleum, a new compound combining the excellent qualities of the old product with many new features, to ensure its suitability for motor gear boxes, rear axles and grease points. Commercial Ambroleum is not a grease. It is claimed that the gear wheels will not track through it, it

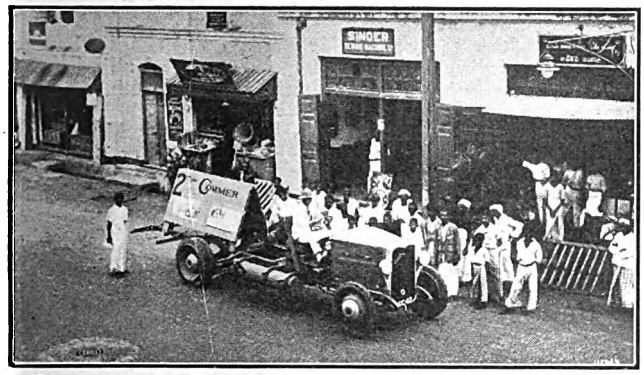
Digitized by Google

follows the teeth at all speeds and reaches all lubrication points. Particulars can be obtained from Messrs. Sternol, Limited, Royal London House, Finsbury Square, E.C.2.

**Triplex Safety Glass.**—The Report of the Directors of The Triplex Safety Glass Company, Ltd., 1, Albemarle Street, London, W.1., for the year ended 30th June, 1930, states that during the year the Company maintained its premier position in the Trade, and satisfactorily complied with the conditions relative to quality and delivery attaching to its contracts with the most important firms in the British motor industry.

**Automotive Products Company. Change of Address.**—We are informed that The Automotive Products Company has now removed to new premises at Brock House, Langham Street, London, W.1. Their new telephone number is Langham 1373 (3 lines).

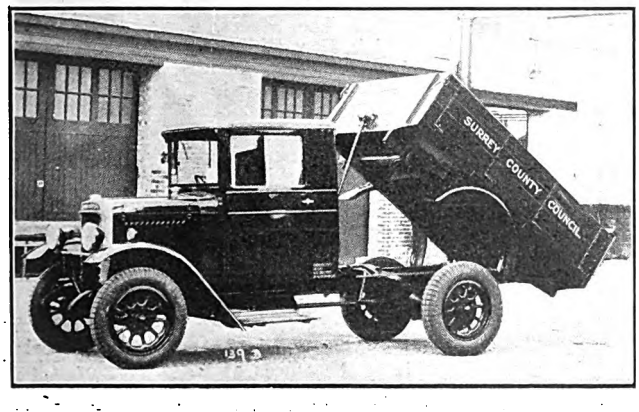
**The First "Commer Invader" Chassis to be Landed in Ceylon.**—Commer Cars, Ltd., Luton, have sent us an interesting photograph, which we reproduce, showing the



THE FIRST "COMMER INVADER" TO BE LANDED IN CEYLON.

first "Commer Invader" chassis to be landed in Ceylon. This was taken at Colombo, where the vehicle attracted much interest, and astonishment was displayed at its performance in top gear when throttled down to a mere three or four miles per hour without a suspicion of "snatch." In fact, the native driver was able to walk alongside while the chassis was in top gear. We understand that opinion in Ceylon is that this chassis is specially suited for Colonial conditions.

**Morris-Commercial End Tipping Truck for Surrey County Council.**—Stewart & Ardern, Ltd., sole London distributors of Morris cars, Morris House, The Vale, Acton, London, W.3, have sent us a photograph, which we reproduce, of a 30-cwt. Morris-Commercial End Tipping Truck, one of two vehicles supplied by them to the Surrey County Council.



ONE OF TWO MORRIS-COMMERCIAL 30 CWT. END TIPPING TRUCKS FOR THE SURREY COUNTY COUNCIL.

"Germ" Motoils.—Henry Wells Oil Co., Ltd., Manufacturers of Lubricating Oils, 736-739, Salisbury House, Finsbury Circus, London, E.C.2, have sent us a copy of the latest issue of their Germ Motoils Booklet which gives some brief particulars of the Wells-Southcombe patented process for increasing "oiliness." There is a complete list of recommendations showing the grades of Germ Motoils for use on all kinds of vehicles, and also retail prices. Copies of this booklet will be gladly sent by the firm to any of our readers who will apply to them.

**Fowler 5-6 ton Trailer on Pneumatic Tyres.**—John Fowler & Co. (Leeds), Ltd., Leeds, realise that there is a growing demand for light trailers for attachment to steam or motor lorries. The Fowler trailer, on pneumatic tyres, is a light but exceedingly strong vehicle capable of carrying 5 to 6 tons, and by the use of pneumatic tyres vibration is reduced to a minimum with consequent increase in the life of the trailer. The frame is of rolled steel sections strongly braced and gusseted with cross members extending the full width of the platform and therefore eliminating body distortion; forecarriage of robust design fitted with specially designed turntable to allow free and easy movement on uneven roads. The centre pin is fitted with a special spring which acts as a shock absorber; springs of adequate strength and flexibility, eliminating vibration at high speeds; disc wheels designed to take pneumatic tyres, easily detachable and carried on cast steel bosses with a combination of ball and roller bearings, which ensures the easiest possible running; brake gear with internal expanding shoes lined with Ferodo acting on steel drums, operated either from the trailing lorry or by hand lever on the trailer as required. Any type of body can be fitted to suit customers' requirements. The leading dimensions are:—Length of body, 13 ft.; width of body, 6 ft. 6 in.; loading height, 3 ft. 10 in.; length of dragbar (centres), 4 ft.; tyres (all wheels), 36 in. by 8 in.

**Thornycroft Vehicles for Canadian Removals.**—British motor vehicles are making good headway in Canada. Our illustration shows two roomy furniture vans on Thornycroft A2 long chassis, recently supplied by The General Trading Co., Ltd., of Vancouver, B.C., agents for John I. Thornycroft & Co., Limited, Thornycroft House, Smith Square, London, S.W.1, to the Crone Storage Co., Ltd.,

TWO THORNYCROFTS USED FOR REMOVAL WORK IN CANADA.

who operate a fleet of about 20 vehicles. These were the Crone Storage Co.'s first two Thornycrofts, which they have now had in constant use for over 18 months, and have expressed themselves as very highly satisfied with their general performance.

**Tangye Presses, Pumps, etc.**—Tangyes, Ltd., Cornwall Works, Birmingham, have recently issued a new catalogue dealing with their specially designed hydraulic presses, pumps, etc., as used for the Moulded Products Industry. The firm are in a position to offer the complete unit of Presses, Pump, Accumulator and Steam Boiler, of their own manufacture throughout. They are prepared to make the necessary layout drawings of the pressing unit to suit their customers' requirements. Staff is available for the immediate assistance of users when required in cases of repairs and for instructing the workmen in the proper upkeep of the unit, so that satisfactory service can be obtained from the installation.

**Timken Tapered Roller Bearings.**—Of considerable interest to all Garage Proprietors, Repairers, Large Fleet Owners, etc., will be the new Service Catalogue No. 292, issued by British Timken, Limited, Cheston Road, Aston, Birmingham. The catalogue shows position and number of Timken Bearings fitted to popular makes of British, American and Continental vehicles, and has been published in order to assist the immediate indentification of the particular replacement Timken Bearings required. Any of our readers can obtain a copy of this catalogue free upon application to the firm.

# County Court Judgments.

The following returns from the Registry of County Courts' Judgments, Whitehall, have been received relating to judgments entered up in the respective County Courts of England and Wales. Publication does not imply inability to pay. Many judgments may have been settled between the parties or paid. Judgments settled otherwise than through the Court may appear unless "satisfaction" is entered up within twenty-one days from judgment or allocatur. Registered judgments are not necessarily for debts. They may be for damages or otherwise, they may relate to actions *bona fide* contested between the parties, or they may be against defendants, liable in a representative capacity, and not personally; but no distinction is made on the register. Judgments are not returned to registry if satisfied in Court books within twenty-one days.

Blevins & Keen, Jane Pit-yard, Walker-on-Tyne, Northumberland, char-a-banc proprietors. £29/6/0. July 4th.

## Satisfactions.

*Note: Where the amount "originally secured" is stated, that is not necessarily the amount outstanding at the date of the satisfaction recorded below. There may have been previous partial satisfactions, registered or unregistered. The registration of Satisfactions is not compulsory.*

**Thomas Maguire, Ltd.**—Satisfaction to the extent of £5,907 8s. 2d. on September 1st, 1930, of mortgage debentures, authorised May 27th, 1915, and registered June 17th, 1915, securing £6,000.

**Capon & Sons, Ltd.**—Satisfaction to the extent of £3,600 on September 2nd, 1930, of mortgage dated December 5th, 1929, and registered December 6th, 1929.

**Black and White Motorways, Ltd.**—Satisfaction to the extent of £3,205 on September 15th, 1930, of memorandum of deposit dated April 30th, 1930, and registered May 15th, 1930.

## News from all Parts.

**The Transoceanic Forwarding Co., Ltd.**—We have watched with a good deal of interest the development of the Transoceanic Forwarding Co., Ltd., and congratulate the directors upon having found it necessary to move to larger premises at Lincoln House, 60, Greek Street, Soho Square, London, W.1. This is only a move to the next building to the one which the company has occupied for the past eleven years, but with the greatly increased accommodation they are now in a position to offer their clients better service and they have also been able to open a special department for the sale of passenger tickets, insurance of baggage, etc. Ample accommodation is now available for any of their foreign clients who wish to transact their own business at their London office. A special room has been reserved for their use, where they can carry out transactions in the same privacy that they would enjoy in their own premises. The company have their own offices at Southampton, Liverpool, Glasgow, Harwich, Paris, Brussels, Antwerp, Berlin, Vienna and Persia.

**Canal Bridges that will be affected by Development Scheme.**—Bridges which for over a century have been picturesque landmarks on the Grand Union Canal between London and Birmingham will have to be reconstructed as the outcome of the £881,000 development scheme which the Company hopes shortly to undertake. The general policy is to increase the capacity of the whole canal, so that the passage of bigger craft may be possible. Its realisation will depend, in a large measure, on the reconstruction of the bridges, as undertaken by the local authorities from time to time. In any new works of a permanent nature, allowance will be made for a waterway to allow the passage of barges of 14 ft. 6 in. beam; but it is estimated that craft of 12 ft. 6 in. beam would serve meanwhile to navigate the River Thames and take in cargo from ship or dock, thus saving the cost of the transhipment from barge to narrow boats which is at present necessary. The Company anticipates that craft will run in pairs as at present, namely, motor-propelled barge and towed barge of the following dimensions:—72 ft. long by 12 ft. 6 in. beam, which, when drawing 4 ft. of water will, it is estimated, carry 117 tons the pair, and when drawing 4 ft. 6 in. of water, 137 tons the pair.

**R.A.C. and the Roads.**—During the past few months the Royal Automobile Club has installed twenty-five roadside telephone boxes of a new type in various parts of the country. These boxes have been built to a special design by Sir Edward Lutyens, R.A., and are intended for use principally in districts where they would be more in harmony with their surroundings than the "sentry box" type of telephone hut commonly employed by the R.A.C. The new box has a square front with split door, the top half opening in the centre in two leaves to enable members to use the telephone, etc., at night time when the R.A.C. Guide usually in attendance is off duty. The sides and back of the box are shaped in a broken curve, and the whole of the exterior of the box is panelled. The top is surmounted by a brass finial representing the Club's initials beneath a crown. The boxes are painted in two shades of blue, and have a most pleasing appearance. The value of roadside boxes, containing a telephone, fire extinguisher and first aid outfit, is unquestionably very great indeed, and the R.A.C. has now installed approximately 430.

**London Chamber of Commerce. Commercial Education Department.**—The Commercial Education Committee of the London Chamber of Commerce, of which The Rt. Hon. Lord St. John of Bletso is Chairman, have issued their fortieth Annual Report, which defines the aims and objects of the Commercial Education Movement of the Chamber, and shows the continued steady progress of this important work since its commencement in 1890. The value of the Certificates and Diplomas granted by the Chamber is well recognised by employers, and the efforts of the Chamber to increase the efficiency of entrants to commercial and industrial firms have met with a great measure of success. The expenses incurred in carrying on this work are met partly by fees from examinees and by the sales of publications, and partly by the financial support of Members of the Chamber and others interested in the progress of British Commerce, and it is hoped that practical support to the scheme by contributions towards the estimated cost of the present year's programme will be forthcoming. The address of the Chamber is 1, 2 and 3, Oxford Court, and 97, Cannon Street, London E.C.4.

**National Certificates in Mechanical Engineering Endorsed in respect of Automobile Engineering Subjects.**—The Institution of Automobile Engineers, Watergate House, Adelphi, London, W.C.2, states that an arrangement has existed for the past six years whereby, when a candidate for a Higher National Certificate in Mechanical Engineering at the termination of an Advanced Course includes a specialised automobile engineering subject in his final examination, the signature of the President of the Institution of Automobile Engineers can be added to any Certificate which may be awarded. The arrangement has now been extended to Ordinary Certificates awarded at the termination of Senior Part-Time Courses. It has also been arranged to consider applications for approval of Supplementary Senior Part-Time Courses with a view to the endorsement of automobile engineering subjects on Ordinary Certificates previously awarded at the termination of Courses of a more general type. Such applications should be addressed in the first instance to the Board of Education, and requests for the addition of the signature of the President of the Institution of Automobile Engineers to Ordinary Certificates awarded or endorsed under these conditions should be made to the Institution of Mechanical Engineers at the time when the results of final examinations are submitted on Forms 279T.

## NOTICES

**The World's Carriers is published monthly, on the 15th of each month. Annual Subscription, including World's Carriers Year Book and Diary, £1 1s., post free.**

**Advertisement tariff sent on request.**

**The Editor, while promising to give prompt consideration to any articles, notes, drawings, or photographs submitted, disclaims all liability in connection with contributions sent in voluntarily. If a properly addressed and stamped envelope is forwarded, every effort will be made to return rejected contributions.**

**Books, pamphlets, prospectuses, and newspapers (the latter having any special item conspicuously marked) should be addressed to the Editor.**

# Road Transport in the United States.

OUR recent visit to the United States to attend the Sixth International Road Congress was far too short to make a detail survey of road transport conditions in that country, so that, in dealing with the subject, it must be understood that our statements are of a general character compiled from observations during a 3,000 mile tour through the States of Virginia, North Carolina, South Carolina, Georgia and Florida and by observation in the cities of New York, Detroit and Washington, amplified by information gathered from sundry recognised authorities on the subject. Road transport in the States above mentioned has not yet developed to such an extent as in the States more densely populated and where manufacturing industries are centred. The road transport problem in the United States and its development are on much the same lines as in this country, though, in the United States the regulations regarding use and construction are much less restrictive than our own. Though undoubtedly road competition with the railways is serious, it is not nearly so serious as is the case in this country for the reason that there are still vast areas of land in the United States still entirely undeveloped either for agricultural or industrial purposes and the opening up of these areas by road construction and road transport is compensating largely for the traffic lost to the railways in and around the highly developed industrial centres. The rectangular layout of the principal cities and the generous width of the streets makes traffic control easier than it is with us and almost universally the automatic control system has been adopted and it works very satisfactorily. The United States road user appears to be very considerate in his use of the road so long as he is satisfied that by observing the usual courtesies of the road he is adding to his own comfort as well as to that of others. The speed of street traffic is considerably in excess of ours and more liberal use is made of the brake than in this country. It is certainly recognised that the speedier the traffic the less street congestion there is. In the open country high speed is the general rule and although there are maximum speed limits they are no better observed than in this country and, indeed, there is less necessity because of the infrequency of road crossings. The American system of speed regulation is more practical than our own and, in theory at least, a high uniform speed tends to render the road safer, for the reason that there is less overtaking. For instance, the average motorist in England appears to consider it a point of honour that he should on all occasions be able to overtake and pass a motor coach or any other heavy vehicle and his persistent complaints in this respect are largely responsible for the ridiculous speed limits for other than private cars. The present day motor coach is without a doubt the fastest and safest vehicle on the road, with of course the exception of specially built fast cars. Also heavy goods carrying vehicles are capable of very high speeds with safety equal to that of any other vehicle. Obviously then it is better for these vehicles to maintain their high speeds, under favourable conditions, and by so doing the necessity for frequent passing is avoided. On narrow roads this advantage is important as, not only can a single line of traffic, going in one direction, be maintained over long distances, but also the danger incidental to two vehicles travelling abreast meeting other vehicles coming in the opposite direction is also avoided. Speed limits in the United States vary in various States but generally they are as follows:—20 miles per hour upon urban streets, 25 miles per hour upon suburban streets and upon any other street or highway 40 miles per hour. The laws of many States prescribe for the three types of thoroughfares indicated, a graduated schedule of speed limits based on the kind of tyre equipment and on the gross weight of the vehicle, but it is found that such elaborate and detailed schedules are very difficult to enforce. There are weight restrictions in the United States but neither are these very rigidly enforced; though on the whole the gross weights do not appear to be so heavy as ours, that is judging from such traffic as we saw in New York and other large cities. In the States through which we passed the heavier traffic consisted of agricultural produce such

Digitized by Google

as apples, citrus fruits, tobacco, cotton and, in some districts, timber. We were told that the main check on the abuse of the road by too heavy axle weights was that afforded by the community as a whole. If for instance a lumber man is damaging the road by unnecessarily heavy axle weights, he becomes unpopular with his neighbours and it is more to his advantage to come into line with their requirements than to defy them. In a sparsely populated district this is readily understandable. The majority of the vehicles we saw were not of greater than 3-tons capacity and were built for considerable speed. We saw a limited number of 4-ton vehicles hauling trailers, which were usually loaded with cotton. Long distance motor coaching is increasing rapidly in popularity in the United States, increasing in fact proportionately as the mileage of good roads is increased. It is important to remember that fifteen years ago there were practically no roads worthy of the name in the United States and, in some of the States, so recently as ten years ago there were no good roads. Motor coach speeds average about 45 miles per hour. Motor coaching is popular in the United States for the same reasons that it is here namely, either for sight-seeing or for cheap transport, since it is much cheaper than by rail. It is likely to develop more than in this country as there are fewer legal restrictions and the railways appear to be developing it on much broader lines than is the case in this country. Concerning road development in the United States; there are many things which we can learn from the American engineers whilst there is also so much that they can learn from us. Such roads as we passed over struck us as being both too weak and too narrow to meet the requirements of traffic development, in fact in many instances they are already finding it necessary to widen and strengthen them to meet growing traffic needs. Also in most instances the road bridges are not sufficiently strong and will have to be replaced by heavier structures in the near future. Except in the vicinity of large towns the volume of traffic on country roads does not equal the volume on ours in spite of the fact that the proportion of vehicles per head of population is 1 to 4. The motor vehicle has brought residents in rural areas into touch with the cities, whereas, previous to the advent of the motor, they were almost entirely cut off from their fellows and indeed a journey to town was even more of an adventure than it was with us 50 years ago. When considering transport conditions in the United States, the vast area of the country must be taken into consideration. Notwithstanding its population of somewhere about 120,000,000, the real business of scientific development is only in its infancy. The vast natural wealth of the country undoubtedly handicaps its development in that the standard of living has risen so high that intense cultivation is too expensive, consequently there has been an exodus of rural population to the large industrial centres, with the result that manufacturing industries are now over producing for the needs of the home market and this, together with world trade depression, is responsible for an unemployment problem in the United States, greater than our own and for which the United States were entirely unprepared.

# Comment on Current Topics.

## Road Traffic Regulations.

The time is drawing near when part of the Road Traffic Act will come into operation and the Minister of Transport and his officials are busily engaged day by day in preparing the Regulations which he is empowered to issue and which, when promulgated, will have the force of law. Just as we go to press we have learned, in an interview with Mr. Morrison, the latest decisions regarding the Act and these are published on page 80 in this issue. Meetings at the Ministry are taking place constantly between officials and representatives of motoring and transport organisations and the proposed regulations are being discussed, clause by clause, and altered or amended on the advice of those best qualified to give expert help. Many statements have been made in the daily press purporting to disclose these regulations, only to be contradicted the following day and it is well to take no notice of such unauthorised pronouncements and await the official statements. We have received the first of these, that dealing with third party insurance, a difficult and thorny question and one which will need careful handling and watching, if it is not to obtain a stranglehold on road transport. The draft regulations, a copy of which we have received, are voluminous and can be obtained by any public or representative body on application to the Roads Department of the Ministry of Transport. We publish in this issue the announcement made by the Minister in which he states that he has published notice of his intention to make regulations under Part II of the Act. It is not only necessary for every motor vehicle user to see that his vehicles are insured, a suggestion which should be unnecessary, but that they are fully covered against third party risks as set forth in the regulations.

## Co-Ordination of London Passenger Transport.

A full measure of praise should be given to Mr. Herbert Morrison, the Minister of Transport, for his statesmanlike handling of the great road problems, which are filling so large a place in the public eye at present. The Road Traffic Act, although off the stocks is not yet afloat and is still demanding a large share of his time and thought. At the same time the problem of London passenger transport is engaging his attention and the Government is committed to a Bill to consolidate and co-ordinate all London transport passenger undertakings. It is not to be wondered at that Mr. Morrison has found it necessary to modify his views on the subject of the controlling authority of such a body and he has boldly stated his altered views. In a speech delivered at a dinner of the London Underground and Omnibus Joint Committee of the Railway Clerks Association, held recently, he said he had frankly broken away, as he believed the Labour Party would have to do in nearly all big trading undertakings, from the old conception of direct State or Municipal management on departmental lines. In other words the proposed public transport body would be controlled by a business board of management, free from political interference in matters of every day management. Another point stressed in his speech was that the new undertaking would have to pay its way. If these two provisos are strictly adhered to, then the Minister's expressed hope, that he would have the goodwill, both of the general public and also of the public and private undertakings engaged in providing passenger services in Greater London, is likely to be attained.

## Railways Road Services.

An announcement made by the Great Western Railway Company foreshadows an important development in the road services of which it has been the pioneer among the railways. It is intended to spend immediately just on £90,000 on 152 new motor vehicles and tractors to be employed on freight services. These will help,

Digitized by Google

amongst other things, in the expansion of the Company's collection and delivery services, the replacement of horses by motors; opening up of new country lorry services; cartage facilities for traffics now consigned at station to station rates; rail and road contracts specially between London and South Wales; the development of the container traffic in which tractors will be employed. Co-ordinated road and rail transport has greatly increased in spite of trade depression. The other great railways also have placed large orders for motor vehicles and are steadily extending their services. This means that while the railway policy has been to enter into arrangements with the big passenger organisations, they are adopting a different plan as regards goods transport and are competing for traffic on the roads with all classes of road transport contractors. This is shown by the rapid increase in the use of containers enabling then to carry merchandise from door to door without handling en route, and their recent advertisements in which they are catering for removal contracts, taking all risks.

### The Heavy Oil Engine.

For some years past British Motor Manufacturers have been experimenting with a new type of engine using heavy oil as fuel, and motor lorries have been successfully made and used on the roads. A new step forward is foreshadowed in the report appearing in this issue of the new heavy oil engined omnibus built by the Associated Equipment Company at Southall. Three years' work and research have been expended in developing this new engine and so satisfied are the makers that one hundred vehicles are to be built to try out the new fuel thoroughly. The saving in cost is enormous at present prices and it constitutes a menace to the supremacy of the petrol engine, which will be closely watched by all road vehicle operators, whether for passenger or goods traffic. It must be borne in mind that the source from which the heavy oil is drawn is the same as that which controls the petrol supply and any great measure of success with the new type of engine will be followed undoubtedly by a rapid increase in the cost of the fuel.

## Personal Notes.

**Dunlop Changes. Mr. L. V. Kenward Becomes General Manager of Subsidiary Companies.**—Mr. L. V. Kenward, who has during the past 20 years occupied various positions with the Dunlop Rubber Company and latterly that of General Sales Director, has now been appointed General Manager of subsidiary companies. Mr. Kenward will, therefore, no longer be intimately associated with the sale of tyres but he will retain his seat on the Fort Dunlop local board which deals with tyre questions. The subsidiary companies include the Macintosh group of companies engaged in the rubber footwear, water and rainproof garment and general rubber goods businesses. Since the companies were acquired in 1926 these lines have been assuming an increasingly important place in the Dunlop output and the Board has come to the conclusion that the time has arrived when special arrangements should be made for their intensive development. It will be remembered that Mr. Kenward was recently re-elected Chairman of the India Rubber Manufacturers' Association for the second year in succession. Mr. H. L. Kenward remains, as heretofore, Director of Replacement Sales in the tyre division of the Company, his association with the many trade bodies with which he is so intimately connected remaining unaltered.

MR. L. V. KENWARD.

**Firestone Tyre and Rubber Co. New Manager of Sales Department.**—Mr. F. A. Upperton, who has taken over the management of the sales department of the Firestone Tyre and Rubber Co., Ltd., Brentford, was for some time in charge of the Company's sales in several countries in the Far East. He has practically travelled round the world in the interests of the Company and has spent periods in many of their factories.

MR. F. A. UPPERTON.

**London, Midland & Scottish Railway Appointments.** — At a recent meeting of the Board of Directors of the London, Midland & Scottish Railway, Sir Henry Fowler, K.B.E., LL.D., D.Sc., at present the Chief Mechanical Engineer of the Company, was appointed to be Assistant to the Vice-President for Works, to date from January 1st, 1931. Mr. E. J. H. Lemon, the Carriage and Wagon Superintendent, has been appointed Chief Mechanical Engineer to succeed Sir Henry Fowler. It will be remembered that Mr. Lemon contributed a very interesting and instructive Paper on "Railway Amalgamation and its Effects on the Workshop" at the Institute of Transport Congress held in Glasgow last July.

**Central Electricity Board.**—Sir James Lithgow, Bart., has resigned from the Central Electricity Board in view of the pressure of his other duties, and the Minister of Transport has appointed in his place Sir Ralph Lewis Wedgwood, C.B., C.M.G.

## Obituary.

**Death of Mr. Harry Gosling, C.H., M.P.**—We regret to record the death on October 24th last of Mr. Harry Gosling, C.H., M.P. for the Whitechapel and St. George's division of Stepney, E., and President of the Transport and General Workers' Union. He was 69 years of age. Mr. Gosling's father, his grandfather, and his great grandfather had all been master-lightermen, and he himself was apprenticed to their calling in 1875. Mr. Gosling worked on the river till 1893, when he became an official of the watermen's trade union, and continued to devote his time to their affairs till he became President of the Transport Workers' Federation on its formation in 1910. He entered Parliament in 1923, and was Minister of Transport in the Labour Government of 1924. Ill-health kept him out of the present Cabinet. He served on the Port of London Authority since its formation in 1909.

**Death of Captain O. Dahlbeck.**—We regret to record the death after a very short illness of Captain O. Dahlbeck, Managing Director of The Skefko Ball Bearing Company Ltd., Luton. Captain Dahlbeck, an old and valued servant of the SKF organisation, became Managing Director of that company in January, 1927, following a long period in Sweden as Chief of Publicity for the organisation. The loss to the Skefko Company by the death of one who was so actively fulfilling the position of leadership will be profound.

# Institute of Transport.

## Joint Meeting with The Institution of Automobile Engineers and The Commercial Motor Users' Association.

### Passenger and Goods Carrying Vehicles.

A JOINT meeting of the Institute of Transport, the Institution of Automobile Engineers and the Commercial Motor Users' Association, was held at the Institution of Electrical Engineers, London, on November 10th.

**THE HON. SIR ARTHUR STANLEY, G.B.E., C.B., M.V.O.,** the President of the Institute of Transport presided.

Before the joint meeting the Annual General Meeting of the Institute of Transport was held, at which the Annual Report of the Council for the year 1929-1930 was presented and adopted.

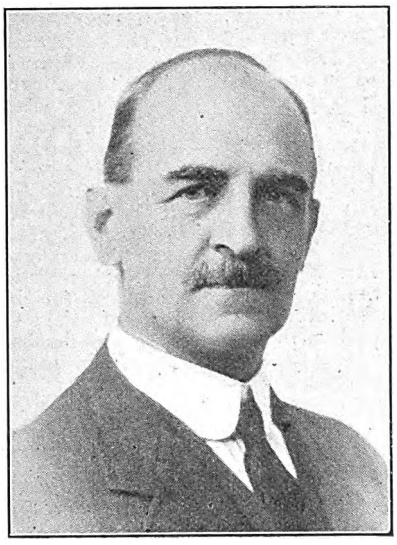
Opening the joint meeting, Sir Arthur Stanley said he understood it was the second time that members of the Institute of Transport had had the pleasure of a meeting with the Institution of Automobile Engineers, but it was the first time in the case of the Commercial Motor Users' Association, and he was particularly glad that it had been arranged during his year of office. He had had the honour of being associated with the C.M.U.A. directly, he thought, or at all events indirectly, through Mr. E. S. Shrapnell-Smith, the first President of the C.M.U.A., and in many other ways ever since the Association was formed, and it was a very great pleasure to him to welcome the members of that body.

Sir Arthur Stanley then presented the Institute of Transport, Road Transport Gold Medal (donor: The Commercial Motor Users' Association) for the Session 1929-30, to **PROFESSOR R. G. H. CLEMENTS** for his Paper on "Road Engineering in relation to Road Transport."

* * * *

### Goods Carrying Vehicles.

**MR. C. LE M. GOSSELIN, M.Inst.T., M.I.A.E.,** President of the Commercial Motor Users' Association, and Managing Director of H. Viney & Co., Ltd., motor haulage contractors and forwarding agents of Preston, in a Paper on "Goods Carrying Vehicles," said his purpose was to give manufacturers in broad outline some idea of how they could assist users to turn their products to better advantage in practical use. Manufacturers finished products lying in their works and priced at say £1,000 each, were intrinsically worth no more than the value of the raw material that they contained—say a £10 note. It was only after the product had passed into the hands of a user and had demonstrated that it could perform a useful task with efficiency and economy that its value began to appreciate from that low figure. What its value might ultimately become depended upon how long it could continue to function with economy and efficiency, having regard to alternative means available for performing similar work. One of the most urgent requirements of any manufacturer was to have adequate machinery for keeping in the closest touch with his products once they had passed into the hands of the user, and also to ascertain how far he could modify them to prove of still greater utility to the user in any of his varying requirements.



MR. C. LE M. GOSSELIN, M.INST.T., M.I.A.E.

There was considerable feeling, even to-day, regarding the rapid development of the commercial vehicle, and although legislation was not being directed towards their entire elimination—by a process of strict regulation with attendant penalties for breaches of the the same of extraordinary severity, the value of the commercial vehicle as compared with alternative means of transport was becoming very seriously impaired and in more than one sphere threatened to become eliminated.

There was a considerable feeling amongst users that the manufacturers of to-day were insufficiently alive to the consequences of such legislation upon the future development of the industry, and therefore upon their own future welfare. Whereas the manufacturers themselves might be expected to lead the van in resisting any curtailment of the use of their product, they were inclined to leave that position to the user.

Manufacturers of to-day were producing goods vehicles which could with safety and economy carry loads of high capacity at speeds of from 30 to 40 miles per hour. Legislation demanded that their maximum speed should not exceed 20. The manufacturers were, therefore, faced with the problem of reproducing a vehicle of inferior performance and, incidentally, crippling their prospects of competing in those countries where such empirical limitations were not applicable.

ESSENTIAL REQUIREMENTS OF THE USER—THE PETROL LORRY.

Briefly, the user's requirements were simplicity, reliability, durability and general economy in operation.

**Simplicity** because the general user who owns but one or two vehicles did not wish to engage a specialist to supervise them.

**Reliability** was necessary for regular service.

**Durability.**—The life of the vehicle must extend over a reasonable number of years, in view of the capital outlay involved.

**Economy in operation.** — This must be evident in comparison with alternative makes or methods of transport.

Speed, of course, suggested economy in time, but the law limited possibilities in that direction which could not altogether be ignored.

In respect to the quality of simplicity, the manufacturer of to-day was certainly heading in an opposite direction. Complications of every description were developing on the latest models, and the author wondered, if the development continued, how far such vehicles could be really serviceable except in the hands of an expert staff of mechanics.

To the user of a number of vehicles of varying makes the question of standardisation of the various units of the vehicles was becoming a matter of urgency and the question of standardisation of parts should be considered by the manufacturers as a whole and should at least receive attention as between different models of one make.

Reliability could only be obtained as the outcome of experience and the frequent changing of design now so prevalent with some makers was to be deprecated.

Economy in operation did not, of course, limit considerations to running costs. The initial cost of a vehicle was spread over its life and the lower the initial cost and the cost of replacements the lower the ultimate cost of operation.

THE STEAM WAGON.

In the case of the steam wagon there was the same lack of standardisation of parts as between various makes, but there was on the whole evidence of as great a reluctance to bring out new ideas amongst those manufacturers as there was overzeal on the part of the petrol vehicle makers.

It was abundantly clear that if the steam wagon was to retain its popularity with the user it must possess more of the advantages of its rival in regard to cleanliness, ease of starting up from cold, and be as automatic in operation. High-pressure, high-speed, condensing engines, with semi-flash boilers, fired with liquid fuel, appeared to be indicated. Moreover, the steam wagon must be built with a closer regard to the actual load it was to carry.

The two great handicaps from which steam wagons suffered to-day were the use of solid fuel with all its attendant disadvantages and the fact that it could not condense its exhaust steam.

Digitized by Google

### Bodywork.

In regard to the bodywork of commercial goods vehicles in general, including cabs, platforms and special bodies of various types, there was considerable evidence of carelessness amounting in some cases almost to indifference on the part of all manufacturers. From evidence collected by the author it was clear that such matters very largely must be dealt with by the user if he was to get any satisfaction. It was also a matter of vital importance to the user that the distribution of the load on the respective axles of the vehicles should be in proportion to the requirements of the law.

### Service after Sales.

Service in use was a matter which was capable of very great extension and improvement, more particularly in the initial stages of the life of a vehicle. Very inadequate instructions were given to the users of most vehicles, as to lubrication, the frequency with which valves should be examined; in the case of the steam wagon of the cleaning of boilers—to give but three examples. In some cases spare-part lists hardly existed, very largely due no doubt to rapid change of design.

More recently it had become the practice with some makers to employ outside inspectors to visit users and obtain their experience of how the products were behaving in practice, but the whole thing was run on most unbusinesslike lines.

## Passenger Carrying Vehicles.

**MR. GEORGE JAMES SHAVE, M.I.Mech.E., M.I.A.E., M.Inst.T.,** Chief Engineer and Operating Manager to London General Omnibus Company, Ltd., in the course of a Paper entitled "Passenger Carrying Vehicles" said that the problem exercising the minds of the principals concerned in passenger transportation, both for cities and outlying districts, was a very important one. The question to be answered was "What is to be the bus or coach of the future?" Would the vehicles being operated to-day become obsolete before they had completed their useful life, or had the chassis at present being used reached such a point of efficiency that it could be said that for at least four or five years it would not be improved upon other than in minor details?

An omnibus had, in several particulars, to conform to regulations laid down by the Minister of Transport, more especially in connection with dimensions and weights. The carried load—passengers and the omnibus body—would, at most, be less than the regulation weight by a figure termed the chassis weight. The proportion borne by the carried load to the total weight was largely determined by the speed, hill climbing and other performance characteristics of the omnibus. It was always made as large as possible, with a view to obtaining the maximum earning power. For any specified performance, designers had, in recent years, been able to increase this proportion without prejudicing either the reliability of the vehicles or the lowness of their running costs.

Body design aimed at making the proportion borne by the passenger load to the carried load as great as possible, and was influenced very largely by public requirements in the matter of comfort and safety.

MR. GEORGE JAMES SHAVE, M.I.MECH.E., M.I.A.E.

He would place passenger carrying vehicles in six categories:—

1. Six-wheel double-deck—as large a vehicle as can be built within the 30 ft. overall length regulation.
2. Short six-wheel vehicle within the 27 ft. regulation.
3. Four-wheel double-deck—as large as can be built within the 26 ft. regulation.
4. Six-wheel single-deck vehicle within the 30 ft. regulation.
5. Four-wheel single-deck vehicle within the 26 ft. regulation.
6. Long distance coach—four-wheel within the 26 ft. regulation.

Large seating capacity vehicles—70 seats D/D, 40 seats S/D, were most suitable for operations over routes where there was an all day concentrated traffic between given points. Normal seating capacity vehicles—50/60 seats D/D, 36 seats S/D, were probably the most economical to operate generally. They were more efficient for short-distance traffic which occasioned frequent stops for boarding and alighting.

Considering the possible applications of the six-wheel bus, Mr. Shave said that the limitation to the usefulness of the six-wheeler was the large area covered when negotiating a corner. The additional 5 ft. in length of the L.G.O.C. "L.S." type double-deck six-wheel bus sets a definite limit in respect of width of roadway which it could traverse without creating a temporary obstruction.

The London General Omnibus Co., Ltd., had introduced a short six-wheel vehicle known as the "L.T." type which had a much more favourable turning circle and could be operated on most of the services.

Faster schedules might be run with single-deck omnibuses having low centres of gravity than with double-deck omnibuses. Since the carried load in a modern omnibus formed the large proportion of the total weight, and since the carried load comprised very nearly everything which was above floor level, it followed that the problem of making further reductions in the height of the centre of gravity resolved itself simply into the problem of reducing the floor height. Very little could be hoped for in the matter of lowering the individual parts of the carried load as distinct from lowering this load as a whole.

With the new vehicles now being used by the London General Omnibus Company, with their very low centre of gravity, under the worst conditions—when the upper deck was laden and the lower deck was unladen—the body might be tilted to the extent of more than 30 degrees before overturning could occur. With the advent of cross-seating, omnibus axle weights became so great as to approach the limit tolerated by road authorities. Rear axle weights, reaching that limit, could no longer be increased and the need arose, as bigger omnibuses were required, for throwing a greater proportion of the weight forward. To this end, the forward drive omnibus was introduced in London, and subsequently in all parts of the world the modern omnibus body was contained forward to a point only an inch or two behind the rear cylinder block. The driver sat forward alongside the engine, and was actually in a much more favourable position to steer his vehicle round blind corners than formerly.

Common to all road vehicles employing the internal combustion engine was the problem of transmitting the power developed by a relatively inflexible prime mover to the road wheels. In the omnibus, more than in other vehicles, this problem was one of great difficulty to which no entirely satisfactory solution had yet been found.

All forms of clutch in use could be made to meet the requirements of service, but, in the matter of maintenance costs, no one type was good enough to have become the widely accepted standard in clutch practice.

During the past two or three years, considerable advancement had been made in the design of bodies both for coaches and omnibuses, and in his opinion it was the comfort provided in the new vehicles which had attracted passengers from the railways as much as the cheaper fares.

With regard to single-deck or coach bodies, he strongly recommended the front entrance design which enabled a stronger form of construction without extra weight and overcame the fume and dust nuisances.

He could not help feeling that it would be but a short time before bodies would be produced in this country entirely of metal.

Dealing with the question of the heavy oil compression ignition engine, Mr. Shave said he believed that the adoption of this type of engine for passenger transport vehicles was not far distant. Experiments had been carried out by the London General Omnibus Company with Mercedes-Benz, Junkers and Acro-Bosch engines; these had given a very satisfactory performance and two of the Junkers had been in use for nearly two years.

From the investigations so far made, he had no doubt that the list of objections which had been generally cited

Digitized by Google

as rendering the heavy oil engine unsuited for application to in-town omnibus service was by no means unsurmountable, and with regard to the fuels which could be used in compression ignition engines, he suggested that every endeavour should be made to use gas oil—a home produced fuel.

The outstanding advantages of the heavy oil engine were so great that every encouragement should be given to the development of this form of prime mover.

As a concluding note on the subject of the Diesel engine, he would like to add that he hoped every encouragement would be given by users and that teething troubles which were bound to arise with the introduction of this type of engine for commercial vehicles would not deter their efforts to go ahead.

As to his ideas regarding the bus of the future, he would suggest:—A chassis with as low a centre of gravity as possible with final reduction of the worm type; compression ignition engine giving idling speed of approximately 300 revolutions per minute, with a maximum speed say up to 2,500 revolutions; engine to develop not less than 100 h.p. at say 2,000 revolutions; to be fitted with some form of infinitely variable gear, or, it might be, an electric transmission, as the Diesel engine in its present state could be used more satisfactorily with electric transmission—a wide range of speeds was not necessary with this; four-wheel brakes of the assisted type. Driver to be placed in the forward position by the side of the engine. Body to be constructed entirely of metal—double-deck, and to be of the covered top type, having a "sunshine" or sliding roof which could be operated easily and rapidly. Particular attention must be given to the comfort of seating as undoubtedly the more comfortable a public service vehicle the more traffic it would attract.

## The Discussion.

**THE CHAIRMAN** proposed a hearty vote of thanks to the Authors, and **MR. W. A. TOOKEY,** representing the Institution of Automobile Engineers, seconding, apologised for the absence of the President of the Institution, Sir Herbert Austin, K.B.E., who was in Scotland. Mr. Tookey said he was greatly interested in Mr. Shave's remarks regarding the internal combustion engine, but had hoped that for once he would have heard a Paper which did not refer to the Diesel engine. Mr. Shave had started well by calling it a compression ignition engine, which was its proper name, but fell from grace later by saying "Diesel." (Laughter.)

The vote of thanks was carried with acclamation.

**MR. J. B. OSLER, O.B.E.,** Chief Engineer to Carter, Paterson & Co., Ltd., asked Mr. Shave whether he had made any experiments with bodies mounted on a bed of spiral springs with a view to providing more comfort for passengers. Mr. Shave had mentioned the possibility of constructing passenger vehicle bodies of steel. As to steel for goods carrying vehicles he (Mr. Osler) had found that almost, invariably, wherever there was beading, rust appeared eventually. The movement in the body gradually brought the beading away from the steel and one could not dry out any moisture which might find its way in between the beading and the steel.

He believed that the manufacturers would benefit themselves and the transport industry as a whole if they were to keep in much closer touch with the actual user of the vehicle. The user usually saw a man who was known as a salesman whose principal job in life was never to let the vehicle he was selling down; consequently, when he visited a user and heard a complaint he felt it was his first duty to say that there was no complaint, and he thoroughly convinced himself that that was so, and off he went back to the works and said "I have put that man right." In order to get over that difficulty he respectfully suggested that the manufacturers would do well to send qualified engineers to study the problems which the user had to face.

**MR. SIDNEY E. GARCKE** said that Mr. Shave asked whether the vehicles being operated to-day would become obsolete before completing their useful lives. It was an important question. In these days of economy he thought they were all striving to avoid throwing aside existing vehicles for new types, unless they got in exchange something really better from an operating point of view and not merely a change of fashion. They did not want to change their vehicles merely because the manufacturers began to feel they had had them long enough.

He felt there was a good deal in what Mr. Gosselin had said as to the necessity for standardisation of fittings.

**SIR JOHN E. THORNYCROFT, K.B.E.,** said that Mr. Gosselin seemed to suggest that at any rate it would be desirable for manufacturers to comply with the law as regards axle weights. That was a subject which had been exercising the minds of manufacturers a good deal. If vehicles were being offered for sale which did not comply, it could only be to meet the demands of the users. Manufacturers did not make vehicles to keep themselves, but for sale. He suggested that if there was any blame it must be on the users who asked for the make.

**MR. R. E. MORLEY** said that as to manufacturers not keeping in close touch with their products—this might be due to the fact that to a very large extent their machines were sold through agents. As to body work—the body of a vehicle was usually built to the specification of the user and had to conform to his requirements. He thought that the manufacturer was not so much concerned with the body as with the chassis. He imagined a great deal could be said for standardisation, but on the other hand they did not want standardisation to lead to stagnation. As to the necessity for service after sales, he thought that a great deal more might be done in that respect than was being done at present.

**COLONEL R. E. B. CROMPTON, C.B.,** congratulated the L.G.O.C. on the improvements they had made from time to time in London's buses.

He was one of the original people who started standardisation and he wished at once to say how much he agreed with what had been said as to the disadvantages of over-standardisation. If they fettered design and future improvements by specifying particular things in their standards they would do great harm to the future. If they standardised a type in order to turn out great quantities by mass production, they were liable to be put out of date in a certain period, but if the advantages were so great that they counterbalanced the risk of writing the vehicles off at an earlier period than they otherwise would have done, that was different.

The change over from petrol to a non-inflammable heavy oil would, in his opinion, come eventually, and people would wonder why they had ever run such a danger from fire when a vehicle overturned.

**MR. W. VANE MORLAND,** referring to the compression ignition engine, said that if he was a heavy haulage man he would have no more petrol engines. From a passenger point of view one had to be more careful, and he did not think that at the moment this type of engine had reached such a state of perfection as would justify them in placing it into service in large numbers in closely congested or city areas.

With regard to changing design, it seemed to him that some manufacturers had carried some things to ridiculous lengths. No useful purpose was served by suddenly changing the shape and design of radiators.

**MAJOR CHAS. WHEELER, O.B.E.,** said that Mr. Gosselin had referred to the *laissez faire* attitude adopted by many manufacturers towards the users. In more recent years several wide-awake manufacturers had paid greater heed to suggestions and criticisms of operating engineers and it behoved those who had not yet appreciated the value of such criticisms to pay greater attention to this factor.

**MR. J. J. MILLIGAN** also took part in the discussion, and in the course of his remarks gave very interesting particulars with regard to some experimental work carried out recently with a compression ignition engine and electric transmission.

**MR. J. L. CLEWES** claimed for the English heavy lorry that it was the best in the world in regard to simplicity, reliability, durability and economy in operation.

**MR. J. W. MILLS** said that the manufacturers generally welcomed the criticisms of the users because it was the policy of the manufacturers to make and supply the goods which their customers wanted; their great difficulty was and had been in the past to get to know what was wanted as a universal article. The difficulty was that every user had his own requirements and the manufacturer had to provide a vehicle at mass production price to meet varied needs. He would respectfully suggest to the various fleet maintenance men that the best way to assist the industry to get what they wanted was to get together themselves and determine what they really did want. The manufacturers, he was certain, would welcome a specification which would be acceptable to all fleet users.

**MR. L. H. HOUNSFIELD** thought the manufacturers had to please the drivers. If drivers liked a vehicle the manufacturers got the order.

As the discussion lasted a considerable time it was agreed that the replies of the authors to the points raised should be circulated in due course.

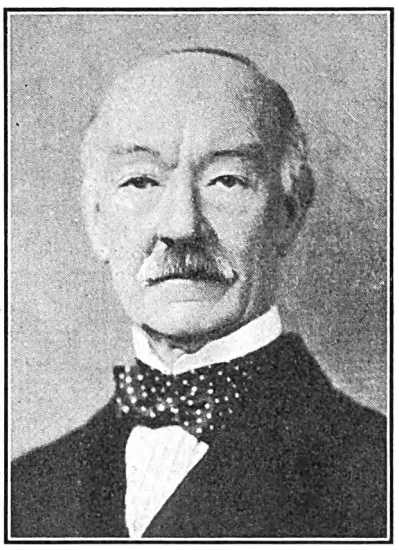
# Transport as it Affects Industrial Concerns.*

MAJOR-GENERAL S. S. LONG, C.B., Managing Director, Lever Bros., Ltd., delivered a lecture at the City of Birmingham Commercial College on the 23rd October, on "Transport as it affects Industrial Concerns." This was one of a series of lectures on "Some Fundamentals of Business Organisation." After mentioning various problems which confront British manufacturers to-day and pointing out that our commercial leaders have in the past taken little interest in practically any form of transport, the lecturer went on to say that one of the factors in the restriction of our trade was the high rate of wages paid in certain sheltered industries upon which Industry, Commerce and Trade were largely dependent. He ventured to say that those large numbers of people who should know better and who maintained that our railways were neither cheap nor efficient were both unjust and wrong. He admitted that as regards efficiency many improvements still required to be made, but, our railways were second to none and better than most in this world. However, when we came to costs, one had to admit that our charges were, generally speaking, higher than other countries and greater than our depressed industries could bear. This was not the railway administrators' fault but was due to the factors out of their control. It was an excellent example of Government interfering in Industry. Although the individual railwayman's wages might only be 55 per cent. above pre-war rates, the actual railway wages *bill* was over 200 per cent. above pre-war. In other words, owing to Government interference, the railway was now a sheltered industry and no matter how depressed industry might be, it could not hope for, nor get, any assistance from rail transport.

Road transport also was a sheltered one, in as much as trade unions had succeeded in forcing up wages and conditions of labour to a position out of all proportion to those pertaining to industry generally. The man who carted a load of coal from a railway station earned more money than the miner who hewed that coal from the bowels of the earth. Finally, looking at shipping, we found in docks an industry practically sheltered, with the result that there was a further stranglehold upon our poor struggling helpless commerce.



MAJOR-GENERAL S. S. LONG, C.B.

Another factor which had some bearing on high transport costs was the present system of taxation of motor vehicles. It was generally admitted by all economists that any tax on movement or transport should be, as far as possible, avoided. One of the reasons for the present excessive motor taxation was the very skilfully engineered propaganda of the railways. After all, these taxes were every bit as illogical as the old Window Tax where the Government sought to make us pay for air and light.

The effect of transport on the industrial worker should not be ignored as his well-being and efficiency was vital to any sound business. At the beginning of the great industrial era there began the concentration of large bodies of workers in great industrial towns. Owing to the absence of transport, they had to crowd into limited spaces with the consequent long dreadful record of human degradation and suffering. With the coming of railways Parliament tried to rectify matters by passing the "Cheap Trains Act." In spite of Parliament, public authorities and philanthropists, dreadful housing conditions still persisted, but in very much less degree. The wonderful improvement in health, physique, sobriety and comfort of our population got its start from improved train traffic followed by tram and horse bus and lastly the safety bicycle.

In considering transport in its relation to the factory the lecturer started at the beginning, the selection of the site. Owing to our captains of industry having paid so little attention to the importance of transport, we found them struggling hard to-day to reduce manufacturing costs and congratulating themselves when they succeeded to the extent of a few pence per ton. They did not realize that shillings per ton might be saved by a better system of transport. But often the original lay-out of the factory had been so bad from a transport point of view that additional heavy traffic costs were bound to occur in working. From a traffic aspect a bad lay-out was more the general rule than the exception, owing to the fact that when the works were planned the necessity for consulting a traffic expert was ignored. The advice of a traffic expert was essential on the following points:—

(a) Can I get railway siding connection with the Railway and will it be easy to work?

(b) Are there good roads in the immediate neighbourhood?

(c) Is there any close water transport available, sea, river or canal?

(d) Raw materials, availability and at carriage cost no greater than other parts of the country.

(e) Distance of fuel supply, and if rail, or water-borne, cost?

(f) Distance of possible markets, and whether rail, road, or water-borne?

(g) What rail siding accommodation do I require for the intake of fuel and raw materials and despatch of products?

(h) If waterside accommodation is available, is it amply sufficient for my needs, and will the erection of wharves be extra costly?

If traffic economy was to be properly studied then the siding and running rail connections should be first inserted on the general ground plan, and then the plans for various buildings interpolated. The planning of siding connection could only be done by an expert and it should be remembered that our railway administrators were always willing to place one of their experts at the disposal of anyone proposing to build works. Up and down the country could be found excellent examples of exactly opposite procedure.

Of equal importance was the lay-out of the works and buildings to reduce to a minimum the handling and movement of commodities in the process of manufacture. Before deciding these points it would be desirable to bear in mind that possible future expansion of works might necessitate extension of sidings. The Works Manager might find a piece of vacant ground and put up the building only to find a year or two later that it was so placed that it completely blocked any possible siding expansion or essential running line.

Consideration was also necessary of the siding connection with the main line. If the connection could be easily arranged and involved small cost on the railway in working the traffic the siding owner was entitled to get his traffic carried at correspondingly smaller costs. For working the traffic, if the works were extensive, steam locomotives might become necessary, but, it might be that internal combustion tractors or even electric capstans would even meet the case.

Warehouses had to be considered as regards their position, and accessibility to factory so as to reduce the distance of goods to be carried to minimum. The necessities of the business would determine the necessity for holding a reserve of finished products and also whether such reserve should be held only at the factory or distributed at suitable depots. The necessary warehouse space could be calculated by a formula which was actual floor space occupied per ton plus space per ton for alleyways plus space per ton for gangways. The width of the loading bank was governed by the variety of goods to be assembled thereon, but sufficient width should be allowed to admit of free movement without obstruction. It should be of correct height from road or rail to facilitate loading.

Further, the question had to be considered of the necessity for the bank being covered or protected from weather, and also the selection of a suitable material for the floors which would provide a smooth surface and stand up to hard continuous work.

Other questions to be considered were the desirability of

* Lecture delivered at the City of Birmingham Commercial College, on the 23rd October, 1930.

Digitized by Google

hiring warehouse space rather than providing your own, and as to whether manhandling or the employment of electric trucks or conveyors was to be the system. Manhandling involved small capital expense but much additional labour and therefore high wages bill. Electric trucks were expensive to buy, but if the warehouse and loading banks were suitably constructed for their use they were very efficient and economical. Conveyors were certainly economical, possibly the cheapest method of moving goods, but had the disadvantage of being troublesome to move, once set up, and might be compared to the tram as a rigid form of movement, versus the motor bus as representing the trucking.

The depot system, which he had already mentioned, was one which had, within the last few years, been largely adopted in this country. It was, of course, true that the ordinary system of depots had been in use ever since the existence of any big business, but they varied very greatly from the modern one. The proposals of his firm to hire warehouse space from the railways to save the cost of cartage from rail to warehouse at first received anything but welcome from the railways, but to-day the railways themselves had adopted the plan and had been circularizing traders to adopt the system. It consisted in selecting certain centres which would make good distributing areas, railing to those centres full wagon loads of goods and distributing from that depot to all customers within the district of roughly forty miles round by means of motors. The advantage of the depot system were :—

(a) The avoidance of the necessity of large warehouse space at the works.
(b) A stock of goods close to the customer.
(c) The despatch of each commodity in whole truck loads, and the avoidance of assembling separate consignments at the works.
(d) The obtainment of most favourable exceptional rates by despatching in bulk.
(e) The avoidance of the cost of labelling.
(f) Quick transit of whole truck loads.
(g) Avoidance of transhipment and consequent loss and breakage.
(h) A saving of handling by off-loading direct into depot warehouse.
(i) Speed of execution of customer's order.
(j) The existence of stocks at depots in the event of curtailment of rail facilities through industrial unrest.

The disadvantages were :—

(a) Holding of greater amount of stock than would be involved if it were all held at one point.
(b) The danger of the depot keeper not turning over the stock in rotation resulting in loss through staleness or deterioration.
(c) The danger of accumulation of excessive amounts of stock at certain depots and shortage at others.

Returning to the factory itself, no matter how skilfully planned it might be a certain amount of transport work was necessary between portions of the factory. Here we were faced with the problem as to which system is cheaper—horse or mechanical tractor. The former involved small capital cost but the daily cost was usually high compared with that of running a small tractor and a number of trailers, where the tractor could leave its loaded trailer at an unloading point and proceed at once to a fresh point, thus getting maximum use at a cheaper price out of the tractor.

Turning to road vehicles, it was not worth while wasting any time on animal transport. We found ourselves at once involved in a subject upon which there was strong difference of opinion—those who advocated the firm possessing its own vehicles, and those who maintained that the cheapest and best plan was to employ a contractor. To-day, the provision of motor vehicles entailed a heavy cost and it was by no means easy to ascertain what this form of transport actually was costing, or whether it was being run as cheaply as possible. Owing to the absence of a generally accepted system of costing it was very difficult for one factory to compare costs with another. To go into the whole question of running a fleet of motor vehicles would entail a very lengthy lecture. But, in the case of a small firm who did not possess and could not afford to pay for an expert it would be found cheapest to employ a contractor. But, in the case of a large firm, it would be wisest and more satisfactory to possess sufficient vehicles of its own to deal with its normal average requirements, employing a contractor to handle all above normal.

The advantages which could be claimed for possessing one's own vehicles were :—

(1) A direct touch between the firm and its customers.
(2) The possession of a road staff accustomed to the firm's own products, thus eliminating mistakes.
(3) The avoidance of mixing the firm's goods with those of the general public.
(4) In many instances the avoidance of the necessity for careful packing.
(5) Saving the expense of labelling.
(6) Greater control over the road staff.
(7) Availability of the vehicles for use with volunteer labour in the event of industrial unrest.
(8) Generally greater efficiency.
(9) Ability to satisfy requirements of the sales department which involves additional cost.
(10) The considerable advertising value of the vans.

The disadvantages were :—

(1) The locking up of capital in the provision of the necessary vehicles.
(2) The necessity for an expert staff to control the running and maintenance of the vehicles.
(3) The difficulty of comparing costs.
(4) The tendency for the service to become extravagant.

It should never be forgotten that the traffic department was the servant of all the others, and it was its duty to meet so far as possible the demands made upon it.

The number and qualifications of the traffic staff depended upon the size of the business—but it was cheaper to employ a small well-paid staff thoroughly qualified and efficient than a larger ill-paid one. A well-informed efficient traffic head might well save the whole cost of the traffic staff many times over. Even the seating of the staff in an office was worth studying so that the papers passed from one to the other without them leaving their seats. The checking of accounts was another source of saving. It was sometimes found that the total overcharges for the year which were discovered were considerably less than the cost of the labour spent in checking the accounts. The common sense way would be to check all accounts over a certain figure and only 10 per cent. of those under. The same applied to the checking of weights of goods received, such as, fuel and raw material.

In conclusion, the lecturer referred to a book at present in the press by Sir John Fortescue on "The Supply and Transport of our Army from earliest Times." He pointed out that the failure of Germany to realize her ambition in the Great War was largely due to the efficiency of the transport arrangements of the British and French armies and the inefficiency of the German army transport.

## British Industries Fair.

TEN thousand trade buyers on four continents will receive the overseas advance catalogue of the British Industries Fair, with index in their own languages, at least a month before the Fair opens in London and Birmingham on February 16th, next. A later edition of 10,000 copies of the London catalogue will be handed out at Olympia to visitors from abroad and the home buyers' edition, on sale at the Fair, will run to 30,000 copies, making in all a guaranteed circulation of 50,000.

An advance edition of the catalogue of the Birmingham section of the Fair with index in nine languages is also to be circulated along with the London catalogue. Both are already in preparation. There are to be separate catalogues for the Cotton Textile Exhibition at the White City, London, February 16th to 28th, and for the Artificial Silk Exhibition at the Albert Hall, London, February 16th to 21st.

The languages to be used both for the London and the Birmingham catalogues will be English, French, Spanish, Portuguese, Italian, German, Swedish, Danish and Dutch.

## G.W. Extend Freight Road Services.

A NEW transport development is foreshadowed by the Great Western Railway who propose to proceed at once with the purchase of an additional 152 new motor vehicles and tractors to the value of £89,786, for use in connection with its freight services. These vehicles will be used in connection with new cartage developments which include: the expansion of the Company's collection and delivery services; the inauguration of new country lorry services, and to strengthen certain existing services; affording traders cartage facilities for certain lower class traffics consigned by rail at "Station to Station" rates; special Rail-Road contracts and throughout road services especially in London and South Wales for the conveyance of General Building materials, bricks, pipes, girder work, timber, roadstone, etc., required for delivery to site; the concentration of collection and delivery traffic upon one main station serving a considerable area whereby traffic is expedited and economies in working effected; the conveyance of livestock to and from Markets and Shows either in connection with rail services or by road direct; the development of the Company's container traffic.

# Furniture Warehousemen and Removers' Association.

## Autumnal Meeting and Dinner.

THE Bi-annual meeting of the Furniture Warehousemen and Removers' Association was held at the Hotel Victoria, Northumberland Avenue, London, on November 5th last.

**Mr. A. C. Osborn** (Curtiss & Sons, Ltd., Portsmouth), the President of the Association, presided, and there was a good attendance of members representative of the whole of the country.

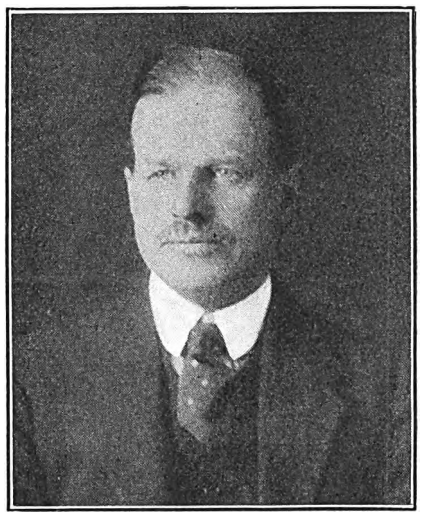
The first business on the agenda was to pass new Articles of Association. There was a brief discussion, after which the new Articles, which had been circulated to members, were adopted.

A report of a special sub-committee appointed to consider the question of non-members advertising for return loads was considered, and a resolution proposed by **Mr. F. C. Skinner** (Arding & Hobbs, Ltd., London) and seconded by **Mr. E. J. Elloway** (Green & Edwards, Ltd., London) that the recommendations contained in the report be adopted, was carried unanimously. A further resolution, proposed by **Mr. F. W. H. Winwood** (Frederick Winwood, Ltd., Worcester), to the effect that disciplinary action should be taken by the Executive Committee against any member who persisted in breaking the rules of the Association, was duly seconded and carried.

**Mr. Victor Brown**, the Hon. Treasurer, referred to the recent breakdown in health of Mr. T. A. Chambers, of Dublin, and reminded the members of the good work done by Mr. Chambers over a large number of years to further the interests of the Association.

Mr. Victor Brown was followed by several members, all of whom paid tribute in their remarks to what Mr. Chambers had done in helping members and in raising the status of the industry.

**Mr. G. H. Price** (Mousell Bros., Ltd., Birmingham) addressed the members on the subject of railways and removal traffic, and was heartily thanked for the excellent services he has rendered in this connection.



MR. A. C. OSBORN, PRESIDENT.

**Mr. G. H. Good** (J. J. Allen, Ltd., Bournemouth), in the course of a brief address to the members on the Road Traffic Act, said that the Minister was determined to effect far more control over road transport than had been the case previously. Mr. Good reminded the members of the action taken by the Association during the passage of the Bill through Parliament, and pointed out the advantage members derived by belonging to an Association which was able to voice its own requirements and opinions direct to the Minister which certainly could not be done by an individual. The Association was most anxious to receive from members their views with regard to the Act, with a note of any difficulties they might experience when it came into force, and particularly their views as to the working of Clause 19.

**Mr. Geo. Moores** (Geo. Moores & Sons, Ltd., Chorlton-cum-Hardy) moved the following resolution:—

> "That the Executive Committee be and is hereby authorised to issue certificates of membership to members of the Association."

He said he wanted a certificate or something of that nature which members could frame and hang up in their office testifying to the fact that they were members of the Furniture Warehousemen and Removers' Association.

The resolution was seconded by **Mr. Ormesher** and carried.

**Mr. H. V. Bishop** (Bishop & Sons Depositories, Ltd., London) proposed the following resolution:—

> "That the Association be and is hereby empowered to confer degrees and for that purpose shall form an Honours Committee with authority to make regulations and rules and to confer such honours."

He said that after a man had served a certain number of years in the trade and had gained experience, had probably served on the Committee and done many things to benefit the trade, was it not fitting that he should be rewarded, and what reward could be more fitting than the conferment of a degree. A candidate would have to submit his qualifications to the Committee, and of course, a degree would not be conferred upon all and sundry. An Honours Committee could be set up to whom qualifications would be submitted. A man would be expected to have passed the estimator's examination and to have served a period of seven years in the trade before he could become an Associate. To become a Fellow a man should have served the trade for a long time and have performed certain work for the benefit of the Association. A degree could be rescinded at any time, and the holding of it could be conditional upon the holder remaining in the service of a member or himself remaining a member of the Association. The scheme would automatically make the estimators' examination and certificate more valuable.

He commended the resolution to the members as he considered it was a step they must take in their efforts to uphold the dignity of their profession, not only in the eyes of those actually engaged in it, but in the eyes of their fellow men.

**Mr. Fuller** seconded the resolution which he said aimed at raising the status of their profession, and there was no reason why the industry should not be regarded as a profession. When they considered the different phases of knowledge which their members had to possess in order to carry on their trade properly, he felt that all members would support the resolution. It might be said that their qualifications lay in the fact that they were members of the F.W. & R.A. That was true up to a point, but only firms were represented in the Association, and in the case of the conferment of degrees it would be individuals. If they passed the resolution it would help the trade to occupy a position much higher than it did at the present time.

The resolution was carried unanimously.

### The Banquet.

The Banquet which followed the annual general meeting was attended by many distinguished guests.

**Mr. A. G. Coombe** (The Pantechnicon) London, Chairman of the Metropolitan (London) Centre, presided.

**Sir Francis Goodenough, C.B.E.**, President of The Incorporated Sales Managers' Association and Chairman of the Government Committee on Education for Salesmanship, proposing the toast of "The Furniture Warehousemen and Removers' Association, Ltd.," said he had been wondering why he had been chosen to speak to them. Perhaps it was because he was Chairman of a similar organisation and knew the value of co-operation and unity in an industry. The removers were as tired probably of the joke about three moves being equal to a fire as those in the gas industry were tired of the story about the lying gas meter. (Laughter.) But the gas industry had gone a little further during recent years and had since introduced that mysterious thing called "therm" and they now had the story. "A therm is a germ which gets into the meter and causes galloping consumption." (Laughter.)

He had asked their Chairman what was the real reason why he had been asked to speak to them and he was told it was thought he might be able to solve a knotty problem. The problem was "By what means can salesmanship get more business?" Frankly, he did not know how they were to produce a system of salesmanship that would

Digitized by Google

induce people to move more often than they did. He was an extremely bad example as a customer of their industry, because although he had been married thirty years they had only moved once and had no intention of moving again if they could possibly help it. (Laughter.) That was not because he was dissatisfied with the way in which his goods had been moved, in fact he remembered being moved to admiration of the manner in which the job was tackled, and he took off his hat to the removers who did the job.

He really did not know how they could get more removals, unless they could agitate for the repeal of the Rents Restriction Act.

He realised the great value of an organisation such as the F.W. & R.A. in which they pooled all their knowledge and experience of the trade and which enabled each member to raise the standard of his service, and they could not possibly conduct their trade with satisfaction to themselves unless they conducted it with satisfaction to their customers. Meeting together to discuss problems and difficulties and to arrange standard methods of doing the work must lead to an increase in the efficiency of every member of the Association, and would increase the happiness of each, because really the happiness to be got out of their work was to do it so that the customer was delighted with the business. Nothing gave a man who was worthy of being in business more satisfaction than to get letters of approval from those to whom he had rendered service, and he was quite sure that their Association enabled members to secure more of those valentines than they could get if they were working disjointedly and unorganised.

### JOINT ADVERTISING.

He did not know whether they had considered the question of joint advertising for the purpose of ensuring that the public would only employ those who by their membership of the association showed that they had set up a high standard of service. He believed in advertising from that particular point of view. If they claimed in an advertisement that they intended to give first-class service and complete satisfaction, they set up a standard for their own staff to live up to as well as for themselves, and they were more likely to hear from the public regarding anything that caused them dissatisfaction than if they had made no claim to give good service. In his industry they always tried to get every complaint they could in order, if it was justified, that they might remedy it, and he was quite sure that the furniture removers did the same, as if claims or complaints were dealt with in a broadminded and generous spirit they would establish good will amongst the public which they could secure by no other means.

MR. A. G. COOMBE,
CHAIRMAN,
METROPOLITAN (LONDON) CENTRE.

He wished well an organisation that had for its object the raising of the standard of service to the public.

### REPLY BY THE PRESIDENT.

**Mr. A. C. Osborn,** the President of the Association, responding to the toast, congratulated the Chairman, Mr. A. G. Coombe, upon being elected Chairman of the London Centre for a second year, and he congratulated the London Centre upon the wise choice they had made. (Applause.)

Continuing, the President said that the Furniture Warehousemen and Removers' Association although perhaps not being very prominently in the public eye, yet occupied a very high place in the regard of those who knew their work, such as kindred associations whose interests were similar to their own, various government departments and the large commercial concerns with whom they came into contact.

Trade associations in every industry were to-day more than ever necessary to enable one to get into and keep close relations.

They found that traders in their industry were approaching the Association with a view to membership, and it was gratifying to find that many old members were rejoining, and the Association believed that a useful future lay before them. At least six firms who in past years had left the Association had joined them again in the last few months, and there was a general feeling all over the country that the Association was really doing good work, and he thought they would have an influx of members and especially of old members who for some reason or other had left them.

### SALESMANSHIP.

Sir Francis Goodenough had referred to the question of salesmanship, and this point had been emphasised in the journal of the Association and at meetings held during the last few years. It would have been observed that the estimator of to-day had a knowledge of his business. The estimator's examination had been established by the Association for the benefit of the younger men in the industry, and the knowledge a young man acquired in his efforts to secure the estimator's certificate would always be of use to him, even if he entered another sphere of activity. One could wish that the majority of employers were more eager to bring to the notice of the younger members on their staff the advantages of that examination and so encourage them to enter for the next examination which would be held early in the New Year.

Sir Francis had referred also to the question of joint advertising. As it happened the members had that afternoon discussed a report from a sub-committee with reference to joint advertising in districts.

With regard to salesmanship, a good salesman would point out to a prospective client that a removal to-day was not what it was thirty years ago, and that he could go to a member of the Association with the confidence and full knowledge that his furniture and effects would be treated with great respect and placed in his new residence without damage.

He urged all members to take even a greater and deeper interest in the Association, and he hoped those present would endeavour to influence firms who were not in the Association to become members. They must all be optimists and see an opportunity in every difficulty, not pessimists who saw a difficulty in every opportunity.

### PROVINCIAL CENTRES.

**Mr. A. G. Coombe** (the Chairman) proposed the toast of "Provincial Centres." He said he could assure all that the business life of one employed in the removing of household goods was nothing if not varied. They met all sorts of people under all sorts of conditions and they had all sorts of jobs to do.

The provincial centres of the Association were made up of groups of members in various parts of the country who gathered together from time to time to discuss their problems, problems which affected their particular district, and, as Sir Francis Goodenough had told them, to learn to help each other. Centres had their local chairman and secretary and an elected representative to the Executive Committee of the Association in London, and they undertook various work so as to keep the lifeblood of the Association circulating round the country. It was essential to the well-being of the Association, which meant the well-being of the removal trade as understood by them, that the centres should not only continue but that they should grow from strength to strength.

The Association in the past had benefited to a very large extent through its provincial membership, and although London members might not always see eye-to-eye with their friends from the provinces, yet he could assure members from the centres that the London men had great sympathy with all the difficulties with which they had to contend and wished well to every member of every centre throughout the United Kingdom.

**Mr. T. Ormesher** (T. Ormesher & Sons, Stockport) responded, and in the course of his remarks said that the London members of the Association really put in a great deal more time in furthering the interests of the Association than members in the provinces always realised perhaps, and he was glad to have that opportunity of acknowledging publicly the appreciation of the provincial members.

### TRANSPORT AND ITS FUTURE.

**Mr. Frank Pick, LL.B., M.Inst.T.,** Managing Director, The London Underground Railways and the London General Omnibus Company, Ltd., proposing the toast "Transport and its Future," referred to the Road Traffic Act, and said there were now so many regulations that even

Digitized by Google

the most prudent of them might find it difficult to keep out of the Police Court. (Laughter.)

Perhaps the Furniture Removers would watch with interest what effect the Act would have upon passenger transport vehicles, because as the Minister obtained sufficient experience of how to control those vehicles, he would very likely attempt to control the vehicles belonging to members of the Association and, therefore, they would be able to profit by the sufferings of the passenger business and learn from their misfortunes. (Laughter.) The Act was passed by a Labour Government. Trade Unionism was fully organised and could control its members and could set an example to those who sometimes sat at the other side of the table that they too if they hoped to succeed should also control their membership and their charges. Therefore, perhaps they could feel a certain amount of satisfaction in the passing of the Act as he thought it must result in their Association too having more control.

### OIL *v.* PETROL.

He would turn his attention to another development which seemed to be imminent, namely, the change over from petrol engines to heavy oil engines. Advertisements told them that they would get double the mileage at half the cost. It seemed an attractive change, but was there not a catch somewhere. After all, heavy oil and petrol both came from crude oil and if there happened to be much demand for heavy oil then he could see the price of heavy oil rising and petrol prices falling.

clients, and from time to time those people would be removing.

They had to make the public understand that their industry required skill and that skilled people were engaged in it.

### RAIL *v.* MOTOR.

With regard to motor transport they had all come to think that nothing but motor transport was good enough for them, and that they must run their motor vans from London to Glasgow no matter what it cost. Looking into the future he could not see that that state of things was going to continue. He thought that in the future they would use road motors to a considerable extent for household removals, but not to the same extent as they were doing to-day. He thought the motor trailer would soon be off the road with the restrictions imposed by the Road Traffic Act, and that they would put their long distance work back on to the rail, and it would be up to the railways to do a little more for their industry than they had promised to do to-day. The containers offered to them by the railway companies were not good enough to carry personal effects; they were all right for merchandise, but the industry wanted something better and more on the style of the removers' own lift vans. He did not think that mammoth vans would be required in the future because they were very wasteful and uneconomical. It was not economy to keep a big van standing outside a house four to six hours loading it, and the vehicle should be

MEMBERS OF THE FURNITURE WAREHOUSEMEN AND REMOVERS' ASSOCIATION AT THE A.E.C. WORKS AT SOUTHALL.

One thing the future of transport must bring was a very substantial development of our road system, and already they saw large numbers of roads partly completed, and to those responsible for the carriage of passengers and the removal of goods it was certainly an advantage as these new roads would bring with them large strings of houses. They should encourage the migratory instinct.

Reference had been made to the Rents Restriction Act—that Act had, of course, had an effect in preventing the population moving from place to place and there was taxation—the more they were taxed the smaller would be the house in which they could live, in fact they would all have bungalows in time and then the amount of furniture removing would not be so great. (Laughter.)

It was said that transport was civilisation and that he thought was really true. The removers had meetings for discussions and exchange of views and helped to provide homes which were the basis upon which our civilisation was built up and upon which we must depend for our future whatever it might be.

**Mr. A. E. Knill** (Pickfords, Ltd., London), Senior Vice-President, responding to the toast, said that in spite of what Mr. Pick had said regarding restrictions imposed by the Road Traffic Act, high taxation and so on, he thought that the removal industry was in for a jolly good time. During the last few years thousands of new houses had been built in this country so that all the owners of those houses were the removers' prospective

on the road. His opinion was that in the future they would have solo machines of fair capacity and high speed so that they could do a distant job in the country or a local job at economical rates.

It would depend upon their service how much business they got, and he would ask every remover to set an ideal before himself so that the public would recognise that the industry required people in it who had studied it very carefully and had trained their men to do the job and then they would not go to a railway company or any one else but come to those engaged in the industry when they wished to remove from one place to another.

**Major W. Taylor** proposed the health of the guests, and **Mr. H. E. Binstead,** who responded, referred to the Benevolent Fund established by the Furniture Warehousemen and Removers' Association and said he would like to see the members push that Fund along a little faster.

He referred to Mr. Victor Brown, the Hon. Treasurer of the Association, to whom he said the thanks of the members were due for the inauguration of the Association, and with Mr. Victor Brown, in those early days Mr. Tapner and Mr. Byng Hall were associated. Those men were endowed with courage and vision and he asked the members to have the same faith and vision in regard to their Benevolent Fund.

On November 6th, the members paid a visit to the A.E.C. motor works at Southall, and subsequently lunched together at the Holborn Restaurant as the guests of the London Centre.

# Regulation of Road (Goods) Motor Transport and Commercial Motor Taxation.

THE Commercial Motor Users' Association has submitted to the Royal Commission on Transport a memorandum dealing with the regulation of road motor transport (goods) and commercial motor taxation.

The Association submitted a memorandum, supplemented by oral evidence, to the Commission in February, 1929, and this further memorandum has been submitted it is stated in view of circumstances which have arisen since that date.

The Royal Commission is reminded that the membership of the Association numbers between five and six thousand individuals, firms or companies, owning upwards of 100,000 road motor vehicles. They include haulage contractors (long-distance and short-distance), ancillary users (i.e., traders who own their own motor transport) and omnibus and coach proprietors, in the respective proportions of approximately 25 per cent., 65 per cent. and 10 per cent. of the membership of the Association.

### REGULATION OF GOODS MOTOR TRANSPORT.

The Memorandum points out that the road motor transport industry is a young and growing one, and has not yet passed through the development stage, and in so far as is possible it should be left free and untrammelled so as to act as an independent transport agency or as a means of supplementing existing transport facilities. The convenience and demands of the general public cannot be met unless freedom of development and expansion is allowed. One of the salient benefits of road motor transport is its mobility and any attempt to interfere with it by rigid methods of standardisation would deprive the road transportation of goods of one of its most powerful advantages. The Association strongly urges the Royal Commission not to recommend any further regulations or restrictions which might have the effect of reducing the mobility of this means of transportation. Special regulation of the goods motor transport industry, either according to the distance run or the particular class of user, is impracticable. The choice in these matters should still rest with and be exercised by the producing and trading communities of the country. A motor vehicle licensed to use the roads under the regulations already provided by law should be capable of serving the public in any capacity within these limits. Any further restrictions is a restriction of trade and an added cost to the commercial activities of the community. Road motor transport is already regulated by the common law of the country and by special Statutes. The Road Traffic Act, will still further regulate the industry.

Any proposal to institute a special system of licensing haulage contractors is not favoured. The business of haulage contracting is a trade and an absolutely necessary one, just as much as the making and selling of any commodity. A haulage contractor sells his goods, i.e., transport, in competition with other haulage contractors, and the one who gives the best service at the cheapest price obtains the business. The conditions governing goods transport are essentially different from those obtaining in road motor passenger transport, and any special system of licensing upon the former would be in the nature of a restriction on trade.

It was brought out in evidence by Sir Henry Maybury before the Royal Commission in November, 1928, the memorandum continues, that in certain of the States of America where a system of licensing haulage contractors was brought into operation it has been found extremely difficult to carry out its provisions, and the system of control had broken down to a very great extent, largely owing to the fact that immediately the haulage contractor was placed under regulations the manufacturer or trader employing him provided himself with his own transport. There is no reason to think otherwise than that similar results would arise if steps were taken to enforce a system of licensing haulage contractors in this country.

A certificate of fitness for a commercial motor goods vehicle, whether in the ownership of a haulage contractor or an ancillary user, is no more necessary than for a private car. Goods vehicles in commercial ownership are, in general, as well maintained as are vehicles in private ownership. A driver of a commercial motor goods vehicle should come under no more or no less restrictions and regulations than a motor car driver. He is in an entirely different position to the driver of a public service vehicle, who has the additional responsibility of the lives of those who travel in his vehicle.

With but very few exceptions well-organised trading concerns who operate their own road motor transport do not engage in carrying other peoples goods by way of return loads. The amount of such traffic carried by ancillary users is negligible, and any systematic attempt to use their vehicles for work of this character has been found to cause serious disorganisation of their regular transport services. It is submitted that the operation of economic laws can be relied upon to prevent redundancy of transport far more efficiently than any regulative action of officials.

The Association submits that this is not a time for imposing regulations on the road transport industry with a view to limiting its competitive powers and thereby handicapping the industry in adjusting itself to the need of trade and commerce at this critical period.

### COMMERCIAL MOTOR TAXATION.

Arising out of memoranda submitted by the Ministry of Transport and the Railway Companies Association the Commercial Motor Users' Association submits the following points:—

The Association confirms the average yield of vehicle duties upon commercial motor vehicles as 0.18d. per gross ton-mile, as a throughout average, which was given by Mr. E. S. Shrapnell-Smith in his evidence on behalf of the Association before the Royal Commission in 1929. As to its sufficiency to cover the related cost of commercial traffic passing, the Association adheres to 12,000 miles a year as a throughout average.

The principal causes of additional total highway costs for the country since the war have been (a) war-time neglect, (b) increased ratios of cost for labour and materials, (c) spread of population in country districts, (d) greater use of rural highways, and (e) the growth of public travelling by road.

It has been the advent and growth of road motor transport that have brought about the adoption of new methods of construction and repair which have in practice rendered economies possible, and have kept down total annual highway costs.

The succession of taxation increases upon commercial motor vehicles in recent years has created a burden which it is practically impossible for many users of these vehicles to bear. This excessive taxation should be reduced forthwith, having regard to the fact that it is a tax upon industry and trade.

# Leeds, Goole and Hull Transport Co., Ltd.

## Canal Carriers, Leeds.

WE are informed that Mr. Philip Blythe, Governing Director of Messrs. Blythe & Berwick (1928), Ltd., the well-known Yorkshire Transport Contractors, has joined the above Company and has been appointed a Director to fill the vacancy created by the death of the late Mr. Arthur Jackson.

The management of this Company is now in the hands of men of considerable Transport experience, themselves Directors of long established Transport Firms, who give their personal attention to all phases of the Company's business, and whose names are appended.

Henry Hunt, Esq. Messrs. John Hunt & Sons (Leeds), Ltd.

Thos. Porter, Esq. Messrs. Wm. Hill & Sons (Carriers), Ltd.

Richard H. Hunt, Esq. Messrs. John Hunt & Sons (Leeds), Ltd.

Philip Blythe, Esq. Messrs. Blythe & Berwick (1928), Ltd.

Lawson Hill Porter, Esq. Messrs. Wm. Hill & Sons (Carriers), Ltd.

The above Companies have been working in conjunction for many years, and it is confidently anticipated that this closer co-operation will now enable the Company to offer an excellent service in Transport either by Water or Road, at the most attractive rates, by controlling a direct and efficient means of transport and distribution between Hull and Goole and the industrial area of the West Riding of Yorkshire and Lancashire.

Splendid facilities are placed at the disposal of their customers for storage and warehousing in the combined extensive warehouses in Leeds and Bradford, these premises containing upwards of 200,000 feet of floor space. During 1929 a total of over 125,000 tons of all classes of Merchandise was dealt with by Water and Road.

# Suggested Compulsory Fitting of Pneumatic Tyres on Commercial Motor Vehicles.

A MEMORANDUM has been submitted to the Ministry of Transport by the Standing Joint Committee of Mechanical Road Transport Associations, regarding the suggested compulsory fitting of pneumatic tyres on commercial motor vehicles. The following are the constituent bodies represented on the Standing Joint Committee:—The Commercial Motors Users' Association (Inc.); The Electric Vehicle Committee of Gt. Britain; The Furniture Warehousemen and Removers' Association, Ltd.; The Mansion House Association on Railway and Canal Traffic for the United Kingdom (Inc.); The National Road Transport Employers' Federation (Inc); The National Traction Engine Owners' and Users' Association (Inc.); The Omnibus Owners' Association (Inc.); The Scottish Commercial Motor Users' Association (Inc.); The Showmen's Guild of Great Britain and Ireland; The Steam Cultivation Development Association.

The following is the Memorandum:—

(1) The higher speeds permitted and the relief granted in motor taxation in respect of commercial motor vehicles fitted with pneumatic tyres are sufficient in themselves to induce owners to change-over from solids to pneumatics as soon as this becomes an economic proposition, without the necessity of compelling them to do so.

(2) The Road Traffic Act, 1930, specifically provides for solid-tyred motor vehicles to be operated at speeds substantially lower than are permitted for similar vehicles fitted with pneumatic tyres in order to ensure their use upon the highways without damaging effect. To proceed to prohibit the use of solid tyres is imposing a further penalty upon the road motor transport industry in excess of that anticipated by Parliament.

(3) It is economically impossible to operate commercial motor vehicles on pneumatic tyres in connection with many classes of work where the vehicles have to leave the ordinary highway, e.g., the collection of timber, the collection of materials from stone and slate quarries and sand pits, the conveyance of material to new building sites, the removal of excavating material from sites in process of preparation for building and for agricultural requirements.

(4) Numbers of commercial motor vehicles now running on solid tyres are totally unfitted to change-over to pneumatic tyres. There will not be adequate room for brakes, the wheel arches will be too small involving the rebuilding of the body, and there will not be room for pneumatic tyres without the hubs, and probably the tyres, projecting beyond the sides of the vehicle and so infringing the overall width limits. There are other mechanical difficulties.

(5) There is no pneumatic tyre of sufficient strength or area of contact with the road to carry the weights required on low loading vehicles fitted with small diameter wheels. The use of these vehicles is a considerable advantage for many purposes, e.g., for public health services, for the conveyance of cable drums in connection with the Government electricity scheme, for delivering under low gateways and arches and for simplifying delivery where hand labour has to be employed.

(6) The difficulty of obtaining satisfactory pneumatic tyres for steam wagons is a real one, and it would be unfortunate if the use of these vehicles were to be prevented or hindered, particularly in view of the fact that the fuel used in them is home produced.

(7) Operators of commercial motor vehicles, particularly of the heavier types, have not yet had sufficient practical experience with pneumatic tyres to warrant them being forced into the position of experimenters and pioneers of this type of tyre.

(8) Considerable development is taking place in connection with air-cored solid tyres, and this development should be encouraged both in the interests of highway authorities and road motor transport users.

(9) The expense involved in changing-over from solid tyres to pneumatic tyres would be considerable. Large operators of public service vehicles have in fact abandoned their intention to make such a change-over in view of the cost and difficulties involved, considering it preferable to continue to run their vehicles for a further period on solid tyres and then replace them with new vehicles fitted with pneumatic tyres.

(10) There are many hundreds of expensive pantechnicons in use drawn by tractors in lieu of the horses they were originally designed for, the wheels of which could not economically be converted, and the furniture removing industry would be compelled to revert to horse haulage for moderate distances, one result of which would be to add to the congestion of the highways. There are also many cases where trailers now running on solid tyres are used very infrequently, and it would be a hardship on the owners to be required to fit them with pneumatic tyres.

(11) The time limit of six years proposed in the regulations raises a very serious question. The Commercial motor vehicle manufactured in this country is a very sturdy and long-lived construction and there is a considerable number of vehicles now being operated on solid tyres which will be perfectly good for several further years service in six years time. To compel these vehicles to be fitted with pneumatic tyres will result in great financial hardship to the owners.

(12) It cannot be too strongly urged that the state of trade is such that no additional burden should be placed upon the road motor transport industry.

Mr. F. G. Bristow, F.C.I.S., M.Inst.T., is the Hon. Secretary of the Standing Joint Committee and the offices are at, 50, Pall Mall, London, S.W.1.

# Road Traffic Act.

## What the Minister of Transport Proposes.

SPEAKING at the Dinner of the Society of Motor Manufacturers and Traders in London, on October 15th, last, Mr. Herbert Morrison, the Minister of Transport, said that he depended to a great extent upon the manufacturers and traders in his efforts to raise the standard of efficiency and safety in road traffic.

The passing of the Road Traffic Act, 1930, necessitated the making of new orders and regulations covering the whole field of the construction, equipment and maintenance of motor vehicles.

He had no intention of dealing harshly with the owners of existing vehicles. They could not, without weighing up the advantages and disadvantages, recklessly scrap the capital involved, but in the interests of public safety there were many commercial vehicles, omnibuses and even private cars which should really be prevented from using the roads.

The time was now ripe for taking a definite step forward in certain directions. It had been his duty in Parliament to answer many questions as to noise and vibration resulting from motor traffic, and, he intended to require the maximum possible use of pneumatic tyres as technical development in their manufacture had now made it possible for them to carry even the heaviest weights within legal limits. It would no doubt be necessary to allow for exceptional cases where large and indivisible loads had to be carried by road, and possibly also for vehicles engaged in special industries, but as regards ordinary commercial transport there was really no reason why vehicles of reasonable dimensions and unladen weights should not be fitted with pneumatic tyres.

As regards omnibuses and motor coaches he proposed to require that as from January 1st, no new public service vehicle should be licensed unless it was fitted with pneumatic tyres.

It was intended that the regulations should provide a reasonable period of exemption for existing vehicles and for those registered within a year of the making of the regulations, but a stage had now been reached when we could take steps to ensure that within a reasonable period all ordinary forms of transport on the roads should be on pneumatic tyres.

He was considering the desirability of providing that wind screens and other glass fitted in the front of motor vehicles should be unsplinterable and it was also proposed in the interests of public safety to require the fitting of life guards in the absence of running boards, between the wheels of lorries and other commercial vehicles.

On the subject of taxation Mr. Morrison said that no one was wedded to the present horse-power formula as such, and he took the opportunity of stating afresh that the Ministry was always ready to carefully consider any alternative formula on the basis of producing the same amount of revenue.

# Correspondence.

*The Editor is not responsible for the views expressed in letters appearing under this heading. No letter will be inserted unless accompanied by the name and address of the writer, not necessarily for publication, but as evidence of good faith.*

## RAILWAYS AND ROAD TRANSPORT.

*To the Editor of* THE WORLD'S CARRIERS.

SIR,—The enclosed cutting from the "Derby Daily Express" is deserving of wide publicity amongst the trading public for the paragraph which refers to the Road Act and the Railways is nothing less than a clear admission that parts of the Road Act are designed for the special benefit of the Railways.

Derby opinion on Railway matters is usually well founded since the town is the centre of the L.M. & S. Railway and the writer of the article is doubtless expressing more than his own personal views. He concludes that the enforcement of the Act, by putting out of existence many of their "mushroom yet formidable competitors . . . . will serve to restore much of the balance now weighing against the Railways."

Traders for whom Transport is an important matter will clearly foresee what would be their position if the Railways Companies should succeed in breaking down the competition of independent Road Transport and thus regain a monopoly.

By securing the particular good-will of Traders and the general public Road Transport will draw to itself much active assistance which will help to minimise some of the hardships imposed by the Act. We have strong evidence of this in the wonderful response accorded to a recent circular-letter of which I enclose you a copy.

It is perfectly clear to anyone with a knowledge of Long Distance Road Transport that Section 19 of the Act could have been so designed as to secure its avowed object without imposing the great difficulties it actually does.

Yours faithfully,
for STEVENSON TRANSPORT, LTD.,
L. J. RIX.

20, St. Alkmund's Church Yard,
Derby.
17th October, 1930.

Following is the Circular referred to in the letter:—

THE ROAD TRAFFIC ACT, 1930.

UNDER Section 19 of the above Act the hours which a man may drive a Commercial Motor Vehicle are rigidly curtailed in direct opposition to the special requirements of certain classes of Road Haulage. As a result, a great number of Commercial vehicle owners will have extreme difficulty in complying with the regulations without greatly reducing the efficiency and utility of their operations.

Time is now money indeed to long distance Road Transport Contractors, and to help us to meet the situation we earnestly beg all our customers to assist by ensuring that all our vehicles sent to them are lightened or loaded with the utmost dispatch.

The avowed object of Section 19 of the Bill, viz: "The protection of the public against risks which arise in cases where drivers of Motor vehicles are suffering from extreme fatigue" could be secured equally well by a differently designed clause which would not have the hampering effect of the Section as it stands.

The clause as it is imposes the greatest amount of difficulty on both employers and employed in large sections of the Road Transport industry and as most of this difficulty could have been avoided without impairing the safeguard aimed at, the conclusion is inevitable that Road Transport is being penalised unduly and unnecessarily.

Traders will clearly foresee their position were the powerful Railway Companies to succeed in breaking down the competition of independent Road Hauliers, and we feel sure we may look for your hearty co-operation in this matter which is of vital importance to your own interests as well as to us.

If our friends will kindly see that our lorries are lightened or loaded as quickly as possible as soon as they arrive it will be a very material help in the maintenance of the efficiency of our service.

We take this opportunity of thanking you for past favours and assure you of our intention to merit your continued support.

## ILLEGAL RAIL CHARGES.

*To the Editor of* THE WORLD'S CARRIERS.

SIR.—For some time past references have appeared in the Press under the above or similar headings, the general contention being that it has been discovered that the Railway Companies have included some 800 unauthorised entries in the Classification of Goods which have resulted in the traders having to pay more than the legal rates in respect of many classes of traffic conveyed by rail.

As an application to include in the Statutory Classification these entries (which were of an explanatory nature and in no case involved increased charges) was before the Railway Rates Tribunal, the Companies considered that it would be most improper to reply to the Press criticisms while the question was *sub judice*.

A Mr. Percy Donald who appears to be the moving spirit in this unwarranted attack on the Railway Companies has for some time endeavoured to obtain the support of traders and trade organisations throughout the Country in opposing the Companies' application but when the case came before the Court the only substantive objection to the inclusion of the entries in the Statutory Classification was that of the London Chamber of Commerce, with whom Mr. Donald is closely associated. Evidence was given on behalf of the Traders Co-ordinating Committee, the National Federation of Iron and Steel Manufacturers and the Birmingham Chamber of Commerce that the inclusion of the entries was welcomed by traders generally.

The Tribunal approved the additions to the Classification proposed by the Railway Companies and the President after referring to the fact that no Witnesses were called to support the contentions of the London Chamber of Commerce concluded his Judgment as follows:—

> "I am sorry to say that I have not been able to attach any weight or any importance to the opposition of the London Chamber of Commerce. It seems to me utterly misconceived. Somebody must have been responsible for having placed such a case before the Tribunal, and I should like the person who is responsible to understand that I, personally, am by no means satisfied with the attitude which the London Chamber of Commerce has adopted. If they thought fit to put forward these arguments, assertions and suggestions which they have, they should be supported by some evidence, of which, apparently, none has been brought to our notice."

In fairness to the Railway Companies I would ask that the true facts of this matter may now be given to the public.

I am, Sir,
Your obedient Servant,
G. COLE DEACON.
Secretary.

Railway Rates and Charges Committee,
35, Parliament Street,
Westminster, S.W.1.
4th November, 1930.

## RAILWAY SHAREHOLDERS AND RAILWAYS ADVERTISING.

*To the Editor of* THE WORLD'S CARRIERS.

SIR,—As one who welcomes every attempt to bring more beauty and good taste into advertising, I view with pleasure each new poster put on the hoardings by the British railway companies. But I often wonder whether such appeals as these artistic posters make really for increased traffic and, in consequence, for increased dividends. Now Sir Arthur Stanley, the Chairman of the British Red Cross Society, has crystallised my doubts.

"I am not much stirred," he said in his inaugural address the other day to the Institute of Transport, "by posters urging me to go to some place because it is so bracing, or even by pictures of incredibly pink maids immersed in impossibly blue seas; but I should be moved to the depth of my pocket by the suggestion that every pound I spent on a railway journey, however unnecessary, brought me nearer to my railway earthly millenium—a really substantial dividend."

There are, as Sir Arthur pointed out, nearly a million railway shareholders; yet never, to my knowledge, does the railway advertising manager appeal to them to support their own concern, for their own benefit. That, surely, should be the basis of a great part of railway advertising.

Yours truly,
CHARLES VIVIAN.

3, Hare Court, Temple, E.C.4.
31st October, 1930.

## AGRICULTURAL TRACTOR TRIALS.

*To the Editor of* THE WORLD'S CARRIERS.

SIR,—Having read the editorial on pp. 12-13 on the World Agricultural Tractor Trials in Berkshire permit us to state that the following passage:—

"At Ardington, except for the fuel oil machines, there were no experiments, while implements were much more suitable" contained in the last paragraph of the article mentioned does not seem to make the position of Crude or Fuel Oil Tractors as clear as might be expected for this highly important class of machines.

By the way this statement is apparently in contradiction with the Official Report of the Trial Committee which on pages 38 and 39 records that of the two classes of fuel oil tractors the semi-Diesel class is well out of the experimental stage for a number of years and in regular production, whereas the full-Diesel engines generally are in the experimental stage, and most of them were making their first public appearance in the trials.

In the interest of your readers which we are sure you endeavour to provide with information as exact as possible on the very important events of the Oxford Trials we might suggest the advisability of elucidating this point more clearly in a later issue.

Yours faithfully,
HEINRICH LANZ, A. G.

Mannheim.
October 23rd, 1930.

Our special contributor answers this point as follows:—The Full Diesel tractor is admittedly still in the experimental stage. I should have stated, however, that as regards the Continent the semi-Diesel is out of the experimental stage and, as the official report of it says, is in regular production. As far as the British farmer is concerned, however, both types are still regarded as an experiment. I might have made it more clear however that the semi-Desiel is much further than the other out of the experimental stage which means to say that farmers who wish to buy it may venture to do so knowing that there is service behind it.

*An Official Report published in connection with the trials gives details of the performance of the various machines entered.—Editor.*

# Publications Received.

PRACTICAL TRANSPORT MANAGEMENT. By Andrew Hastie, M.Inst.T., (Sir Isaac Pitman & Sons, Ltd., Parker Street, Kingsway, London, W.C.2. Price 10s. 6d. net.). The author of this work is well-known in the realm of transport. He is Traffic Superintendent, Synthetic Ammonia and Nitrates, Ltd. (Imperial Chemical Industries, Ltd.), and has held the position of Traffic Manager, David Colville and Sons, Ltd., and Traffic Manager, Bolckow, Vaughan & Co., Ltd. Sir Josiah Stamp, K.B.E., D.Sc., President of the Executive, London, Midland and Scottish Railway, and immediate Past President of the Institute of Transport contributes the foreword in which he points out that this volume, dealing with the economy of goods transport arrangements generally, from the point of view of manufacturers and other traders, is welcomed and will be of interest not only to those concerned in obtaining transport for their own needs, but also to those concerned in supplying it.

This treatise deals with "Transport Management" as it affects the Industrial Transport Manager. Chapter I deals thoroughly with the many questions to be taken into account when considering the site and lay-out of a factory and the author then proceeds to explore the subjects of works organization; the commercial and shipping sides of a transport department; works transport management; control and working of wagons; general questions involved in industrial transport; shipping of goods; works transport and costs; transport maintenance, etc. The author considers that the airplane or airship as a commercial proposition in the transport of general cargo has yet to go a very long way. The main need in Great Britain at the moment he says seems to be the introduction of municipal or civil air stations in or adjacent to all large towns throughout the country. The main disabilities under which aircraft at present operates, namely, the small tonnage or carrying capacity, operating costs and unfavourable climatic conditions will, no doubt, be swept gradually away. In the last chapter entitled "Research in Transport" the author says "There is an endless field available for research within the purview of transportation . . . . let us hope that there will be no repression of effort from all who are interested in transport affairs, but rather a great revival in order to achieve the desired end." There are some excellent illustrations and a comprehensive index.

RAILWAY ACCOUNTS. THEIR STATUTORY FORM AND THE PRACTICE OF RAILWAY COMPANIES TO GIVE EFFECT THERETO. By C. H. Newton, F.A.A., Chief Accountant, London and North Eastern Railway. (Sir Isaac Pitman & Sons, Ltd., Parker Street, Kingsway, London, W.C.2. Price 10s. 6d. net.) Railway finance looms large in the public eye at the present time and here is a work which although written primarily for students, and those directly concerned in railway accounting should prove of value to a wider circle, embracing those members of the public who must form undoubtedly a large body, who take an interest in the financial aspect of railway operation. The author has compiled an up-to-date exposition of the general principles upon which the statutory accounts prescribed for railways are constructed. The work opens with a brief historical review of railway accounts and the author deals adequately with a number of important matters concerning the financial and accounting aspect of railway operation dealt with in some of the eighty-six sections and nine schedules which comprise the Railways Act of 1921. Succeeding chapters deal with Capital accounts, Revenue receipts and expenditure of the whole undertakings; appropriation of net revenue; receipts and expenditure in respect of railway working; ancillary businesses; general balance sheet; capital and revenue expenditure; depreciation and renewal funds; indirect accounts; classification of expenditure on revenue account; standard revenue, Railways Act, 1921; General Principles of audit of railway accounts; and Separation of operating expenses between passenger and freight services. An excellent index is provided. This volume takes its place in the series of works forming Pitman's Transport Library and is one of the most comprehensive treatises in this invaluable collection of text books. BARTHOLOMEW'S HANDY REFERENCE ATLAS OF LONDON AND SUBURBS. (John Bartholomew & Son, Ltd., The Geographical Institute, Edinburgh. Price 6s. net.). The sixth edition, revised and enlarged, of this work is a good example of the excellent atlases and guides emanating from the house of these well-known cartographers. The maps are very clear and each plan is divided into half-mile squares. The general index to streets with their postal districts, public buildings, railway stations, etc., fills over 130 pages and is so cross referenced that any street may be found immediately on the map.

# Exide Motor Show Lunch.

THE Chloride Electrical Storage Co., Ltd., makers of the Exide Battery, held their annual lunch at the Clarendon Restaurant, Hammersmith, on October 16th, on the occasion of the opening of the 1930 Motor Show.

Mr. D. P. Dunne, Joint Managing Director of the Company, gave some very interesting instances of how the Exide Battery is regularly chosen whenever there is a great responsibility on the battery. Its record is unusual for any single commercial product. For instance, almost all recent polar expeditions have taken the Exide Battery with them.

Other instances of this reliance on the Exide Battery are provided by the many record flights of recent years. It accompanied Captain Barnard on his flight to the Cape, and also Wing-Commander Kingsford Smith on his flight across the Atlantic.

The makers of the Exide Battery have always attached the utmost importance to the service side of the business. Exide Service is the most complete battery service in the world. There are more than 13,000 Exide Service Stations in the world, and the owner of an Exide Battery can obtain efficient service from Greenland to New Zealand. 600 of these Exide Service Stations are in the British Isles, where any make of battery for any make of car can be repaired or replated, ready for use, in two hours—truly wonderful service.

At the conclusion of the Chairman's speech the assembled guests listened with great interest to a speech by Wing-Commander Kingsford Smith who was at that time nearing Australia on his great record flight. This item was rendered possible by the fact that Mr. Kingsford Smith had made a gramophone record of what he would have said had he been able to be present and needless to say he spoke in the highest terms of the Exide batteries, which he was using on his machine. The Publicity Department are to be congratulated upon having organised such a clever piece of publicity. As the guests left the luncheon room they were each of them presented with a souvenir copy of this record.

# Round the Lancashire Associations.

**Joint Road Council.**

Differences having arisen between the two sides of the Lancashire and Cheshire Joint Road Council with respect to the rates of wages, the Minister of Labour appointed a board of arbitration consisting of Sir Harold Morris, K.C. (Chairman), Mr. J. Crombleholme, Employers' representative, and Mr. John Jagger, Workpeople's representative, to make a settlement. The parties concerned were the Transport and General Workers' Union on the one hand and the following employers' associations on the other:—Amalgamated Horse and Motor Owners' Association, Ltd.; Ashton, Stalybridge, Mossley and District Master Carriers' and Horse and Motor Owners' Association; Bolton and District Horse and Motor Carriers' Association; Burnley and District Road Transport Association; East Lancashire Road Transport Association; Conference of Manchester Carriers; Manchester Transport (Owners') Association, Ltd.; Stockport and District Team Owners' Association; Warrington Horse Owners' and Motor Owners' Association.

The workers' representatives maintained that no adjustment of wages could be made until both sides of the Joint Council had agreed. On the other hand the employers maintained that in view of the clauses of the Agreement, affecting wages, adjustments were automatic, being controlled by the Cost of Living Index Figures published in the Labour Gazette.

The points submitted for decision by the arbitrator were:—(a) The rate of wages which should have applied having regard to the cost of living figure of 54 points for June; (b) the date from which the decision reached on (a) shall operate; (c) the rate of wages which shall apply from the first pay day in November having regard to the cost of living figure of 57 points for September. As the members of the Board were unable to agree, Sir Harold Morris awarded as follows:—(a) "The rates of wages which should have applied having regard to the cost of living figure of 54 points for June are 'the Schedule rates,' reduced by 2/-; (b) the date from which the decision reached on (a) shall operate is the first pay day after the date of this Award; in those cases where the reduction of 2/- has already been made, there shall be no repayment; (c) the rates of wages which shall apply from the first pay day in November having regard to the cost of living figure of 57 points for September, shall be 'the Schedule rates.'"

In accordance with the foregoing decision the rates of pay to transport employees are as follows:—

| Grade of Worker. | Wage at Oct. 9th, 1930. | Wage on and after Nov. 6th, 1930. |
|---|---|---|
| One Horse Drivers ... ... ... | 49/- | 51/- |
| Two Horse Drivers ... ... ... | 54/- | 56/- |
| Stable or Garage Hands ... ... | 49/- | 51/- |
| Mechanical Vehicle Drivers— | | |
| Up to 1 ton, Youths ... ... (Not to load more than 15 cwts.) | 39/- | 41/- |
| Up to 1 ton, Adults ... ... ... | 49/- | 51/- |
| 1 ton and under 2 tons ... ... | 53/- | 55/- |
| 2 tons and over ... ... ... | 59/- | 61/- |
| Wagon Assistants and Loaders ... | 49/- | 51/- |
| Steam Wagon Drivers ... ... | 62/- | 64/- |
| Steam Wagon Second Man ... | 51/- | 53/- |

**Liverpool and District Conference.**

Since the Liverpool and District Road Transport Employers' Conference has terminated its agreement with the Liverpool and District Carters' and Motormen's Union, because of the refusal of the latter to permit the insertion in the working agreement of an optional clause, whereby motor men engaged in up-country work may be paid on the accumulative week system, there have been fresh moves. It is apparently the wish of the Union that the agreement should be continued. Consequently, fresh negotiations have been embarked upon and are still proceeding. Liverpool motor haulage contractors consider it imperative, owing to the intensity of competition, for the accumulative week system to be put into operation on Merseyside. They have offered the men one week's holiday annually with pay, if the 48 accumulative working week is adopted.

**Horse and Motor Owners' Association, Manchester.**

The several committees of the Amalgamated Horse and Motor Owners' Association, Manchester, and the S.E. Lancashire C.M.U.A., have held special meetings to consider draft regulations under the Road Traffic Act. As certain of these will impose considerable hardship on members, a number of amendments have been suggested.

**Manchester Transport Owners.**

It is now possible to briefly review the success which has been achieved by the Manchester Transport Owners' Association with its scheme, which was tried out this summer for the first time, to rationalise conditions in the motor coaching industry. One striking result was the better level of fares throughout the season, there being far less rate cutting than for several years. It was not until towards the back end, that rates began to reflect the scarcity of traffic. The movements of over 200 vehicles were governed by the scheme and on several occasions these were fully employed; in fact, it was necessary to import coaches from other districts.

**Liverpool Traffic Club.**

The Liverpool Traffic Club which exists for the promotion of traffic knowledge, has compiled an interesting syllabus for the 1930/31 season. The first meeting took place on Monday, 3rd November, when Mr. L. B. O. Heilbron gave an address on the Road Traffic Act which he interpreted from the standpoint of transporters. Mr. E. C. Marston, of M.R.S., Ltd., who is a specialist in the handling of big and outsize loads, is down to give an address on November 24th on "The Haulage of Heavy Traffic." At the January meeting, Mr. A. D. Sharpe, of the L.N.E.R., will speak on "Goods Transport—Advantages and Economies by Rail." Mr. G. Leedham, District Goods Manager, L.N.E.R., will preside. The Secretary of the Liverpool Traffic Club is Mr. J. C. Purcell, who will be glad to furnish particulars to interested persons as to the activities of the Club.

**Institute of Transport.**

Arrangements have been made for the annual dinner of the Manchester, Liverpool and District section of the Institute of Transport to take place at the Queen's Hotel, Manchester, on Friday, November 28th. The next ordinary meeting of the section will take the form of a visit to the C.W.S. head offices and tobacco factory, Manchester, on Wednesday, December 10th. Members will assemble at the C.W.S. offices, Balloon Street, Manchester, at 2.15 p.m. Members of the Institute will be entertained to tea after which Mr. Robert W. Royle, who is Traffic Manager of C.W.S., will give an address on "The Transport Interests of C.W.S."

# Eight Times Round the World.

SOME striking facts and figures are set out in an attractively designed booklet recently published by the Dunlop Company on the Road Transport Division of its organisation. The booklet describes the activities of the Division which exists solely for the purpose of enabling commercial vehicle users to get value for the money they spend on their tyres. In addition to giving full details of the service and showing how it helps transport companies, the booklet gives an insight into the basic work at Fort Dunlop, where a large staff is engaged in continually testing giant pneumatic tyres, both on the road and on specially constructed testing machines. There are twelve of these machines, each fitted with tyres running under known conditions, and capable of carrying loads up to 3 tons per tyre. Thirty-five thousand giant tyres miles are run on them weekly. Much constructive information is obtained from the result of these tests. The large test fleet is continually on the road, a 24-hour daily working being obtained by two shifts of drivers. As much as 8,200 miles have been covered by one vehicle in a single month. During 1929 the heavy vehicles accomplished practically 176,000 miles, approximately equal to 8 times round the world at the equator. Copies of the booklet can be obtained on application to Fort Dunlop.

**Special Rates to the Fair.**—The Lloyd Triestino Shipping Company has decided to reduce fares by 30 per cent. for all persons travelling via Trieste and Venice to England for the British Industries Fair.

**Motorists and Road Repairers.**—The Automobile Association asks motorists and other road users, when passing stretches of road undergoing reconstruction and repair, strictly to observe the warning notices usually displayed.

# Bus Services at Cambridge.

*(Specially contributed.)*

THE University town of Cambridge is in line with many others of similar size and importance in being a prominent centre of passenger traffic for the county, and the wide spread network of services which radiate into the surrounding district is, in no small measure, due to the enterprise of the Ortona Motor Co., Ltd., whose headquarters are in the city.

The "Ortona" buses first commenced operating on the town routes twenty-four years ago, and were then owned by Mr. J. Walford, the concern being made into a limited company in March, 1908.

From a handful of buses, running purely local routes, the business has been extended until it now embraces nearly all Cambridgeshire and parts of Huntingdonshire, Bedfordshire, Norfolk, Suffolk and Essex, covering over 450 miles of route, for which between 70 and 80 buses are in commission.

The Company's services may be divided as follows:—those catering for the city itself, secondly those serving the outside districts, including cross country services not running into Cambridge (including special market routes), and thirdly, the long-distance services of which, at present, there are five.

Two of these latter mentioned services operated in conjunction with other concerns are as follows:—to Bedford, jointly with The Eastern National Omnibus Co., Ltd.; to Peterborough, jointly with The Peterborough Electric Traction Co., Ltd., whilst those to Ely and March, and during the summer months only, to King's Lynn and Hunstanton, and Clacton, via Colchester, are purely "Ortona" services.

A general bus terminus (for all except the local routes) is provided in Drummer Street, Cambridge, and from this point a number of other smaller concerns operate.

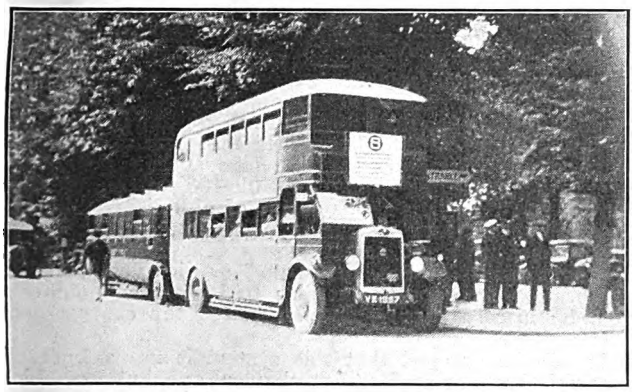
The Burwell and District Motor Service is one of these, this concern maintaining services from Cambridge to Fordham, and Great Wilbraham, on Mondays, Wednesdays, and Saturdays, and daily to Burwell, extra journeys being made on Wednesdays and Saturdays, and on Saturdays only Eversden is also served.

32-seater saloons are employed, including the "C.F." model Daimler.

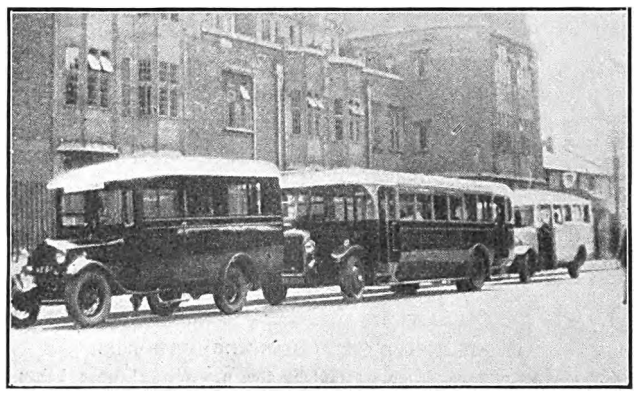
Thompson's buses, known as The Harston and District Motor Service, operate daily to Fowlmere, with market services to Barrington on Saturdays, and Royston on Wednesdays. Reo 26-seater buses are favoured.

A twice daily service to Hitchin is provided by Ashwell's buses, whilst St. Ives is served on Mondays, Wednesdays, Fridays and Saturdays by the "Fenstanton and District" service, which also runs to Dry Drayton on Wednesdays and Saturdays only.

Cambridge Blue Motors, who employ Thornycroft, 20-seater saloons serve Bedford every day except Thursdays. Cottenham is catered for by the "Reliance" service, whilst a number of smaller places are served on certain days only by about another half-dozen proprietors, whose vehicles include Reo, Ford and Graham 14 and 20-seater one-man operated buses.



"ORTONA" BUSES ON DRUMMER STREET STAND, CAMBRIDGE. (LEYLAND TITAN AND "S.O.S." SALOONS).



"C.F." TYPE DAIMLER OPERATED BY BURWELL AND DISTRICT MOTOR SERVICE (IN CENTRE) AND OTHER BUSES AT CAMBRIDGE.

Altogether there are sixty different routes, quite a number of these being special services worked on market days only, from such places as Ely, Haverhill, Newmarket and St. Ives. At Bedford, Haverhill, St. Ives and St. Neots, connections are made with the "Eastern National" services.

Housing accommodation for the greater part of the fleet is provided at a specially constructed spacious garage at Hills Road, Cambridge, where the head office and repair shops are also situated.

Sub-depots are also situated at Newmarket and Ely.

Although the majority of the vehicles employed are mounted on Leyland chassis, there are also a number of "S.O.S" 32-seater saloons. "Tigers" with single-deck saloon bodies, and "Titans" for the double-deckers, are the latest Leyland acquisitions. On the town services, open top double-deckers are also used.

The Westminster Coaching Services Ltd., operate a daily service to London, having been working this route since early in 1928. De-luxe saloon coaches on F-type Dennis chassis are in commission. Five journeys are made daily in each direction.

Another London Service which is routed alternately via Ware and Bishops Stortford, is that of Varsity Express Motors, Ltd., whose operations commenced in October, 1929. A total of nine journeys on week-days, and six on Sundays are worked. The through single fare is 5s. and period return 8s. 6d., with a day return for 7s., these rates applying to both companies.

The Birmingham-Yarmouth service belonging to Eastern Motorways passes through Cambridge daily at 10.0 a.m. towards Birmingham, and 4.0 p.m. to Yarmouth.

Easy Motor Coaches also operate the Northampton-Yarmouth route via Cambridge.

# Area Traffic Commissioners.

**Headquarters.**

THE Minister of Transport announces that the Headquarters Offices of the thirteen Traffic Areas specified in the Third Schedule to the Road Traffic Act, 1930, will be in the following towns:—

*Traffic Areas in England.*

| | | |
|---|---|---|
| 1. | Northern Traffic Area. | Newcastle-upon-Tyne. |
| 2. | Yorkshire Traffic Area. | Leeds. |
| 3. | North Western Traffic Area. | Manchester. |
| 4. | West Midland Traffic Area. | Birmingham. |
| 5. | East Midland Traffic Area. | Nottingham. |
| 6. | Eastern Traffic Area. | Cambridge. |
| 7. | South Wales Traffic Area. | Cardiff. |
| 8. | Western Traffic Area. | Bristol. |
| 9. | Southern Traffic Area. | Reading. |
| 10. | South Eastern Traffic Area. | London. |
| 11. | Metropolitan Traffic Area. | London. |

*Traffic Areas in Scotland.*

| | | |
|---|---|---|
| 1. | Northern Traffic Area. | Aberdeen. |
| 2. | Southern Traffic Area. | Edinburgh. |

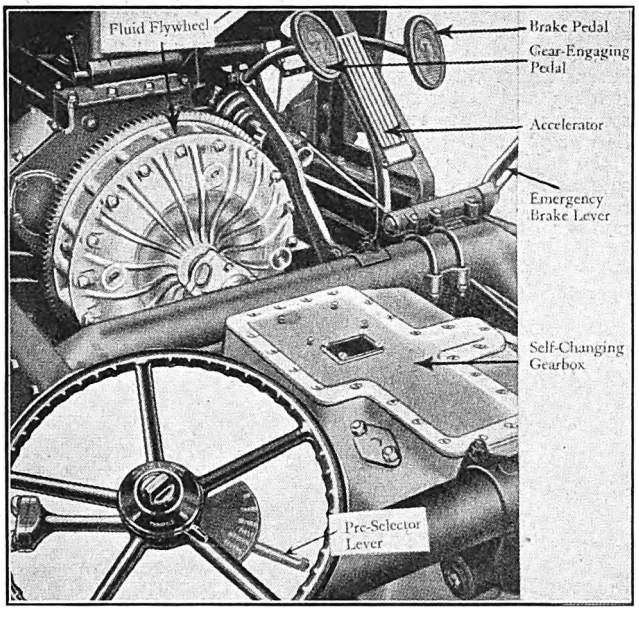
# A New Daimler Bus.

## Inaugural Demonstration of a Pioneer Model.

THE Daimler Co., Ltd., Coventry, have not lost time in extending the range of their recently developed fluid flywheel and preselective, self-changing epicyclic gear layout to the more arduous requirements of public service traffic. Already the first of a new set of 50-seater bus and coach chassis has been completed and is in course of being demonstrated. It was the good fortune of our representative to be able to accompany a group of pressmen on a trial of this bus through London traffic. The route was westwards from Pall Mall via Hyde Park corner along the Hammersmith route, returning via Holland Park



LAYOUT OF DAIMLER CHASSIS WITH "FLUID FLYWHEEL" AND PRE-SELECTIVE (SELF CHANGING) GEAR-BOX.

**There is no gear-lever or clutch, the pre-selected gear being engaged when required by depressing and releasing the gear engaging pedal. [Inset (in left lower corner) is the steering-wheel with engine control and pre-selective gear quadrant and lever.]**

and Marble Arch and Oxford Street to Pall Mall. The traffic conditions were those normal in the mid-day hours and proved a sufficient opportunity to gauge the smoothness of the starting, pick-up, and control of the new Daimler transmission.

We noted more particularly the absence of jerkiness and gear noise, and were impressed with the smoothness of the drive and controllability of the bus (a double decker) without fuss on its own part or worse still as regards the driving. In this respect, when the pre-selection gear-change, hand-controlled mechanism is grouped as in the car chassis on the steering post (a detail not carried out in the first of the new series of these passenger vehicles) a London bus driver will be saved most of the fatigue inseparable from handling a normal bus with the usual pedal and gear change lever. Beyond noting the accelerative effect in terms of smoothly increasing speed, there was no evidence of a "build up" such as is inseparable from a change up from gear to gear, while on top gear there was merely a slight rythmic hum indicative of a shockless drive. Deceleration, too, was pleasant and there was no evidence of "piling on" when the brakes were applied, followed by the usual click of the gear lever to engage a lower gear for the subsequent build up. Altogether the impression on one was that of a gearless drive, smooth and comfortable.

### The New Transmission.

The leading points of the new fluid flywheel and epicyclic gear are known to most readers so that the following brief *resumé* of the makers' claims for it will suffice. First it may be explained that the fluid flywheel is a simple hydro-dynamic device which replaces the ordinary clutch, has only two moving parts and is automatic in action. The drive is transmitted from the engine by means of the interchanges of energy in a rapidly moving fluid within the flywheel casing. Among the claims for it are the following:—The vehicle can be started and stopped at will with the drive engaged and the engine running; the engine can be used as a brake; over-run vibration is eliminated, and there is no gear noise when idling or on any gear, hence there is a saving of wear and fuel to be expected; any gear "pre-selected" by a small control lever on the steering column may be instantly and silently engaged merely by depressing and releasing a pedal; the epicyclic gear controls are self-adjusting and fool-proof.

Under normal running conditions there is but 2 per cent. of slip between the fluid flywheel rotors; this is equivalent to an efficiency of 98 per cent. in that part of the transmission. At starting and at low speeds the slip is greater—diminishing from a possible 100 per cent. at starting on full throttle. This factor of diminishing slip and increasing efficiency of the transmission combined with the pre-selective and self-changing gear control explains the smoothness of the "build up" or vice versa, making it possible even for the vehicle to be braked quickly to rest by merely passing down through the change gears into reverse.

It will be grasped that this system is not a hydraulic transmission, nor a wholly mechanical one, but a combination of the good features of both. Of course there are other points besides, peculiar to it and covered by patents. We understand that the fluid flywheel as a unit is lighter than the normal flywheel and clutch, and that the four speed and reverse gear box as a unit is about 50 lb. heavier than the normal sliding gear box with the same number of changes.

About a gallon of a mixture of commercial glycerine and other liquid is the content of the fluid flywheel casing. Any good grade lubricant suffices for the gear box, and the quantity and consumption of it are normal. Regarding the possibility of leakage or seeping of the liquid content of the fluid flywheel, it will suffice to re-assure enquirers by explaining that this is one of the provisions effected by the patented form and layout of the two rotors (i.e., (a) the external flywheel casing and (b) the internal driver or rotor) which together provide a hydro-dynamic transmission box between the engine and gear box.

# Manchester Coachowners' Proposal to Amalgamate.

ONE important development from the Manchester motor coach owners' co-ordination scheme, which was put into operation during the summer months by members of the Manchester Transport Owners' Association, is the proposed amalgamation of 17 firms into one company. This number is approximately 25 per cent. of the total coach-owner members of the Association. Other concerns are likely to attach themselves and to form a public company in the early part of next year. Even if this plan attains fruition, it will not modify in any way the arrangements made by the Motor Transport Owners' Association for regularising conditions as they affect the other outside owners. Mr. Howard Robinson informs us that the co-ordination scheme will be revived next spring, and will be improved upon in the light of experience which has been already gained. The fact that one large concern will take the place of many small ones should simplify matters.

The particular circumstance that has encouraged the putting forward of the proposal for the amalgamation of small coachowning concerns is the new Road Traffic Act which, as is well known, has far reaching effects. Mr. T. Quinn, of Central Motor Coach Services, Manchester, who has taken the lead in negotiating this merger, is strongly of the opinion that the Area Commissioners to be appointed under the Act would prefer to deal with amalgamations of coachowners and large concerns than with small undertakings. Every owner would have to satisfy the area commissioner of his ability to operate a desired service efficiently, both in point of finance and administration. It was desirable to form an organisation which would ensure the continuity of their businesses, even as part of a large concern.

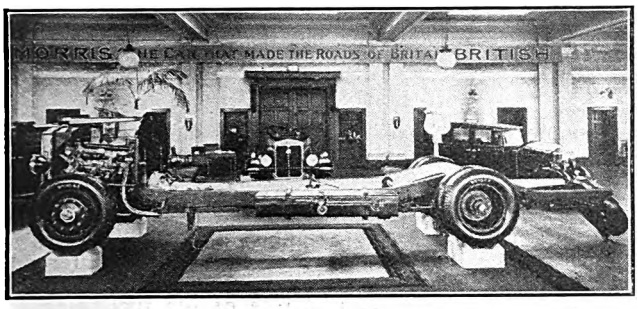
# Motor Coach and Bus Notes.

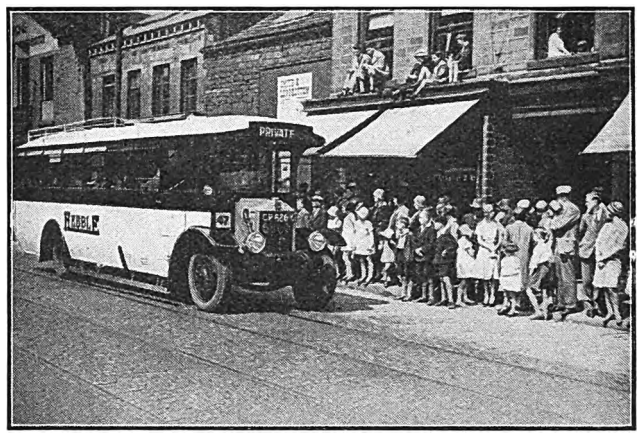
**Morris-Commercial "Dictator" Passenger Chassis.**—The Morris-Commercial "Dictator" normal control passenger chassis has a six-cylinder engine, developing 110 b.h.p.; "high camshaft" arrangement, combining accessibility, efficiency and simplicity to a great degree. The greatest care and attention has been paid to the accessibility and ease of removal of all parts of the vehicle. The rear axle casing is of the built-up type, with cast centre



MORRIS-COMMERCIAL "DICTATOR" PASSENGER CHASSIS. SOLE LONDON DISTRIBUTORS OF MORRIS CARS, STEWART & ARDERN, LTD., MORRIS HOUSE, THE VALE, ACTON, LONDON, W.3.

casing (carrying worm gear without using separate casing) with taper tubular extensions, of great strength and stiffness due to large diameter of tubes, and, owing to the scientific disposition of metal, light in weight. Grouped nipples for gun feed oiling are conveniently arranged to reduce lubrication time to a minimum. Silentbloc rubber-bushed shackle pins reduce number of points requiring lubrication, and graphite-bronze oil-absorbing bushes are used in all brake connections, requiring only occasional oiling. Special arrangements are provided on all exposed bearings to prevent ingress of mud and water. The springing, in conjunction with hydraulic shock absorbers front and rear, affords a high standard of riding comfort. The foot brake (servo assisted) operates on all four wheels. Hand brake (for parking or emergency use) operates on rear wheels. The brakes are actuated through very heavy tubular cross shafts which eliminate spring in connecting gear. Lighting sets of adequate capacity are available for coach or bus work. The dashboard instrument panel is detachable for inspection without disconnecting any wiring. All connections to panel are accessible and visible from front of panel. A special form of carrier for spare wheel is provided which can be withdrawn from the rear of the vehicle sufficiently to permit the removal of the wheel from the carrier in the easiest possible manner. When sliding the carrier in and out, the operator has only to bear one-third of the wheel weight. The price of the "Dictator" passenger chassis, including starter, 12-volt dynamo, 38 in. by 8¼ in. pneumatic tyres (singles front, twins rear), with spare wheel only, head, side and tail-lamps, gear driven air pump, domed front wings, full kit of tools, with normal control, £890; with forward control, £925. Alternative tyre equipment 34 in. by 7 in. or 38 in. by 7 in. (twins rear), without extra cost. Extra for 25 amp. dynamo in place of standard equipment on normal control chassis, £2.

**An "Albion" Bus at Hospital Gala.**—The 30-60 h.p. "Albion" overtype bus which we illustrate is owned by Hebble Motor Services, Halifax, and was photographed whilst on special duty in connection with the Bingley Hospital Gala.



A 30/60 H.P. "ALBION" OVERTYPE BUS OWNED BY THE HEBBLE MOTOR SERVICES, HALIFAX.

**Motor Coach Stations, Ltd.**—We gave particulars in our October issue of the registration as a private company of Motor Coach Stations, Ltd. The details as to Directors, etc., given by us, while correct at the time of the registration of the Company, were, we are informed, subsequently altered by a special resolution passed at an extraordinary general meeting of the Company, held on October 6th. By virtue of this resolution Mr. Frederick Thomas Wood shall so long as he holds either by himself or his nominees 4,000 ordinary shares in the capital of the Company and Messrs. Patrick and John Hearn shall so long as they hold between them either by themselves or either of them or their respective nominees at least 4,000 shares in the capital of the Company or until they shall resign be Directors of the Company. Mr. F. T. Wood and Mr. John Hearn are Joint Managing Directors.

**Guy Motors, Limited,** Fallings Park, Wolverhampton, have produced a 20-seater six cylinder chassis for use either as a service bus or long distance coach. This new model, named the "Victory," made its debut at the Scottish Motor Show at Kelvin Hall. The chassis sells at £495. It is fitted with a very efficient six cylinder O.H.V. engine, Servo assisted four wheel brakes, 32 by 6 in. pneumatic tyres and 12 volt lighting and starting set. Other models which were exhibited at Glasgow were the "Invincible" four wheel double decker, "Conquest" four wheel single decker, and 40/50 cwt. open type lorry. The "Conquest" vehicle is interesting, inasmuch as it is fitted with a new type of body. In this body the span of the roof is reduced owing to the pillars above the waist rail sloping sharply inwards. This arrangement gives better upward vision for the passengers, reduces weight and cost, and gives a better clearance of trees, lamp posts, etc., when the bus is on the camber of the road. Particulars we have received giving brief specifications and prices of Guy 1931 models, show that in addition to the "Victory" and 40/50 cwt. there are a number of other entirely new vehicles, namely, the 3/4 tonner and the 8 and 12 tonners.

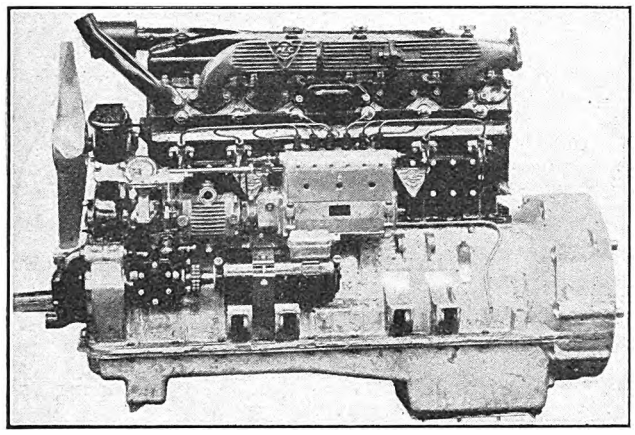
# A New A.E.C. Oil Engine.

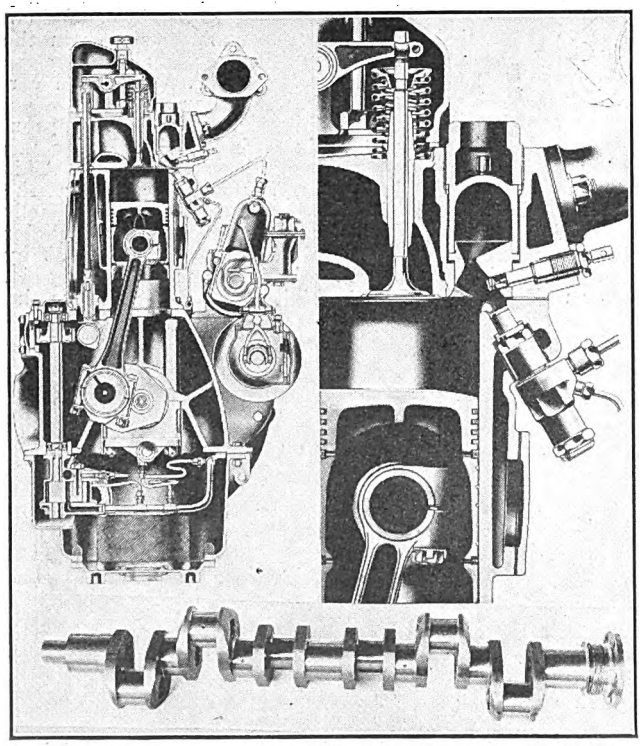
## A Standardised High Speed Diesel Type Product.

THE Associated Equipment Co., Ltd., of Southall Middlesex, have put into production as standard output after a prolonged trial in daily use since December, 1928, a six-cylinder Diesel type of vehicle engine.



NEARSIDE VIEW OF THE NEW A.E.C. (ACRO LICENCE) HIGH SPEED 95 H.P. SIX CYL. OIL ENGINE.

Samples of the new engine were recently made available for inspection in detail, and for trial as fitted to a standard two-deck bus. A short run over local bye-ways of a tortuous character and the Great West Road, provided a fair scope for demonstrating the smoothness and absence of thump (in spite of the somewhat high compression of 500-520 lb. per sq. inch), controllability and accelerative response of the new engine and, occasionally, too, it was possible to gauge something of its immense power. There were no exhaust fumes and no evidence of imperfect combustion or over-lubrication. The pick-up was as good as is found with best modern plate clutch, a fact the more notable because of the manifest big power range of the engine. This indeed was a factor which greatly impressed us both on its own and for the absence of thump and jerkiness which denote either lack of balance or lack of suppleness in the pick-up. With the introduction of this engine purchasers of A.E.C. chassis have an alternative selection of either a constant pressure, i.e., Diesel type of engine, or a constant volume engine of the four-cycle Otto type, i.e., the explosion type which until recently ruled supreme for road vehicles.



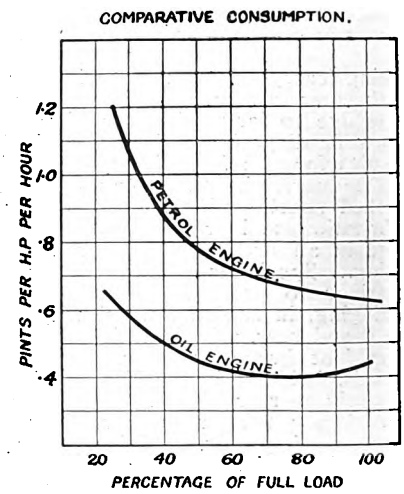
END ELEVATION SECTION VIEWS OF NEW 95 H.P. SIX CYL. A.E.C. HIGH SPEED OIL ENGINE BUILT UNDER ACRO LICENCE.
Featuring Bosch full injection modified pumps, and (on right) the special (Acro patent) combustion chamber. Below: the seven main journals hollow crank-shaft.

### LEADING DETAILS.

A summary of details more or less differentiating the newcomer may be suitably interposed here before passing on to explain such as need amplification.

The engine is built under the Bosch-Acro licence, which includes among its patented features a special venturi form and construction of combustion chamber, and a number of details which may be regarded as interconnected with it, e.g., compression ratio (15½-1), stroke-bore ratio, fuel-air ratio, and rate of the fuel injection per stroke.

The bore and stroke of the six cylinders are 110 mm. by 142 mm. (4.33 in. by 5.59 in.). They are cast in block of first grade iron and are bolted to a crank-case of special aluminium alloy. The cylinders' head is a separate casting in two sections in which are the overhead (inverted) valves for the air inlet and exhaust outlet. The valves are worked by an internal one-piece cam-shaft through push-rods and rockers, all the mechanism being enclosed and self-lubricated. The engine operates on the four-cycle system, i.e., the cycle is the normal one of suction, compression, ignition and exhausting, with, of course, the important difference that air only is inducted and is compressed to a rate of 520 lbs. per sq. inch at the normal working temperature of the cylinders which is sufficient to produce self-ignition (not explosion) of the oil-charge at the moment of induction. The resultant impulse is not accompanied by a rise of pressure such as characterises the detonated charge in the normal or explosion type of four and two-cycle engine.



COMPARATIVE FUEL CONSUMPTION IN PINTS PER H.P. PER HOUR. PETROL V. A.E.C. OIL ENGINE.

To facilitate starting from cold each cylinder is fitted with an electric pre-heating plug. These are placed in circuit for a short while with the battery which supplies current for the flywheel starting motor, and is charged by a lighting generator.

The crank-shaft is supported in seven hefty bearings (approx. 3⅜ in. dia.) between each throw. It has large journals but is hollow and, therefore, not unreasonably heavy. The connecting rods are of the usual I section form, with self-keyed, white metal big end bearings and inserted gudgeon bushes. The pistons are of Y metal (resembling aluminium).

The engine has a speed range from 300 to 3,000 r.p.m. and has the somewhat unusual feature of being self-governed for a minimum speed and not for the maximum. The makers claim that this engine can run at 1,000 r.p.m., a higher speed than any other of its type at present in production. And, in this connection, it may be noted that the power-weight ratio also is remarkable, being but 14 lb. per b.h.p. at 95 h.p. including the flywheel and the necessary accessories. The gross weight is, therefore, 1,330 lb. which is about the same as that of a normal

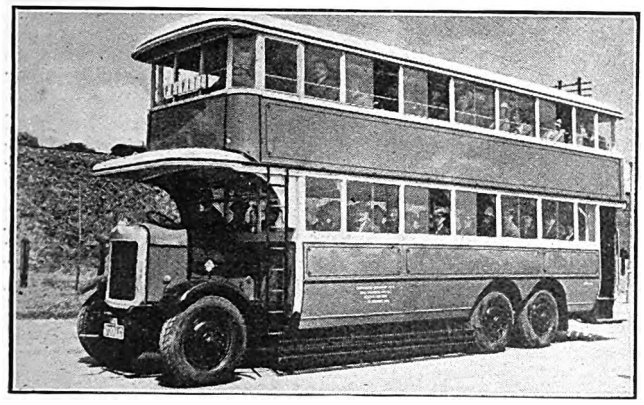
Digitized by Google

petrol engine of corresponding size. This is a notable achievement and the more so when one has seen the robustness of the layout and details as recently displayed for visitors' examination.

There is a novelty which will be dealt with later, but will be noted here among the details. It is a small, continuously running (Reavell) exhauster, which will be recognised in the near-side view of the engine by its horizontally-ribbed casing. In this same picture will be seen bracketed in tandem with the exhauster the Bosch six-fold fuel injection pumps and the corresponding pipe-leads to the injection-nozzles in each cylinder. The details of the fuel injection system are very clearly shown in the composite and elevation section view through the cylinders. An important detail may be explained here in reference to this composite view. It concerns the already referred to Acro patented feature.

### THE ACRO PATENT COMBUSTION CHAMBER.

Students of constant pressure (Diesel) layouts know that they are in two main categories: (a) the plain or normal with some modification in shape of piston top or combustion chamber from the petrol motors, and (b) some less normal type embodying (largely to promote turbulence) an anti-chamber or bottle neck cavity in the region of the combustion area. The Acro layout differs from both these forms. The combustion chamber's capacity is divided into two approximately equal volumes, separated by a narrow throat-shaped passage. This chamber is termed the "air cell" and is situated to one side of the cylinder, which communicates directly with the lower portion of the combustion chamber. The fuel pumps assembly is driven at half crank-shaft speed. The



104 SEATER SIX WHEELED DOUBLE DECK BUS WITH NEW A.E.C. (ACRO LICENCE) HIGH SPEED 95 H.P. SIX CYL. OIL ENGINE.

Bosch normal layout for advance and retard of the fuel injection moment is modified by the A.E.C. makers to suit the much higher speed range of this engine. The fuel pumps are kept supplied from a large tank by an A.C. (diaphragm) pulsator-pump operating at about 3 lb. per sq. inch pressure, which is driven in step with the Bosch oil pumps assembly. The fuel is sprayed into the lower part of the combustion chamber and is aimed directly towards the opening between the two parts. The maximum pressure after ignition is attained in this engine when the piston is about 10 degs. past the dead-centre. As the piston moves downwards the pressure falls, allowing the air contained within the air cell to pass out into the main combustion chamber, maintaining the turbulence and bringing a fresh supply of oxygen to the burning mass within the main combustion chamber, thereby ensuring a complete and clean combustion.

### FUEL, MILEAGE, LOAD ECONOMY.

The fuel consumption is much less than for a petrol engine under similar conditions of load and road. This is shown graphically by the comparative consumption curves in the accompanying Fig. Expressed in actual consumption rates, using a standard fuel-oil costing 4d. to 5d. per gallon in bulk lots, this engine in a full-loaded "Majestic" chassis had a mileage per gallon ranging from 8.25 (Winchester via Guildford) to 12.1 (Bagshot-London), the mean rate being 10.2 m.p.g. (London-Oxford), on the out and home run across London via Ealing to N. Woolwich the rate was 9.1 m.p.g. The corresponding figures for a petrol engined similar vehicle are taken at from 5 to 6 m.p.g. This in effect is the data as plotted in the comparative consumption graph referred to.

Referring to the near side view of the engine, and the section and elevation view, the latter shows the layout of the pressure lubricating pump and circulation (return) system and sump. The pump is of the rotary gear-tooth type and is driven by a skew gearing off the cam-shaft and supplies oil direct to all the chief parts and to the overhead valve-rockers assembly through holes in the respective shafts. The cam-shaft and fan, together with the accessories already mentioned, are driven by a triplex roller-chain which is provided with a self-tensioning member. The length of this chain, supplemented by the simple means for keeping it self-taut, it is stated, has been found to combine good wear and shock-resisting qualities in connection with the auxiliary drives. The water-circulating pump and current generator will be noted bracketed in tandem below the oil pumps and exhauster on the near side of the engine. The starting motor is correspondingly bracketed on the off-side of the casing.

### THE VACUUM EXHAUSTER.

Reverting to the before mentioned exhauster, which is the novelty among the auxiliaries of this engine, the following description of it (slightly condensed) and its function, is by the A.E.C. Co. Its function is to provide the vacuum necessary to operate the vacuum servo brakes with which all new A.E.C. chassis are fitted. With a petrol engine the necessary vacuum is instantly available through the induction pipe the moment the accelerator pedal is released. With an oil engine, however, the control is entirely on the fuel supply, the air drawn into the engine remaining constant at all times. No throttle is therefore required, and there is never at any time a vacuum in the inlet manifold. The exhauster, therefore, is fitted to supply this deficiency.

In form it is a small rotary vane pump and, being driven positively by the engine, is running all the time the engine is turning over. The suction side is connected to a vacuum tank mounted inside the frame, and the vacuum pipe from the servo is connected directly to the vacuum tank instead of to the inlet manifold as it is with a petrol engine. The discharge from the pump, i.e., the air passed through the brake cylinder, is passed into the crank-case through the base of the exhauster, the exhauster being lubricated by splash through the discharge opening. A relief valve it fitted to limit the vacuum to 20/22 in. of mercury and avoid overheating, which would result if too high a vacuum was reached. To avoid losing the vacuum when the engine drops to idling speeds, a non-return valve is provided. This and the relief valve are incorporated as a single unit directly on the exhauster.

The engine is controlled solely by means of the advance and retard of the fuel pumps. This is a hand control and combines the similar function of the ignition and throttle valve (hand or foot) control on a petrol motor. Judging from the recent trial run, the result is satisfactory all round.

## Skidding Research.

IN conjunction with the Ministry of Transport, the National Physical Laboratory has recently been carrying out researches into the question of rubber-tyred vehicles on roads, and the results of some of these researches are given in two Papers which are to be read before various Centres of the Institution of Automobile Engineers, i.e., "Some Experiments on the Factors Affecting the Motion of a Four-Wheeled Vehicle when some of its Wheels are Locked" by J. Bradley and S. A. Wood, and "Factors Affecting the Behaviour of Rubber Tyred Wheels on Road Surfaces" by J. Bradley and R. F. Allen. These Papers will be read at a meeting to be held at Glasgow on Monday, 24th November, at The Institution of Engineers and Shipbuilders, Elmbank Crescent, at 7.30 p.m., and at a meeting in London on Tuesday, 2nd December at The Royal Society of Arts, John Street, Adelphi, at 7.45 p.m. A further Paper of interest to be read before the I.A.E. is that of Mr. A. H. Girling entitled "A New Automobile Braking System." Mr. Girling will read his Paper at a meeting of the North-Eastern Centre, to be held at the Metropole Hotel, Leeds, on Wednesday, 19th November, at 7.15 p.m. Cards of invitation to admit visitors to any of these meetings may be obtained on application to the Secretary, The Institution of Automobile Engineers, Watergate House, Adelphi, London, W.C.2.

# Third Party Insurance.

THE Minister of Transport makes the following announcement:—

The Part of the Road Traffic Act, 1930, relating to the provision to be made against third party risks arising out of the use of motor vehicles will come into force on the 1st January, next, and as from that date it will be an offence for any person to drive a motor vehicle on a road unless he is covered against the third party risks specified in the Act.

In the case of the ordinary motorist this cover will usually take the form of a policy of insurance. As evidence of compliance with the Act the motorist when driving will need to have in his possession a certificate of insurance which will be supplied by the insurers and which must be produced to a police constable on demand or in the event of an accident involving a third party either to a police constable or to any person who has reasonable grounds for requiring to see it.

Evidence of compliance with this Part of the Act will have to be produced when a Road Fund licence is applied for, so that motorists when applying either to a licensing authority or to a Post Office for their Road Fund licences for 1931 will at the same time have to produce their certificate of insurance.

The Minister is informed that the insurance companies and underwriters have in hand the preparation of the necessary certificates in connection with all insured vehicles and that these certificates will be forwarded to policy holders without application as soon as possible before the close of the year.

In all cases where the existing policy does not give all the cover required by the Act by reason of a limitation of liability in respect of injury to third parties the necessary additional cover will have to be arranged for.

It will be of assistance to insurance companies and underwriters if, for the present, policy holders will refrain from approaching them in respect of specific insurance policies.

In the case of employed drivers the necessary cover will normally be obtained by the employer, as the Act provides that no person may cause or permit another to drive unless when so driving he has the necessary cover against third party risks.

The Act provides alternatives to insurance in the case of persons or organisations who have substantial financial resources and are in a position either to deposit £15,000 with the Accountant General of the Supreme Court or to obtain a "security" given by a company or body of persons authorised to do so by the Act guaranteeing to meet any default in the satisfaction of third party claims. Appropriate certificates are provided for in the Act and in the Draft Regulations made thereunder in these cases, and also in the case of the local and police authorities who are not required by the Act to be covered against third party risks.

The Minister of Transport has published notice of his intention to make regulations under Part II of the Act and copies of the draft regulations can be obtained by any public or representative body on application to the Roads Department of the Ministry of Transport.

This Part of the Act does not apply to invalid carriages or to tramcars.

# Traffic Commissioners' Duties.

IN the House of Commons, **Viscount Elmley** asked the Minister of Transport if he would summarise the duties of the traffic commissioners to be appointed under the Road Traffic Act, 1930? **Mr. Herbert Morrison** (Minister of Transport) said that the main duties to be performed by the Area Traffic Commissioners, otherwise than in the Metropolitan Traffic Area, might be summarised as follows:—

(1) The granting of public service vehicle licences and the inspection of such vehicles from the point of view of fitness and suitability.

(2) The granting and backing of road service licences and the attaching of conditions thereto for the control and co-ordination of passenger services by road.

(3) The granting of licences to drive or to act as conductor of a public service vehicle.

(4) The granting of consents to local authorities to operate public service vehicles on routes outside their areas under Part V of the Act.

(5) Advising the Minister on Orders made by local authorities under Section 90 of the Act in respect of the routes, stopping places, parking places, and stands for public service vehicles.

(6) All matters incidental to the above such as:—

(a) The holding of public sittings for the hearing of applications for, and objections to, the grant or backing of road service licences and for other purposes.
(b) The collection of fees.
(c) The keeping of accounts and records.
(d) The presentation of an annual report, etc.

# 50 Years with One Firm.

MESSRS. PICKFORDS, LTD., held a Dinner on Thursday night, 23rd October, at The Grove Hotel, Nottingham, in honour of their late foreman Mr. Fred Knight, who retired in July last, having served the firm for 50 years. The gathering comprised the local staff and representatives from other Branches of the firm, and many local business friends.

Mr. W. H. Tanner, the Local Manager, occupied the Chair, and presented a Wireless Set and Loud Speaker to Mr. G. Knight (son of Mr. F. Knight), who acted on behalf of his father who unfortunately was indisposed and was unable to be present, much to the great regret of all. The Chairman in his remarks paid a splendid tribute to Mr. Knight and said it was a great achievement to have worked for the firm for 50 years. During that time he had been a splendid servant and it was a great tribute to him that there were such a large number of business friends present, including Mr. A. E. Knill, and Mr. L. Alderman, who had been Managers of the Local Office during the years that Mr. Knight had been foreman.

Mr. G. Knight who accepted the Presentation thanked the Company, and said that no words of his could express his appreciation. He regretted that his father was unable to be present, but would convey to him all the good wishes that had been expressed.

Mr. F. Knight (brother of Mr. Fred Knight), foreman of the Sheffield Depot, expressed the hope that he would complete a further 11 years of service with Pickfords Ltd., and he and his brother Fred would between them have completed 100 years service for the firm.

Mr. W. Donaldson Wright, Transport Manager, Chamber of Commerce, proposed the Toast to the Firm of Pickfords Ltd., and commented upon the great changes which had been made in the Transport World since Pickfords first started with Pack Horses 300 years ago, and it was a wonderful boast that the firm could go back such a long time.

Mr. A. E. Knill, of London, replied on behalf of the firm, and said it was a great pleasure for him to be present, and he paid a warm tribute to Mr. Knight and said that the spirit to help one another was one of the things which had helped the firm in the past, and that was particularly noticeable whilst he was Manager at Nottingham.

The Toast to the Visitors was proposed by Mr. A. L. Pickbourne, chief clerk at Nottingham Office, and mention was made of the large number of business friends present, and this was a great tribute and appreciation of Mr. Knight's services whilst foreman.

Mr. L. Alderman, Manager of Liverpool branch, replied, and said it was a great pleasure for him personally to be at the gathering, and he paid a warm tribute to Mr. Knight.

Mr. A. S. Marshall, foreman of Nottingham branch suitably thanked Mr. W. H. Tanner for occupying the Chair. The proceedings were interspersed with Musical items.

**The Motor and Cycle Trades Benevolent Fund.**—The Appeal recently made on behalf of the Motor and Cycle Trades Benevolent Fund by the President, Mr. Boultbee Brooks, has resulted in the receipt by the Honorary Treasurer of £6,348 3s. 6d. The Appeal remains open until the 31st December, and donations addressed either to Mr. Boultbee Brooks, c/o Messrs. J. B. Brooks & Co., Ltd., Criterion Works, Gt. Charles Street, Birmingham, or Mr. A. J. Wilson, the Honorary Treasurer, at 42 Bedford Row, London, W.C.1, will be very gratefully accepted.

**Road Traffic Act.**—A comprehensive summary of the Road Traffic Act has been issued by The Transport and General Workers' Union. In a foreword Mr. Archie Henderson, the National Secretary, Road Transport Group (Commercial) says: "The new Road Traffic Act is of great importance to all men earning their living as motor drivers. . . . . We have tried in this little booklet to give you in a brief form particulars of the Act that concern you as a driver of a goods vehicle." The attempt appears to us to have been very successful.

# Unification of Custom House Formalities.

(*Continued from page* 601, *Volume XXVI, September,* 1930, *issue.*)

IN our September issue we published part of the paper on the Unification of Custom House Formalities read at the third Biennial Session of the International Federation of Forwarding Organisations, held at Antwerp in June last, by **MR. PAUL DUMONT,** Vice-President of the International Federation of Forwarding Agents and Managing Director of the "Schweizerischer Spediteurenverband" at Berne.

Dealing with the question of way-bills, Mr. Dumont said that nearly everywhere other documents for consignments liable to duty were demanded, and in other instances documents were examined more or less strictly. For instance, various complaints were received from Poland with regard to Customs clearance and a grievance was that in that country there was not a preliminary customs examination, and the result was that those drawing the bills of entry were often committed for trial on the charge of committing offences against the customs regulations. To send back the goods which were warehoused for a fortnight, a permit from the competent customs authority must be applied for by means of a stamped petition, and to obtain that permission was occasioning loss of time, and if one consignment had to be classified into several tariff categories of different kinds stamped petitions had to be presented to the customs house, and this tended to cause complications and difficulties with regard to international traffic. Of course it was desirable in the interests of smooth international commerce that Poland should introduce a preliminary customs examination.

In Bulgaria the practice existed of inflicting heavy penalties for contravention of customs regulations if a single parcel of imported goods was missing. Instead of demanding duties only upon bales actually imported one was, as it were, punished for the fact that a single packet had been lost or perhaps stolen. They knew that the same system prevailed also over the whole of South America, and there also duties were paid according to the consular invoice without further ceremony.

The removal trade with various States, for instance with Jugo-Slavia, Roumania and Poland, was hampered by the fact that on the importation of pantechnicons into those countries enormous securities had to be deposited which were recovered only after the lapse of a long time and with the greatest difficulty. They all knew that there were absolutely no difficulties on that point throughout Central Europe and in the Western States, apart from the fact that as a rule foreign pantechnicons were not permitted to be employed on transport work at home, and that the duration of the stay of pantechnicons abroad was variously limited.

Extremely hard and hindering had proved to be the question as to upon which weight duties for goods were to be assessed, i.e., upon the gross or net weight, and in many States the greatest variation existed. For example, the gross weight, i.e., the weight of merchandise in condition packed, was taken as the dutiable weight in Jugo-Slavia and was charged at the minimum duty of 10 Dinars per 100 kg. and less; in Hungary at a minimum duty of 15 Gold Krones per 100 kg. and less; in Poland at a minimum duty of 10 Zlotys per 100 kg. and less; in Czecho-Slovakia at a minimum duty of 7.50 Korunes per 100 kg. and less, and in Italy at a minimum duty of 30 Lire per 100 kg. and less.

In Switzerland the payment of duties was upon the basis of the gross weight: in Austria, Poland, Czecho-Slovakia, Italy and Jugo-Slavia it was the net weight. Belgium, France and Italy discriminated between the legal and actual net weight. Moreover, France had introduced the payment of duties upon the basis of half gross and half net weight. Also, for clearance, the weight of the merchandise without wrapping or packing must be taken into consideration; for instance, as to freight in Jugo-Slavia no kind of packing was necessary.

It was obvious that these many variations in regard to dutiable weight rendered the handling of traffic extremely difficult and exposed contractors to hindrances of various kinds, and uniform principles in this respect would give the greatest relief and simplify the international exchange of commodities.

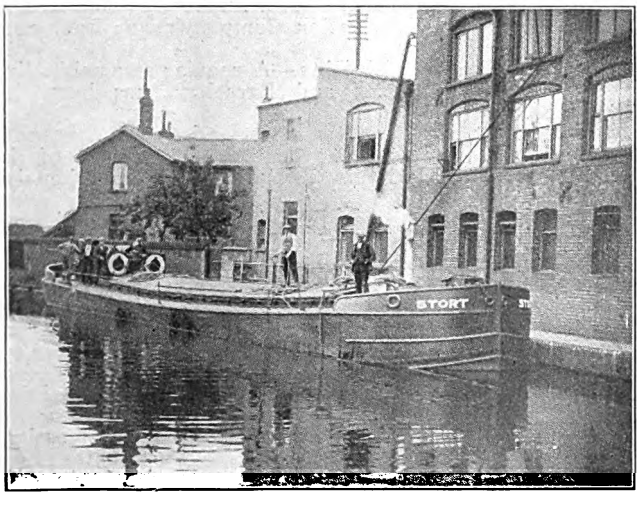
He had only pointed out some of the more striking cases in order to demonstrate by concrete examples some of the causes of the difficulties that arose in regard to clearance regulations. Of course the examples he had given could be considerably multiplied, but it was not necessary.

What view should they adopt in face of the present situation, and what could they do to improve the position?

They knew it was said that the forwarding trade prospered the greater were the difficulties with regard to clearance and other formalities under which international traffic was carried on. That point of view was, in his opinion, entirely wrong. It would be quite evident to each expert that every hindrance to commerce must reduce the amount of freight intended for abroad, and must slow down circulation and therefore damage the whole trade. Hence they were really greatly interested in the question of the re-organisation of those conditions and were competent to engage in active co-operation to that end. But it was not so easy nor so simple to bring about an improvement as some at times appeared to take for granted.

Most of the difficulties he had mentioned were the result of the greatly differing customs systems involved in the customs laws of the various countries, and this legislation was determined by economic, fiscal and political considerations which varied of course in country and country. Customs regulations were framed according to the customs system of the country and in his opinion unification was impossible, as they could see diametrically opposed points of view. For instance, in the customs regulations of Germany there was no rule regarding compulsory declaration and one made the "entry" after examination by the appraisers, whereas in France, Italy and Switzerland declaration was compulsory and these complications could only be obviated by alteration of the customs legislation in the various countries and they all knew how difficult it was to obtain material alteration of legislation, so that success in this regard would, he thought, not come up to their expectations.

Desirable as would be the removal of the difficulties he had mentioned, they must face the present position, but he believed that in the course of time a change for the better certainly would take place, and he felt that the International Federation of Forwarding Organisations must help in achieving that happy result. At present he believed that they could not do more than keep their eyes upon the question and bring to notice any specially striking absurdities, and draw the attention of the International Chamber of Commerce to the great importance of the question and assure the Chamber of the great readiness of the International Federation to assist the Chamber by active co-operation. By so doing they would be working not only in the interests of the shipping and forwarding industry but in the interests of international commerce as a whole.



## Motor Barge "Stort."

OUR illustration shows the Motor Barge "Stort," owned by the Trent Navigation Company, whose Head Offices are at Wilford Street, Nottingham. This motor barge was built for the company by J. S. Watson, Ltd., of Gainsborough, and is equipped with a 90 B.H.P. Two-Cylinder "Widdop" Crude Oil Semi-Diesel Engine. The vessel is built of steel, and is of the following dimensions: 82 feet 6 inches by 14 feet 6 inches extreme by 5 feet 8 inches deep, with cargo capacity of 100 tons on a draft of about 5 feet 6 inches. The "Stort" is designed for working between the Humber Ports and Nottingham, and will tow two fully laden barges, each with a cargo of approximately 100 tons.

The photograph was taken by *The Nottingham Guardian.*

*REUTERS TRADE SERVICE.—By special arrangement with Reuters Trade Service we are publishing news items from all parts of the world dealing with transport matters.*

# News from the Ports.

**Lisbon Port Improvement.**—The construction of the third section of the port of Lisbon, viz., the quays to be built between Santa Apolonia and Poco Do Bispo, has been granted to an Italian firm, the Societa Anonima Del Lavoro Del Porto De Genova, says Reuter's Lisbon correspondent. The work is to be finished within a period of four years, and will make Lisbon one of the largest ports in Europe.

**Liverpool Shipping and Forwarding Agents' Association.**—At the last meeting of the Council of the Liverpool Shipping and Forwarding Agents' Association, Mr. S. L. Jude submitted the annual report and balance sheet. These will be presented to members at the 29th annual meeting of the Association, which will be held at Exchange Station Hotel, Liverpool, on November 19th, at 2.30 p.m. A sub-committee has been formed to make arrangements for the annual dinner of the Association. This will take place as usual at the Midland Adelphi Hotel, Liverpool, either on January 17th or January 31st, 1931. Messrs. Armfield, Owen and Co., Ltd., 14, Water Street, Liverpool, and the Bishop's Wharf Carrying Co., Chapel Chambers N., Liverpool, were admitted to membership.

**New Orleans Freights.**—A reduction has been made by the Gulf Shipping Conference, New Orleans, in the freight rates on hardwoods to Liverpool. The new rates dispose of the disadvantage under which Liverpool laboured, through lower rates being quoted to continental ports. As regards the canned goods and dry fruits traffic from the Pacific ports to Liverpool, the negotiations with the object of securing lower freights to Liverpool have failed owing to the inability of the shipping companies to agree upon the rates for deliveries via the Bridgewater Canal system. One company held out for 10 per cent. additional rate and the other for 12½ per cent. It was impossible to bridge the difference. Consequently the old rates obtain.

**New Consul.**—Mons. Khalil Nicholas has been appointed Egyptian Consul in Manchester. His office is in Ship Canal House, King Street, Manchester.

**Good News.**—There is some elation on Merseyside at the success of Messrs. Harland and Wolff, Ltd., Bootle, in securing the contract for the alterations to the S.S. "Lapland," because it was obtained in open competition against the leading Continental firms. The work will involve the employment of over 1,000 men for three months, and it is a matter for congratulation.

**Manchester Traffic Return.**—Another decline is advised in the monthly traffic return of the Manchester Ship Canal Company. In September, the receipts were approximately £90,486, or £15,621 less than in the corresponding month of last year. In the nine months to the end of September the receipts were approximately £982,891, a decline of £96,917 compared with last year. It must be remembered, however, that in the corresponding months of the last two years the derating scheme was not in operation, and, consequently, the company's charges had not been reduced in order to give the users of the canal the full advantage of saving in rates which on most of the undertakings was 75 per cent.

**Extended Steamship Service.**—The Tyne-Tees Steam Shipping Company, Ltd., is developing its services. The directors have decided to run a new fortnightly service between Newcastle and Dordrecht, the recently enlarged portion of which was opened recently by the Queen of Holland. The Company is also contemplating opening a new service between Newcastle and Danzig. The latter is a free port under the Treaty of Versailles, and has been an important outlet for Polish coal.

**Sunderland Port.**—Capt. V. Forth has been appointed Assistant Harbour Superintendent and Dockmaster at Sunderland, to fill the vacancy caused by the promotion of Capt. W. Anderson to be Harbour Superintendent and Dockmaster.

**New Steamer for Transport Services in the Western Highlands and Islands of Scotland.**—The Secretary to the Ministry of Transport announces that under the terms of a contract dated the 16th day of November, 1928, between His Majesty's Government and Messrs. David MacBrayne (1928), Limited, for the maintenance of certain transport services in the Western Highlands and Islands of Scotland, the Minister of Transport has recently approved the plans and specifications for the fourth vessel to be built under the contract. The contract for this boat was let on the 14th of October to Messrs. William Denny and Bros., Ltd., of Dumbarton.

**The New American Liners.**—Mr. E. Grant McMicken, Vice-President in charge of Traffic of the United States Lines, who left for America recently following a six weeks' survey of the European organisation of the company, questioned concerning the two new first class 30,000 ton liners being constructed for the United States Lines at the plant of the New York Shipbuilding Company at Camden, New Jersey, stated that the work is progressing rapidly. Discussing the prospects of next year's tourist season, Mr. McMicken stated that rapidly improving business conditions warranted a most optimistic view being taken. The greatly increased interest taken by European countries in attracting the American tourist were undoubtedly having an admirable effect—particularly so in the case of Great Britain.

**Launch of the "Appalachee."**—Stated to be one of the safest and most economical tankers built, the motorship "Appalachee," sister ship of the recently launched "Cheyenne," was launched at Palmers Yard, Jarrow-on-Tyne, last month, for the proprietors of Pratts spirit. Replying at luncheon to the toast of the Anglo-American Oil Co., Ltd., proposed by Mr. A. B. Gowan, managing director of Palmers Shipbuilding Co., Ltd., Mr. Wilkie Frye said that the Anglo-American Oil Co. completed this year the 42nd year of their existence. It was the first oil company to distribute petroleum in this country on a large scale. They were fortunate that their business was a constantly growing trade which enabled them to expand their fleet and to scrap smaller and less efficient vessels and build larger ships. Mr. A. Maclean, director of the Anglo-American Oil Co., said that the total production of petroleum in 1894 was about 12,000,000 tons, whereas the production in 1929 was in the region of 200,000,000 tons.

**Southampton Docks.**—Important passenger and cargo services were inaugurated at Southampton during October by the British India Steam Navigation Company and the Anchor-Brocklebank Line. The call of the first named Company's M.S. "Dumana" at the Docks to embark passengers for India marked the initial step towards the establishment of Southampton as the Company's British port for passenger embarkation purposes. The "Dumana" was followed later by the "Domala," and it is anticipated that the service will give a three-weekly passenger and freight connection with Bombay and Karachi. The growth of the tobacco trade at the Port was mainly responsible for the second new service, by Anchor-Brocklebank steamers, from Norfolk, Virginia, this Company's ships calling here at fortnightly intervals to discharge large quantities of tobacco, etc. Throughout the past few years an increasing number of the Union-Castle Mail S.S. Company's steamers engaged on the intermediate South African service have been seen at Southampton and now the Company announce that, commencing in December, all their intermediate boats will call here on the homeward voyage to land passengers and discharge cargo. This will represent a substantial addition to the Port's trade with South Africa for very large quantities of wool, hides and skins, fruit, etc., are carried on these steamers. The recent appearance at the Docks of the "Rawalpindi," and other ships of this class averaging 16,000 tons each, in place of the older and smaller vessels previously operating from here, is evidence of still further development in the P. & O. Steam Navigation Company's Far East connection from this port.

**New Yugoslav-Spanish Line.**—A regular steamship line between Yugoslav ports and Barcelona has been inaugurated.

**Development of Motor Transport and Aerial Transport at Irish Free State Harbour Centres.**—The report of the Irish Free State Harbours Tribunal is a comprehensive volume comprising a detailed examination of the ports and harbours of the Free State, and it is illustrated by a series of maps. This Tribunal was constituted by an Order of the Minister for Industry and Commerce, in May, 1926. In the report the Tribunal has made the suggestion that harbours situated on routes likely to be developed for motor transport should take steps to ascertain the probable cost of providing suitable landing and other facilities for seaplanes, and where such can be provided at a reasonable cost, proceed to create an airport, obtaining whatever statutory powers that may be necessary for the purpose. The report further suggested that an investigation of the proposal to create a Free Port in the Free State should be undertaken by the Government in con-

Digitized by Google

junction with the harbour authorities at Dublin and Cork, and that an examination of the conditions which had led to the establishment and successful operation of a few selected Free Ports should form part of that investigation. The Tribunal held 27 sittings, and took evidence from 223 witnesses.

**A New American Service. The Pacific Atlantic Line.**—A new freight service between Great Britain and the Pacific coast of America was inaugurated when the S.S. "Jefferson Myers" sailed from London during the last week in October. The company operating the service is to be known as the "Pacific Atlantic Line." The service is to be a regular one between Liverpool, Manchester and London, and Philadelphia, Cristobal (Canal Zone), San Diego, Los Angeles, San Francisco, Oakland, Portland, Seattle, Tacoma, and Vancouver, B.C. Eastbound the route will be from the Pacific coast, via the Panama Canal, direct to the above British ports. The five vessels thus far assigned to the service are all oil burners of between 11,000 and 12,000 tons deadweight capacity. They are the "Jefferson Myers," "San Lucas," "San Julian," "San Pedro," and "Peter Kerr." They are all of modern design and admirably equipped for the trade, carrying mainly timber, grain, copper, canned goods, flour, and all the principal commodities from the Pacific coast. The new line is a subsidiary of the State Steamship Company of the U.S.A. The United States Lines, through Messrs. Runciman (London), Ltd., 52-54, Leadenhall Street, E.C.3, their own freight operating agents, will act as General European Agents for the service and will handle all their business in Europe. Mr. Kenneth C. Dawson is at the head of the Pacific Atlantic Line. It was his original intention to construct a fleet of five 20-knot vessels for the Pacific/Europe service at a cost of about £800,000 each, but this high speed and consequent outlay was deemed excessive for present conditions. It is, however, believed that new tonnage will shortly be added to this service.

**Primrose Wharf, Greenwich.**—We are informed by Mr. Henry Froud, Excavation and Cartage Contractor, 37, Cornwall Road, Bird-in-Bush Road, Peckham, London, S.E.15, that he has taken over Primrose Wharf, Tunnel Avenue, Greenwich, London, S.E.10. We understand that any kind of goods can be landed or housed in a well-built brick building at this wharf, which is equipped with a steam crane. The site covers some 2½ acres, there is a good granite sett road and no matter how large a vehicle may be there is a good pull in any time during the day or night. A petrol pump is installed.

**Merkland's Wharf, Glasgow.**—It will be recalled that the Glasgow Corporation gave up this wharf some time ago and that the Clyde Navigation Trust took it over in order to preserve the very valuable facilities for the cattle trade, and there are now signs of a resumption in the Canadian cattle trade. Already a shipment of Canadian cattle is now on its way to Merklands.

**The New Shieldhall Dock, Clyde.**—The new dock at Shieldhall on the River Clyde is rapidly approaching completion. The shed on the east side is practically finished and the flooring laid. It is expected that a good proportion of the berthage on this side of the dock will be occupied by Messrs. Holt & Co., who are installing the latest appliances for the rapid loading and unloading of cargo. The programme for the west side has not been definitely settled nor the berthage allocated.

**Glasgow Markets and Overseas Trade.**—The Clyde Trust are making energetic moves for the development of the Glasgow market for overseas products, particularly those of the Dominions, and one result of this is seen in the direct import of Australian eggs. In the past Australian products have been concentrated on London, but due to the action which has been taken both by the Clyde Trust and those engaged in the egg trade in Glasgow, three shipments are being dispatched direct to the Clyde from Australia this year. This is but a small beginning, but it is generally believed that the efforts of Mr. Ford, commercial manager to the Trust, as well as the enthusiasm of the Glasgow traders, will result in big developments in the future. We understand that Mr. Ford has the question of an itinerary in hand with shipping companies and the fruit trade for next year's supplies to the Glasgow market from the Antipodes.

**Trade on the Clyde.**—The total output of shipping on the Clyde for October was 18 vessels with an aggregate tonnage of 55,627 gross, compared with 10 vessels of 26,894 tonnage in September.

**Obituary.**—The death of Mr. James S. Craig, chairman of the Clyde Trust, took place at his residence, Randolphill, Dunblane, on Friday, October 24th. Born in Glasgow, Mr. Craig spent a busy life in commercial and administrative spheres in the city. He was chairman of Messrs. R. Hunter, Craig & Company, Glasgow, Liverpool and London, provision and flour importers, and was director of the Scottish Union and National Insurance Co., Ltd. Apart from his business interests Mr. Craig devoted a large portion of his time to serving the community, and for 27 years was a member of the Clyde Trust. For eight years he acted as deputy-chairman, and on the retirement of Sir Wm. Raeburn, in 1929, he assumed office as chairman. His wide experience and great tact made him an ideal occupant of the position, and he earned the respect of his associates of the Trust as well as his colleagues on the Clyde Pilotage Authority and other bodies.

**New Ship for L.N.E.R.**—The London & North Eastern Railway Company have placed an order with the Fairfield Shipbuilding & Engineering Company, Ltd., Govan, Glasgow, for a new paddle steamer for their Firth of Clyde Service. The new vessel will be larger than any vessel in their present Clyde fleet; the dimensions being as follows:—Length between perpendiculars 249 ft. 9 ins., beam 30 ft., moulded depth 9 ft. 6 ins. The tonnage will be approximately 550 tons gross. The vessel will be propelled by triple expansion engines capable of developing sufficient power to give a service speed of 18½ knots. The steam will be supplied at 180 lbs. per square inch by a double-ended cylindrical marine boiler with three furnaces at each end and common combustion chamber to two furnaces in a fore and aft direction, on the closed stokehold principle. The saloons, cabins and tea-room will be of large size and tastefully panelled in hardwood, and special provision will be made for the ventilation of dining saloon and dining cabin, as also the officers' and crews' quarters.

**London's Shipping Still Increasing.**—London's shipping, despite the general trade depression, has been greater than ever this year. During the nine months from January to September the tonnage of vessels that used the port was more by 834,296 net reg. tons than during the same period of 1929. The relative figures are 43,738,889 net reg. tons for 1930 and 42,904,593 net reg. tons for 1929. The imports handled over the Port of London Authority's quays during the period were 17,683 tons more than in 1929 but the tonnage of exports handled was less. Even so, the total turn-over of goods during the first nine months of the year was down by only about 56,000 tons compared with last year. It is well known that owing to the establishment of new industries, the environs of London and the South generally have been affected to a lesser extent by trade depression than other areas. The figures of the Port's activities go to prove the resilience of London as a great market and distributing centre, the net small falling off in the total tonnage handled being chiefly attributable to the unsatisfactory condition of certain export trades in the Midlands.

**Great Western Railway. Orders Placed.**—The directors of the Great Western Railway Company have placed a contract with Messrs. Vickers Armstrong, Ltd., for the supply and erection of 13 coal hoists at Barry Docks at a cost of nearly £200,000. Approval has also been given to the placing of an order for a new steamer for use in connection with the ocean liner traffic at Plymouth at a cost of about £40,000.

**Services to Fiji Isles.**—Proposals have been made in Liverpool shipping circles for the steamship companies to provide an improved service of steamers between U.K. and Fiji Islands. The request has been put forward to the shipping companies.

**Certificates of Origin.**—The Spanish Government recently sent a representative to Liverpool to inquire into the system of free warehousing facilities in the port, representations having been made by the Liverpool commercial interests that certificates of origin for non-European goods shipped from Liverpool to Spain, be issued locally. The prospects of this being done, are said to be good.

**The Question of an Irish-Owned Mercantile Marine.**—The annual report of the Cork Industrial Development Association refers to the export trade with Great Britain of Free State agricultural produce, and states that an important export trade in farm products has always been the basis of Ireland's external trade. Extensive rather than intensive cultivation has been the characteristic of Irish agriculture, and the volume of the exports should lead one to believe that in the reorganisation of the industry the provision of an Irish-owned mercantile marine was a question of primary and vital importance. With big outward cross-channel cargoes available the success of an Irish-owned mercantile marine would be assured if it were found practical to make it the law of the land that Irish exports, and subsequently imports, must be carried only in Irish-owned vessels.

# Railway Notes and News.

**The Railway Barometer.**—The Railway Traffic Receipts of the four Group Railway Companies have now been published for the first 43 weeks of 1930 compared with the same period in 1929, and are as under:—

| | 1930 | 1929 |
|---|---|---|
| | £ | £ |
| Passengers, Parcels, etc. | 63,074,000 | 65,722,000 |
| Merchandise, etc. ... | 51,580,000 | 55,440,000 |
| Coal, Coke, etc. ... ... | 27,921,000 | 29,821,000 |
| | 142,575,000 | 150,983,000 |

**Big Great Western Scheme.**—One of the greatest developments in British railway operating methods is announced by the Great Western Railway Company who propose to equip 1,758 miles of track, embracing all its principal main line routes and 2,000 engines, with the Company's own system of Automatic Train Control. The total cost of this scheme will be £208,000. The system gives audible warning to the driver of the state of the signal and in the event of a danger signal being passed automatically to stop the train before it reaches the next signal. The Company already have 372 miles of track and 334 engines fitted with this device. With the completion of the scheme, 2,130 miles of track and 2,334 locomotives will be equipped.

**Canadians Seeking Branch Factories. New Industrial Office Opened in London.**—An Industrial Branch, whose primary object is to interest British industrialists in the establishment of factories in Canada, has just been established in London by the Canadian National Railways, according to an announcement made by Mr. C. J. Smith, European Vice-President of the Company. Mr. T. A. Hooker, who will have charge of the Branch, which will have the advantage of an existing department in Canada, has returned to London after a six months' tour of the Dominion where he investigated practically every field of possible industrial expansion and enlisted the co-operation of the Boards of Trade and Chambers of Commerce in the furtherance of his work. Through the London office it is intended to furnish information on the industrial and commercial possibilities of any part of the Dominion and to facilitate investigation of specific industrial projects.

**L.N.E.R. Magazine.**—The London and North Eastern Railway Company's magazine for November contains interesting articles and news items. Chief of the articles is one specially contributed by Mr. R. A. Thom, Mechanical Engineer, Doncaster, entitled "Repairs to Locomotives." It tells of the splendid results that have followed "rationalisation." This article is well illustrated.

**Indian Railways Conference. Road Motor Services Urged.** — A Simla message says that presiding at the Thirty-Seventh Annual Session of the Indian Railway Conference, Mr. Rothera, the Agent of the South Indian Railway, advised the railways to play up to the spirit of the times by increasing the rate of progress in engineering works, by the faster transport of goods and merchandise, by reducing the detention of vehicles, and speeding up the traffic between the larger centres in order to compete with motor competition. Mr. Rothera urged the railways to follow the example of England and establish road motor services, either separately or in combination with existing road services, thereby providing additional facilities for traffic and also to establish a system of containers as a means of the transport of small consignments.

**Staff Training and Efficiency in Relation to Modern Railway Working.** — On October 20th Colonel H. H. Mauldin (Superintendent, Eastern Section, Southern Area, L.N.E.R.) addressed the Norwich L.N.E.R. Literary and Debating Society on "Staff Training and Efficiency in relation to Modern Railway Working." Colonel Mauldin stressed the necessity of each railwayman studying not only his own job but railway problems generally and the public. Railways being such gigantic corporations each Department must perform team work for successful operation of the whole; similarly each man must make himself a fit unit of his department. The fundamental thing was to give the public quickly what it wanted otherwise the best salesman in the world could not do business. Varied experience and a lively imagination were great assets, but it was a touch of genius in a particular subject that made the specialist. The specialist was bound to be listened to, so if he did not sit in the seat of the mighty he might well be a power behind the throne. Training, always a feature of railway life, was of the utmost importance to-day in view of the vastly changed conditions. The fundamental principles underlying the training were the same as in earlier years, but a wider knowledge was necessary. Our railways were the best and safest in the world and we must make them the most progressive and popular.

**London & North Eastern Railway Continental Services.**—At the York L.N.E.R. Lecture and Debating Society's Meeting on October 28th, Mr. A. L. Gibson, Continental Traffic Manager of the L.N.E.R., gave a lecture, illustrated by lantern slides, on the Continental services via Harwich. Mr. Gibson opened his talk with a brief sketch of the history and development of the services and the international trains in connection therewith which now include the luxurious Rheingold, Edelweiss and Balkan Expresses. The advantages of the Harwich-Hook route with three new vessels, the Zeeland Company's daylight Flushing service, the Harwich-Antwerp and the Harwich-Zeebrugge routes were mentioned and attention was drawn to the very complicated subjects of international time-tables, through carriages and registration of baggage. Illustrations were shown of the motor-ships of the United Steamship Company which maintain a daily service between Harwich and Esbjerg. Passing to cargo services Mr. Gibson said that improvements at Harwich included new electric cranes and dustless coaling hoists; speed is a principal factor of the Harwich routes, but much traffic was dealt with needing particularly careful handling. This again brought in the question of through tariffs with the Continent. Mr. Gibson closed his lecture with a description of the Harwich-Zeebrugge train ferry service by means of which through wagons can be run between England and ten Continental countries this service is particularly suitable for fragile and perishable traffic.

**Great Western Railway Activities.**—The G.W.R. is to construct at its Swindon works ten new twin restaurant car sets for use next year in connection with excursion train traffic and special parties. Each set will consist of a first and third class saloon and kitchen capable of seating 23 first class passengers and 63 third class passengers. The kitchen will occupy a part of the first class saloon and will be between that and the third class restaurant car. The Company's Westbourne Park garage, the main repair shop for the Company's fleet of cars in London, is to be considerably enlarged and modernised.

**Traffic Lost to the Rail.**—The phenomenal "slump" in the iron and steel industries during the current year and the effect upon rail traffic and receipts is revealed in the G.W.R. Magazine for November. In South Wales and Monmouthshire, the principal centre of the industry so far as the Great Western Railway is concerned, the number of blast furnaces fell, during the eight months, from eight to three; the production of pig iron declined by 34 per cent., and the output of steel by 32 per cent. Expressed in actual figures, on whole of the Great Western system, the tonnage of iron ore, pig iron, scrap, limestone, and finished steel, has fallen in the eight months, by a million tons, and the receipts by £187,000. To these figures must be added the loss in tonnage of coal and coke conveyed to and from the blast furnaces and steelworks for iron and steel manufacture. To illustrate further: a review of the Company's traffics, by districts, shows that in the first eight months of 1930, no less than 76 per cent. of the decline in general merchandise and 80 per cent. of the fall in other minerals was attributable to South Wales. The effect of the "slump" in the iron and steel industry is also very marked upon the Company's dock traffic and receipts, as there has been a heavy reduction in imported iron ore and exports of steel products.

**Two New Rail By-Passes to the West.**—With the completion in 1932 of the two new sections of the G.W.R. main line to the West of England at Westbury and Frome (Somerset), the Company will have what may virtually be called by-pass roads in these sections over which will be directed the main line expresses, boat specials, ocean and mail trains, express freight and perishable trains. The purpose behind their construction is the avoidance of the rather severe curves in the present main line at the points mentioned and the necessary speed restrictions of 30 and 40 m.p.h. The total cost of the two schemes, which are vital to each other, it is anticipated, will be in the region of £220,000.

**Soviet Railway Tariffs Raised.**—A Riga message says that it is announced that the Soviet Government has raised all railway tariffs by 25 per cent.

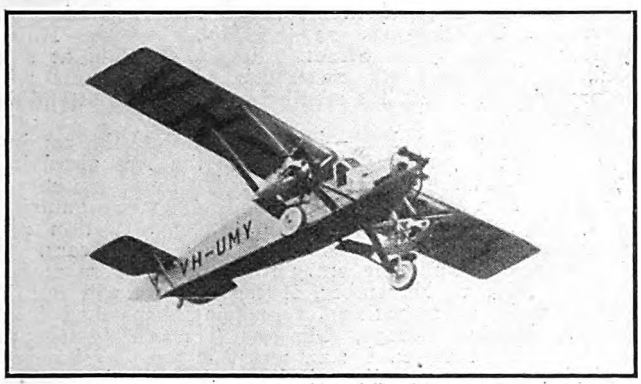
# Air Transport Notes.

**Australian National Airways.**—We are informed that Australian National Airways have now flown over a million and a half engine miles with 19 Armstrong Siddeley Lynx engines. During the period not one single regular service flight was uncompleted owing to mechanical failure.

**Hanworth Club's Record.**—A remarkable record has been made by the Hanworth Flying Club during the last 3 months, no less than 51 members having been trained as pilots. 24 qualified in August, 17 in September and 10 in October. Since the club opened on 1st September last year its growth has been one of the most satisfactory features of the National Flying Services' scheme. The number of licensed pilot members of Hanworth is now 169 and the total membership of the club is 1,030, with 572 active flying members. Hanworth was the first of the six flying clubs now operating under National Flying Services, Limited. The total membership of these clubs has now grown to 1,707, and of these 975 are active flying members, 266 hold pilots' "A" licences and 56 keep aircraft of their own.

**Exploring Australia by Air.**—A five thousand miles flight between Melbourne and Port Darwin has just been successfully completed in a Lascondor machine fitted with



MONGOOSE ENGINED LASCONDOR IN FLIGHT.

three Armstrong Siddeley Mongoose engines. The machine was of new design and at the start of the flight had only done some 15 hours flying. Its total load was over 2,300 lbs. and included five people, camping gear, food and equipment. Mr. Neale, the pilot, reported that with this load and a temperature just on 90 degrees in the shade the machine took off in less than half the length of the Darwin aerodrome. The chief engineer of the Larkin Aircraft Supply Co., Ltd., of Melbourne, reports that during the whole 50 hours flight no trouble was experienced with the engines, while the pilot, Mr. Neale, reports that they started up definitely at the first turn on every occasion. Our illustration shows the Mongoose engined Lascondor in flight.

**Gift of a Model Bristol.**—Bristol Aeroplane Company, Ltd., of Bristol, has presented to the Liverpool Museums, a model of the single seater Bristol Fighter aeroplane.

**British Engineering Supremacy.** — Certain events recently have shown the world that British engineering skill is maintaining its reputation despite the hard times through which we are passing. First of all there is the remarkable flight from England to Australia in under ten days of Wing Commander Kingsford Smith on a steel Avro Avian light aeroplane designed and built by A. V. Roe & Co., Ltd., in Manchester. A day or two before a Japanese pilot had flown an Armstrong Siddeley engined light aircraft from Berlin to Tokyo in under ten days, while, later, a Fokker single seater fighter again fitted with an Armstrong Siddeley engine beat all comers in a military competition organised by the Roumanian Government at Bucharest. On the ground delegates of the Imperial Conference have attended a demonstration of mechanised transport, the outstanding feature of which proved to be the remarkable performance of a 16 ton tank fitted with a self changing gear box and 180 h.p. air cooled engine of Armstrong Siddeley design and manufacture.

**French Air Agreement with Portugal.**—The "Echo De Paris" states that an important agreement was concluded recently between the Portuguese Government and the Franco-Portugal Airways Company (Allied with the Trans-African and Air Mails Companies). According to the agreement, Portugal grants to France for a period of thirty years the exploitation of the inland lines and a monopoly of the air lines between Portugal and her Colonies. The newspaper emphasises the importance of the agreement including as it does the Azores and the Cape Verde Islands which lie on the air routes from Paris to New York and from Paris to South America.

**Air Mail Service between Windhoek and Kimberley. Provided by Junker Company.**—The Government of South Africa has concluded an agreement with the Junker Aeroplane Co. whereby the latter is to establish an air mail service between Windhoek and Kimberley, to commence on the 1st April, 1931. The service, which is to be weekly, is to be carried out with all-metal machines, and will connect with the Imperial Airways Cape to Cairo Line.

**Spanish Aviation.**—A Madrid message says that dealing with certain rumours regarding the developments of Spanish aviation, General Berenguer, the Prime Minister, has issued a statement in which he says that the Government recognises that Spanish aviation is confronted with a period of crisis due to the fact that it has not been organised on a definite basis. The credits for aviation were not large but they were those provided by predecessors of the present Government. He added that the reduction of the number of flights carried out at certain aerodromes was not due to shortage of credits but to the lack of foresight on the part of previous Governments.

**America's New Giant Airship.**—The R101 disaster, and the acute question it raises of the future of the airship in Great Britain, lend added interest to some remarkable safety devices, said to be unknown to any other dirigible, that are being built into the Akron-ZRS-4, the United States navy's giant airship, now nearly half finished at Akron, Ohio. The motors, says a Reuter New York despatch, are being tested on the engine block, and more than half of the ten duraluminum main rings are in place, with material for half a dozen intermediate rings ready for fabrication. The use of helium as the lifting gas is regarded as the greatest safety factor. Besides being non-inflammable, it permits housing the engines in large rooms in the hull of the ship for the first time, making them readily accessible to repair and overhauling with the dirigible in flight. Housing the engine within the ship, it is claimed, cuts down the wind resistance of engine gondolas, ordinarily hung on the outside, where repairing is extremely difficult and overhauling impossible. The swivel feature of the eight propellers is another important safety factor. The great ship can be more easily manoeuvred in adverse winds. The propellers can be turned through a 90-degree arc so that the blades can be vertical or horizontal, as desired. The motors may run forward or reverse, so that the propellers' energy may be exerted in any of four directions. When the propellers are horizontal the motors at forward speed will help pull the ship to earth. With the motors reversed and the propellers horizontal, the ship can be pushed upward if altitude is lost. Each propeller and its engine will work independently, making it possible to use half the motors for exerting upward thrusts and the other half forward thrusts when quick take-offs are desirable. Inversely, this arrangement can be employed to slow the ship down to make a quick landing. The Akron-ZRS-4 can be kept in the air by the use of dynamic lift, it is calculated, which results from flying at a slight angle of pitch to compensate for an extreme case of losing more lifting power through large ruptures in gas cells than can be compensated by jettisoning ballast. The possibility of a petrol fire is considered to be no greater than in a motor car, but fire-proofing precautions will be taken. The engine rooms will have fireproof walls, the entire ship will be ventilated and the electrical connections will be gas-tight. The whole metal framework will be banded together by a faraday cage, rapidly dissipating a lightning charge. The material for the ten gas cells has not been selected. Several new substances are being tested. The construction started a year ago and is to be completed by next summer. The dirigible will be 785 feet long with a diameter of 133 feet. It will have eight engines and a helium gas volume of 6,500,000 cubic feet.

**1,500,000 Valves by Air.**—Messrs. Impex Electrical, Ltd., the well-known importers of French Dario Valves, use Imperial Airways machines for transporting these delicate goods from Paris to London. Up to date more than 1,500,000 valves have been carried without loss or damage.

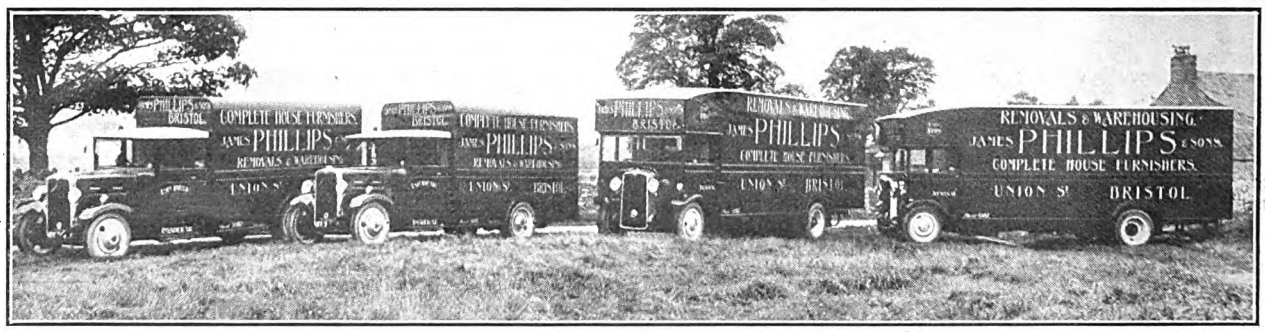
# News from all Parts.

**Large Pantechnicon on Gilford Chassis.**—The large capacity pantechnicon illustrated is owned by Mr. Jas. S. Ralston, Furniture Remover and Transport Contractor, of Milngavie. The body was constructed by Wylie and Lochhead, Ltd., of Glasgow, and it is mounted on the well-known "Gilford" model 168-OT chassis made by the Gilford Motor Company, Ltd., 465-471A, Holloway Road, London, N.7. We understand that thirty suites of furniture can be loaded into the van at one time. During a period of five weeks recently this van covered 6,000 miles without a hitch of any kind.

A LARGE PANTECHNICON ON GILFORD CHASSIS.

**Institute of Transport. Forthcoming Meetings.**—There will be an ordinary meeting of the Institute of Transport at the Institution of Electrical Engineers, London, on December 8th, at 5.30 p.m., when Mr. C. J. Hyde Trutch, B.Sc., will speak on "The Diesel Engine and the Railways." At a meeting for Graduates and Students, to be held at the Institution of Electrical Engineers on December 15th at 6 p.m., a lecture entitled "Transportation and Harbour Development in South Africa" will be given.

**A Fine "Commer" Fleet.**—Our illustration shows a fleet of Commers mounted with pantechnicon bodies, which Commer Cars, Ltd., of Luton, have recently supplied to James Phillips & Sons, of Bristol, through their distributors, Provincial Motor Traders, of Alma Road, Clifton, Bristol. The chassis in question consists of two Invaders and two Avengers.



A FLEET OF "COMMERS" WITH PANTECHNICON BODIES.

**Liverpool Traffic Club.**—Transport Managers and representatives of the road carrying community met under the auspices of the Liverpool Traffic Club, on November 3rd, to discuss the Road Traffic Act. Mr. L. B. O. Heilbrun undertook to interpret the clauses of the Act, particularly those vital to all transporters. A discussion following, based on the present experience of transport managers, showed that the application of certain sections of the Road Traffic Act, whilst theoretically simple, will be a source of difficulty and serious concern when practically applied. The question of the hours of work of drivers, it was stated, is going to make road transport operation for small concerns an almost impossible task and for big firms a very serious and expensive undertaking. It was felt that the Minister of Transport should be requested to define the clauses more lucidly and, with this object in view, a resumption of the discussion will take place on Monday evening, 17th November, when resolutions will be passed and representations made to the Ministry to afford some better guidance to Road Transporters.

**The Training of Young Automobile Engineers.**—The Institution of Automobile Engineers has for some years been giving advice to parents as to how their sons can enter the Automobile Industry. This practice has been elaborated and the Institution is now in a position to inform parents as to the exact possibilities of apprenticing their sons in works in their own neighbourhood. No charge is made by the Institution and parents may consult the staff by appointment on making written application to The Institution of Automobile Engineers, Watergate House, Adelphi, London, W.C.2.

**Institution of Petroleum Technologists.**—There will be a general meeting of members of the Institution of Petroleum Technologists at the House of the Royal Society of Arts, John Street, Adelphi, London, at 5.30 p.m., on December 9th, next. Light refreshments will be provided at 5 p.m. for members and visitors attending the meeting.

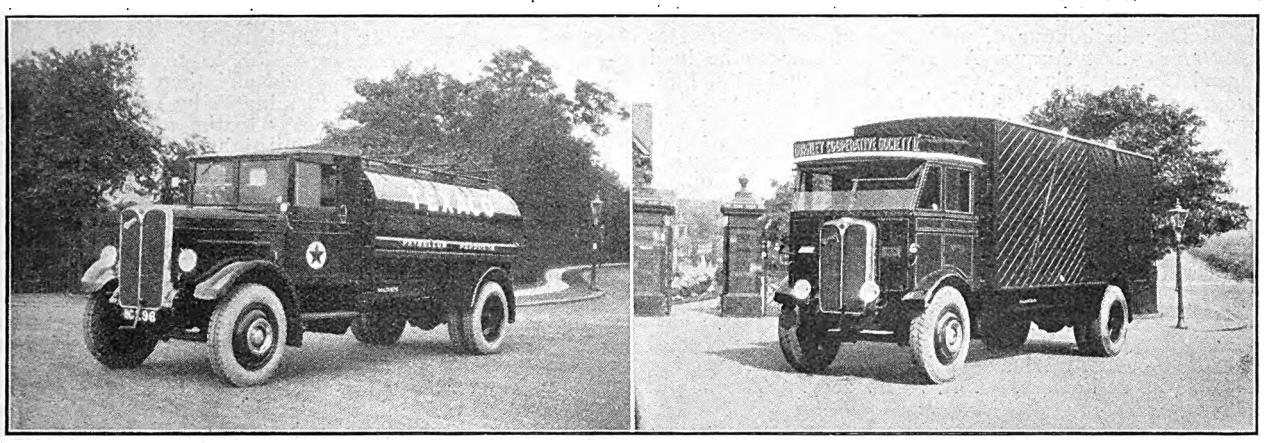
**Emancipation Day Run.**—To commemorate the coming into force thirty-four years ago of the Act absolving motorists from the need to be preceded by a man carrying a red flag, the Royal Automobile Club is organising on Sunday, 23rd November next, a demonstration run from London to Brighton of early type motor cars. It is proposed to limit the entry to cars that were manufactured prior to November, 1904. The run will not in any sense be a competition, cars being dispatched from Messrs. Henlys Garage, Glasgow Terrace, Grosvenor Road, S.W.1, between 9 a.m. and 9.30 a.m. on Sunday, 23rd November, proceeding via Westminster Bridge, Kennington, Streatham, Reigate and Crawley to Brighton, those arriving before 4 p.m. at the finishing point at the Aquarium Garage, Brighton, being awarded a special R.A.C. Certificate. No schedule speed is fixed, and any form of assistance is permitted to the cars, providing they are not towed or carried. There will be no intermediate checks, the cars proceeding direct from London to Brighton without any stop, save those occasioned by breakdowns or the need for replenishment. The Run is open only to three and four wheeled vehicles of the age specified. Copies of the regulations with entry form may be obtained on application to the Secretary, Royal Automobile Club, Pall Mall, S.W.1.

**Canal Development.**—Schemes for canal development were discussed in the House of Commons on November 5th, when Major L. B. Thomas asked whether any plans which would enable more use to be made of England's inland waterways were under consideration. Mr. Herbert Morrison, Minister of Transport, said that under the Development (Loan Guarantees and Grants) Act, 1929, a grant had been made in respect of an £881,000 scheme

Digitized by Google

for improvements and reconstructions on the Grand Union Canal Company's London to Birmingham route. Approval in principle had been given also to proposals for dock-facilities improvements on the Manchester Ship Canal. Apart from these two cases there were at present no applications from canal undertakings for assistance under the development Act, said Mr. Morrison. On the Crinan Canal, Argyllshire, however, which was administered by his department, reconstruction of sea-locks and the improvement of the water supply had been put in hand.

achieved success in the municipal elections. Mr. W. T. Roberts, cartage contractor and forwarding agent and past president of the Liverpool and District Cart and Motor Owners' Association, has been again re-elected for Abercromby Ward by an overwhelming majority. Mr. T. H. Burton, teamowner of Old Swan, was returned for Breckfield Ward, Liverpool, with a majority of 1,000, and Mr. C. Sydney Jones, shipowner, for Fairfield Ward with a majority of 1,400. Another teamowner to be elected is Mr. J. Hill, of 60, Garnett Avenue, Kirkdale, who was



LEFT: AN A.E.C. 110 H.P. "MAJESTIC" TANKER. RIGHT: 7-8 TON A.E.C. "MAMMOTH" WITH LIFT VAN BODY.

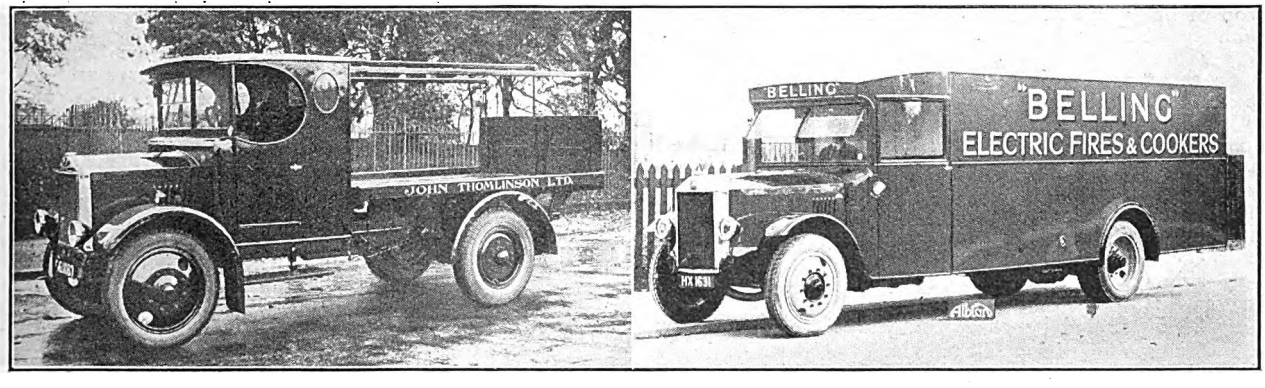
**Two Northern Deliveries.**—The newly appointed A.E.C. Wholesale Distributors in the North have recently delivered the two vehicles which we illustrate. The first is an A.E.C. 110 h.p. "Majestic," 1,500 gallon triple compartment tanker purchased by Messrs. Ashworth Heys and Glover, haulage contractors, of Accrington. It has the fittings and equipment common to this type of vehicle, and is being used for the delivery of "Texaco" fuel. The tanks are the work of Messrs. Butterfield, Shipley, and the body work was carried out in Messrs. Tillotson's own shops at Burnley. The second vehicle is a 110 h.p. 7-8 ton A.E.C. "Mammoth" with a lift van body for the Burnley Co-operative Society, Ltd. It is to be used principally on long distance haulage work.

**Interesting "Albion" Vehicles.**—Our illustrations show a neat 30-cwt. "Albion" lorry with rigid poles supplied by the Albion Motor Car Co., Ltd., Scotstoun, Glasgow, to Messrs. John Thomlinson, Ltd., the well-known Glas-

returned for Warbreck Ward, his majority being nearly 2,000 votes. In Birkenhead, Mr. Herbert Halsall, forwarding agent, was elected with 370 votes to spare.

**A.E.C. "Majestic" Lorry for Curtiss & Sons, Ltd.**—On page 37 of our October issue we illustrated one of the latest types of goods vehicles supplied by The Associated Equipment Company, Ltd., of Southall, to Messrs. Curtiss and Sons, Ltd., the well-known transport company. This vehicle was described in the caption as a 7-8 flat platform lorry, "Mammoth" Model; whereas the vehicle in question is an A.E.C. "Majestic" 6 tonner.

**Scammell Machines on Tour in Scotland.**—Scammell Lorries, Ltd., of Watford, inform us that the Scammell machines which have been garaged at their new Scottish Sales & Service Depot, 68/70, Paterson Street, Glasgow, during the progress of the Scottish Motor Show, will start on a special demonstration tour of practically the whole of Scotland at the conclusion of the Show. This representa-



LEFT: A 20/36 H.P. 30 CWT. ALBION LORRY. RIGHT: A 36/90 H.P. ALBION SHOW VAN ON "VIKING-SIX" CHASSIS.

gow Printers, and a high capacity van on "Albion" 36/90 h.p. "Viking-Six" chassis, owned by Messrs. Belling & Co., Ltd., fire and radiator manufacturers.

**Spencer-Moulton Tyres.**—The Trowbridge Tyre & Rubber Co. (1929), Ltd., whose London offices are at 54, Victoria Street, S.W.1, have sent us an ingenious ashtray. This takes the form of an actual model of one of the well-known Spencer-Moulton tyres fitted on to the rim of an earthenware dish modelled like the wheel of a motor car, the result being a very effective advertising novelty.

**Transport Men on Municipal Councils.**—Several members of the Liverpool and district transport trade have

tive selection of Scammell models will be in Edinburgh from the 17th to 19th November and will afterwards visit Stirling (via Falkirk), Dunfermline, Kirkcaldy, Perth, Dundee, Aberdeen (via Arbroath and Brechin), Greenock, Kilmarnock (via Paisley), and the tour will finish at Dumfries on December 12th.

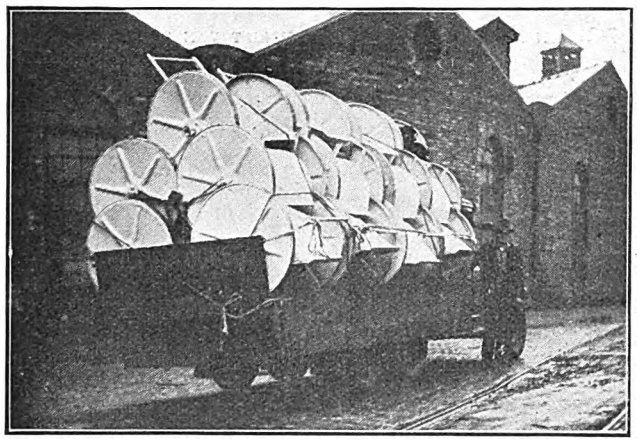
**"On Guard." Monthly Safety First Magazine for Workers.**—"On Guard" is the title of a special little pocket magazine issued by the National Safety First Association as part of a specialised accident prevention service, which consists of an intensive campaign each month against one of the principal dangers of industry.

Digitized by Google

For October the particular hazard covered is "Fire," which costs this country some £12,000,000 a year. The magazine deals with various aspects of Health, as well as Safety, at Work, in the Street and in the Home. The October issue also contains an interesting competition, with a prize of £5 for the best suggestion for making "On Guard" even more interesting. Copies of "On Guard" can be obtained, price 2d. each, post free, from, or quotations for quantities will be given by, the National Safety First Association, 119, Victoria Street, London, **S.W.1.**

**International Day. New York Automobile Show.**—Monday, January 5th next, has been designated as International Day, in honour of visitors from other countries to the Thirty-first Annual Automobile Show to be held in Grand Central Palace, New York, January 3-10th, 1931. A programme of activities is being arranged with a view to making their visit of the greatest value. Guests will be welcomed at the New York headquarters of the National Automobile Chamber of Commerce, 366, Madison Avenue, New York City, on the opening day of the Show, Saturday, January 3rd, at which time credentials for all Show Week activities will be furnished.

**"Marshall" Concrete Tipping-Cart.**—Our illustration shows a load of 20 Marshall concrete tipping carts leaving the works of Marshall, Sons & Co., Ltd., Britannia Iron Works, Gainsborough. The body of this concrete cart is constructed of mild steel plates ⅛ in. thick. Its general dimensions are 3 ft. 1 in. by 1 ft. 10½ in. at top, tapering to 1 ft. 7½ in. at bottom. 1 ft. 7⅛ in. deep. The height



A LOAD OF MARSHALL CONCRETE TIPPING CARTS.

to top of body is 2 ft. 2½ in. The side plates are pressed to shape and flanged to give well-rounded corners. The wrapper plate is securely riveted to side plates. Angle section stiffeners are bolted along the sides and extended to be joined by a length of tube, and thus form a handle. The stiffeners are readily detachable so that they can be reversed to enable the cart to be handled from either end. The wheels are 3 ft. diameter with a tread of 2 in. They are made of pressed steel, and suitably tyred. The cast iron hubs are bored to fit the trunnion axles. The Trunnion Brackets are of semi-steel, with mild steel axles cast in them, machined to fit the wheel hubs, and bolted to the side of the body. The vehicle is designed and built to withstand hard usage. Its net weight is approximately 2¼ cwts. and its capacity is 7 cubic feet.

**Advertising the British Isles Abroad.**—All parties in the House of Commons and all parts of the British Isles are represented among the supporters of the Local Authorities (Publicity) Bill which will be introduced by Major Isidore Salmon, C.B.E., on November 21st. This Bill, which has the sympathetic support of the Ministry of Health, is the outcome of a Conference held at the instance of the Travel Association of Great Britain and Ireland. If carried, it will enable local authorities to contribute to any organisation established for collecting and collating information in regard to the amenities and advantages of the British Isles and disseminating that information outside the British Isles. In other words, it gives the health and pleasure resorts and historic and beautiful towns of Great Britain and Northern Ireland a chance to co-operate in the work of attracting more visitors to this country. The value of such co-operation to the nation at large lies in the fact that the tourist at present brings £15,000,000 a year of new money to the British Isles and the experience of all countries is that such a source of wealth to the country can be largely increased by co-operative action under a central direction.

**Pickfords' New Offices at** Bristol.—Pickfords, Ltd., have recently transferred their business from St. Augustine's to more commodious premises at 98, Victoria Street, Bristol, where every facility is offered for furniture removals. Trained and experienced men only are employed.

**Packing Motor Oils. Electric Cleaner's 1,200 Barrels a day.**—An example of the care taken in packing modern motor lubricating oils is to be seen at the Anglo-American Oil Company's depot, Purfleet, Essex, where a new electric plant has been installed for cleaning, repairing, painting and weighing 1,200 barrels a day. The used wooden barrels are steamed for 15 to 20 minutes and washed; first with caustic soda and then with hot water. They are then dried for 40 minutes by means of 90 hot-air driers and sent on runways to the cooper for repairs, glued inside to make them oil-tight and dried with cold air to harden the glue. The barrels then pass between revolving paint brushes, and after drying they are weighed on automatic scales, filled with oil and weighed again before passing, by their own momentum, down a quarter-mile runway to be loaded on barges or railway trucks. Careful inspection of the barrels is made at three stages to ensure that they are clean, dry and efficiently sealed.

**A.E.C.'s New Potteries Branch.**—In order to maintain a closer contact with the operators of the Potteries area the Associated Equipment Company, Ltd., of Southall, have opened branch premises at Halifax Chambers, Market Square, Hanley. From here Mr. L. V. Williams, who was formerly attached to the A.E.C. Birmingham Depot and who is well known in the Midland counties, will represent the Company throughout the whole of North Staffs. The phone number of the new branch is Hanley 5481, and the telegraphic address "Vangastow, Hanley."

**Traffic Tunnel between United States and Canada. Cost Four and a Half Million Pounds.**—The tunnel for vehicular traffic under the Detroit River, connecting Detroit with Windsor (Ontario), which was opened by President Hoover on November 1st, took two years to construct. The total cost was 23,000,000 dollars (£4,600,000).

**International Horse Show, 1931.**—The Twentieth International Horse Show will be held at Olympia, London, from Thursday, June 18th, to Saturday, June 27th, 1931 (both days inclusive). The offices of the Show Committee are at 12, Hanover Square, London, W.1.

**International Automobile Passenger Car Show, Copenhagen, 1931.**—This Exhibition will take place in the Exhibition Hall "Forum" at Rosenorns Allé, Copenhagen, from February 6th to 15th next. As usual the exhibition will include passenger cars; automobile accessories, equipment, tyres and tubes; lubricating materials, etc.

**Shire Horse Society.**—Mr. David Davies (President) occupied the Chair at a meeting of the Council of the Shire Horse Society held on October 21st. Sir Walter Gilbey, Bart. (Chairman of the Horse Show Committee), reported that during the past year Gold, Silver and Bronze Medals and Breeders' Prizes had been awarded at over 200 Country Shows and Parades. It was resolved to continue the offer of these Special Prizes at all Affiliated Shows in 1931, but in the case of the Gold Medal, the foaling restrictions would be made easier so that mares foaling in the year of award or the preceding two years would in future qualify to receive the medal. In addition to the above medal schemes cash prizes were provided at the Royal and other Shows, bringing the total cost of this side of the Society's activities up to £1,000.

**Dennis Vehicles for G.W.** Railway.—We are informed by Dennis Brothers, Ltd., of Guildford, that of the 152 motor vehicles ordered by the Great Western Railway Company during the first week in November, no less than 108 are to be supplied by them. The model is the Dennis 2-tonner, already popular with the Southern Railway, but the G.W.R. machines are of the forward-control pattern, giving additional body-space.

**Fordson Industrial Tractor Prices Down.**—The Ford Motor Company officially announce that the price of their Fordson Industrial Tractor has been substantially reduced. The revised price list, operating from November 1st last, is as follows:—

| Model. | List Price. |
|---|---|
| Twin Tyres Industrial Tractor ... ... | £230 |
| Industrial Tractor, less wheels, but including brakes, silencer and automatic hitch ... ... ... ... ... | £185 |
| Industrial Tractor, less wheels, brakes and silencer ... ... ... ... | £170 |

## MERSEYSIDE.

**Liverpool Cartowners' Queries.**—Cartowners engaged in cross river transport are exercising their minds as to what sort of ferry service will be provided when the new Mersey traffic tunnel is opened. The tunnel, as is well known, is primarily intended for self-propelled vehicles which will have the option of using alternative entrances on both sides of the river. Not all of these are centrally situated for dock traffic, and all of them will be approached by a long and somewhat steep gradient to and from the bed of the river. These will impose a strain on horses, and when it is remembered that the tolls and pull-up charges will be equal to, if not more than, the present charges for the use of the ferries, it will be readily seen that the advantages of the tunnel to cartowners seem somewhat dubious. Cartowners are anxious there should be a good vehicular ferry traffic service, because during the ten minutes taken for the crossing of the river, their horses are resting. Another argument of cartowners is that even if it is convenient for them to use the tunnel, it will be impossible to load their vehicles with the same tonnage that is now carried on the ferry boats, because of the long steep gradients already mentioned.

**Long Service.**—Mr. J. Lloyd, of Sandbach, has completed sixty years continuous service as a moulder at the steam wagon works of Fodens, Limited, of Sandbach. He started with the firm at the age of fourteen as an indentured apprentice.

**Railway Cartage.**—At the next meeting of the Liverpool Railway and Traders' Conference (set up by the railway companies), an interesting question will be raised concerning the charges for cartage, in circumstances where the railway companies employ an agent to effect delivery, instead of carrying out the operation themselves.

**Orders for Pagefields.**—Liverpool Corporation Health Committee has accepted the tender of Messrs. Walker Brothers (Wigan), Limited, Pagefield Iron Works, Wigan, for the supply of three complete sets of refuse collection vehicles, with the usual type of engine, and each comprising a "Pagefield" motor lorry and four horse-drawn containers, both the motor lorry and the containers to be fitted with solid rubber tyres, for the sum of £5,887 10s. Messrs. Walker Brothers (Wigan), Limited, have also obtained an order for the supply of one complete set of refuse collection vehicles consisting of one motor lorry with "Gardner" Diesel engine, the chassis to be fitted with pneumatic tyres and four horse-drawn containers, fitted with solid tyres, for the sum of £2,266 10s.

**Experts in Debate.**—Two well-known members of the South-West Lancashire transport industry, Mr. Paul, engineer of the Merseyside Touring Co., Ltd., Liverpool, and Mr. Norman E. Box, of Manchester, participated in the discussion at the dinner debate of the Manchester branch of the Institute of Automobile Engineers. Mr. John O. H. Norris (J. Cockshoot and Co., Manchester) presided.

**Coachowner and Lecturer.**—Mr. A. Kingham, Managing Director of the New Brighton Touring Co., Ltd., during the winter months is giving a series of free lectures and demonstrations at the company's premises in 19 Grosvenor Road, New Brighton, on the mechanism of motor cars. The course includes talks on the engine, the carburetter, magneto, gear box, differential, etc., the lighting systems, law appertaining to insurance, modern road signs, etc.

## MANCHESTER.

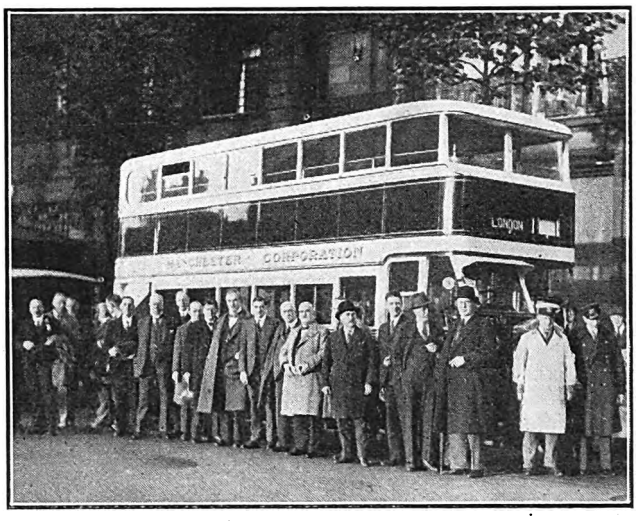
**Team Labour Contract.**—The tender of Mr. J. W. Cage, Manchester, for the hire of team labour during the period ending 31st March, 1931, was accepted by the Manchester Corporation Paving, etc., Committee.

**Experiments with Diesel Engines.**—Manchester Transport Committee intends to experiment with motor buses fitted with Diesel engines.

**Bulk Loads.**—Because of the severity of the industrial depression in the cotton towns of Lancashire, motor haulage contractors have found it a difficult matter to keep their motors on the move with paying loads. Many have had to cut their rates to something like the same figure per ton that is quoted for bulk consignments carried by six and eight wheeled vehicles which seem to be getting quite a substantial proportion of available tonnage. This form of transport has become popular in the Mersey city for through consignments mainly to the midland towns and cities.

**Transport Authorities in Conference.**—Representatives of Lancashire transport committees attended a conference at Manchester recently to consider the co-ordination of Lancashire bus services, especially long distance ones. A further meeting is to be held when representatives of the railway and transport companies will meet representatives of municipalities for the purpose of considering the points of difference.

**Tubes for Manchester?**—A conference was recently held in Manchester between representatives of the Corporation and the L.M.S. Railway Company to discuss details for a joint scheme for the provision of an underground railway. Mr. J. B. Meek, the City Engineer, said that about £3,000,000 would be spent in labour on the scheme and the total cost would be about £8,000,000. Another conference will be held at which more intimate details will be considered.

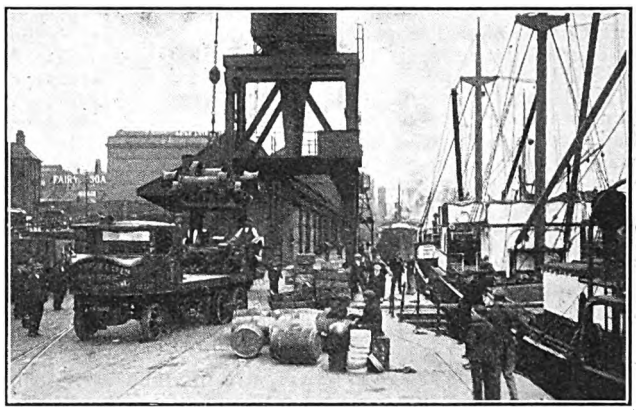


THE "CROSSLEY" 50-SEATER DOUBLE DECKER WHICH FOR THE FIRST TIME IN THE HISTORY OF TRANSPORT HAS MADE A TRIP FROM MANCHESTER TO PARIS AND BACK.

**Manchester Bus in Paris.**—One of the Manchester Corporation's double decker Crossley buses has recently returned from a trip to the Continent. Travellers by the bus were Mr. Stuart Pilcher and other members of the Municipal Tramways and Transport Association who attended a conference of the International Union of Tramways and Light Railways in Paris. It was Mr. Pilcher's idea that this form of transport should be employed. The journey was made via London, Dover, Calais and the Seine valley to Paris.

## NORTH-EAST COAST.

**Traffic Commissioners in the North.**—The three Traffic Commissioners for the Northern area will have no easy task. Newcastle is to be the Northern headquarters, and



A STEAM WAGON OWNED BY W. YOUNGER & CO., LTD., TRANSPORT SPECIALISTS, NEWCASTLE-ON-TYNE, ENGAGED ON DOCK TRANSPORT.

the area consists of Northumberland, Durham, Cumberland, Westmorland, the Furness district of Lancashire, and part of the North Riding of Yorkshire. This includes all the county boroughs in the four Northern counties, and those of Barrow-in-Furness and Middlesbrough. The granting of road service licences is one of the Commissioners' greatest tasks, and in the Northern area this will be a formidable one, as in no other districts have bus services been developed to such a great extent. The granting of licences will be carried out at public sittings.

Digitized by Google

**Big Load of Machinery.**—On November 3rd the first consignment left Heaton Station, Newcastle, of one of the biggest loads of machinery ever carried by rail—two turbo-alternators and a condensing plant for a power station in Holland, over 1,000 tons. Put on to trucks at Heaton the load would not be taken off until its arrival at the Dutch power station, having gone direct from Newcastle to Harwich and there being shunted on to the train ferry for Zeebrugge.

**Traffic Control.**—The Unilateral system of traffic control, or one-side halts according to whether the date of the month is odd or even, is being tried in Newcastle, as mentioned last month, and seems to meet with the general approval of motorists and pedestrians alike. Morpeth has had a similar system working for some time, each side of the main street getting its turn for a week.

**Road Traffic Act.**—The Railway and Transport Committee of Newcastle and Gateshead Chamber of Commerce has been considering the Road Traffic Act, especially reviewing the clauses affecting commercial vehicles, on which Mr. A. E. Millard (Director of Messrs. Robson and Sons, Ltd., Newcastle) was invited to report.

## HULL.

**The Humber Bridge.**—The Humber Conservancy Board has decided to oppose the Bill for the construction of a bridge over the Humber. Mr. H. A. Reed, the consulting engineer to whom they went for advice, fully endorses the attitude of their own engineer, Mr. Butterfield. In a preliminary report he stated that his views were "distinctly against" the bridge proposal, both as regards the possible influence of the piers on the regime of the river, and also as regards the obstruction the bridge would offer to navigation. The influence on the regime of the river is the most important. A layman with the slightest knowledge of the river can but recognise the infinite possibilities of danger to the deep water channel the placing of twenty-two large piers to carry the bridge would create, and as the Conservators of the estuary the Board have no alternative but to place them before the committees of Parliament by whom the Bill will be considered. As the Government are backing the scheme as a means of providing work it is likely the House of Commons committee will regard it favourably, but the members of the House of Lords committee doubtless will decide upon the evidence that is submitted to them.

**Hull's Parking Station.**—Hull is to become up-to-date and provide a parking station for buses. The Chief Constable has pressed for it owing to the increasing difficulty of dealing with the traffic. The station is to adjoin the Paragon railway station and the new street. Some members of the Tramways Committee wanted the Corporation buses to be exempted from resorting to the station but they were told that if they wanted a terminus in the city that must be it.

## SOUTH WALES.

**Cardiff Transport.**—In his half-yearly report to the Cardiff Corporation Tramways Committee, Mr. Wm. Forbes (General Manager) is able to show that a decrease of £18,589 in tramway receipts is offset by an increase of £19,588 on the omnibuses. But whereas the traffic expenses in regard to trams had decreased by £5,546, there had been an increase of £6,832 on the buses. In this way, matters had been evened up. It was decided to seek tenders for six new buses, saloon single-deckers.

**Western Welsh Omnibuses.**—The mammoth garage and offices of the Western Welsh Omnibuses, Ltd., have grown to the roof stage at Ely Garden City, Cardiff, and hundreds of employees, contemplating settlement in the neighbourhood, are inquiring if the Cardiff Corporation intend to make provision for them by the inauguration of a housing scheme. It is hoped that the new buildings will be completed by the New Year. A similar large establishment for the Western Welsh Omnibuses is to be constructed at Neath, the new centre of the Company for West Wales, in the course of the next few months. Accommodation is to be provided for the housing of nearly 100 buses. A proposal is also on foot to build a large bus station in Cardiff in association with the G.W.R. Company.

## NORTHERN IRELAND.

**Road Traffic Legislation.**—The Motor Vehicles and Road Traffic Bill, introduced last month in the Northern Ireland House of Commons, makes insurance against third party risks compulsory. It also makes provision for reciprocal arrangements with Great Britain in respect of drivers' licences, and enables local authorities to incur expenditure on automatic signals. Licences issued in Great Britain will now be valid in Northern Ireland by Act of Parliament, and not by virtue of an informal agreement, as hitherto. A clause affecting bus companies imposes on them an obligation, when running a regular service, to carry whatever mails may be desired of them by the Postmaster-General, to or from places along the route. The obligation is limited to mails that can be carried without inconvenience to the passengers. If the parties cannot agree on the price, it will be fixed by the Ulster Road Transport Tribunal, of which Sir Lynden Macassey is Chairman. A new development in the Bill is a provision for the payment to a hospital where an accident case is treated, of a sum up to £25 by the authorised insurer, if he has made a payment in respect of the accident, or the owner. This clause has been put in to meet a grievance often stated by hospitals, and in this matter Northern Ireland has acted on its own. "Joy riding," or the practice of taking unattended cars for runs, and leaving them miles away—a practice that has become very prevalent here—will be dealt with and joy-riding is definitely scheduled as an offence.

**Belfast's Tramcars and Buses.**—The first of the fifty new tramcars supplied by the Brush Electrical Co. to Belfast Corporation has now been received, and will soon be on the streets. Six double-decker buses are on order and are expected shortly.

## IRISH FREE STATE.

**British Air Liner to Visit Ireland.**—Arrangements have been made for the visiting of Ireland during this month by a British air liner. A demonstration tour of the Wessex, a three-engined air liner, is to be made. This air liner, which belongs to the Westland Co., is a six-seater cabin monoplane equipped with three motors, each developing about 110 horse-power. The Wessex is expected to fly over Dublin and alight further on at Baldonnel Aerodrome for Customs examination, and it is planned to make a trip to Cork and to descend on the landing ground at Ballincollig, some six miles from Cork City. During the progress of this interesting demonstration tour it seems that invitations will be sent to the municipal authorities, chief industrialists, and others interested in air transport, to visit the Aerodrome and see the Wessex in operation at close quarters.

**Establishment of Air Transport in Ireland.**—During the past month Sir Alan Cobham, K.B.E., A.F.C., has been advocating in a practical way the establishment of air transport in Ireland. A number of the municipal authorities in the Irish Free State have been written to on the subject by Sir Alan, and his communications have occasioned considerable interest and discussion amongst members of public bodies. In the course of the letter it was pointed out to the municipal authorities that in view of the rapid extension of air transport and air travel, he should like to refer to the necessity for reserving a landing ground for aircraft to cater for the future needs of particular towns and districts, and to suggest that the best site in the neighbourhood for this purpose should be ascertained as soon as possible. There are so many development schemes in hand at the present time that there is a danger that the most suitable site for a landing ground within the environs of your town will be rendered useless by new arterial roads, housing estates, and overhead electric cable lines. Good sites for landing grounds are rare, and as there is usually one site near every centre which, perhaps, by the removal of a few hedges and ditches, is better than any other, it is essential that its position should be known to local authorities immediately with a view to developing it when the need arises. The requirements at a small town are:—An open piece of ground, within easy reach by road, marked with the towns name, and provided with a simple wind indicator. "I have been consulted on this question,' Sir Alan explains, "by more than 60 towns during the past twelve months, and have found that the only certain method of finding the best site in any district is by making a complete search by car and on foot, because in this way it is impossible to miss a likely site, each being considered for a landing ground before I make a decision as to the best one. In order to make it possible for private aircraft owners and tourists generally to visit every part of Ireland by air, a landing ground is essential at each town." A good deal of importance is attached to the interesting opinions expressed in the letter.

**Irish Free State's Half Year's Revenue from Motor Vehicle Duties.**—For the six months ended 30th September—the first half of the financial year—the Irish Free State revenue derived from motor vehicle duties amounted to £300,000, as against £290,000 for the corresponding six months in 1929.

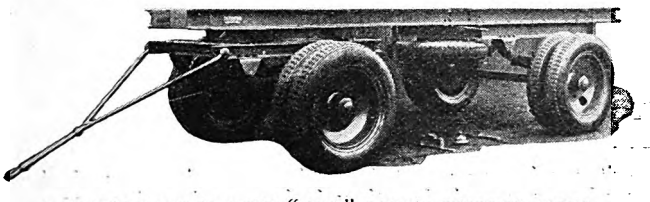
Digitized by Google

# A Roller Bearing Axle complete with Brake Gear for High Speed and Heavy Duty Trailers.

(Specially Contributed)

THERE are few mechanical devices of which the design has developed so little as is the case with the under-carriage of the ordinary wheeled vehicle.

As soon as trailers for motor lorries were introduced an improvement in the axles of the vehicles became imperative because the existing designs of hubs as, for instance, the cast-iron bushes, were found to be unsuitable at high speeds. They quickly wore out, ran hot and broke under shock loads whilst the vehicle was in use. This being the case, the use of plain bearing axles with bronze sleeves in steel hubs—the so-called "trailer axles"—was commenced and the axles were found to wear well. At the speeds at which the trailers are generally run for

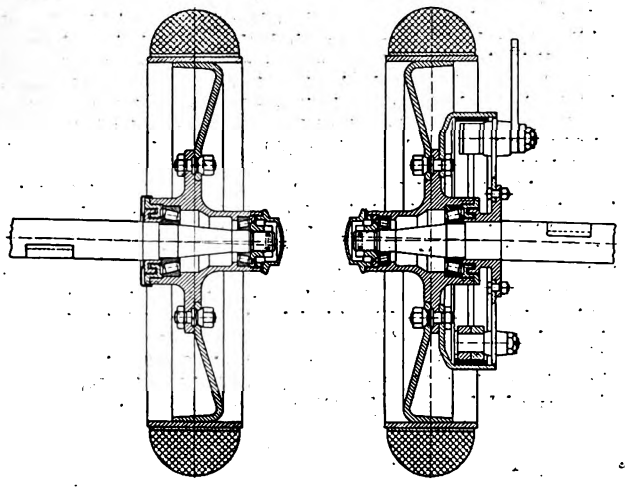


A TASKER TRAILER WITH "SKF" ROLLER BEARING AXLES.

long distances, it was found, however, that even these axles were not sufficiently reliable; besides which the frictional losses, the consumption of oil and the amount of attention required were very heavy.

Of late years several attempts have been made to introduce on a large scale ball bearing hubs for horse-drawn vehicles and trailers, but without great success, due, partly, to the disinclination on the part of the vehicle builders to pay the extra price and partly to the frequent use, through inexperience, of bearings with inadequate load-carrying capacities. Axles that had been provided with ball bearings of adequate capacity functioned well and large numbers are still in use with carriers and brewers.

The progress made in introducing roller bearing axles for heavy vehicles was at first quite insignificant and was due to the same difficulties.



SKF Taper Roller Bearing Trailer Axle with single disc wheel for solid tyres.

Type for single disc wheel complete with internal expanding brakes. Method of taper roller bearing mounting and protection will be seen.

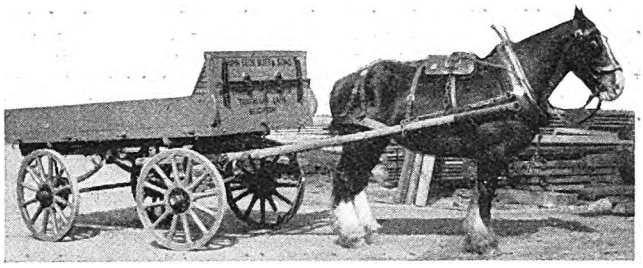
The particular requirements of the coach-building industry made it imperative that complete axles and hubs of different designs should be available for their use, and a realisation of this fact led the SKF organisation to standardise complete ranges of hubs and axles suitable for trailers.

### DESIGN AND CONSTRUCTION.

The axles are forged from special Siemens-Martin steel, of high tensile strength, and the flaps are forged out of the solid which provide for easy and reliable fixing of the springs. The hubs are forged of the same material.

SKF Taper Roller Bearings of standard sizes are fitted on the axle ends and in the hubs; both are provided with seatings ground to the required limits.

The outer rings of the bearings are pressed against shoulders in the hub—the outer ring of the inner bearing being secured by the threaded inner cover, which has



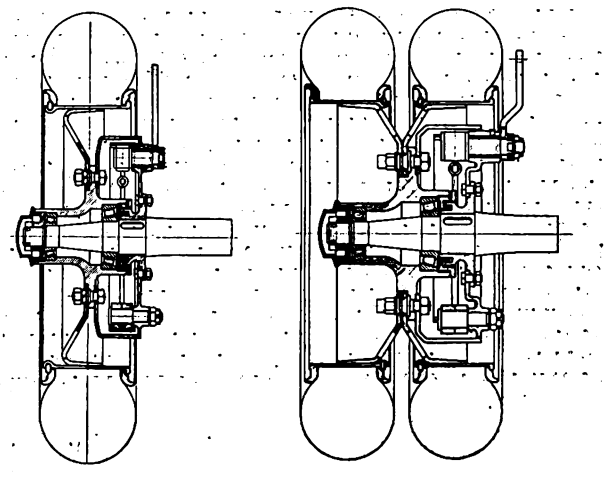
HORSE LORRY WITH "SKF" ROLLER BEARING AXLES.

right-hand threads on the right-hand side and left-hand threads on the left-hand side, while the outer ring of the outer bearing is secured by means of a ring nut screwed into the hub. This ring nut has only a right-hand thread. The principal function of the outer ring nut is to prevent the inner ring and rollers from falling out and collecting dirt when the complete hub is drawn off.

The inner ring of the inner bearing fits against a shrunk-on collar, and that of the outer bearing against an axle nut. The inner cover is so made that when the hub is drawn off the rollers and inner ring are prevented from falling out of the hub.

Sealing is effected by means of a labyrinth formed by the intermeshing of inner cover and collar.

On the outer end of the axle is a castle nut with six slots. In the threaded portion of the axle two holes are drilled at an angle of 90° with one another for the purpose of receiving the split pin. The interval between successive locking positions is therefore 30°. The pitch of the thread employed makes the adjustment sufficiently fine.



Single disc wheel with giant pneumatic tyres fitted with SKF taper roller bearing axle.

SKF Taper Roller Bearing Axle fitted to single dise twin wheels with giant pneumatic tyres. Complete with internal expanding brakes.

When brakes are fitted the axles have special collars provided with flanges to which the brake plates are fixed by means of suitable bolts. The brake plate serves as a support for the brake cam and pivot pin, besides enclosing the brake mechanism. This special arrangement for fixing the brake plate allows the brake lever to be adjusted

Digitized by Google

to various positions if space does not permit the lever to take up the normal position on the top centre of the drum.

A further advantage is the provision of means for varying the final adjustment of the brake lever in relation to the position of the cam. This is essential in the case of vehicles provided with air-compression brakes. The brake shoes have a special lining giving the maximum amount of life. The brake drums are fixed to the hubs by means of the same studs that serve to attach the wheels to the hub flanges.

The brake drums are manufactured from pressed steel, the brake collars and plates being of forged steel, the brake shoes of cast steel, while the brake cam is of high class tool steel.

THE PRINCIPAL ADVANTAGES OF SKF ROLLER BEARING AXLES MAY BE SUMMARISED AS FOLLOWS:

A considerable reduction of tractive effort required for haulage, as much as 30 per cent. to 45 per cent. being recorded on good surfaced roads with moderate gradients. In the case of motor-hauled trailers, the initial effort is reduced to a minimum, thus conserving the efficiency of both clutch and engine. Greater loads are possible and, owing to the ease of starting, handling in traffic is facilitated. The consumption of lubricant is reduced by 80 per cent. to 90 per cent. as lubrication is necessary only once or twice a year. The amount expended on non-productive wages in lubricating and general maintenance may, therefore, be considerably curtailed. A trouble, common to plain or phosphor bronze bearing hubs, is "heating-up." This is entirely eliminated in the case of SKF Taper Roller Bearing Hubs, as pure rolling motion takes place in the rotating parts.

There is a very comprehensive range of the axle sizes for varying loads, ranging from the smallest, which is capable of carrying a load of 7 cwts. to the largest, which carries a load of 12 tons.

Design, material and workmanship of the axles and brakes is such that they are eminently suitable for high speed trailers, and for trailers which have to carry heavy loads under severe conditions.

Large numbers of these axles are already being used in this country, and on the Continent over 30,000 are running very satisfactorily. These roller bearing axles are made at Luton, Bedfordshire, by the Skefko Ball Bearing Company, Ltd.

## Transport in Scotland.

**Present Rail and Road Position.**—The struggle for supremacy on the road between contemporary bus firms which marked the earlier stages of bus activity in Scotland has now more or less subsided. It the past two years there has been a constant recession of the smaller element such as the single bus owner, while at the same time a gradual process of absorption among the larger bus concerns has continued. The Scottish Motor Traction Co., Ltd., together with its associate companies forms the largest and most power group north of the border. The railway companies have an interest in this company. Edinburgh is the radiating centre for the parent company of the group while Glasgow, Aberdeen, Inverness, Kirkcaldy and other towns form centres of operation for the associate companies. In the opinion of a prominent Scottish Railway official it is expected that soon the whole of Scotland will be catered for by a vast network of rail-road co-ordinated transport services. There seems little hope of any agreement being reached between municipalities and the railway companies towards a co-ordinated scheme for municipal and privately owned buses. Overtures have taken place between the parties concerned but the matter has been shelved for the time being at any rate.

**Albion Motor Car Co., Ltd.**—A third repeat order was recently placed with this firm for 14 single-deck Albion bus chassis from the Cape Electric Tramways, Limited, for their services in Cape Town and Port Elizabeth.

**Glasgow Bus Dispute Settled.**—A provisional arrangement between the Chief Constable of Glasgow and the representatives of the principal bus companies operating in the city has terminated a long standing dispute between the Magistrates and the bus proprietors. For some considerable time the problem of bus congestion in the streets of Glasgow and the overcrowding of the bus stances has been engaging attention. The Magistrates instructed the Chief Constable to confer with the bus owners, and among other things a special point for consideration was the possibility of buses being run to a depot or garage instead of the existing stances. After receiving the Chief Constable's report the Magistrates received ex-bailie Thomson, of Edinburgh (S.M.T. Co., Ltd.), and Mr. Muir Wilson, writer, who represented the bus proprietors, and these gentlemen stated that they had secured options on properties in the city in anticipation of the proposed settlement being carried through. It was accordingly agreed by the Magistrates to recommend that the buses belonging to the proprietors represented at the conference—about 90 per cent. of the total—be allowed to arrive at and depart from the proposed stations in Waterloo Street and Killermont Street as soon as these were ready.

**Aberdeen Scraps another Tram Service.**—At a recent meeting of the Aberdeen Town Council it was decided by a majority to discontinue the tramway service on the Ferryhill route and run a bus service in its place. The Council recently came to a similar decision in regard to the Torry route.

**Glasgow Transport Inspection.**—The annual inspection of the Glasgow Municipal Transport Department took place last month. A visit was paid to the new garage at Larkfield, the extension to which has been practically completed. The Convenor of the Department, Councillor P. J. Dollan, stated that the past year had been one of the most successful in the history of the Department. They had obtained from Parliament powers which, in effect, gave them a monopoly of transport within the city, while they had almost carried through their scheme of reconditioning all the tram cars at a cost of nearly £1,000,000. Work had also been commenced on the installation of the new boiler plant at Pinkston Power Station. Bus services had been augmented to the extent of 225 vehicles and another 100 were under construction. Larkfield garage has been opened and was being extended to provide for 175 buses. Seven acres of land had been bought at Anniesland in the northern part of the city on which it was proposed to build a super-garage to accommodate 200 vehicles. Sites for other garages were being prospected. At the present time the Corporation had 1,100 tram cars and 250 buses which made their undertaking the largest of its kind in the United Kingdom outside of London. The Department had over 8,500 employees and in the past year spent £1,370,000 in wages, so that the undertaking was now probably the largest employers of labour in the Glasgow area.

## In Parliament.

**Speed of Motor Coaches.**—Asked by **Sir George Penny** whether, in view of the high speed at which many of the heavy passenger motor coaches are driven on the roads, he would make it compulsory for a schedule time record of each journey to be made by the driver, both as a protection to the public and to provide evidence should it be required in case of accidents? **Mr. Herbert Morrison** (Minister of Transport) said that sub-sections (3) and (5) of Section 72 of the Road Traffic Act provided for the submission to the Traffic Commissioners of time tables or of other particulars as to the times to be taken on the journeys and the Commissioners were required to refuse road service licences if, from the particulars deposited, it seemed likely that the speed limit applicable to the vehicle would be contravened. It would be for the Traffic Commissioners to consider whether in certain cases the maintenance of a time record should be made a condition of the grant of a road service licence.

**Sparks from Traction Engines.—Lt. Colonel Acland-Troyte** asked the Minister of Transport whether he was aware that much damage had been done to buildings and crops by fires caused by sparks from traction engines; whether he had made any regulations to prevent this damage; and when any such Regulations would come into force? **Mr. Herbert Morrison** said that his attention had been called from time to time to damage alleged to have been caused by sparks from traction engines. He had the point under consideration in connection with the Regulations under Part 1 of the Road Traffic Act, 1930, now in course of preparation.

# Scottish Motor Show.

## Opening Ceremony.

A NOTE of optimism characterised the speech of Mr. G. M. Gladstone, president of the Scottish Motor Trade Association at the opening of the Scottish Motor Show in the Kelvin Hall, Glasgow, on Friday, the 7th November. The show closes to-day, November 15th.

Speaking of the motor industry the president said that like all others it was affected by the general trade depression, but, fortunately it was not so marked. The manufacturers, with their ambitious programmes, had sounded the note of optimism. They must not, however, rest on optimism. They must be up and doing. Every member of the trade must put his shoulder to the wheel.

He called attention to the need for expert salesmanship and said that in his opinion the speech of the Prince of Wales on salesmanship was not taken sufficiently to heart by the nation. Good salesmen of the type required were very scarce. The successful motor car salesman must know his car.

Continuing, the president said the present commercial vehicle show was the only one to be held in Great Britain this year under the auspices of the Scottish Motor Trade Association, and it was a notable point that there were more stand-holders this year than ever in the Scottish Motor Show. All available space had been let. It was evident that greater interest was now taken in the commercial vehicle passenger bus, and the enormous strides which had been made for the comfort of bus passengers would be seen. A brilliant array of pleasure cars were on view, and never had the manufacturers given the public such value.

Never was an industry more handicapped with burdens of direct taxation than the motor industry, and the time was certainly not far off when a great outcry would be made against the Government's hampering influence on the advancement of the great motoring industry.

In declaring the motor show open Lord Provost Mr. Thomas Kelly said that it was surely a matter for congratulations that this year's show was a record. It was his earnest wish that the exhibition would result in increased business and give an impetus to the trade generally.

## The Banquet.

Over 400 sat down to the Banquet of the Scottish Motor Trade Association which was held on November 10th, in the Grosvenor Restaurant, Glasgow. Mr. G. M. Gladstone, president of the S.M.T.A., presided. Among other leading personages in the motor world present were Sir William Morris, Sir Herbert Austin, Sir John Samuel, Sir Edward Manville, Sir George Beharrel, Sir William Sleigh, and Sir Iain Colquhoun.

Proposing the toast of "The Scottish Motor Trade Association and Exhibition" Sir Edward Manville pointed out that the funds which were forthcoming from motor shows enabled the trade to carry on various activities which would not otherwise be possible, such as benevolent work and the watching of legislation which might have an adverse effect upon motoring. He was convinced also that they had enabled the British Industry to put before the public products which were certainly not at the bottom of the list in comparison with the products of other countries.

Replying to Sir Edward Manville the president dealt first of all with the reports of business coming from the Scottish Motor Show, which he said had, so far, been very good indeed. The greatest confidence possible, he continued, had been placed in the Scottish Motor Trade Association by the Society of Motor Manufacturers and Traders, inasmuch as each year they had allowed the Association to carry on the Scottish Motor Show.

In the course of his speech he quoted a report on the conditions of the engineering industry showing that orders were coming in for heavy foundry machinery, indicating that preparations were being made for a large amount of new work. In the past few weeks there had been a constant rise in the demand for machine tools—another significant indication that there was machinery at work somewhere, and that orders were being anticipated.

"The spirit of optimism is reigning in Kelvin Hall" he said, "And I forsee in the near future that business will get over the bunkers and make straight for the greens." (Applause).

Sir Iain Colquhoun, Bart., of Luss, submitted the toast of "The City of Glasgow" and made an earnest plea for better facilities for the outlet of youthful energies in Glasgow, particularly as regards sport.

The Lord Provost, Mr. Thomas Kelly, who replied, said, he had no doubt Sir Iain's speech contained an appeal to him to use his casting vote as Lord Provost in the direction which Sir Iain desired. But he would have to wait and see how the discussion went in the Town Council the following Thursday when the question of allowing the use of the Kelvin Hall for boxing would be raised.

Bailie John T. Young, past president of the S.M.T.A., stressed the fact that he believed there was no advertising medium which gave so much publicity to the motor industry as the holding of the annual shows in London and Glasgow.

He took the opportunity to state that motor traders in Scotland were not yet satisfied that delivery charges could not be included in the retail prices of the car and they accordingly urged the Society of Motor Manufacturers and Traders to exert themselves on this very important matter. Furthermore, they were not satisfied that manufacturers should demand customers names to whom manufacturer's products had been sold. They maintained that the purchaser of a motor car should be handed the "Guarantee" by the agent, and that the purchaser's name should be part of the goodwill of the agent and not the manufacturer. He reminded his hearers that they were depending upon the Society to keep before the Ministry of Transport and the Chancellor of the Exchequer the necessity of an alteration regarding the horse-power tax and thereby enable the British manufacturer to make motor cars to compete with any other country in the world.

Concluding, Bailie Young paid Mr. E. H. Blake, president of the S.M.M. and T. a fitting compliment saying he could quite safely state that as the president of the Society Mr. Blake upheld the dignity of the office and was maintaining the high standard which has been created by illustrious predecessors.

Replying to Bailie Young, Mr. E. H. Blake president of the Society said Scotland had played a very full part in the work of assisting the development of the motor industry, and the society had always recognised that they had advanced a long way since the old days. A certain Chancellor of the Exchequer some time ago received a deputation on the subject of motor taxation and he referred to the motor trade as being an extremely buoyant industry. The truth was that as an industry during the last three years they had been definitely held back by the ever increasing burden of taxation, and it was time to call a halt.

In looking around the show at the Kelvin Hall it was pleasing to observe the distinct note of the optimism everywhere. The increase in commercial and passenger vehicles showed that the policy of extensive roadmaking that had been undertaken by their authorities during recent years was having a beneficial effect not only on the trade but to the community at large. They had pierced their magnificent Highlands with wide, well drained, and smooth surface roads to enable the motorist to use them to the best possible advantage. He thought that the policy which was in the forefront of the programme of their Northern Authorities, was one that must be heartily commended as it brought in its train increased progress and prosperity. Scotsmen to-day, he humorously remarked were sufficiently clever to draw more from the Road Fund than they contributed directly to it. During the year ending March, 1929, Scottish Roads had drawn from the Fund a matter of £911,256 in excess of their contribution. If that was not hard headed business he did not know what was. The difficult times through which their industry and other industries were passing emphasised to the fullest extent the necessity for homogeneous co-operation on the part of all the trading associations of the Society. They knew full well that unless they made their voice heard the burden of taxation to which they were subjected would not be reduced and might even be increased. If they desired as he was sure they all did most urgently, that the total taxation on motor vehicles be reduced or that the incidence of taxation on private cars be altered so that British manufacturers would have a better opportunity of extending their overseas markets, they must be unified in their appeal. (Applause).

The toast of the "Chairman" was honoured on the call of Mr. H. L. Richardson, vice president of the Scottish Motor Trade Association.

Presentation—In recognition or his many years' service on the Council and his two years' services as president, Bailie John T. Young was presented with a canteen of cutlery.

# Road Traffic Act, 1930.

## PART I.
## Regulation of Motor Vehicles.

IT is proposed to bring the whole of Part I of the Act into force on the 1st December with the exception of sections 10, 17, 19 and 25. The most important of the sections which will thus become operative on the 1st December are those relating to the licensing of drivers, careless and dangerous driving, and other offences in connection with the driving of motor vehicles.

It is proposed that **Section 10** of the Act which deals with the maximum speeds at which motor vehicles of different classes may be driven and which abolishes the speed limit in the case of ordinary motor cars and motor cycles should come into force on the 1st January.

**Section 17** of the Act which deals with the number of persons to be employed in connection with vehicles and trailers will also come into operation on the 1st January next.

The operation of **Section 19** of the Act which deals with the maximum number of hours which may be worked by the drivers of locomotives, public service vehicles, motor tractors and goods carrying vehicles will be deferred until the 1st February next.

The date when **Section 25** will be put into force has not yet been decided upon. This section deals with the powers of bridge authorities to prohibit the use of weak bridges by vehicles weighing more than the bridge will safely carry.

### LICENSING OF DRIVERS.

New regulations entitled the Motor Vehicles (Driving Licences) Regulations will be made in the course of the next few days.

On and after the 1st December, the old form of driver's licence under the Motor Car Act, 1903, which was issued without question as to the physical fitness of the applicant, will cease to be issued but the old licences issued up to and including the 29th November will be valid until their normal date of expiry, subject to certain exceptions which are set out below.

Under the provisions of the Act, a person under 16 years of age in possession of a motor cycle driving licence will not be allowed to drive a motor cycle after the 30th November, unless he satisfies the licensing authority that he was in the habit of driving a motor cycle for the six months prior to the 1st January, 1930, **in which case he must surrender his old licence on the 1st December** and obtain a new licence under the new Act.

Similarly, a person under 21 years of age will not be allowed to drive a locomotive or tractor or heavy motor car unless he satisfies the licensing authority that he was in the habit of driving a motor vehicle of that class for the six months prior to the 1st January, 1930, and in this case also **he must surrender his old licence** and obtain a licence under the new Act.

Hitherto it has been the practice of some licensing authorities to issue reminders to holders of expiring driving licences. The Minister has come to the conclusion that the system of sending reminders cannot be justified in view of the work and expenditure involved, and the fact that responsibility should properly rest upon drivers. The Minister has accordingly instructed all licensing authorities to cease sending reminders where they have hitherto been in the habit of so doing.

An important point to be borne in mind by the holder of a driving licence issued under the new Act is that upon receiving a driving licence he must sign it with his ordinary signature in the space provided at the bottom of the licence; failure to do so will render him liable to a fine not exceeding £5.

## PART II.
## Provision Against Third Party Risks Arising Out of the Use of Motor Vehicles.

This Part of the Act is dealt with in another part of this issue. It will become effective as from the 1st January next.

## PART IV. Regulation of Public Service Vehicles, and PART V. Running of Public Service Vehicles by Local Authorities.

It is proposed that the time-table for bringing these parts of the Act into operation should be divided into three stages:—

### FIRST STAGE TO COMMENCE 1ST DECEMBER, 1930.

The main object to be achieved during this stage is to get the Traffic Commissioners appointed and into the saddle. For this purpose it is proposed to bring into operation such provisions of the Act as are required to allow the following action to be taken:—

Constitution of traffic areas;
Formal appointment of Commissioners, Certifying Officers, Examiners and other staff;
The making of the necessary Orders, Regulations, etc.; also the prescription of fees and other matters.

### SECOND STAGE TO COMMENCE 1ST JANUARY, 1931.

During this stage it is intended that the Commissioners should receive applications for licences, consents, etc., and be able to consider them and reach decisions, so that at the end of this stage there can be a complete change-over on a specified date (provisionally fixed for 1st April) from the present system to the new one under which 12 Traffic Commissioners will replace local licensing authorities. For this purpose it will be necessary to bring into operation on the 1st January, 1931, such provisions as are required to enable the following action to be taken:—

To allow the Traffic Commissioners to consider applications and objections, and to issue and back licences of all descriptions.
To allow Certifying Officers to issue certificates of fitness and suspend public service vehicle licences.
To allow the Minister to approve type vehicles.
To allow the hearing and determination of appeals.
To enable Local Authorities to make applications under Part V. for the extension of their services.
Other matters incidental to the above.

By these means it is hoped that the various applications will have been dealt with and licences, consents, etc., issued during this stage; but the licences and consents so issued will not be valid until the date for the third and final stage is reached. During these two preliminary stages the existing Licensing Authorities will continue to deal with applications for licences made to them as at present. It is hoped that in so doing the Local Authorities will continue to exercise their powers with care and responsibility.

### THIRD STAGE.

It is hoped that the date for the commencement of this stage may be 1st April, 1931.

At this point the provisions of these parts of the Act will be brought fully into operation and there will be a change-over from the existing licensing system to that established under the Act. From that date omnibuses and motor coaches will only be operated in accordance with a road service licence granted by the new Traffic Commissioners. Local Authorities will also be able from that date to start operating any extensions of services which may have been approved by the Commissioners in accordance with the provisions of Part V. of the Act.

# Public Health Congress and Exhibition.

## Royal Agricultural Hall, London.

## November 17th to 22nd.

The Public Health Congress and Exhibition, which will be held from Monday, November 17th, to Saturday, November 22nd, at the Royal Agricultural Hall, London, will be opened by the Rt. Hon. Arthur Greenwood, M.P., Minister of Health, who in doing so will address the Delegates. Each day, up to Friday inclusive, papers will be read by well known men on subjects connected with public health and important meetings of associations will also take place every day.

During the week of the Exhibition a series of important demonstrations will be held, on the Exhibition premises, of various types of mechanically propelled municipal vehicles.

In order to make this possible the organisers have, at considerable expense and with outstanding enterprise, arranged for the laying of a length of roadway, which will be complete in all respects to meet the requirements of the demonstrations.

The length of the road will be 150 ft. with a width of 30 ft. The surface will be cambered in order to take off the surface water and a patent channelling will be installed, complete with gullies and manholes.

The organisers invited tenders from a group of road firms whose material would be suitable for this work. The chief considerations being the speed required for laying the roadway—only 6 days being available for preparation, and after the demonstration the whole of the work was to be cleared away in readiness for the Smithfield Show that would follow.

After careful consideration of all the suggestions put forward, it was decided that the quotation and scheme submitted by Unaphalt Roads, Ltd., should be accepted, whilst the footpaths and channellings are to be placed in the hands of the Liverpool Artificial Stone Co., Ltd. John Knowles, Ltd., will supply the gullies.

Demonstrations will be held each day, and on Wednesday afternoon of November 19th a special Demonstration is to be arranged before the members of the Institution of Municipal and County Engineers, who have nominated a group of experts who will judge the claims of the manufacturers in respect of the vehicles demonstrated.

It is anticipated that many local authorities will accept this unique opportunity of witnessing the performances of the respective vehicles before making a choice for their individual requirements.

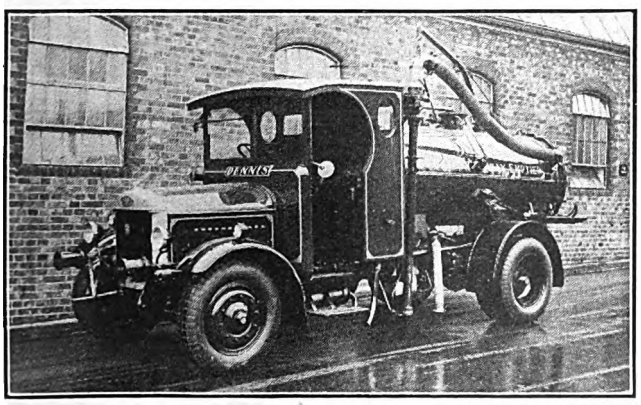
The demonstrations will be open to all the Delegates and other officials attending the Exhibition, but tickets will be necessary to obtain admittance to the Gilbey Hall.

**Allan Taylor Engineering & Manufacturing Co.**, 126/128, High Street, Wandsworth, London, S.W.18. The exhibit will comprise a 7 cubic yard capacity hydraulic tipping A.T. low loader.

**Chloride Electrical Storage Co., Ltd.**, Clifton Junction, Nr. Manchester. The exhibits of this firm will be (1) The "Keepalite" system of automatic emergency lighting in hospitals and public institutions, which will be shown in actual operation. (2) Chloride batteries for all lighting services, and (3) Exide-Ironclad batteries for the propulsion of electric trucks in hospitals and institutions, also for propelling electric refuse-collection vehicles for sanitary service.

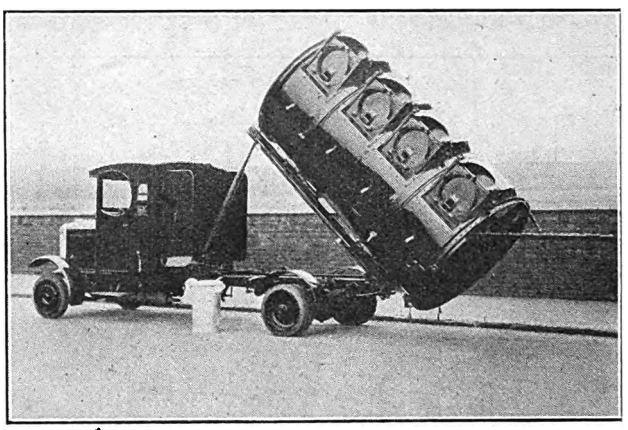
**D.P. Battery Company, Ltd.**, Bakewell, Derbyshire. The exhibits will comprise a comprehensive display of "Kathanode" batteries as supplied to cleansing and other municipal departments, together with sectional cells showing the manner in which the patent "Kathanode" separators are fitted, in order to prevent loss of active material from the plates. In addition, D.P. Stationary cells will be shown, as supplied for lighting hospitals and other public institutions.

**Dennis Bros., Ltd.**, Guildford. The exhibits of this firm comprise:—(1) a 2-ton refuse collector with a capacity of 7 cubic yards which is provided by the specially designed steel body which tapers outwards towards the rear to facilitate emptying. The chassis of this collector is a Dennis 2-tonner with forward control giving maximum body space, wheelbase 10 ft. (2) A 550 gallon gully emptier will also be shown, which machine is available for street-sprinkling, sewer-flushing, channel-flushing and cesspool-emptying, by the incorporation of special fittings to the tank. This machine has been specially designed for use in towns having insufficient work to justify the purchase of a large machine. Neither of these two machines briefly referred to have previously been exhibited at any show.

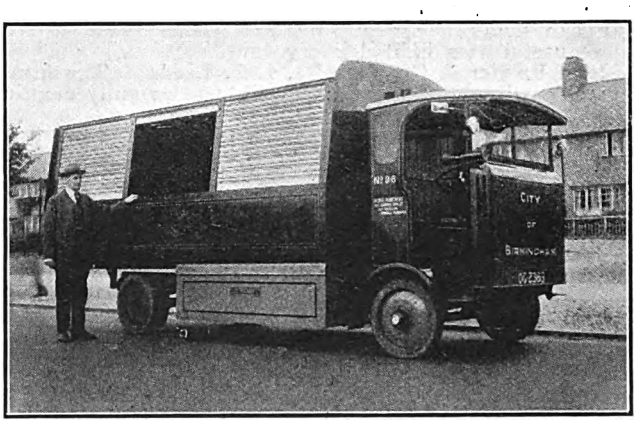


THE DENNIS 550 GALLON GULLEY-EMPTIER.

**Eagle Engineering Co., Ltd.**, Eagle Works, Warwick. The exhibits will comprise (1) an Eagle patent rotary bin changing trailer as shown in the accompanying photograph. This ensures a most perfect dustless and hygienic system for refuse collection, and is designed to carry 88 bins, giving low loading facilities. (2) An Eagle patent hygienic refuse body mounted on an A-3 Thornycroft chassis, the body of which is fitted with patent dustless covers to prevent the refuse blowing about. The vehicle has a low loading line and is fitted with an automatic opening taildoor and hydraulic tipping gear. (3) A similar outfit to the above but mounted on a Vulcan 35-40



THE NEW EAGLE DUSTLESS REFUSE COLLECTOR.



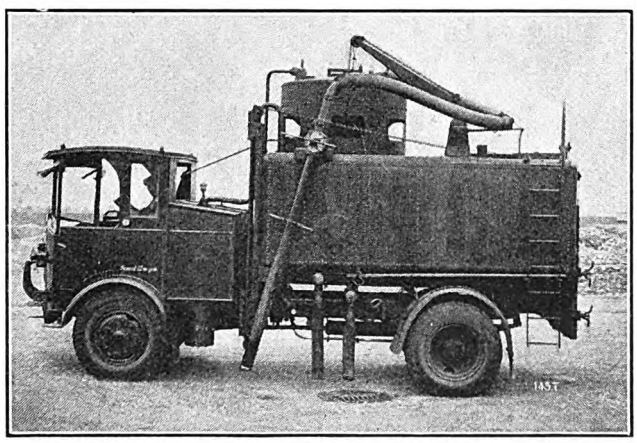
A 3½-TON LOW LOADING REFUSE COLLECTION MACHINE SPECIALLY BUILT BY ELECTRICARS, LTD., FOT THE CITY OF BIRMINGHAM.

Digitized by Google

cwt. chassis will also be shown. (4) A New-Eagle rotary refuse collector for use with tractors or motor chassis. Perfect dustless system worked in conjunction with Ess-Em bins.

**Electricars, Ltd.,** Lawley Street, Birmingham. This firm will exhibit their Electricar 3½-ton low-loading refuse collection machine, specially built for the Borough of Southampton, fitted with their new patent rolling shutters. The fixed canopy on the top collects rising dust. The steel shutters can be manipulated with the greatest ease and will stay in any position. The increased body capacity which is afforded by these shutters allows for bulky and light refuse without packing, although the height of the body will allow a packer inside if required. A similar vehicle to the above, specially built for the City of Birmingham, fitted with their patent rolling shutter, as shown in the accompanying photograph, will be exhibited in Gilbey Hall.

**Ford Motor Co. (England), Ltd.,** Trafford Park, Manchester. The exhibits entered by the Ford Motor Company, Ltd., include the following:—Ford 30 cwt. truck. Many improvements have been made in this useful vehicle during the past year. It is perhaps the most adaptable of all commercial vehicles and is used, not only by carriers for their lighter transport, but by traders of all kinds. Ford hydraulic three-way tipper. The new Ford three-way tipper enables the load to be dumped exactly where it is required in the minimum of time. The hydraulic pump which is driven off the gear box is brought into engagement by a detachable lever in the floor of the cab in which position it is easily reached by the driver when he is in the cab or standing at the side of the vehicle. Fordson industrial tractor. This well-known machine owing to its small size, light weight and 21 ft. diameter turning circle can be manœuvred in spaces too confined for any other method of mechanical transport. Ford enclosed light van. This vehicle now has increased loading space, smarter body lines, sliding windows to the cab doors and other features which make it still more useful as a light delivery van.



THE FOWLER PATENT GULLY EMPTIER.

**John Fowler & Co. (Leeds), Ltd.,** Leeds. The firm's exhibits will comprise the "Fowler" steam gully emptier which has many uses including the emptying, cleansing and re-sealing of gullies, emptying cesspools, street washing and sprinkling, channel damping, kerb washing, sewer flushing, etc. It can also be used for supplying steam or hot or cold water under pressure for cleansing purposes, and apparatus can be fitted for injecting disinfectant into the gullies after cleansing. Another exhibit, here illustrated, will be the petrol gully emptier which is built on the same lines as the vehicle mentioned above except that the power unit is a petrol engine instead of steam. This machine will be used for demonstration purposes.

**General Vehicle Co., Ltd.,** 15, Devonshire Street, Bishopsgate, E.C.2. The exhibits will comprise a G.V. 2-ton low loading electric vehicle and a G.V. six-wheel heavy low loader.

**Karrier Motors, Ltd.,** Karrier Works, Huddersfield. This firm's exhibits will comprise:—(1) A standard "RSC" type road sweeper, sprinkler and collector, 200 of which are being operated in this country by progressive municipalities. (2) A standard "CYR" type 2½ ton low loading refuse collector with end tipping body of 8 cubic yards capacity, as illustrated. This machine will be equipped with metal dust covers, mechanically operated. (3) A "DRC" type dustless refuse collector, also here illustrated, which has recently been placed on the market. The totally-enclosed body will have a capacity of ten cubic yards. (4) Of interest will be their new Three Wheel low loading refuse collector with a capacity of six cubic yards, which is to be shown in public for the first time. The vehicle incorporates a 7 h.p. power unit, has a maximum speed of 25 m.p.h. and can turn completely round in a 20 ft. circle. Under full load conditions the machine has a petrol consumption of 14 m.p.g. The bodywork of the machine exhibited will be tipped hydraulically and can be fitted with roll up canvas covers.

**Morris Commercial Cars, Ltd.,** Soho, Birmingham. This firm will exhibit two vehicles, namely:—A Morris-Commercial 35/40-cwt. refuse collection vehicle with all steel body and sliding metal covers. This is on their standard 11 ft. wheel-base chassis with 4-cylinder engine developing 35 h.p. The body is built with small wheel arches to give the lowest possible loading line and it is tipped by hydraulically operated gear. Their second exhibit will be a 35/40-cwt. long wheel-base refuse collection vehicle as illustrated. The chassis has a 13 ft. wheel-base which

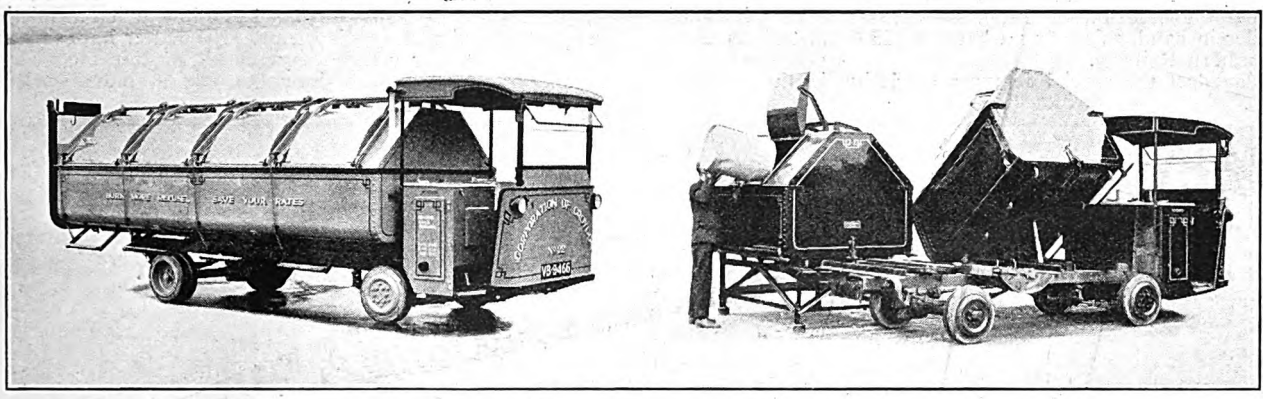
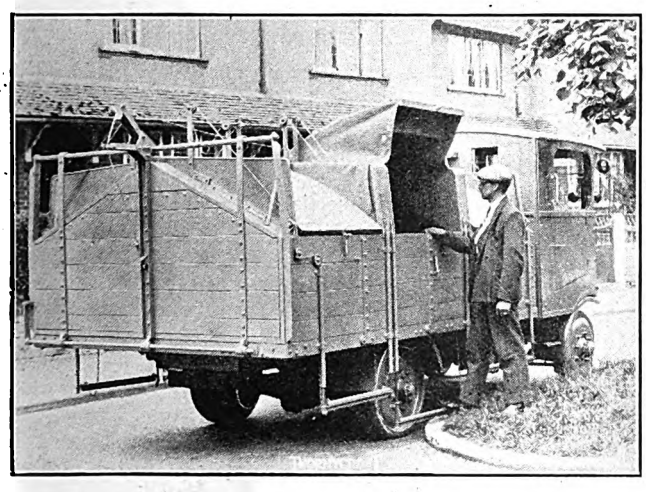
Digitized by Google

allows for an extra large body and ample accommodation for the driver, behind the engine. It has a 4-cylinder engine developing 35 h.p. This vehicle has a very low loading line of only 4 ft. 6 in. from the ground to the top of the highest part of the sides. A fleet of similar new refuse vehicles has just been supplied to the City of Norwich.

**Shelvoke & Drewry, Ltd.**, Letchworth, Herts. The three exhibits of this firm will include one, a Freighter dustless loading refuse collection vehicle, as illustrated. This vehicle has a body of 10 cubic yards capacity, 14 ft. long by 6 ft. wide at the front, tapering to 6 ft. 6 in. wide at the rear. This Freighter has a loading level of 4 ft. 5 in. The second exhibit, also illustrated, is a 6 ft. 9 in. wheelbase Freighter chassis fitted with special hydraulic side tipping gear and mounted with two 2¼ cubic yard refuse containers. The third exhibit will consist of one Freighter dust cart with hand operated metal covers having a body of 10 cubic yards capacity.



LEFT: 10 CUB. YARD S.D. FREIGHTER DUSTLESS LOADING REFUSE COLLECTION VEHICLE. RIGHT: S.D. FREIGHTER CONTAINER VEHICLE.



THE LATEST TYPE OF THORNYCROFT FORWARD CONTROL LOW-LOADING HYGIENIC REFUSE COLLECTING LORRY.

**John I. Thornycroft & Co., Ltd.**, Thornycroft House, Smith Square, London, S.W.1. The only exhibit on this firm's stand, their latest forward control low loading hygienic refuse collecting lorry, here illustrated, should be of special interest to public health authorities. The body is a patent of the Eagle Engineering Co., Ltd., of London and Warwick.

**Tuke & Bell, Ltd.**, 1, Lincoln's Inn Fields, London, W.C.2. The two exhibits of interest on this stand will be (1) a low-loading vehicle of 6 cubic yards capacity for the collection of house refuse, consisting of 30-cwt. low loading chassis, and (2) an improved type of horse-drawn low loading dust cart.

**Unic Automobiles, Ltd.**, 303-5, Cricklewood Broadway, Cricklewood, London, N.W.2. The exhibit of this firm will consist of their "Unic" low load line refuse collecting vehicle with mechanically operated tipping gear.

**Vulcan Motor & Engineering Co. (1906), Ltd.**, Crossens, Southport. The exhibits will comprise the Vulcan "Stoke" type 30/35-cwt. refuse collector with grit spraying attachment. The Vulcan 35/40-cwt. "O.K." patent refuse collector, and the Vulcan 70-cwt. gully emptier and street sprinkler.

**Walker Bros. (Wigan), Ltd.**, Pagefield Works, Wigan. This firm's exhibits will comprise a 4-ton chassis specially designed for refuse collection to work in conjunction with horse-drawn containers not greater than 8 cubic yards capacity. The principal feature on this chassis is the engine, which is of the 3-cylinder "Gardner" compression ignition type. A 7 cubic yard container with an all steel body will also be shown.

**F. Walters & Co.**, Albert Street, Rugby. The exhibits comprise two of this firm's special models of refuse collecting vehicles, Model A.1., a two-wheeled horse-drawn cart with 4 ft. 7½ in. load-line, 4½ cubic yards capacity with 4 ft. wheels fitted with roller bearings; and Model B., a four-wheeled horse-drawn wagon with capacity of 6 cubic yards, and load-line 4 ft. 7 in. There will also be shown a Simplex gritting machine for covering slippery roads.

**Yorkshire Patent Steam Wagon Co.**, Hunslet, Leeds. The exhibits will comprise a Yorkshire gully emptier which will also be fitted with street washing and sprinkling apparatus. The gully emptying apparatus is of the Yorkshire patented type. It utilises the principle of separate vacuum tank and sludge tank, enabling a working vacuum to be raised in 10 to 15 seconds. The capacities of the tanks are as follows:—Vacuum tank 110 gallons, sludge tank 900 gallons and resealing water tank 1,000 gallons. Waste water can be drained off at any time.

---

**Saving of 2d. per Mile.**—When Mr. R. Stuart Pilcher discoursed on "Some transport problems" at the Manchester Rotary Club on October 30th, he spoke of the possibilities of the Diesel engine, which, he said, could cheapen transport by 2d. a mile per vehicle. A vehicle incorporating the Diesel engine had been purchased for Manchester, and he hoped to test it on the streets in a few weeks time. By adopting the Diesel engine, he said, it would be possible to use fuel which could be made in great quantities by gasworks. Petrol buses travelled five miles per gallon of petrol which cost about 1s. per gallon. The price of crude oil was about 5d. a gallon and enabled buses to run fifteen miles to the gallon. That meant a cost of a halfpenny a mile instead of 2½d.

**Bus Developments.**—Messrs. Orange Bros., of Bedlington, are building a 30-bus garage there, and have ordered 12 new A.E.C. buses for the extension of their London-Newcastle service. The acquisition of new garage premises at Morpeth, the purchase of new buses, and additions to the staff, are among the extensions to the business of Messrs. F. W. Jermy & Co., Ltd., who work a service between Alnwick, Morpeth, and Newcastle.

**Northern Transport Owners' Association.**—In view of the Road Traffic Act, private bus owners in the North-Eastern area have formed the Northern Transport Owners' Association, and elected as their first chairman Mr. Joseph Orange, of Messrs. Orange Bros., Bedlington, pioneers of the London-Newcastle service.

# Harrow Trailers.

WE recently paid a visit to the works of the Harrow Industrial Co., Ltd., at Green Lane Works, Stanley Road, South Harrow, Middlesex.

All kinds of trailers are made by the firm ranging from 5 cwt. to 15 tons and include 2, 4 and 6 wheelers.

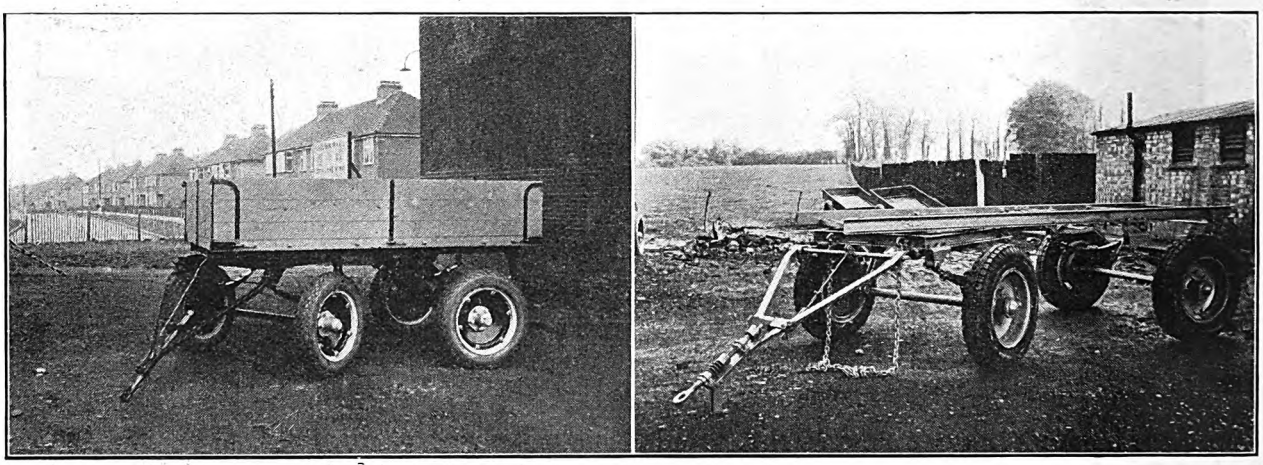
On the occasion of our visit we saw a very interesting order in hand, this being a batch of 15 6-ton trailers for the Southern Railway.

Amongst the special features of design in the "Harrow" trailers are that all frames are constructed of best quality channel steel and are electrically welded throughout. The pinless turntable is of large diameter and so constructed as to reduce wear through tractive effort and distribute the load over the greatest possible area. This patented turntable also damps out the tendency of a trailer to swing. There is no restriction of lock and the trailer can easily be operated by one man when detached from the hauling unit. The "Harrow" type of turntable obviates the tendency found in pin type turntable trailers to roll over when the wheels are at full lock. The double acting spring draw bar absorbs starting and "over run" shocks thereby safeguarding the hauling unit. By the use of the combination of double acting draw bars and turntables perfect tracking is obtained. All parts on "Harrow" trailers are machined to jig thus allowing interchangeability which is a great advantage.

A very useful feature embodied in certain of the "Harrow" Trailers is the spring balanced draw bar. There is often the risk of physical injury, when van boys have to handle trailer draw bars owing to the weight which has to be lifted and held horizontal. To overcome this, the patent design provides for two long coil torsion springs around the draw bar pivot. These are so arranged that the draw bar can be raised practically without effort from about 4 inches from the ground to above the horizontal.

Another feature worthy of note is that the lever for hand operation of the brakes has been moved to a position in front of the turntable, where it can be operated laterally and without danger in the most congested spots.

Regarding the automatic trailer brake, this is extremely simple in operation and is planned to allow action at all times in exact accord with requirements. No matter how slowly or quickly the towing vehicle may retard, so does the over-run of the trailer cause the draw bar eye to move backward against a coil spring. This, in turn, bears upon a lever coupled through a brake rope to a laterally disposed cross-shaft which is connected by rods to the camshaft levers of internal expanding brakes.



LEFT: A 20/30 CWT. HARROW TRAILER. RIGHT: A 3/4 TON HARROW TRAILER WITH AUTOMATIC BRAKING.

One of the very interesting group of trailers made by the firm, is that specially designed and approved for use with Chevrolet Commercial vehicles.

As with all the firm's trailers the frame is electrically welded throughout there being no rivets or nuts to loosen under vibration. It has double acting draught-gear which prevents passage of load (inertia at starting or stopping) or road shocks to frame, engine and transmission of the hauling unit. Free turntable and spring draught-gear together ensure correct result at any angle for the tractive effort of the towing vehicle, and therefore, securing undeviating tracking of the trailer. The trailer is designed to enable the user to interchange rims of the hauling unit with those of the trailer. The wheels have great peripheral and lateral strength, the generously dimensioned boss ensuring long life through distributed loading of ball bearings. The axle is of Solid Bright Steel of 2⅛ in. diameter fitted with sturdy axle brackets. Semi-elliptical springs fitted at front and rear are of ample strength. Lubricators are provided throughout.

All the features referred to and incorporated in "Harrow" Trailers are patented.

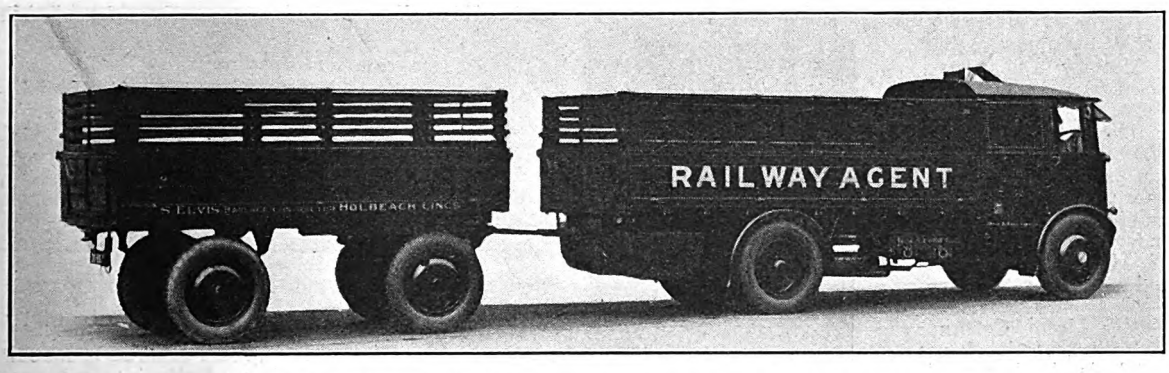
# Motor Notes.

**A Foden Outfit for Beet Haulage.**—We illustrate a Foden "Speed-Six" 6-ton Steam Wagon and 4/5 ton Trailer, recently supplied by Fodens, Limited, Elworth Works, Sandbach, to Mr. S. Elvis, of Holbeach, Lincolnshire. These vehicles are mounted on interchangeable pneumatic-tyred wheels and hinged cratch extensions are fitted to the body sides to facilitate the unloading of sugar-beet.



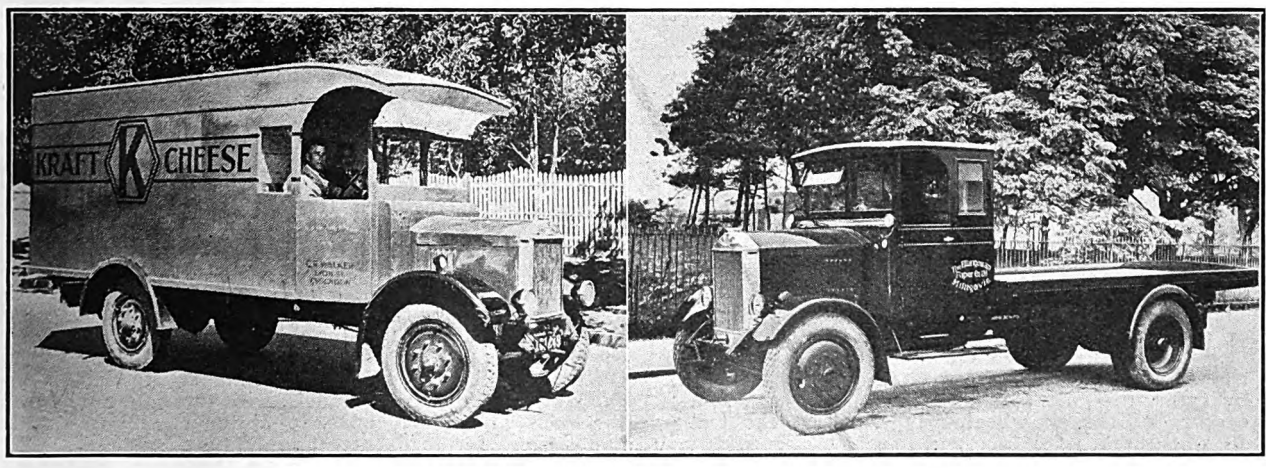
A FODEN "SPEED-SIX" 6-TON STEAM WAGON AND 4-5 TON TRAILER.

**Bean Commercial Vehicles.**—We have received from Bean Cars, Ltd., Tipton, Staffs., a copy of the firm's latest publication dealing with the Bean 40-45 cwt. (Forward Control) Commercial vehicle and the 80 cwt. Bean (Forward Control) Commercial vehicle. The catalogue points out that (a) the forward control allows increased body space, approximately three to four feet; (b) an improved turning circle; (c) the load is distributed between the wheelbase to a greater extent. Most of the castings, drop forgings, and stampings are produced in the firm's own plants; only accessories which call for specialist production being purchased outside the factory, and these components are of the highest grade.

**Albion Vehicles Overseas.**—One of our illustrations shows a 30-cwt. Albion van recently supplied by the Albion Motor Car Co., Ltd., Scotstoun, Glasgow, to Mr. C. R. Walker, of Essendon, Victoria, Australia. Not only at home but also in various overseas countries has this model demonstrated its ability to stand up to heavy work under arduous conditions. Our other photograph shows an Albion pneumatic tyred 4-tonner of standard type recently supplied to the Ellangowan Paper Company, Ltd.

**Renold Products for Industrial Applications.**—Hans Renold, Ltd., Burnage Works, Didsbury, Manchester, have issued their Industrial Price List for 1930-31. The new products, which have been introduced during the last twelve months, briefly are:—Chain Clutch which is efficient, cheap and supplied from stock; Bush Roller Chains.—A ¾ in. and 1 in. pitch in the Triplex and a 4 in. pitch in the Single and Duplex series; Chain Couplings.—Aluminium Covers of minimum weight combined with strength and ensuring efficient lubrication; Tools for Inverted Tooth Chains.—Modified type at reduced prices; Chain Tensioner.—Two types, Standard and Compensating; Chaincase—with built-in pump and sump; Rivet Extractors.—Two new designs; Conveyor Chains.—Grease Gun Lubricated chains in the Solid Stud series are now available, and chains can also be supplied in stainless steel and other metals. The firm's Branch Offices carry stocks of all their standard products.

**British Farm Tractors for Algeria.**—In the face of keen competition from American, German and other foreign trade rivals, the Rushton Tractor Company, whose factory at Walthamstow specialises in the production of farm and industrial tractors, has just secured a large and important contract for the supply of its machines to the French colony of Algeria. The initial order, it is understood, calls for the immediate despatch of a considerable number of machines. Further substantial orders are expected to follow. The contract was awarded not only on account of the superior performance of the British tractor over all foreign makes, but also because the keenest price bids of competing firms were successfully met. Hitherto, the tractors used in Algeria—an important agricultural territory—have been almost exclusively of American manufacture.

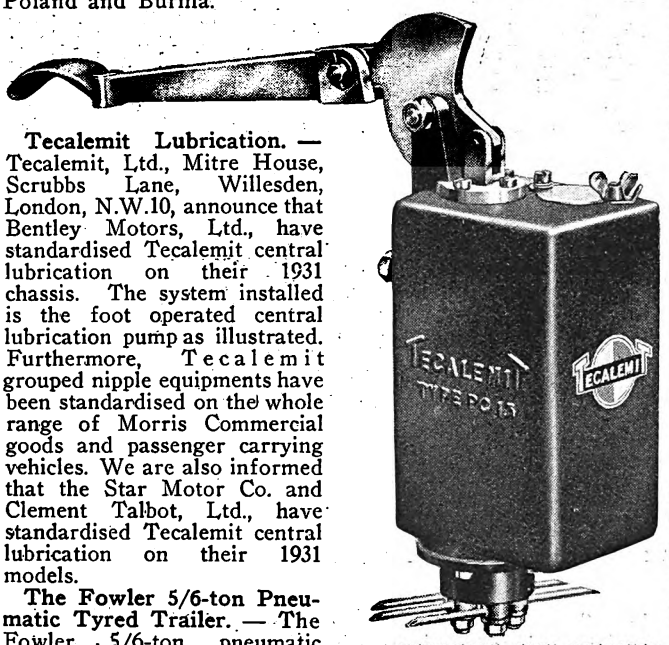


LEFT: AN ALBION 30 CWT. VAN FOR SERVICE IN AUSTRALIA. RIGHT: AN ALBION 4 TONNER FOR THE ELLANGOWAN PAPER CO., LTD.

**Recent "Sentinel" Deliveries.**—The "Sentinel" Waggon Works, of Shrewsbury, inform us that they have recently received a large number of orders for their various models. Their rigid six-wheelers—the D.G.6—have been supplied to many well-known firms, prominent amongst whom may be mentioned The Cement Marketing Company, of London (repeat order for 9 D.G.6's), The St. Albans Sand & Gravel Company (repeat order for 2 D.G.6's), and Messrs. Hibberts, Limited (2nd repeat order for D.G.6's). Many D.G.4's have also been delivered

Digitized by Google

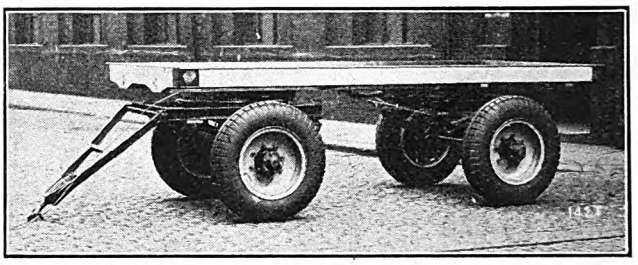
during the last few months and amongst those on hand are orders for L. F. Briggs, Ltd. (repeat order for 2 D.G.4's) and The Cement Marketing Company (repeat order for 5 D.G.4's). "Super-Sentinel" Waggons and "Sentinel" D.G. Tractors have also been in demand, many repeat orders for the former having been received, whilst Tractors are now being shipped to places as far apart as Poland and Burma.



THE TECALEMIT FOOT OPERATED CENTRAL LUBRICATION PUMP.

**Tecalemit Lubrication.** — Tecalemit, Ltd., Mitre House, Scrubbs Lane, Willesden, London, N.W.10, announce that Bentley Motors, Ltd., have standardised Tecalemit central lubrication on their 1931 chassis. The system installed is the foot operated central lubrication pump as illustrated. Furthermore, Tecalemit grouped nipple equipments have been standardised on the whole range of Morris Commercial goods and passenger carrying vehicles. We are also informed that the Star Motor Co. and Clement Talbot, Ltd., have standardised Tecalemit central lubrication on their 1931 models.

**The Fowler 5/6-ton Pneumatic Tyred Trailer.** — The Fowler 5/6-ton pneumatic tyred trailer is of R.S. channel sections strongly braced and gussetted and soundly rivetted together. The rear subframe is built up of R.S. sections and the two cross members are extended full width of platform to support the side rails. The fore-carriage is constructed of M.S. sections suitably arranged to withstand severe shocks and strains. Fitted with large diameter turning rings of M.S. and centre bearings of C.S. allowing ample movement on uneven road surfaces without distortion of frame members. King pin fitted with steel coil shock spring. The springs are of best laminated steel, long bearing centres of suitable strength and flexibility to suit load, the front end of each spring being fixed and the rear sliding free in a guide bracket. The wheels are of detachable pressed steel disc centres, fitted with Dunlop giant pneumatic tyres 36 in. by 8 in. and carried on cast steel bosses, housing roller and ball



THE FOWLER 5/6-TON PNEUMATIC TYRED TRAILER.

bearings which are adequately protected from dust, etc. Fixed axles of square section steel accurately machined on journals. The brake gearing of the internal expanding type, Ferodo lined, acting on pressed steel drums on the two rear wheels, and operated by flexible steel cable from haulage unit, or by hand lever on trailer side. The platform is formed of well seasoned oak framing with 1¼ in. thick planed, tongued and grooved oak boards, securely fixed together. Lip edges protected by M.S. beading. Fittings, number plate and tail lamp bracket of standard type.

## Some Notes on the Paris Exhibition.

**(By Our Special Correspondent).**

THIS year, as in England, there was no real exhibition of commercial and passenger vehicles in Paris, but many well-known firms had small stands at the "Salon" and were exhibiting their products on the fine "Esplanade des Invalides" just across the Seine. Amongst those who were so exhibiting, the following may be mentioned:—

Berliet (Automobiles M.) Lyons, were exhibiting commercial vehicles of from 3 to 6 tons capacity, including their well-known tippers with steel bodies. They were also showing a six-cylinder six-wheeled luxury motor coach with a seating capacity of 14, and also a luggage compartment and lavatory in the rear.

Bernard (Camions) Arcveil, Seine, were showing a very fine six-cylinder van, suitable for fast transport work, with a capacity of 5 tons, shod with giant pneumatics.

Chenard & Walcker (Automobiles) Gennevilliers, Seine, in conjunction with the firm of Lagache & Glaszmann, of Argenteuil, Seine and Oise, were showing complete units, tractor and trailer for loads of almost any size. The chief exhibit which aroused much interest was a tractor and trailer, mounted throughout on Michelin "Comfort" balloon tyres, carrying a load of 25 tons of stone. The tractor was of the six-wheeled type, whilst the trailer had 10 wheels.

Citroen (Ste. An. Anché), Paris. The exhibit comprised a very complete range of vehicles, with capacities up to 1½ tons, for all purposes, from fast delivery work, with the six-cylinder chassis, to tippers and refuse vans. The Société de Transformations, Boulogne sur Seine, Agents of the Truck & Tractor Appliance Co., Ltd., were showing modified Citroen chassis, one a six-wheeled vehicle and the other a tractor and trailer, both intended for a useful load of 3 tons.

Coder (Etablissments), Marseille, were showing some of their two and four-wheel trailers for a variety of purposes, the most interesting being a four-wheel trailer carrying an elliptical storage tank and pump.

Delahaye (Société des Automobiles), Paris, were exhibiting vehicles for fast transport work with loads up to 2½ tons, and also a 5 ton lorry on Michelin "Comfort" balloon tyres.

Laffly (Etablissements A.) Asnières, Seine, were exhibiting several public service vehicles, and also a very fine chassis specially suitable for motor coach work, being fitted with a six-cylinder engine and a compound gear box giving six speeds.

Latil (Automobiles industriels), Suresnes, were showing lorry chassis and tractors, including their four-wheeled drive and steering tractor fitted with special adhesion device.

Lavigne (Etablissment Paul), Paris, were showing several models of the A.S. lorries, including 3 and 6 ton six-cylinder vehicles for fast transport work and also a vehicle fitted with a two-cylinder heavy oil engine manufactured under Junker patents.

Michelin et Cie, in conjunction with several of the firms exhibiting, were showing various 5 and 6 ton vehicles mounted on Michelin "Comfort" balloon tyres, and also a tractor and trailer, previously mentioned, carrying a useful load of 25 tons or a total load of 33 tons on the tyres.

Renault (S.A. des Usines), Billancourt, Seine, were showing all their latest models, with the radiator in front, for loads of from 10 cwts. to 7½ tons and also tractors and trailers for loads of 6 and 12 tons.

Saurer (Automobiles industriels), Suresnes, Seine, were holding a special exhibition at their works and, for the convenience of those interested, they were using one of their motor coaches with a six-cylinder heavy oil engine, for communication between the "Salon" and their works.

S.O.M.U.A., Saint Ouer-sur-Seine, were showing 4 and 6 cylinder vehicles suitable for heavy transport in connection with public works and road construction, either with or without tipping arrangement.

Willeme (Etablissments), Nanterae, Seine, were exhibiting a vehicle fitted with a two-cylinder two-stroke heavy oil engine, manufactured under Junker Patents, suitable for heavy loads at low speeds.

Willys Overland Crossley, Ltd., Stockport, England, were exhibiting their well-known six-cylinder vehicle suitable for loads up to 7 tons.

# County Court Judgments.

THE following returns from the Registry of County Courts' Judgments, Whitehall, have been received relating to judgments entered up in the respective County Courts of England and Wales. Publication does not imply inability to pay. Many judgments may have been settled between the parties or paid. Judgments settled otherwise than through the Court may appear unless "satisfaction" is entered up within twenty-one days from judgment or allocatur. Registered judgments are not necessarily for debts. They may be for damages or otherwise, they may relate to actions *bona file* contested between the parties, or they may be against defendants, liable in a representative capacity, and not personally; but no distinction is made on the register. Judgments are not returned to registry if satisfied in Court books within twenty-one days.

Wm. John, Maesgwyn, Bryn Road, Loughor, Glam., haulage contractor. £94/4/5. July 4th.
David Sambrook & Sons, Kilgerran, Pembroke, haulage contractors. £63/6/7. July 17th.
A. Sutton, Higher Bank, Cherry Lane, Lymm, Ches., carting contractor. £22/9/2. July 17th.
Jno. Holland, 23, Central Street, Hasland Road, Chesterfield, haulage contractor. £71/8/10. July 29th.
Albt. Grubb, Agnes Villa, Rayleigh Road, Thundersley, Essex, (Tdg. as Grubb & Son), carman. £25/14/7. July 31st.
Lion Transport Co., 48, High Street, Dunmow, Essex, transport contractors. £39/7/10. July 30th.
A. Hinder & Son, Morton, Thornbury, Glos., haulage contractors. £47/1/8. July 15th.
Stephen Pickering, 17, Pendlebury Street, Miles Platting, Lancs., general carrier. £29/18/0. July 31st.
F. Brooke Smith, 200, Warrington Road, Glazebury, Lancs, haulage contractor. £81/14/6. July 11th.
Jno. Walmsley, 350, Deane Road, Bolton, Lancs., carrier. £30/8/6. July 30th.
Nancy Landsman, Arches, Dorset Street, Commercial Street, London, E., transport contractor. £47/12/3. July 3rd.
L. E. Webb, 9, Alderney Avenue, Jersey Road, Hounslow, London, E., haulage contractor. £36/13/0. July 26th.

Wm. Nettleton, St. James Street, Wetherby, Yorks., haulage contractor. £63/16/3. August 6th.
Jas. Smith, 18, Rutland Street, Sheffield, haulage contractor. £26/17/7. July 25th.

# The Gazette.

## Dissolutions of Partnership.

CHARLES THOMAS PIDGEON and ARTHUR WYNDHAM PIDGEON, trading as Charles Pidgeon and Son, 163a, Cowbridge Road, Mill Road, Ely, Newport Road, The Heath Halt Sidings, and the Quarry Fairwater, all Cardiff, haulage contractors, etc. 30th September, 1930.

HORACE DEWHIRST and NORMAN DUNCAN, trading as "The Reliable Transport Company," 24, Listerhills Road, Bradford, motor haulage contractors, etc. 30th September. All debts by Norman Duncan who will continue.

RICHARD HAWS and GEORGE WHELAN, trading as Haws and Whelan, 9-11, Back Towerland Street, Edge Hill, Liverpool, haulage contractors. 30th September. All debts by Alexander Critchley, I.A., 50, Sir Thomas Street, Liverpool.

FREDERICK FRANK GOYMER and EVELYN GOYMER, trading as F. & E. Goymer, 38, Vicarage Lane, East Ham, London, E.6, haulage contractors. 18th January, 1929. Evelyn Goymer will continue.

## The Bankruptcy Acts, 1914 and 1926. Bankruptcy Proceedings.

HENRY EDWARD SMITH, 6, Trinity Grove, Bridlington, Yorks., lately trading as The Premier Transport Co., Beaconsfield Garage, Bridlington, and 17, Mytongate, Kingston-upon-Hull, haulage contractor. Receiving order, September 23rd.

HARRY PARRY, 13, Chapel Street and The Railway Station Yard, both Conway, Carnarvonshire, haulage contractor. Receiving order and order of adjudication, September 23rd.

WILLIAM ROBERTS, trading as W. & T. Roberts, and subsequently as William Roberts Junior, Avon House, Penmaenmawr, Carnarvonshire, haulage contractor, etc. Receiving order and order of adjudication, September 23rd.

EDMUND HARRIS ANDRE, 28, Cliffs Parade, Leigh-on-Sea, Essex, lately 243, Cromwell Road, South Kensington, London, motor haulage contractor. Receiving order and order of adjudication, October 1st. Public examination, November 19th, in London.

REGINALD MASON, Thorpe Underwoods, Ouseburn, Yorks, haulage contractor. Receiving order and order of adjudication, September 30th. Public examination, November 28th, in Harrogate.

WALTER FREDERICK CLARKSON, 352, London Road, Croydon, Surrey, haulage contractor. Receiving order, October 2nd. Public examination, November 20th, at Croydon. Order of adjudication, October 17th.

JOHN PITCHFORTH, 9, Victoria Street, West Vale, Halifax, Yorks., haulage contractor, etc. Receiving order and order of adjudication, October 6th. Public examination, December 11th, at Halifax.

## Notices of Dividend.

SYDNEY EDWARD TEMPLE, 75, Sheep Street, Northampton, lately Rothersthorpe Road, Far Cotton, Northampton, haulage contractor. No. 19 of 1929. First and final of 3s. 8d. in the £. Payable Kingham Chambers, Northampton.

SYDNEY CATOR, White Hart Lane, Swaffham, haulage contractor. No. 12 of 1930. First and final of 2s. 6d. in the £. Payable at the Official Receiver's Office, 41, Sydney Street, Cambridge.

FRED POLLARD, Highbury Mount, Headingley, Leeds, motor haulage contractor. No. 69 of 1929. First and final of 2s. 2¾d. in the £. Payable at the Official Receiver's Office, 24, Bond Street, Leeds.

JOHN THOMAS HACKING, 12, Dugdale Road, Burnley, Lancs., haulage contractor. No. 25 of 1929. First and final of 6¼d. in the £. Payable at the Official Receiver's Office, District Bank Chambers, Blackburn.

## Applications for Discharge.

HENRY THISTLETON, 138, Lee Street, Kingston-upon-Hull, lately Camerton, Burstwick, East Riding, Yorks., haulage contractor. November 12th, at Kingston-upon-Hull.

ARTHUR FRANCIS YOUNG, trading as Frank Young, 1, Birkbeck Road, Ilford, Essex, motor haulage contractor. November 17th, at Chelmsford.

## The Companies Acts.

### Winding up Order.

KING'S SERVICE COACHES LTD., 19 Clapham Park Road, London, S.W.4. Winding up order, September 24th.

## New Companies.

**Southend Express Carriers, Ltd.** (251,230). — Private company. Registered October 7th. Capital £1,000 in 900 10 per cent. participating preference shares of £1 each and 2,000 ordinary shares of 1/- each. Objects: To carry on the business of general carriers, transport agents, etc. The first directors are to be appointed by the subscribers. Secretary: E. Howard.

**H. Pye & Son, Ltd.** (251,287). — Private company. Registered October 10th. Capital £10,000 in £1 shares. Objects: To acquire the business of motor haulage and road transport contractors, carried on by H. Pye, Mrs. M. F. Pye and J. F. E. Pye at 75 and 77 Cranham Road, Bermondsey, and elsewhere as "H. Pye and Son." The directors are: H. Pye, Mrs. M. F. Pye, J. F. E. Pye. H. Pye and J. F. E. Pye are the first joint managing directors. Registered office: 75-77 Cranham Road, Bermondsey, S.E.16.

**International Express Services, Limited.** (251,317).—Private company. Registered October 11th. Capital £5,000 in 2,500 10 per cent. cumulative preference and 2,500 ordinary shares of £1 each. Objects: To carry on the business of proprietors and users of motor omnibuses, motor chars-a-banc, touring carriages, etc. The directors are: J. Hancock, Beatrice Hancock, W. H. Andrews.

**Motor Services, Ltd.** (8,048). — Private company. Registered October 11th in Dublin. Capital £1,000 in £1 shares. Objects: To carry on the business of jobmasters, general carriers, bonded carmen, etc. The directors are: J. D. Furey, R. Walsh.

**Ebor Bus Company, Limited.** (251,378).—Private company. Registered October 15th. Capital £1,000 in £1 shares. Objects: To carry on in Mansfield and elsewhere the business of running motor omnibuses of all kinds, etc. The first directors are to be appointed by the subscribers. Secretary (pro tem.): T. Wood.

**Hurstview Motor & Engineering Company, Ltd.** (251,473).—Private company. Registered October 20th. Capital £2,000 in £1 shares. Objects: To acquire the business of transport contractors and motor and general engineers, carried on by E. W. Hewett and C. C. Jacobs, at 339 High Street, Stratford, E., as the "Hurstview Motor and Engineering Company." The first directors (to number not less than 2 nor more than 4) are: E. W. Hewett, C. C. Jacobs. The directors, together with one other member of the company representing one-fifth of the total issued capital, have power at any time to appoint any other person to be a director.

**F. W. Cottis, Ltd.** (251,472). — Private company. Registered October 20th. Capital £1,000 in £1 shares. Objects: To carry on the business of haulage and cartage contractors, proprietors and hirers of vehicles of all kinds, farmers, market gardeners, dairymen, etc. The directors are: Miss Gladys H. Denson, Miss Olive M. Hurrell, A. H. Oliver (all permanent, subject to each holding £100 shares or stock). Secretary (pro tem.): F. Lavy. Registered office: East Street, Prittlewell, Essex.

**Public Works Transport, Limited.** (251,602).—Private company. Registered October 24th. Capital £100 in £1 shares. Objects: To carry on business as sand and ballast merchants, dealers in gravel, shingle, breeze, workers of lorries, omnibuses and other vehicles, etc. The first directors are to be appointed by the subscribers. Secretary: E. Boden.

**Wm. Young & Sons (Road Transport Contractors, Smithfield), Ltd.** (251,664).—Private company. Registered October 27th. Capital £3,000 in £1 shares. Objects: To carry on the business of general carriers, cartage and motor contractors, railway and forwarding agents, carmen, job masters, etc. The first directors (to number not less than 2 nor more than 5) are: W. Young, senr. (governing director), F. A. Young, W. Young, jnr. Registered office: Tenby Villa, Harvist Road, N.7.

**Auto Pilots, Ltd.** (251,714).—Private company. Registered October 30th. Capital £10,000 in £1 shares. Objects: To carry on the business of motor garage proprietors, motor, mechanical, electrical and general engineers, haulage contractors, manufacturers of motor engines and chassis, motor body builders, etc. The first directors (to number not less than 2 nor more than 7) are to be appointed by the subscribers.

**Springfield Motor Haulage & Transport Co., Ltd.** (251,726).—Private company. Registered October 30th. Capital £1,000 in £1 shares. Objects: To carry on the business of haulage and removal contractors, carting agents, general carriers, motor engineers, etc. The directors are: C. B. F. Tucker, L. Llewellyn. Registered office: 42 Spring Gardens, Manchester.

**S. & S. Haulage, Ltd.** (251,844).—Private company. Registered November 5th. Capital £100 in £1 shares. Objects: To carry on the business of haulage contractors, garage proprietors, coal and coke merchants, coal and ironmasters, carriers, manufacturers and repairers of and dealers in automobiles, motor cars and cycles, etc. The directors are: W. Sewell, J. Short. Registered office: 42 Stanley Street, Liverpool.

## Mortgages and Charges.

**B. B. P. Omnibus Company, Ltd.** — Debenture dated September 24th, 1930, to secure £1,800, charged on the company's property, present and future, including uncalled capital. Holder: G. Whybrow, 1 Kenneth Road, Chadwell Heath.

**J. W. Gammans & Co., Ltd.**—Deposit on September 26th, 1930, of deeds of land at Kingston-by-Sea, Sussex, to secure all moneys due or to become due from the company to Barclays Bank, Ltd.

**W. Turpin & Sons, Ltd.**—Two mortgages dated September 29th, 1930, to secure £3,500 and £1,650 respectively, charged (1) on land and premises at Teats Hill Road, and (2) on 12a Commercial Street, both in Plymouth. Holders: Miss A. Dunstan, "Leafield," Dawlish Road, Teignmouth, and I. Foot, 21 Lockyer Street, Plymouth.

**J. T. Grey & Company, Ltd.** — Mortgage debenture charged on company's interest in certain land, buildings, garages, and premises at Upwey, Dorset, and the company's undertaking and property, present and future, including uncalled capital and goodwill, dated October 1st, 1930, to secure all moneys due or to become due from J. T. Grey to Lloyds Bank, Ltd.

**Goodfellow Services (1930), Ltd.**—First mortgage debenture dated October 9th, 1930, to secure £2,100, charged on the company's undertaking and property, present and future, including uncalled capital. Holders: Mosley Street Nominees, Ltd., 38 Mosley Street, Manchester.

**Perkins' Omnibus Co., Ltd.**—Charge on freehold land, garage and bungalow at Bread and Cheese Hill, Thundersley, dated October 22nd, 1930, to secure £1,100. Holders: London Permanent Benefit Building Society.

# Editorial Notes.

### London Traffic Board.

The rationalisation of passenger transport carried out all over the country by the railway companies, in conjunction with the various road passenger organisations, has been carried still further in the proposals outlined in the official advertisement of the proposal by the Minister of Transport to introduce in the next session of Parliament a Bill for the establishment of a Transport Board for the London Traffic Area. This gigantic scheme, which is to take the place of the previous plans for co-ordinating London passenger transport, will transfer to a public authority all the passenger facilities at present being carried on by various organisations in the London Traffic Area. The powers of the proposed Board, which are outlined in the statutory advertisement, will be very comprehensive, as it is proposed to transfer the entire London County Council Tramways, together with all the undertakings of the London Tube Railways, the Metropolitan Railway, the London General Omnibus Company, the London United Tramways Company, and all the smaller municipal companies operating in the London area. It is also proposed to transfer to the Traffic Board the tramways at present run by various local authorities in Barking, Bexley, Croydon, The City of London, Dartford, East Ham, Erith, Ilford, Leyton, Walthamstow, and West Ham, while the Middlesex County Council and the Hertfordshire County Council come within the scope of the proposed Bill for a portion of their undertakings. The notice setting forth particulars of the duties of the Traffic Board state that they will be to manage, maintain, carry on, co-ordinate or develop the existing undertakings, to operate public service vehicles both within and without the London traffic area, and to manufacture rolling stock, vehicles and appliances. While it is not proposed to bring the suburban traffic of the main line railways into the scheme the Bill will make provision for co-ordinating the working of the undertakings of the Traffic Board and those of the main line railways so as to enter into agreements for levying, fixing, apportioning or pooling any tolls, fares, or charges.

This means that the new authority will have an entire monopoly of passenger transport within the London traffic area and further enterprise by private concerns or individuals will be entirely eliminated. While one views with regret, and some amount of misgiving, a step which will take away any form of competition and will curtail the business enterprise which has built up our great transport organisations, it must be admitted that the traffic of London has reached a stage when some complete form of co-ordination has become essential, if congestion is not to continue to an increasing extent. The London Traffic Advisory Committee has been working for years to improve traffic conditions; to prevent congestion, and to speed up the traffic, and has done a great deal of useful work in this connection. At the same time the results which would otherwise have been shown have been very greatly minimised, because at the same time the traffic on the streets has been increasing so rapidly, that any benefit which would have resulted has been largely neutralised. It is the intention of the Minister of Transport that the Board should consist of experts in transport and the high officials will probably be drawn from those at present occupying leading positions in the various concerns which are to be taken over. This should guarantee a continuity in the organisation and ensure that those who have given their best years to London traffic will still be at the head of the proposed Board to guide its work.

### A Mechanical Horse at Last?

During the past quarter of a century we have investigated numerous claims made by engineers to have produced a motor vehicle or tractor which could actually be claimed to supersede the horse both for economy and for service in confined areas. In spite of this the horse up to now has held its place for goods transport where cheapness and short hauls were the first essential. When

Digitized by Google

we had the opportunity therefore of seeing a demonstration of the new machine built by Karrier Motors, Ltd., from the design of Mr. J. Shearman, the road motor engineer of the London, Midland and Scottish Railway, we were not too optimistic of the results. The railway companies still employ some 35,000 horses for collection and delivery work in London and the larger cities and towns throughout the country and have a very great number of wagons in constant use. The idea was to produce a tractor which would take the place of a horse and be attached to the wagon, and which in all respects would do the work of the horse. After seeing the way in which it was manœuvred and put through its paces we believe the claims made for it are justified. This "mechanical horse" has been put through most exacting trials by the railway company's road transport department with the result that it is claimed that it is capable of performing the work of two horses at the cost of a horse and a quarter. Previously when vehicles of this description have been placed on the market they have failed to convince the horse user. The horse user has no prejudice against the mechanical horse; if it will do his work cheaper than the horse then he will not allow sentiment to stand in his way; he will use it and be glad to do so. Though one would imagine there could be no practical difficulty in the provision of a small motor vehicle which could do the horse's work as cheaply and as well, there apparently have been practical difficulties, otherwise the vehicle would have been produced and put into service long ago. We are not at all sure that really serious attempts have previously been made. Small vehicles of the tractor description have been placed on the market, but the demand has never been so encouraging as to justify the continuance of their production. The greater demand has always been for high speed and greater weight carrying or haulage capacity. We now have a great railway company demanding a vehicle which can compete with the horse at its own special work, namely, short journeys and manœuvrability in confined areas and this railway company announces that it is satisfied that the vehicle can do that which has been claimed for it. One of the vehicles has been in service at a railway goods depot for some weeks and is giving good results. On points of detail improvements are being made but there is every sign that a vehicle has been evolved that will haul wagons previously drawn by horses, and do it better and more economically. We have known for a long time there has been a movement on foot to prohibit the horse from our streets as being one of the principal causes of traffic congestion. The heavy cart horse, which it is sought to displace by the mechanical horse, has the disadvantage of being slow moving, even on a straight course and so he can and does reduce a whole street of traffic to a speed not greater than his own, about four miles an hour. The mechanical horse, it is stated, travels at a speed of 18 miles per hour with a 3-ton load behind it, that is on a level road, and it can be stopped and re-started with its load on a gradient of 1 in 8. Our readers will watch this experiment with more than ordinary interest because, if successful, it will mean much more to them than at first appears.

## Road Traffic Area Commissioners.

We publish in this issue a list of the Road Traffic Commissioners who have been appointed by the Minister of Transport to fill eleven of the thirteen positions and to have charge of road transport in the areas which will be under their control. In announcing these names in the House of Commons, Mr. Morrison mentioned that as the commissioners would have to take counsel together from time to time, he had purposely selected men of varying experience. We do not know whether it is intended that these officials should form a kind of executive council, meeting at regular intervals and discussing points which have arisen and generally taking counsel together about the problems which will confront them as they carry on their work. If this is the intention then the appointments are admirably suited to this end, as amongst them are Chief Constables, Barristers, Army Officers, a Colonial Official, a Railway Official with transport experience in India and Rhodesia, a well known Municipal Tramways Manager, a Traffic Manager used to controlling all kinds of road transport, both passengers and goods, and last but not least a Trade Union Official who has had experience as a member of the London and Home Counties Advisory Committee and is at present National Secretary of the Commercial Road Transport Section of the Transport and General Workers' Union. The new Commissioners under the Minister of Transport will have in their hands the wellbeing of road transport and upon them will depend very largely the successful working of the Road Traffic Act as regards passenger transport.

## Proposed Ban on Motor Coaches.

The proposal, with which the Minister of Transport is credited, to forbid motor coaches to come within a certain radius of Charing Cross early next year is causing a great deal of heart-searching amongst those who are engaged in the motor coach business. It is not clear exactly where the circle will be drawn into which motor coaches are to be forbidden to go, but it is anticipated that it will include the area of about a mile and a half from Charing Cross. Such a scheme would have a very serious effect on the business of those engaged in long distance motor coach services as it would prevent them depositing their customers at such central positions as is now done and it would probably mean that, having brought their passengers almost to their destination, the remainder of the short distance would have to be undertaken by underground rail.

## Railway Wages.

A position of very grave importance has been brought about by the proposals of the railway companies, which have been fully published and dealt with in the daily press, to reduce the wages of railwaymen by a very serious amount. The period of truce having come to an end the Trade Unions put forward claims for increased pay and it was inevitable that the railway companies should take the opportunity of putting forward their proposals for drastic economy in wages and at the same time for alterations in the conditions of employment which would enable them to effect very great economies. The results shown month by month of railway traffic make it clear that something big in the way of economies had to be faced, and as the cost of labour is the outstanding expense in all transport services it was inevitable that this should be considered as the first line of attack. It is only natural that the Trades Unions concerned should oppose such alterations and the whole question has now to be considered by the Central Trades Board and afterwards by the National Trades Board.

## Air Goods Services.

The plans for utilising the established air services, particularly in the carriage of light goods, are making rapid progress and the arrangements between the four British railway companies and Imperial Airways, Ltd., will shortly be in operation. Goods sent under this scheme will be carried by rail to the nearest aerodrome, being sent thence to the Continent by air service and finishing up, if necessary, by another rail journey. On long distances a very big saving of time will undoubtedly be effected and this new development will be watched with great interest.

### Motor Hirers and Coach Services.

The Annual Meeting of this Association, reported in this issue, will be read with interest by all private firms engaged in carrying on passenger transport services. The position of these independent companies is seriously threatened by the Road Traffic Act; by the proposal to establish an area in central London into which motor coaches are to be forbidden to enter, and by the proposal to establish a Traffic Board for the whole of London's passenger transport services. During the course of his report Mr. Logette made a strong appeal for increased support from associations throughout the country on the ground that these bodies, which were doing useful work in their own localities, should add their influence to the national body and thus strengthen the organisation. Suggestions were put forward for linking up Provincial Associations with the Motor Hirers' and Coach Services Association by means of affiliation and it was proposed that a joint committee should be formed to consider the best way of carrying out this proposal. The serious position of those engaged in running motor coach services renders it imperative that everyone interested in this branch of transport should give his full support to the work of the Association at a time when the very existence of such firms is at stake. The proposal outlined at the meeting is one which should have the support of all engaged in the business and it is to be hoped that the secretaries of local associations will adopt the suggestion to write to Mr. R. P. Bailey, the Secretary of the Motor Hirers' and Coach Services Association, at 17, Water Lane, Great Tower Street, London, E.C.3, with a view to organising some scheme of affiliation as has been outlined.

### Industrial Councils Bill.

A Private Member's Bill, under this title, has been introduced to the House of Commons, the object being to form Industrial Councils in connection with every industry for which it seems practicable and expedient and also to legalise voluntary agreements when such have been made. Developments which have taken place of recent years make it more than ever important that the two sides of any industry, i.e., employers and employed, should work together harmoniously for the good of the industry in which they are all so closely interested, and any such industrial council when formed will have the effect of bringing together the two elements which so often seem to be in opposition and will help towards the better organisation and the peaceful carrying out of changes which may be necessary from time to time in the industry.

# Chairmen of Traffic Commissioners.

THE Minister of Transport announces the following appointments as Chairmen of Traffic Commissioners under the Road Traffic Act, 1930. The Chairmen will take up their duties on or about the 1st January, 1931.

| Traffic Areas in England. | Name. | Previous Appointments. |
|---|---|---|
| Northern | **H Riches, Esq., O.B.E.** | Chief Constable, Middlesbrough. |
| North-Western | **W. Chamberlain, Esq.** | General Manager, Belfast City Tramways. |
| West Midland | **Colonel A. S. Redman, C.B., M.Inst.T., R.E.** | Formerly Assistant Director of Transport and now Assistant Adjutant-General, War Office. |
| East Midland | **J. H. Stirk, Esq., J.P., M.Inst.T.** | Transport Manager, Birmingham Co-operative Society. |
| South Wales | **A. T. James, Esq., K.C.** | |
| Western | **A. F. Nicholson, Esq., O.B.E.** | Chief Constable, Exeter. |
| Southern | **Major-General Sir R. Ford, K.C.M.G., C.B., D.S.O.** | Formerly Deputy Quartermaster-General. |
| South-Eastern | **Rowand Harker, Esq., K.C.** | |
| Traffic Areas in Scotland. | | |
| Northern | **Sir John Maxwell, C.M.G.** | After qualifying as a Solicitor in Scotland, has held Administrative Posts in the Colonial Service. |
| Southern | **Archibald Henderson, Esq.** | National Secretary, Road Transport Group (Commercial), Transport and General Workers' Union; Member of London and Home Counties Traffic Advisory Committee. |
| | **Sir E. Haviland Hiley, K.B.E.,** has also been appointed. He was formerly General Manager, New Zealand Government Railways; Member, Royal Commission on Local Government of Greater London and Chairman, Rhodesian Railways Commission. | |

**MR. H. RICHES** has been Chief Constable of Middlesbrough for the past 28 years, during which time he has been closely identified with the work of inspection, supervision and control of Public Service Vehicles and the licensing of drivers and conductors. He has special experience of the regulation and co-ordination of road passenger services and since 1927 he has been closely connected with the Tees-side Regional Committee for the control of Public Service Vehicles operating in North Yorkshire and South Durham, in the initiation of which he played a large part.

SIR E. **HAVILAND HILEY** was in the service of the North-Eastern and Great Northern Railway Companies between 1891 and 1913. From 1913 to 1919 he was General Manager of the New Zealand Government Railways. He was a Member of the Royal Commission on Local Government of Greater London (1921-23), and also served on certain special Committees to investigate transport conditions in India, Rhodesia and elsewhere. In 1927-28 he was Chairman of the Rhodesian Railway Commission.

**MR. WILLIAM CHAMBERLAIN** has been the General Manager and Engineer of the Belfast City Tramways and Transport Department since 1928. Prior to this appointment he was in charge of the Municipal Tramways and Transport undertakings at Oldham and Leeds. He is a Past-President of the Municipal Tramways and Transport Association and is a Member of the Institute of Transport.

**COLONEL A. S. REDMAN** is a Member of the Institute of Transport. During 1914-20 he was an officer of the Movements Directorate at the War Office, and acted as Liaison Officer with the Railway Executive Committee. From 1921 to 1924 he was Assistant Director of Movements and from 1924 to 1925 Assistant Director of Transportation, War Office, and has been Assistant Adjutant General at the War Office since 1926.

**MR. J. H. STIRK** is the Transport Manager of the Birmingham Co-operative Society. Prior to this appointment he was with the Midland Railway Company. He is a Justice of the Peace for the City of Birmingham; Vice-Chairman, Birmingham Section, Institute of Transport; Chairman, West Midlands Division, Commercial

Digitized by Google

Motor Users' Association; and Vice-Chairman, National Council, Commercial Motor Users' Association, and of the Birmingham Motor Coach Owners' Association.

**MR. A. T. JAMES, K.C.,** before being called to the Bar in 1911 practised as a Solicitor in Pontypridd. He has since practised in Cardiff and subsequently in London and on the South Wales Circuit and became a K.C. in 1928. Mr. James both understands and speaks the Welsh language.

**MR. A. F. NICHOLSON** is Chief Constable of Exeter, and in that capacity has had experience in the regulation and co-ordination of road passenger services.

**MAJOR-GENERAL SIR REGINALD FORD** served in the Royal Army Service Corps from 1893 to 1919. He thus acquired exceptional experience in the organisation of transport. He was in control of transport operations during the South African War, and during the Great War was Deputy Quartermaster-General at General Headquarters in France. From 1924 to 1929 he was General Manager and subsequently Managing Director of the Dunlop Rubber Company in India. From 1925 to 1929 he was Chairman of the West India Automobile Association.

**MR. ROWAND HARKER, K.C.,** was admitted as a Solicitor in 1900. He was called to the Bar in 1905 and practised on the South-Eastern Circuit and in London. Since 1919 he has practised at the Parliamentary Bar. He became a K.C. in 1926.

**SIR JOHN MAXWELL** was born in Kircudbrightshire, and after studying at Glasgow University, qualified as a Solicitor in Dumfries. Subsequently, he was appointed to the Colonial Service and has acted as Governor, Colonial Secretary, Attorney-General and Solicitor-General on the Gold Coast, where he has been Chairman of various Commissions and Committees including that on the re-organisation of the Government Motor Transport service.

**MR. ARCHIBALD HENDERSON** was born in Edinburgh and was at one time a tramway conductor; he is National Secretary of the Road Transport Group (Commercial) of the Transport and General Workers' Union. He has been a Member of the London and Home Counties Advisory Committee since August, 1929, on which he represents the interests of Labour engaged in the Transport Industry in the London Traffic Area.

## Personal Notes.

**Railway General Managers' Conference.** — Mr. James Milne, C.S.I., General Manager of the Great Western Railway, has been elected Chairman of the General Managers' Conference for 1931, in succession to Sir Ralph Wedgwood.

MR. JAMES MILNE, C.S.I.

**New Post for Mr. W. Chamberlain.** — His many friends will be interested to learn that Mr. William Chamberlain, General Manager and Engineer of the Belfast Corporation Tramways, has been appointed Chairman of the Area Commissioners under the Road Traffic Act for the North-Western Area. Before going to Belfast Mr. Chamberlain was General Manager of the Leeds Municipal Tramways and recently filled the position of President of the Municipal Tramways and Transport Association.

**Scottish Co-operative Wholesale Society.**—The retirement is announced of Mr. James C. Caldwell, who for nearly forty years has been Traffic Superintendent of the Scottish Co-operative Wholesale Society, Glasgow. Mr. Caldwell is one of the best known transport men in Scotland. Mr. Caldwell is succeeded as traffic superintendent by Mr. John Cairns.

**L.N.E.R. Appointment.** — The London and North-Eastern Railway Company have made the following appointment:—Mr. A. R. Wilson, Assistant to Cartage Manager, Southern Area, to be Cartage Manager, Southern Area, in succession to Mr. R. H. Todd, retired.

**Tyne Improvement Commission.**—Mr. H. P. Everett has been elected Chairman of the Tyne Improvement Commission in succession to Lord Kirkley (formerly Sir William J. Noble, Bt.), and Sir Arthur Munro Sutherland, Bt., is the new Deputy Chairman. Both are well known personalities on Newcastle Quayside. Mr. Everett is of the firm of Messrs. Witherington & Everett, shipowners, and Sir Arthur Sutherland is head of the Tyne-Tees Steamship Co. and the Sutherland Line.

**Institute of Transport.**—At a recent meeting of the Council of the Institute of Transport Mr. J. Milne, C.S.I. (General Manager of the Great Western Railway), was elected a Member of Council and Mr. W. V. Wood (a Vice-President of the London, Midland & Scottish Railway) was appointed Honorary Librarian of the Institute.

**Sir William Letts.** — We have been notified by Sir William Letts that he has resigned entirely from the Board of the Fisk Tyre Co., Ltd., both as Chairman and Director.

**Pagefield-Gardner Diesel Lorries.**—We are interested to note the formation of the Pagefield Commercial Vehicles, Ltd., a company associated with Walker Bros. (Wigan), Ltd., who are making the Pagefield-Gardner diesel vehicles. Of this new company Mr. G. R. Greenbergh, who introduced the Kerr-Stuart diesel lorry, is the Managing Director.

**A.E.C. Yorkshire Manager Joins Tillotsons.** — On October 1st last, Mr. H. Voyce, who, for the past five years, has occupied the position of A.E.C. Sales and Service Area Manager for Yorkshire, joined the firm of Oswald Tillotson (1929), Ltd., the new A.E.C. Northern Distributors, as Sales representative for the county mentioned. Mr. Voyce, with his wide experience and knowledge of transport work in this county, will undoubtedly prove an asset to the Company he is joining.

MR. H. VOYCE.

His association with the Motor Industry dates back to 1902 when he commenced duties with the Panhard Co. at High Road, Kilburn. After a period of much useful work in the commercial motor industry, he joined H.M. Forces and did four years service in the M.T. Workshops of the R.A.S.C.

**Lower Rates for Long Distance Journeys.**—There are still day and night motor coach services from Liverpool and Manchester to London, but the Liverpool rate has been drastically cut. Up to about the middle of October, the rate for the single journey was 15s. and return 27s. 6d. First one owner and then another departed from those fares, until now they are 12s. 6d. single and 20s. return. The position at Manchester is less clear, some owners quoting 20s. return and others 25s. return.

**Co-operation Proposed.**—Lancaster Omnibus Committee having considered a communication from Morecambe and Heysham suggesting a joint meeting of both corporations to discuss certain matters arising out of the Road Traffic Act, 1930, has directed its bus manager to prepare a report upon the advisability of running buses outside the borough. After this has been considered, it is probable that a meeting between the representatives of the two authorities will be arranged.

# Bills in Parliament.

## Applications to the Minister of Transport.

DURING the forthcoming Session of Parliament many Private Bills affecting the transport industry will be considered, and a number of applications to the Ministry of Transport recently made, or shortly to be made, are also of interest. So far as particulars are available to the time of closing for press, the following are among the points worthy of notice.

The most important measure is the London Passenger Transport Bill, which aims at the establishment of a Transport Board for the London Traffic Area. Among other matters proposed in this Bill are:—

(a) Transfer to the Board of the undertakings of the London Electric Railway, District Railway, Central London Railway, City and South London Railway, and District and London Electric Railways' Lots Road Power House Joint Committee, and of the businesses or parts thereof of the London General Omnibus, Co., Autocar Services, East Surrey Traction Co., Overground, Tramways (M.E.T.) Omnibus Co., Metropolitan Electric Tramways, London United Tramways, South Metropolitan Electric Tramways and Lighting Co., Morden Station Garage, Underground Electric Railways of London, Metropolitan Railway, Metropolitan and District Joint Committee, etc.

(b) Transfer to the Board of parts of the undertakings (consisting of the operation wholly or partly within the London Traffic area of services of public service vehicles within the meaning of the Road Traffic Act, 1930) of Thomas Tilling, and of Tilling and British Automobile Traction.

(c) Transfer to the Board of the tramway and trolley vehicle undertakings owned by any local authority operating within or partly within the London Traffic area.

(d) Transfer to the Board of the undertakings of various bodies and persons within the London Traffic area in connection with the running of omnibuses.

(e) Transfer to the Board of the public service vehicle business of any body or person who may at any time hereafter run public service vehicles within the London Traffic area (so far as such business may be carried on within the said area).

(f) Transfer to the Board of rights and interests of the Metropolitan Railway or the District Railway in the East London Railway Joint Committee, Hammersmith and City Railway Joint Committee, Metropolitan and London and North Eastern Railways (Watford Joint Railway) Committee, Metropolitan and Great Central Joint Committee, and Whitechapel and Bow Railway Joint Committee.

(g) Powers to operate public service vehicles within and without the London Traffic area and to manufacture rolling stock.

(h) Provisions for co-ordinating the working of the undertaking of the Board and the undertakings of the L.M. & S.R., the L. & N.E.R., the G.W.R., and the Southern Railway or any of them.

(i) Prohibition or restriction of the running within the London Traffic area of any public service vehicle which on any one journey both takes up and sets down any one passenger within that area. Exemption of the Board from any provisions of Part II. of the Road Traffic Act, 1930, and any provisions of Part IV. of the said Act relating to road service licences.

(j) Agreements between the Board and the L.C.C. for the exercise by the Board of powers of the L.C.C. under the Thames River Steamboat Service Act, 1904.

Brighton and Hove Corporations and Thomas Tilling, Ltd., are jointly promoting a Bill for the incorporation of a Board, consisting of representatives of all three bodies, with power to work tramways and public services in Brighton, Hove, Portslade, Southwick and part of Shoreham.

The Yorkshire (Woollen District) Transport Bill relates to the abandonment of certain tramways, the repeal of certain powers and obligations of the Yorkshire (Woollen District) Electric Tramways, Ltd., and of the British Electric Traction Co., Ltd., and other matters.

The L.C.C. asks for authority to impose conditions as to structural arrangements for dealing with vehicular traffic in connection with cinemas and other buildings. It also asks for extension of time for the completion of works authorised by the L.C.C. (Lambeth Bridge) Act, 1924. The L.C.C. is also promoting a special "Vauxhall Cross Improvement" Bill, the nature of which is sufficiently indicated by its title. In this connection, the L.C.C. asks for powers to construct and work tramways and to abandon parts of existing tramways.

Accrington, Bacup, Brighton, Preston, Scarborough and Southampton wish to abandon certain tramways.

The Corporation of Hull asks for the incorporation of a Board for the construction and maintenance of a road, with a bridge carrying the same over the Humber, at Hessle, and for provisions as to tolls on traffic using the bridge.

Southampton Corporation seeks to take over the undertaking of the Southampton and Itchen Floating Bridge and Roads Co.

The Surrey C.C. Bill proposes to prevent ribbon development along county roads and intended roads.

Dagenham Council wishes to prohibit the filling of public motor vehicles with petrol when occupied by passengers. The Surrey C.C. and Gillingham and Romford Bills also contain provisions as to petroleum filling stations.

Powers with regard to control of traffic and/or hackney carriages are sought by Brighton, Gillingham, Portsmouth, Romford, Southampton, Tamworth and Taunton, and with regard to noise by Brighton, Dagenham, Romford, Southampton and W. Hartlepool. Blackburn and Portsmouth propose to make regulations as to weighing machines.

Darlington is applying to the Ministry of Transport for power to borrow further moneys for the purpose of its transport undertaking.

West Hartlepool desires to regulate the transport of food.

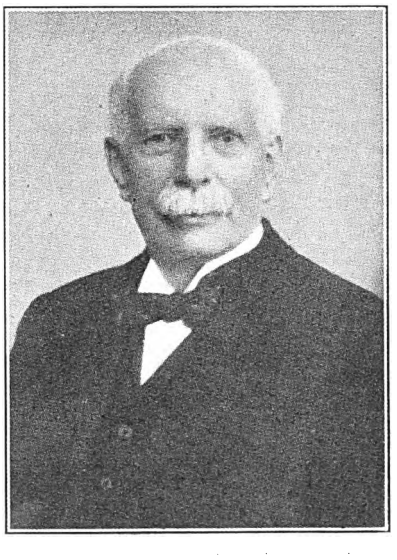
Various other public bodies seek powers which need not be set forth in detail here, but the general nature of all or some of the powers desired is indicated in the following table:—

| Powers sought (either new or in addition to or in extension of existing powers). | Name of authority or body. |
|---|---|
| To run motor or other omnibuses in and/or beyond their respective areas. | Bacup; Colne; Gloucester; Rotherham; Scarborough; W. Hartlepool; Wigan. |
| To run trolley vehicles in and/or beyond their respective areas. | Blackburn; Darlington; Doncaster; Ipswich; Preston; Scarborough; Southampton; Wallasey; York. |
| To restrict or prohibit competitive running of omnibuses or other services. | Blackburn; Brighton; Doncaster; Portsmouth; Southampton. |
| To increase temporarily or to continue temporary increases in the statutory maximum charges, or otherwise to increase or alter charges affecting the transport of goods. | Cowes Harbour; Gloucester Harbour; Grand Union Canal; G.W.R. (Harbours Piers and Docks); Lower Avon Navigation; New Junction Canal; Southwold Harbour; Warkworth Harbour; Calder and Hebble Navigation. |

# Obituary.

## Emile Garcke.

WE regret to record the death on November 14th, last, of Mr. Emile Garcke, M.I.E.E., a Past-President of the British Electrical Federation. Mr. Garcke had devoted himself to the development of electrical and kindred enterprises in the United Kingdom and abroad since 1883. He became Secretary of the Brush Electrical Engineering Company, in 1883 and occupied that position for 10 years subsequently becoming Chairman and Managing Director. He was very closely associated with the formation, in 1896, of the British Electric Traction Co., Ltd., of which he became Managing Director, only severing his connection in an executive capacity with that company and its subsidiaries in June last. In 1893 he became Managing Director of the Electric Construction Company of Wolverhampton. Mr. Garcke played a large part in framing the early legislation in connection with electricity supply in this country. He was a member of the Executive Committee of the Federation of British Industries, a member of the Institution of Electrical Engineers, Member of the Institute of Transport and was a Vice-President of the Tramways and Light Railways Association. The deceased gentleman leaves a widow and one son, Mr. Sidney E. Garcke, Chairman of Tillings & British Automobile Traction Limited.



THE LATE MR. EMILE GARCKE, M.I.E.E.

# London Cartage and Haulage Contractors Provident Institution.

## Annual Dinner.

THE London Cartage and Haulage Contractors' Provident Institution came into existence as long ago as 1864. It was established for the purpose of aiding aged and necessitous members of the cartage trade in London and their dependants and to maintain, clothe and educate the children of such members or of deceased members where circumstances warrant such assistance.

The attendance at the Annual Dinner of the Institution, held at the Connaught Rooms, London, on November 25th last, constituted a record which is gratifying not only to the gentlemen responsible for the administration of the Institution but to all those engaged in the industry and their friends who realise what the Institution has done in the past to help and comfort those who have stood sorely in need of assistance and what it is now doing and will undoubtedly be called upon in the future to undertake if it is to advance along the course contemplated by those who had the inspiration so long ago to set this ship of benevolence upon a voyage which can surely never be completed whilst the urge towards extending help and sympathy animates the breast.

The guests were received by **MR. P. R. TURNER**, the President of the Institution, and Mrs. Turner.

**SIR WALTER GILBEY, BART.**, proposed the toast of the Institution.

He said that those present were well aware of the great work their Institution had done for 67 years in relieving the suffering and the aged and those in the trade who were in distressed circumstances and in maintaining and watching over their children, and all cases that came before the Committee received the most sympathetic consideration. The administration expenses were very low, and he knew that those in the trade were as proud of their Institution as they were of their industry.

It was characteristic of those engaged in industries in Great Britain that they looked after their fellows when in distress and requiring assistance and no other country in the world could compare with us in this respect.

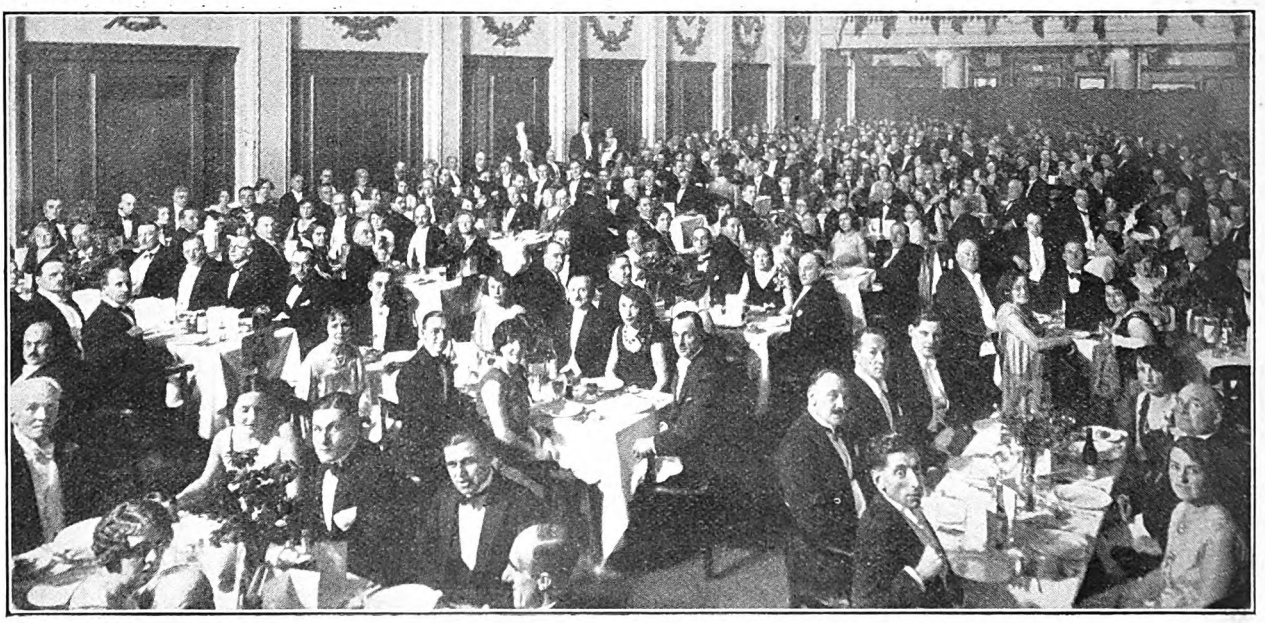
At the present time our country was suffering from an excessive and appalling burden of taxation and from a dwindling trade, and this must have a very serious effect upon benevolent institutions, and he did not know where the money was to come from for these deserving cases if things continued much longer in their present conditions, but as long as they had a currency note in their pockets they would most certainly try to help those who could not help themselves, and he did appeal, most earnestly, to all present to do all they could, and a little bit more, for their great Institution, because he was sure there was going to be in the future greater demands made upon all benevolent institutions and societies connected with the various industries of the country.

In his concluding remarks, Sir Walter Gilbey said that the merchants of this country, in the conduct of their businesses, depended entirely upon those engaged in the transport industry, and they did their job admirably well and were the manufacturers greatest asset.

He wished their Institution every success and he believed that as long as they invited ladies to their banquet their Institution would prosper. (Applause.)

**MR. P. R. TURNER, M.Inst.T.**, the President of the Institution, responded.

He thanked Sir Walter Gilbey for proposing the toast of the Institution in such happy terms. Sir Walter was an extremely busy man yet he always found time to come and support them at that annual dinner. (Applause.)



ANNUAL DINNER OF THE LONDON CARTAGE AND HAULAGE CONTRACTORS PROVIDENT INSTITUTION.

The toast, so ably proposed by Sir Walter Gilbey, was the toast of the evening, namely, that of their Institution which was so very dear to the hearts of all engaged in the transport trade of London.

Knowing that he was to respond to the toast he had got their Hon. Secretary, Mr. R. P. Bailey, to find for him the first Minute Book of their Institution and he found that it contained some very interesting details, but before referring to the happenings mentioned in that book he wished to acknowledge as sincerely as he possibly could the great work Mr. Bailey did in the interests of their Institution. Mr. Bailey's efforts were absolutely untiring and unselfish. (Loud applause.) Sir Walter Gilbey had referred to the fact that the expenses of the Institution were kept very low and that was due entirely to the hard work which Mr. Bailey did. (Applause.)

### LOOKING BACK.

In the old Minute Book to which he had referred he found that their Institution owed its existence to the efforts of nine men who met together in 1864 and at that first meeting Mr. Benjamin Abbott, who kept horses and cows in fields at Limehouse, was appointed honorary secretary—a position which he occupied for many years, and he was gratified to tell them that Mr. Benjamin Abbott's great-grandson had that evening put a cheque into his hand for a substantial amount for the work of the Institution. (Loud applause.) He doubted whether anyone could visualise fields with cows grazing in them at Limehouse to-day. (Laughter.)

Digitized by Google

Mr. Thomas Morrison Fairclough was the first President of the Institution and they had with them that evening at least two of his descendants. (Applause.)

The old pioneers of their Institution held their first dinner at the Crystal Palace; could they imagine anyone holding a dinner there to-day, especially in July or August, as they did in those days? (Laughter.) They also held a dinner or two at the London Tavern and one or two at Alexandra Palace, and now after 67 years they were holding their Annual Dinner at the Connaught Rooms in London.

THE NEEDS OF TO-DAY.

Since those early days the Institution had made enormous strides and the calls made upon it had been heavier than anyone could then have imagined. Some of their pensioners had received from the Institution as much as £1,000, and to-day he believed they had one pensioner who had received nearly £800. Sums were paid out regularly to their pensioners to help them in their declining days. (Applause.)

Sir Walter Gilbey had referred to the burden of taxation and the slump in trade. Undoubtedly members of the transport industry had received a severe blow and he was afraid that in some cases it was a mortal blow. Therefore, he did appeal to those who had so kindly come that evening and had made that their record banquet to open their hearts and respond to the appeal of the Institution for help to enable it to meet the calls of the future which appeared likely to be more heavy than any they had yet experienced. (Loud applause.)

**MR. J. H. TURNER,** proposing the toast of "Our Guests," said it had been a very important toast throughout the 67 years of the life of the Institution, because it had been largely supported throughout the years by the benevolence of guests who attended that annual dinner.

That night witnessed their record gathering and he thanked the guests for their kind interest, and in spite of the fact that we heard so much to-day of the equality of the sexes the day of chivalry was not yet passed and he therefore thanked the ladies for their attendance.

He had heard a story of a young lady who commented on the thickness of her grandmother's wedding ring—"Ah," replied the old lady, "when I was married wedding rings were made to last a lifetime." Out of the strength of the affections each had formed for the other in connection with the work of their Institution and which they trusted would last a lifetime did they hope to progress with the good work, and he trusted that the ladies would take a continued and ever growing interest in that work.

He cordially thanked Sir Walter Gilbey for his kind attendance and continued interest in their Institution.

To those in the transport trade Sir Henry Maybury, who was one of the gentlemen who would respond to the toast, was, of course, well known, and in the years to come people would look back and thank Sir Henry for the long view he had always taken, not only of the transport needs of to-day, but of the ever increasing needs of to-morrow, the to-morrow that always begins to-day. Sir Henry Maybury advocated the construction of our wonderful arterial roads and they hoped he would be spared many years to witness the fruits of his labour. (Applause.)

Mr. W. Edwards who would also respond was, as most of those present knew, the President of the National Road Transport Employers' Federation to which most of the transport associations were so closely allied. Mr. Edwards was doing great work for the transport industry. He possessed a very convincing personality, knew and understood his job, and was willing at all times to do everything humanly possible to help the transport trade. (Applause.)

Mr. C. le M. Gosselin, who had also kindly consented to respond to the toast, was the President of the Commercial Motor Users' Association, a very fine body of gentlemen, whom they thanked most sincerely for hearty co-operation in times of need. They welcomed also Mr. F. G. Bristow, the General Secretary of the C.M.U.A., who was always so willing and did so much for the transport trade. (Applause.)

They welcomed to their table Mr. Frank Elliott Assistant Commissioner of the Metropolitan Police, who had much to do with the immediate needs of the transport trade in the metropolis. They thanked Mr. Elliott for what he did which resulted in the smooth working of transport in the London area, and he was sure that all realised what a great organisation the Metropolitan Police Force was. (Applause.) It was the desire of the transport contractors of the metropolis—always to co-operate with the police in the best interests of all concerned.

He thanked all their guests for their kindly interest in the work of the Institution. He hoped they would go away and speak well of the Institution if they could—speak ill of it if they must, but if they would only talk about it then all would be well. (Applause.)

**SIR HENRY MAYBURY, K.C.M.G., C.B., C.B.E., J.P.,** responding, said it was true that in the course of his life he had, like the transport contractors, tried to make a precarious living on the streets. (Laughter.)

He had had the good fortune to be associated with their leaders, and with Mr. R. P. Bailey their eminent Hon. Secretary for many years. For the last five years he had been Chairman of the London and Home Counties Traffic Advisory Committee and if he had never before heard of the existence of the London Cartage and Haulage Contractors' Association they could be quite sure that so long as Joe Turner was their representative on that Committee he would never be allowed to forget its existence. (Laughter and applause.)

Something had been done for London traffic and although they might not agree, yet it was a fact that traffic passed along the streets of the metropolis three-quarters of a mile an hour faster than it did in 1924. (Applause.)

**MR. W. EDWARDS, M.Inst.T.,** President of the National Road Transport Employers' Federation, said he had been only too pleased to render what little assistance he could to the industry through the activities of the Federation, but he could assure his hearers that whatever he had accomplished could not have been done without the loyal support he had received at all times from their Chairman, Mr. P. R. Turner. (Loud applause.) It was fortunate that Sir Henry Maybury was with them in view of his association with the Ministry of Transport, as he could see how greatly benevolence had to enter into the life of commercial road transport and Sir Henry might, if it was necessary, testify to the fact that their industry was in a very delicate and sensitive condition and quite unable to withstand the shocks administered to it by the Ministry of Transport.

Wherever transport men gathered, the Road Traffic Act was discussed. That Act might prove to be the means of controlling traffic, but he did not hesitate to say for those engaged in actual transport that they thought the Act was a great experiment and one which might involve serious consequences and possibilities if the Ministry did not exercise discretion and judgment in effecting the change over; otherwise undoubtedly serious loss would be imposed upon those who might well claim to have been pioneers in the commercial road transport industry. (Applause.)

**MR. C. LE M. GOSSELIN, M.I.A.E., M.Inst.T.,** President of the Commercial Motor Users' Association, said that the dinner of the London Cartage and Haulage Contractors Provident Institution was a function which each President of the C.M.U.A. looked forward to as it gave him the opportunity of paying his personal tribute as well as that of the C.M.U.A. membership to the wonderful work which was being done by their Institution, and the C.M.U.A. regarded very highly the admirable way in which the Institution was presided over by Mr. P. R. Turner, aided so enthusiastically and loyally by Mr. R. P. Bailey. (Applause.)

**MR. W. H. HIXON,** proposing the toast of "The Chairman," said that as many of those present were aware, Mr. P. R. Turner was not only the President of their Provident Institution but he was President also of the London Cartage and Haulage Contractors' Association.

The Provident Institution had always been fortunate in having at its head gentlemen whose names were so well known in London transport circles and who had always been ready and willing to give of their best in the endeavour to help less fortunate members of their trade, and he was sure all would agree with him when he said that their Chairman maintained most worthily the traditions of the past. (Loud applause.) To recount to them the many activities of their Chairman would take him far too long, but he would like to mention his excellent work as Vice-President of the National Road Transport Employers' Federation in which capacity in conjunction with Mr. W. Edwards, of Liverpool, the President of the National body, he had done most valuable work particularly in connection with the Road Traffic Act. No man had done more for the transport trade in London and the provinces than had their Chairman. (Applause).

He did not suggest for one moment that they should canonise Mr. P. R. Turner, but he did say that if ever their Institution built a house of detention for misguided

Digitized by Google

meddlers in the intricate game of transport he had no doubt that a stained glass window would be installed to commemorate their Chairman. (Laughter and applause.)

Long might Mr. Turner remain on the bridge to guide them. (Applause.)

**MR. P. R. TURNER,** responding, said he was so conscious of his own shortcomings not to take all the kind things Mr. Hixon had said as being directed to him personally but to the Chair he had the honour to occupy.

Years ago they all were told the story of Cinderella. She was said to be young, charming, beautiful and, no doubt, clever, but it had always seemed to him that she failed to organise. (Laughter.) She did not even succeed in convincing her inferior and ugly sisters that she was more beautiful than they. He thought that the transport contractors were Cinderellas and one of their troubles was that they had failed to convince their ugly sisters that they were charming, young and clever. He hoped that when the time came, if it did come, when they would be fortunate enough to have a glass slipper presented to them that it would be found to fit them admirably, and that the Prince of good fortune would descend upon them. (Applause).

If he had been able to do anything to assist the industry he was very happy. He had been ably supported by those around him but he did wish that more members of the trade in London would realise that it was not right for the few to do the work of the many. If the many would take their part then he was sure that all would go on merrily. (Loud applause.)

## Hours of Industrial Employment Bill.

THE Hours of Industrial Employment Bill, to regulate the hours of work in industrial undertakings, has been introduced in the House of Commons by Miss Margaret Bondfield, the Minister of Labour, supported by Mr. William Graham, Mr. Attorney-General and Mr. Lawson.

This Bill is based upon the Washington Hours Convention of 1919. Its limits the statutory working hours of workers in industrial undertakings to eight in any day and forty-eight in any week (the "statutory limits"). Extensions of the limits are allowed as follows:—

(*a*) workers who are employed for less than eight hours on any day of the week may be employed up to nine hours on all or any of the other days subject to the weekly maximum of 48 hours.

(*b*) the hours of shift workers may be arranged so as to average not more than 48 hours over two or over three weeks.

(*c*) the employment of workers upon continuous processes may extend to 56 hours weekly upon an average over three weeks.

For the "statutory limits" of working hours other limits may be substituted on the agreed proposals of organisations of employers and of workers, subject to a weekly average of not more than 48 hours.

The working of 48 hours in a week of five days or less may be permitted subject to the agreement of the workers' organisation.

Preparatory and complementary work and essentially intermittent work may be permitted outside the statutory limits.

Overtime may be worked in order to deal with pressure of work which cannot be dealt with during the statutory working hours of the workers available. The payment for overtime must be at not less than time-and-a-quarter. Overtime must not exceed 32 hours in any period of 28 days; this maximum may be varied by regulation or order.

The restrictions upon working hours do not apply in case of accidents and other emergencies.

Employers are required to notify workers of their working hours and to keep records of hours worked.

Clauses 8 and 9 of the Bill deal with the enforcement of the provisions of the Bill, including the appointment of inspectors and the penalties for contravention.

Before making any order or any regulation relating to the arrangement of working hours, the Minister is required to consult organisations representing the employers and workers who will be affected. No such order or regulation affecting workers to whom Part IV of the Railways Act, 1921, applies may be made unless it is in accordance with a recommendation by the railway companies and the railway trade unions jointly or by the Central Wages Board or the National Wages Board. All regulations and orders are to be laid before both Houses of Parliament.

Power is taken to suspend the operation of the Bill in case of national emergency.

The Bill applies to work in mines (except as mentioned below), in quarries, in factories and workshops of all kinds, upon building and works of construction, at docks and upon warehousing and transport under contract.

Industrial branches or departments of non-industrial undertakings are included.

Non-industrial branches or departments of industrial undertakings are excluded, except that the Bill applies to the warehouse and transport branches of industrial undertakings notwithstanding that they may not be engaged upon warehouse and transport work under contract.

The Bill does not apply to undertakings confined to the employer's family, to persons engaged in supervisory, managerial or confidential capacities, to clerical workers, to home workers, to persons employed at sea, to persons whose hours of employment are regulated by the provisions of the Coal Mines Acts, 1887 to 1930, other than s. 92 of the Coal Mines Act, 1911, or to persons employed in agriculture.

The Bill applies to workers in industrial undertakings under the Crown or under local authorities as to other workers.

It is provided that shorter hours or higher rates of wages secured by custom or agreement shall not be affected by the Bill.

An increased charge on the Exchequer is proposed under Clause 8 in respect of the salaries of inspectors and other officers appointed for the purpose of enforcing the provisions of the Bill. It is contemplated that Inspectors should be appointed under the Bill only to the extent to which the assistance available from the existing industrial inspectorate is insufficient. It is not expected that the additional cost arising under Clause 8 will exceed £50,000 annually.

## Road Traffic Act, 1930.

PART I of the Road Traffic Act came into force on December 1st, with the exception of Sections 10, 17, 19 and 25.

Section 10 which provides for the abolition of the speed limit in the case of ordinary motor cars and motor cycles is to come into force on the 1st January, and Section 17 which deals with the requirements as to employment of drivers and attendants on motor vehicles and trailers will become effective on the same date.

Part II of the Act which deals with the provision to be made against third party risks arising out of the use of motor vehicles will come into force on the 1st January.

Part III of the Act which amends the law relating to highways and deals with the offences of neglecting to comply with traffic directions and of leaving vehicles in dangerous positions became effective on December 1st.

Part IV of the Act which deals with the licensing and regulation of public service vehicles (motor omnibus and motor coaches), came into force on December 1st, so far as was necessary to enable the Traffic Commissioners and their Staffs to be appointed. Further provisions of this Part of the Act are to come into force on the 1st January, for the purpose of enabling the Commissioners to receive applications for licences, consents, etc., and to consider them and reach decisions, but the final date on which this Part of the Act will become fully operative, i.e., when services of public service vehicles can be operated only under the Traffic Commissioners' licences, has not yet been finally determined. The provisional date which the Minister has in mind for this purpose is the 1st April, next.

Part V of the Act which confers additional powers on local authorities with respect to the running of public service vehicles is to come into force on the 1st January, for the purpose of enabling these authorities to apply to the Traffic Commissioners for their consent to run public service vehicles on new routes outside their areas and for enabling them to make the working agreements with other operators, whether municipal or private, which are authorised by Section 105 of the Act. It is intended that this Part of the Act should become fully operative at the same date as Part IV.

The Minister has already announced his intention of deferring the operation of Section 19 of the Act which deals with the limitation of time for which drivers of certain vehicles may remain continuously on duty until February 1st, but no Order with regard to the commencement of this Section has yet been made. The Minister proposes shortly to confer with representatives of the railway and canal companies and highway authorities with regard to the provisions of Section 25 which deals with the restriction of the use of weak bridges by heavy vehicles, but the date on which this Section, which will involve the replacement of a very large number of notices on bridges, will become operative has not yet been fixed.

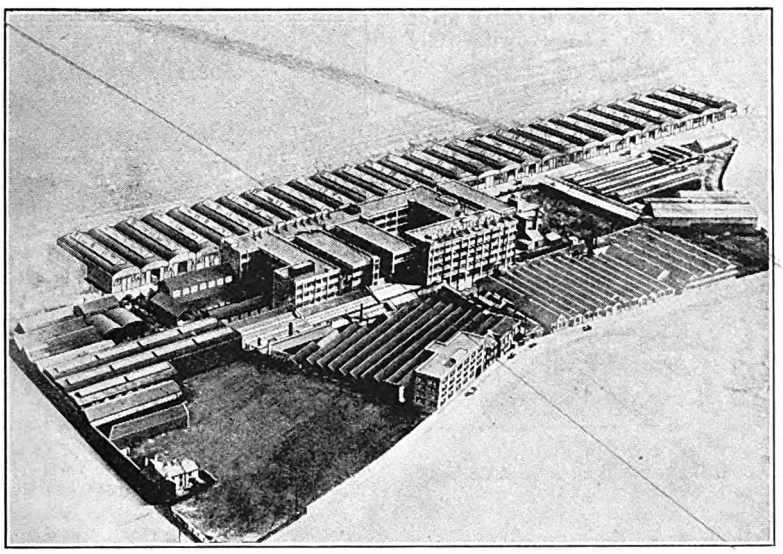
# Morris-Commercial Activities.

THE primary reason for a recent visit to the Morris-Commercial Works at Birmingham was to examine the new Leader 50-cwt. lorry which is now in full production, but a few words about the Morris-Commercial organisation will not be out of place and will add interest to the description of the vehicles which follows.

The Morris-Commercial Organisation which controls one of the largest commercial vehicle Works in Europe, has in the past concentrated its efforts on the production of light vehicles of 12-cwt. and one-ton capacity, and it was not till the 1930 season opened that any serious attention was directed towards the heavier vehicles. The growth of the Morris-Commercial Works has been remarkable. Little more than six years ago the factory was organised and production commenced at the rate of nine vehicles per week; now the output runs into hundreds a week and there are over 50,000 Morris-Commercial vehicles in service all over the world.



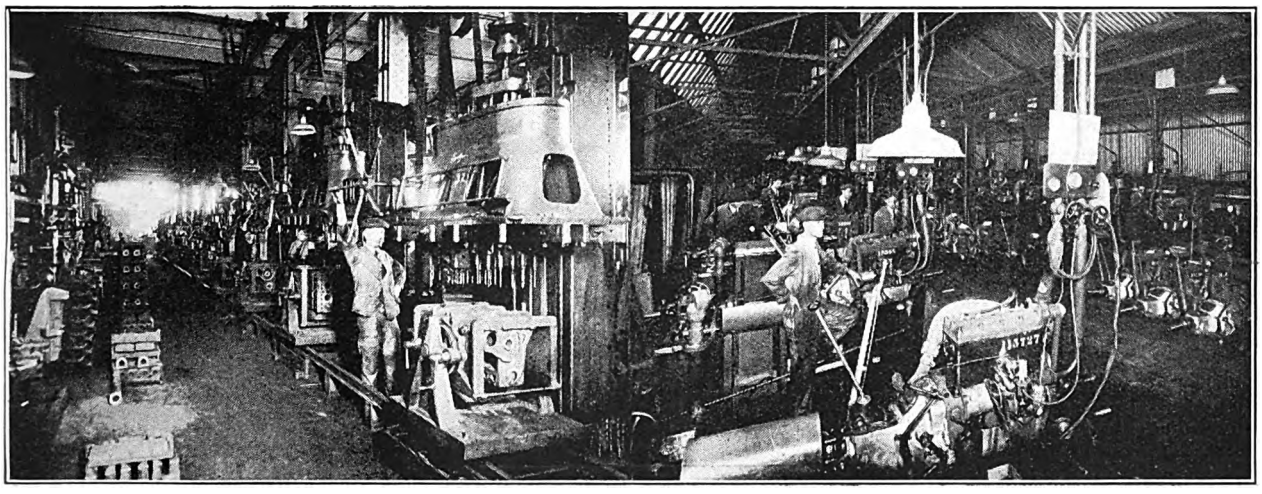
BIRDS-EYE VIEW OF THE MORRIS-COMMERCIAL FACTORY AT SOHO, BIRMINGHAM.

So rapid has been the development of the Works that no sooner is one extension completed than another is put in hand, while in addition a new railway siding is in course of building, which is necessitating pulling down buildings, making a solid embankment, and carrying out other improvements which will facilitate the transport by rail of the Morris-Commercial productions direct to the docks for the very big export trade in these well-known vehicles.

loaded 30-cwt. Truck on ordinary roads. Petrol consumption worked out at 19.91 miles per gallon equivalent to 32.9 nett ton miles per gallon. Oil consumption was correspondingly low at 2,784 miles per gallon, with the vehicle averaging 20 miles an hour. Hill climbing tests were also observed by the R.A.C. Prestatyn Mountain and Sutton Bank, both with gradients of 1 in 3 were easily climbed with full load. The "Middle-Weight Champion" has a lively engine developing 35 h.p. at 2,500 r.p.m.—a 4-speed Gear Box with low emergency gear of 43 to 1—an efficient dry plate clutch, overhead worm rear drive, Springs of Silico Manganese Steel, large internal expanding brakes and Dunlop tyres.

While the production of the "Middle-Weight Champion" and its light sister vehicles was in full swing at the Soho Works, another new factory was acquired at Adderley Park, Birmingham, where the latest machinery was installed to manufacture the heavier types of goods and passenger vehicles. Examples of the models to be built at this new factory were exhibited at the 1929 Olympia Commercial Show, but production on a large scale has only just commenced, the greater part of 1930 being devoted to organisation and the making of jigs.

In addition to the 50-cwt. goods vehicle called the "Leader," now being produced in large numbers at this new works, other vehicles approaching the full production stage are a



MORRIS-COMMERCIAL WORKS, SOHO, BIRMINGHAM.
LEFT: A NUMBER OF MULTIPLE DRILLING MACHINES. RIGHT: ENGINE TEST SHOP.

The 1930 season opened with a big sales offensive directing attention to a new and very successful 30-cwt. model, which was called the "Middle-Weight Champion." This model, a complete Truck with every necessary accessory including engine-driven tyre pump, spare wheel and tyre, 12-volt lighting and starting set—only costs £249 10s. 0d. Statements regarding the very low running costs of this Morris-Commercial Truck are fully confirmed by the report issued by the Royal Automobile Club on a 1,000 miles trial with a fully

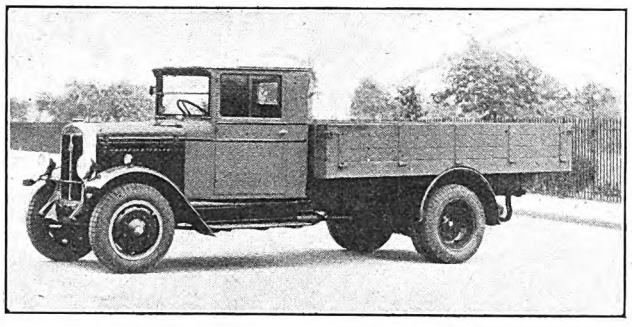
20-seater passenger vehicle called the "Viceroy" and a 28/32 seater called the "Dictator" suitable for bus or coach work. The "Dictator" was a great attraction at the last Olympia Commercial Show, due to its many interesting features. The power unit, for instance, can be removed from the chassis within half an hour using standard tool kit, and without the use of trolley cranes, or any special tackle.

When we were in Edinburgh in July last, on the last day of the Institute of Transport Congress, after inspecting the

Digitized by Google

Forth Bridge in the morning, we were taken with a party of delegates, on a sight-seeing tour of Edinburgh in motor coaches, placed at our disposal by the Edinburgh Corporation Transport Department. These were Morris-Commercial "Viceroy" 20-seaters and very comfortable coaches they proved to be. On a second visit to Edinburgh last month we were interested to learn from Mr. McLeod, of the Edinburgh Transport Department, that these passenger coaches were supplied while they were waiting for the delivery of the larger "Dictator" passenger coach and so pleased were they with the vehicles that they had decided to keep them in addition to the larger coaches.

Going back again to the Soho factory, a few months ago a new model was introduced to cater for tradesmen and manufacturers who have to carry bulky, rather than heavy loads. This new model is called the "R.D." Bulk Load Carrier, with 66 square feet of platform space to carry loads up to 50-cwt. It has a Six-Wheeled Chassis with fully articulated trailing axles at the rear; the complete truck with full equipment only costs £353.



THE NEW MORRIS-COMMERCIAL "LEADER" 50-CWT. TRUCK.

Now the very latest models to make their appearance are the light goods vehicles of 10-cwt., 15-cwt. and 1-ton capacity. These new Morris-Commercial models offer astonishing value, as they embody many modern refinements including chromium plating, gear-driven tyre pump, balloon tyres, group lubrication, 12-volt 5-lamp lighting and starting set, streamline bonnet and scuttle, and the equipment is complete. These new vehicles are not only striking in appearance and of low cost, but they are also of sturdy construction to give lasting service under the most arduous conditions.

Any Morris-Commercial vehicle can be bought by a convenient Hire Purchase scheme of a small deposit and 12 or 18 monthly payments.

MORRIS-COMMERCIAL MODELS FOR 1931.

10-cwt. Van, £190; 15-cwt. Van, £195; 1-ton Chassis, £172; 1-ton Truck, £198; 1-ton Van, £220; 30-cwt. Chassis, £218; 30-cwt. Truck, £249 10s.; 30-cwt. Van; 35/40-cwt. Chassis, £280; 35/40-cwt. Truck, £330; 50-cwt. "Leader" Chassis, £445; 50-cwt. "Leader" Truck, £515; Bulk Load Carrier, £353; 30-cwt. 6-wheeler Chassis, £450; 2-ton 6-wheeler Chassis, £465; Standard Fire Engine, £748; Special Fire Engine, £635; 6-wheeled Fire Engine, £998; 20-seater Passenger Chassis, £595; 28-seater Passenger Chassis, £890; 32-seater Passenger Chassis, £925.

THE NEW MORRIS-COMMERCIAL "LEADER" 2½-TONNER.

The Morris commercial 2½-tonner is now in full production, after having undergone very severe tests in Poland where it was sent for demonstration purposes as well as tests. As a result of these tests, which were over exceptionally rough roads and during which it was frequently considerably over loaded, various parts have been suitably strengthened so that the purchaser now has every reason to be confident that he is purchasing a thoroughly trustworthy vehicle. The price of the chassis is £445 or £515 complete with a hinged-side truck body.

The four cylinder engine has a detachable cylinder head, a cubic capacity of 3,544 c.c., bore 95 m.m. and stroke 125 m.m. It develops 60 h.p. at 2,500 r.p.m. The crankshaft has five main bearings. The pistons are aluminium alloy with three rings and the connecting rods are duralumin, H section. Lubrication is by a camshaft driven gear pump delivering oil under pressure to all main and connecting rod bearings. The cylinder walls are oiled by splash. The oil filter is easily removed for cleaning and without loss of oil. Ignition is by H.T. magneto driven in tandem with the dynamo. The carburetter is the S.U. horizontal type. Cooling is by water pump assisted by fan. The gear box is unit with the engine and provides four forward speeds and a reverse, the gear

A MORRIS-COMMERCIAL 3-TON "LEADER" VAN SUPPLIED TO THE ROTTERDAMSCHE MELT INRICHTING.

ratios being first 4.99, second 2.68, third 1.79 and top 1 to 1, reverse 4.03. The control lever is central and of the ball type. The clutch is the single dry plate type.

From the gear box the drive is taken through an open type propeller shaft, the front end of which is coupled to the gear shaft by a universal joint, and passes through an intermediate ball bearing bracket and there are two universal joints at the rear end of the tubular shaft. The rear axle is of the fully floating overhead worm type with 7.25 to 1 ratio.

The front springs are over-slung, semi-elliptic, 39 in. by 2¾ in. and the rear are under-slung, semi-elliptic, 56 in. by 2¾ in. The foot brakes operate in large diameter drums on the front and rear wheels and the hand brake operates on the rear wheels only. The wheels are disc with detachable rims carrying 32 in. by 6 in. tyres, twins on the rear wheels. There is a mechanical tyre pump.

The frame is exceptionally deep and has five cross members. Steering is by worm and worm wheel, chassis lubrication is by oil gun through accessibly grouped oiling points. Fuel is gravity fed to the carburetter from a 16-gallon tank supported on the dash plate.

The principal dimensions are, wheelbase 13 ft., overall length 19 ft. 6 in., width 6 ft. or 6 ft. 5½ in. over the rear tyres. Dash to end of frame 15 ft. 7 in. Back of seat to end of frame 11 ft. 3 in., turning circle 60 ft. Body weight allowance 15-cwt. Chassis weight 40-cwt., front track, 4 ft. 9 in. and rear track 5 ft. 3§ in. with twin tyres.

A larger model has now been produced to carry 3 tons and we produce the photograph of one of these vehicles, just received from Holland, supplied to the Rotterdamsche Melt Inrichting of Rotterdam, who now operate 10 Morris-Commercials. This picture is interesting as it serves to illustrate that British vehicles are selling well on the Continent against strong foreign competition.

## Long Distance Road Haulage Committee.

A MEETING of the firms who appointed the Long Distance Road Haulage Committee of Inquiry and those who subsequently become affiliated through the Committee has been called for Tuesday, December 16th, at 2.30 p.m. at Winchester House, Old Broad Street, London, E.C. At this meeting the report of the Committee will be read and considered and the meeting will also determine what further steps, of any, shall be taken. The presence of any other members of the industry at the meeting will be welcomed.

The report, of which we have received a copy, details the work undertaken from the appointment of the original Committee in April last, and refers to the evidence given before the Royal Commission on Transport, which has already been reported in this journal.

The report states that it has not been the desire of the Committee to form a new association and existing avenues have been explored to see whether the long distance haulage industry could link up with an existing organisation. After carefully considering the constitution of the Commercial Motors Users' Association and that of the National Road Transport Employers' Federation, the Committee are of opinion that neither of these bodies is suitable for the purpose. In the view of the Committee the long distance road haulage industry must depend entirely on its own resources.

# Motor Hirers and Coach Services Association.

## Annual General Meeting.

THE Annual General Meeting of the Motor Hirers and Coach Services Association was held at the Cannon Street Hotel, London, on December 8th, last.

In the absence through indisposition of Mr. H. T. Rickards (C. Rickards, Ltd., Paddington), the chair was taken by **Mr. J. H. Lowe** (Grey Coaches, Ltd., London), who, opening the meeting, said he was sure that all the members would much regret that Mr. Rickards was unable to be with them owing to illness.

The Minutes of the last Annual Meeting, having been published were taken as read and adopted.

**Mr. R. P. Bailey,** the Secretary of the Association, presented the Balance Sheet for the year ended September 30th, 1930, which was adopted.

**Mr. M. Logette** (G.B. Motors, Ltd., London), presented the Annual Report.

He reviewed the activities of the Association and in the course of his remarks said that the policy followed during the year had been successful. It was, however, necessary for the Association to become more of a National body and embrace a wider field than hitherto.

The members were very pleased to hear of the restoration to health of their President, **Mr. H. T. Rickards,** although unhappily he was unable to be with them that evening. He was afraid that as a result of their President's activities and endeavours in the interests of members of the Association, Mr. Rickards had for some time suffered from indifferent health aggravated he ventured to suggest by worry over the affairs of other people which he had always been so willing to shoulder. (Applause.)

Changes had been made in the Secretarial arrangements. The Association had now appointed a full-time Assistant Secretary to help Mr. Bailey.

The membership of the Association was 250, representing a minimum of 3,000 public service vehicles. The Management Committee met during the year on no less than fourteen occasions.

### ROAD TRAFFIC ACT.

Mr. Logette said that the most vital matter dealt with by the Committee during the year was, of course, the Road Traffic Act. One of the main objects the Association endeavoured to achieve during the progress of the Bill through Parliament, was protection for existing services. Assurances had been given in Parliament, and the Minister of Transport had definitely stated that the Traffic Commissioners, in the discharge of their duties, would be instructed to have regard and consideration for existing operators. Whether this assurance and many others given them on other questions were but pious hopes or whether they could be accepted as promises to be faithfully carried out, remained to be seen, but he thought it was an accepted fact throughout the whole of the road transport industry that Mr. Herbert Morrison, the Minister of Transport was one of the most sincere Ministers who had ever controlled a Government Department and they believed they would have a square deal, but as they knew Governments did not last for ever even with the assistance of Mr. Lloyd George. (Laughter.)

The principle to be adopted in safeguarding and protecting existing services should be that of historical priority and not one of quota. It would be unfair and disastrous to capital they had invested in services pioneered years ago to be compelled to share their goodwill with those who had come on to the road, in total disregard of the warning of the Minister of Transport, for the purpose of staking last minute claims.

### PROPOSED AFFILIATION OF PROVINCIAL ASSOCIATIONS.

Whilst their Association was a National organisation and recognised as such throughout the industry, their strength in some areas was extremely scattered and some of the Committee had given continual consideration to the question of the extent of their sphere of influence, desiring to make the representation still more National. During the year a number of provincial owners' associations had put out feelers and inquiries on the question of becoming affiliated with the Motor Hirers and Coach Services Association. The constitution of the National body however, did not provide for the system of both individual membership and the affiliation of other bodies. In the past it had always been urged upon members of local associations that they should also become members of the Motor Hirers and Coach Services Association but they were met by the argument that provincial members must belong to their local organisations which were best able to deal with purely local matters. Obviously such members were quite right. A national association could not possibly be interested in the colour of the socks worn by a Town Clerk in a particular provincial town. (Laughter.) On the other hand, very few, if any, of such local Associations had the slightest knowledge of all that the Motor Hirers and Coach Services Association had done on their behalf.

### AN INVITATION.

It was suggested that the Committee of the Motor Hirers and Coach Services Association should invite two representatives of every provincial organisation of public service vehicle owners, e.g., the Chairman and Secretary, to come to London and have an immediate conference to explore the best way of setting up some scheme of affiliation. No doubt any question of liaison would be based upon the question of vehicle strength, i.e., he visualised that a local association which had say fifty vehicles might be entitled to send one or two representatives and another representative for another fifty vehicles and so on, and thereby set up a National Council consisting of perhaps 20 or 25 gentlemen. Further he visualised that perhaps the National Association could pay the expenses incurred by those representatives in coming to London to attend the monthly meetings of the Council, and it might be arranged to hold Council meetings in various areas, so that each could get to know the troubles of the other. This was the idea in his mind. The scheme could not be set on foot in a day. If the idea was adopted the matter should be got on with as quickly as possible.

The Secretary of each local Association was invited to communicate at once with Mr. R. P. Bailey, the Secretary of the Motor Hirers and Coach Services Association, at 17, Water Lane, Great Tower Street, London, E.C.3, and he had no doubt that the Association would place an office at the disposal of such National Council. He prophesied that purely local associations would, in view of the new legislation, soon become obsolete except for dealing with purely local matters. If members of the public service vehicle industry did not hang together they would hang separately.

The annual report was adopted and a hearty vote of thanks passed to Mr. Logette for his review of the work of the year.

### RE-ELECTION OF PRESIDENT.

**Mr. H. T. Rickards** was unanimously re-elected President for the ensuing year.

### NO DICTATOR.

When the question of electing the Management Committee for the ensuing year was introduced, **the Chairman** said it was proposed that twenty gentlemen should be appointed.

**Mr. G. Nowell** (Great Western Express, London), said he thought they had reached a crisis in the motor coach industry, and they were beset on all sides by danger. He thought that one man should be placed at the head of the association who could say what ought to be done, and matters should not be left for argument by the whole of the members of the Management Committee.

A member urged that the work of the association should be done through Sub-Committees, whilst another member contended that the Committee had not proved sufficiently forceful.

**Mr. E. Monkman** (Orange Luxury Coaches, London), said he did not think that the members who had criticised the Committee quite realised the position. The members of the Committee were all, of course, busy in their own businesses as well as doing work for the Association. It was certainly not a question of anything the Association could usefully do having been neglected. If the gentlemen who had been critical were a little more frequent in their attendance at meetings at which their presence had been requested they might have learned a little more of what the Association had done. In principle the appointment of one man as a dictator in times of stress was no doubt a good move, but could they find somebody who would enjoy the confidence of every operator; remembering that the Association comprised various branches of the coaching industry. If they appointed a short distance operator to be a kind of dictator, would not the seasonal operator ask whether he would get full attention and so on. He thought that to divide the work of the Association between various Sub-Committees was the best way.

Digitized by Google

Continuing, Mr. Monkman mentioned that quite recently certain members of the Committee received information regarding Section 19 of the Road Traffic Act. Without any delay those gentlemen attended at the Ministry of Transport and gathered that apparently draft regulations dealing with the limitation of time for which drivers of certain vehicles might remain continuously on duty, would be available in a few days time, although they had understood that nothing in this direction would be done until an opportunity had been given for further representations to be made by those affected. They would now have forty days in which to make representations and two members of the Committee had arranged to spend the whole of the following day in preparing the case for the motor coach operators under Section 19.

With regard to the suggested zone area for motor coaches entering London, of course operators simply could not have it, and if it came into force they would die. Something very drastic would have to be done about it. The Association were assured by the Ministry of Transport that their representations would receive close consideration.

Several members spoke against the proposal to appoint one man to control the affairs of the Association.

**Mr. A. Kelcey** (Orange Coaches, Chatham), pleaded for a greater provincial representation on the Management Committee, but it was pointed out that although all members had been invited to send in nominations none had been received within the time prescribed by the constitution of the Association.

After discussion, it was agreed that the Council at their next meeting should consider the question of co-opting certain provincial members on to the Committee. Several gentlemen from provincial towns at once offered their services.

ELECTION OF MANAGEMENT COMMITTEE.

On a vote, the following gentlemen were declared elected to the Management Committee for the ensuing year:—Mr. R. Baxter (Manor Motor Coaches, Clapham, S.W.); Mr. W. D. Beaumont (Beaumont Coaches, Enfield); Mr. R. Birch (Birch Bros., Ltd., Kentish Town, N.W.); Miss C. Culverhouse (Venture Transport, Hendon, N.W.); Mr. C. Dobbs (Skylark Motor Coaches, Acton, W.); Mr. Dudley (Acme Pullman Service, Norton Folgate, E.); Mr. F. A. Flin (M.T. Co., Brockley, S.E.4); Mr. W. F. French (United Service Transport, Clapham, S.W.); Mr. Guilmont (Thackrays Way Coaches, Regent Street, W.); Mr. E. W. Harris (Highways, Ltd., Regent Street, W.1); Mr. J. Hearn (P. Hearn, Ltd., Gray's Inn Road, W.C.1); Mr. Hillier (Farnham Blue Coaches, Harrow Road); Mr. H. O. Jones (Turpin Engineering Co., Ltd., Acton); Mr. A. Kelcey (Orange Coaches, Chatham, Kent); Mr. M. Logette (G.B. Motors Ltd., Gt. Portland Street, W.); Mr. J. H. Lowe (Grey Coaches Ltd., Blackfriars Road, S.E.); Mr. E. Monkman (Orange Luxury Coaches, London, S.E.11); Mr. G. Nowell (Gt. Western Express, Gt. Newport Street, W.C.); Capt. C. E. E. Palin (Weald of Kent Transport Co., Tenterden); Mr. A. E. Tapper (Mayfair Transport, Kilburn, N.W.).

ANNUAL DINNER.

It was decided that the Association should hold a dinner and dance on a date to be announced later.

A vote of thanks to the Chairman for presiding concluded the meeting.

## The Motor Vehicles (Driving Licences) Regulations, 1930.

THE Minister of Transport under the powers conferred upon him by the Road Traffic Act, 1930, has made the following Regulations which came into force on December 1st.

Any person who desires to obtain the grant of a licence to drive a motor vehicle shall apply to the Council of the County or County Borough in which he resides or, if he has no residence in Great Britain, to any such Council (hereinafter in either case referred to as "The Licensing Authority") and shall furnish all relevant particulars and make any relevant declaration specified as to ability to drive, physical fitness, etc.

Applications for the grant of a licence may be received and dealt with at any time within one month before the date on which the grant of the licence is to take effect.

The fee of five shillings prescribed by the Act shall be paid before the applicant is entitled to receive a licence.

The diseases and disabilities in the case of which the applicant for a licence shall not be entitled to claim to be subjected to a test as to his fitness or ability to drive a motor vehicle under sub-section (2) of Section 5 of the Act shall be the following:—

> Epilepsy; liability to sudden attacks of disabling giddiness or fainting; inability to read at a distance of 25 yards in good daylight (with the aid of glasses, if worn) a series of six letters and figures in white on a black ground of the same size and arrangement as thost prescribed for the identification mark of a motor car.

The fee to be paid by an applicant who claims under that sub-section to be subjected to such test shall be ten shillings.

In order to pass such test the applicant for a licence shall prove to an examiner approved by the Licensing Authority his ability unaided to:—

(*a*) Start the vehicle from rest, to move away in a reasonably quick time and to maintain an accurate course.
(*b*) Turn right and left hand corners correctly.
(*c*) Stop the vehicle within a reasonable distance when travelling at various speeds. (In this respect he must satisfy the examiner that in an emergency he will be able to apply the brakes promptly and effectively.)
(*d*) Operate all controls with safety and without moving from the driving seat.
(*e*) Give all recognised signals to other persons using the road and to traffic controllers in a clear and unmistakable manner. (If, owing to his disability, it is impracticable or undesirable that he should give such signals by hand, the vehicle must be fitted with a device or devices which in the opinion of the examiner will be satisfactory for this purpose.)
(*f*) Except in the case of a motor-cycle, make the vehicle proceed backwards for a reasonable distance, make a left and right hand turn in reverse gear, and back the vehicle into an indicated position.
(*g*) Turn the vehicle round so as to proceed in the opposite direction in a roadway 30 feet in width.
(*h*) Stop, hold and start the vehicle on a gradient of at least 1 in 15 but not steeper than 1 in 10.

Generally, the applicant shall satisfy the examiner that he is capable of driving a motor vehicle or a motor vehicle of the particular construction or design to which the application relates without danger to other users of the road.

Where a licence is limited to the driving of any class of motor vehicle or to the driving of a vehicle of a particular construction or design, particulars of the limitation shall be entered in the space provided on the form of licence.

Any person to whom a licence is granted shall forthwith sign it with his ordinary signature and if he fails to do so he shall be guilty of an offence and liable on summary conviction to a fine not exceeding £5.

## Over 53 Years Service with One Firm.

MR. HINTON OXTON, on reaching the age of 65 years, completed just over 53 years loyal and active service with Pickfords Ltd., Liverpool, and he retired on pension at the end of October last. He started as a messenger boy, in 1877, and worked his way up to the position of stock clerk, in connection with Pickfords' General Merchandise Warehouse, and held that appointment for 44 years with credit to himself; and to the firm.

An oak easy chair from the Liverpool Staff was presented to Mr. Oxton by Mr. L. Alderman (Local Manager), who said how proud his colleagues were of the wonderful record of 53 years service faithfully done with the old firm, and they all trusted that Mr. Oxton would have many years in which to enjoy his retirement, and that he would rest and smoke a pipe of peace, bringing up memories of the past, happy in the knowledge he had left behind him recollections of the best.

Mr. A. E. Knill, on behalf of the Directors of the Firm presented Mr. Oxton with a Gold Watch suitably inscribed, and said how pleased he was to be able to come to Liverpool and express the Directors' and his own appreciation of service loyally performed, over so long a period.

Mr. Hinton Oxton replied saying that he was more than delighted with the presentations, but above all, he would go into retirement happy, remembering the kind thoughts and feelings expressed towards him by the Directors and the Staff.

# The Karrier "Colt" or "Mechanical Horse."

KARRIER Motors Ltd., of Huddersfield, have recently produced a vehicle which according to a report we have received from the London, Midland and Scottish Railway, does in actual fact replace the horse. This vehicle is known as the "Colt" chassis, mounted on three wheels and is of the low loader type and of 2-tons capacity. It is stated that the vehicle is the result of designs prepared and experiments carried out by the L.M.S. road motor engineer, Mr. J. Shearman, M.I.M.E., on the instructions of his company.

The aim of design has been not so much for speed as absolute manoeuvrability and its success in this respect may be judged from the fact that it may be turned completely

THE KARRIER "COLT" 3-WHEEL TRUCK.

round within a 16 ft. circle. The two rear wheels are the drivers and the single front wheel is the steerer.

The engine is a two cylinder horizontally opposed type developing 7.2 h.p. at 1,000 r.p.m. with a maximum of 17 h.p. The bore and stroke are 75.4 and 101.5 respectively. Together with the clutch, gear box and change speed, it forms a self-contained unit with three point suspension in a rigid sub-frame. The clutch is of the single plate type and the gear box contains a three speed gear. The gear box is a one-piece aluminium casting fitted with ball and roller bearings. The gear control consists of a ball type lever centrally placed.

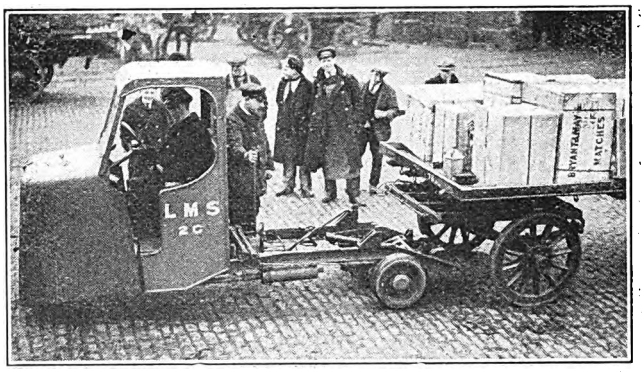
In order to obtain the necessary overall gear reduction, an intermediate chain reduction gear box, fitted immediately behind the primary box, is rigidly supported in the main frame

The frame is 4 in. by 2 in. channel section steel suitably braced by cross members. The springs are under-slung and are semi-elliptic.

The steering wheel is operated through a bevel and pinion mounted in the head of the steering fork which has a movement of approximately 180 degrees. The fork carries the wheel and the suspension is by means of two semi-elliptic springs. The steering wheel is 20 in. in diameter.

There are two independent brakes both operating on the rear wheels. The hand brake is internal expanding and the foot brake external contracting. The petrol tank has 4½ gallons capacity and is strapped to the steering head.

The principal dimensions are as follows:—tank capacity 4½ gallons, tyres 18 in. by 5 in. (solid), wheelbase 8 ft. 1 in., track 4 ft. 8 in., gear ratios, top 10.6 to 1, second 19.5 to 1,



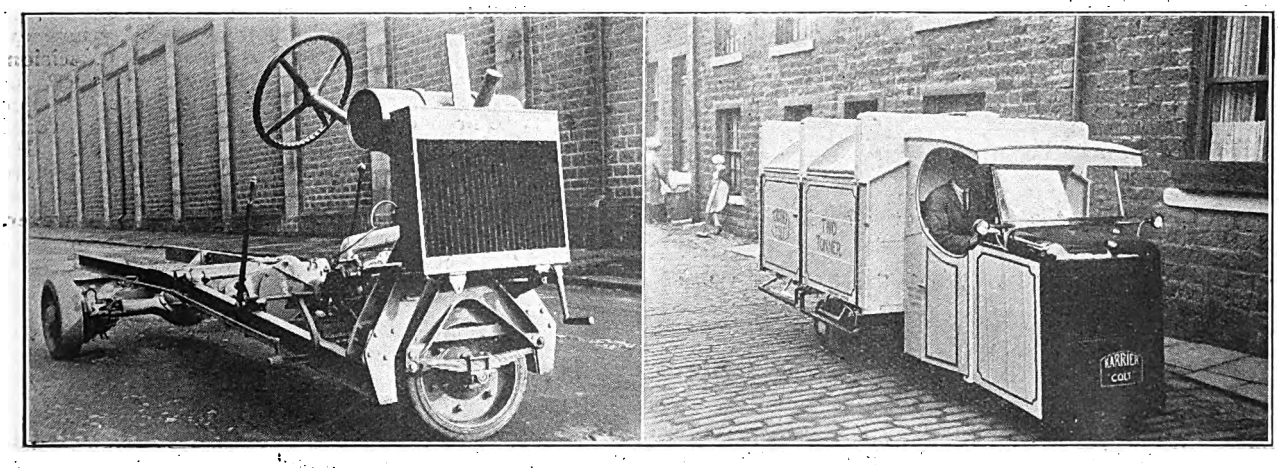
Photo] [Topical Press.

THE KARRIER "MECHANICAL HORSE" NOW UNDERGOING EXTENSIVE TESTS IN THE SERVICE OF THE L.M. & S. RAILWAY.

first 42.4 to 1 and reverse 56 to 1. Turning circle 16 ft., platform space 7 ft. 6 in., overall length 12 ft. 6 in., overall width 5 ft. 2½ in., ground clearance 4 in., ground to top of frame loaded 1 ft. 5½ in., weight of chassis 19 cwt. The price of the chassis is £210.

Fitted with a Bromilow & Edwards' tipping gear and refuse collection body, as it was shown at the Agricultural Hall, the price is £400 which can be reduced to £350 by substituting hand tipping gear for the hydraulic.

The "mechanical horse" is supplied in two models, the "Colt" being constructed for transporting goods on its own body and the "Cob" which we understand is primarily for railway delivery service, is to be used mainly as a tractor, the



LEFT: THE KARRIER "COLT" 3-WHEEL CHASSIS. RIGHT: THE KARRIER "COLT" 3-WHEEL CHASSIS FITTED WITH REFUSE COLLECTION BODY.

which takes the torque re-action. The drive is by Duplex roller chain completely immersed in lubrication and an external tensioning device of the eccentric type is incorporated.

From the reduction the drive is taken direct to the rear axle by a large diameter tubular propeller shaft fitted at each end with fabric discs. The rear axle is of the bevel and pinion type with a four star differential, from which the drive is taken to the taper roller bearing hubs by fully floating axle shafts. Steel disc wheels are fitted with 18 in. by 5 in. solid tyres or 22 in. by 5 in. pneumatic.

rear of the chassis having certain modifications for this purpose, otherwise the specifications are the same. It has been designed so that it may be conveniently coupled to existing horse drawn vehicles and the L.M.S. memorandum states:—

As these horse-drawn vehicles become worn out they will be replaced by specially constructed pneumatic tyred trailers, the tractor also being equipped with larger wheels and pneumatic tyres.

The experimental vehicles are capable of pulling 3-tons on existing standard horse carts, fitted with rubber tyres, at a

Digitized by Google

speed of 18 m.p.h. on the level, and of re-starting with this load on a gradient of 1 in 8.

There are two methods on trial by the L.M.S. for the "mechanical horse" to harness itself to its load.

In the first, the front wheels are removed from the standard horse cart and replaced by a pair of hinged legs which support it while it is being loaded. When the load is ready the "mechanical horse" backs under the front of the horse cart, the front of the latter being lifted up on an inclined ramp on the back of the tractor unit, to which it is then secured by two small pins. The ordinary turntable which is left on the bottom of the horse cart provides the necessary flexibility.

In the other system, which is constructed by Messrs. Henry Miller & Co., of "Skyhi" Jack fame, the front of the horse cart is left intact; two arms mounted on a swinging bracket at the rear of the tractor engage with the existing front axle of the horse cart when the tractor is backed under it. The swinging bracket on which these arms are mounted is then moved forward through an arc by means of an adaption of a hydraulic jack which is fixed to the frame of the vehicle and operated by the driver by a handle placed in a convenient position. This carries the front of the horse cart up and forward and lays it down across the frame of the "mechanical horse," where it is quickly and securely clamped in position with the front wheels clear of the ground. To unharness the "mechanical horse" the operations are reversed and the tractor moved away.

## In Parliament.

**Goods Motor Vehicles. Major Glyn** asked the Minister of Transport whether, as the figures up to the 31st May last showed, that there were issued 331,906 licences for goods road motor vehicles, being an increase of 61,305 since 1927, he could state how many of these vehicles had a capacity of three tons and over and how many were 30 cwt. trucks? **Mr. Herbert Morrison** said that a subdivision into weight categories of vehicles with licences current in May last was not available. From the "Census of Mechanically Propelled Vehicles, 1929," published by the Ministry of Transport, details of the numbers at the various taxation steps could be obtained in respect of vehicles with licences current during any part of the quarter ended 30th September last. For the purpose of the comparison desired, it was necessary to exclude from the total quoted by Major Glyn and from the corresponding total in the census return for 1929 the two groups designated as "agricultural vans and lorries" and "electrically-propelled vehicles" as the classification of these groups for taxation purposes did not include the three tons and the 30 cwts. steps respectively. With the deduction of these two comparatively small groups of vehicles the number of goods motor vehicles with current licences in September, 1929, was 325,947 and 328,382 in May, 1930. Of the 325,947 vehicles included in the census of September, 1929, 61,212 were goods vehicles of three tons or more in weight unladen, and 63,278 were between one ton and 30 cwts. On the same basis the number of goods vehicles with current licences in September, 1927, was 281,542, of which 58,844 were three tons or more in weight unladen. No figure could be given for the number between one ton and 30 cwt., as the 30 cwt. step for purposes of taxation was not introduced until 1929.

**Steam Vehicles. Major Glyn** asked the Minister of Transport what proportion of the 331,906 licences issued for goods road motor vehicles current at the end of May were in respect of steam-propelled vehicles of the lorry and tractor type, respectively; and whether any other country permitted the passage through the streets of cities of steam-driven lorries? **Mr. Herbert Morrison** said he was unable to state how many licences for goods vehicles current at the end of May were issued in respect of steam-driven vehicles, but the census of mechanically-propelled road vehicles taken during the quarter ended September, 1929, showed that there were then 8,520 goods vehicles driven by steam. Tractors were separately classified and were not included in the figure quoted by Major Glyn. As regards the last part of the question, he had no information.

**Time Schedules for Motor Coach Services.** — Asked whether his attention had been called to the case of four motor omnibus drivers who were fined, at Bedale, Yorkshire, for exceeding the speed limit of 20 miles per hour; if he was aware that the men were all drivers of London to Liverpool omnibuses; and if he could state the number of hours allowed to reach the outward and homeward journeys? **Mr. Herbert Morrison,** the Minister of Transport said his attention had not been drawn to the case, and under the existing law he had no means of ascertaining the times allowed for the completion of journeys by the drivers of motor coaches. When Part IV. of the Road Traffic Act became fully operative, he anticipated that an effective check would be imposed on the time schedules of motor coach services.

**Motor Coach Services in Central London.** In reply to a question in the House **Mr. Herbert Morrison** said he had under consideration the question of the limitation of motor coach services in the central area of London, but he was unable at this stage to make any statement on the subject. In the event of it being decided to make any regulations dealing with the matter, due notice would be given, before the regulations became operative, so as to allow the parties affected to make any representations they might consider necessary.

**Road Passenger Services. Lieut.-Colonel Ruggles-Brise** asked the Minister of Transport when it was the intention of the Ministry to re-organise and co-ordinate the various omnibus and coach services; and whether the road service licences would apply when the first application under the new Act was made or whether these licences would be required only by degrees when applications for renewal fell due? **Mr. Herbert Morrison** said that under the Road Traffic Act, 1930, the duty of issuing road service licences, by means of which it would be possible to co-ordinate public road passenger services, was laid upon the Traffic Commissioners. It was his intention to bring into operation on 1st January next the provisions of the Act necessary to enable the Commissioners to receive applications for such licences and to come to a decision thereon. The requirement, however, that omnibuses and motor coach services could not be operated except under a road service licence issued by the Commissioners, would not be brought into force before 1st April, 1931. He hoped that it might then be possible to effect a complete change over from the present system of licences to that provided for in the Road Traffic Act. It might, however, be necessary to have recourse to the provisions of Section 96 of the Act to cover a transitional period if such a course should prove necessary.

## Sheffield Steel Products, Ltd.

THE Ninth Annual General Meeting of the Sheffield Steel Products, Ltd., was held at the Royal Victoria Hotel, Sheffield, November 13th. The Rt. Hon. Sir Halford J. Mackinder presided, and the other directors present were Mr. C. P. Johnston, deputy chairman; Mr. T. Nightingale, managing director; Mr. J. M. R. Francis, Captain W. M. Hungerford Pollen, Brigadier-General H. A. Young. The Chairman, in moving the adoption of the Report and Accounts, said that the results achieved in so difficult a time as the present reflected the very greatest credit on the staff, who, from the Managing Director downward had received the thanks of the Board. Referring to the activities of the Company, the Chairman said that for such enterprises a combination of courage and sound judgment was essential, and it was because they had found that combination in their General Manager—Mr. Thomas Nightingale—that the Board decided that it would be to the advantage of the Company that he should be given the position and powers of Managing Director. They were looking forward to further progress. The unexpected difficulties of present trade conditions must necessarily affect immediate results, but these conditions would not continue for ever, and they were steadily adding to the strength of their organisation in order to be ready to take advantage of improved circumstances as and when they arose. Captain Pollen, Mr. Nightingale and Mr. Johnston were re-elected directors. Mr. Johnston paid a warm tribute to the work done by Sir Halford Mackinder since he had been chairman of the company, and Mr. Nightingale referred to the magnificent work of the staff.

# Heavy Transport in the Highlands.

REFERENCE to the map of Perthshire shows a road which terminates at a station in the heart of the Western Highlands. This road is the road to Rannoch described so admirably by Barrett in his book "The Road to Rannoch."

Constructed some fifty years ago to connect Rannoch Station on the then North British Railway (from Glasgow to Fort William) with Kinloch Rannoch, it was formerly only a sheep track passing over indescribably wild Highland Moorland, comprising alternative stretches of unfathomable bog and rocky mountains.

But twelve feet wide it is like many Highland Roads, which owing to the boggy nature of the land over which they pass and the practical impossibility of effectively bottoming them, is incapable of carrying traffic which an average English second class road would take with impunity, while in addition, scores of culverts and several bridges never designed to carry more than a light load, intersect the route.

Over this road—seven miles in length Coulson & Co., Ltd., Heavy Haulage Contractors of Park Royal, London, N.W.10, undertook to convey some 14 loads of electrical machinery comprising 2 complete Alternator sets and six Transformers of varying weights from 20 to 60 tons each to the Hydro-Electric Power Station on the banks of Loch Rannoch now nearly completed for the Grampian Electric Supply Co., Ltd., by Balfour, Beatty & Co., Ltd. Therefore, before a start could be made all bridges with the exception of the Bridge of Ericht had to be strengthened and elaborate precautions taken to safeguard the culverts.

No traffic of the weights above mentioned had ever passed over this road before and in spite of the fact that some thousands of tons of metal had already been put on to the road by Balfour, Beatty & Co., it was a matter of some speculation as to whether even the heavy Fowler traction engines used to haul the loads would travel over it without becoming hopelessly bogged.

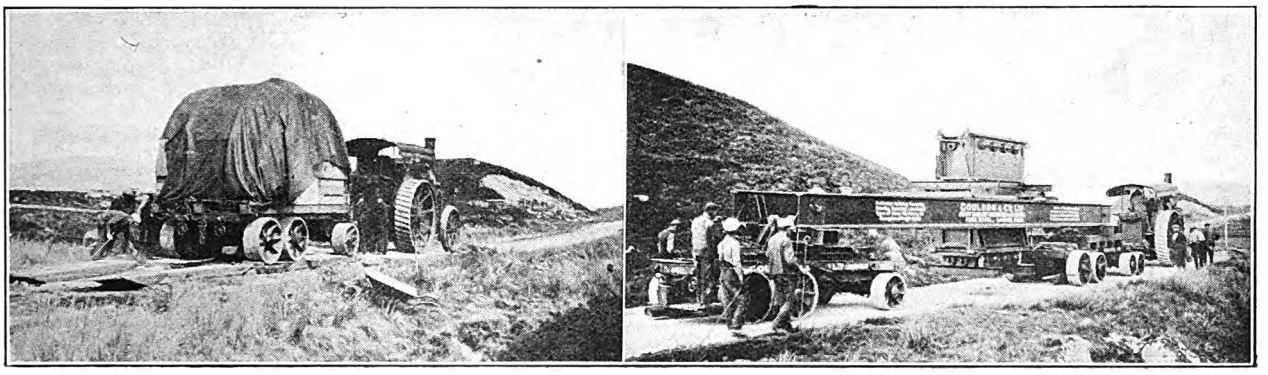
The contractors were however fortunate in this respect, and though even when travelling light the engines depressed the road from 6 to 12 inches they remained on the spongy surface without actually breaking through the thin crust.

On Easter Monday, this year, the first load, a 20-ton half-stator arrived at Rannoch Station—was unloaded on to a six-wheel bogey and pulled out of the station yard.

This was the test load and it was decided to try the carrying capacity of the road without resorting to artificial methods.

Scarcely 100 yards had been covered when without warning all six wheels of the bogey broke through the surface of the road and slowly sunk lower and lower into the bog until long baulks of timber which had been fixed under the axles supported the load and prevented it from disappearing from sight.

Jacks, timber and packing which were carried on a tender were immediately used and after some hard and skilful work the load was once again brought to its normal position, but with this experience it was deemed necessary to continue the journey on long lengths of timber until the road became firmer.

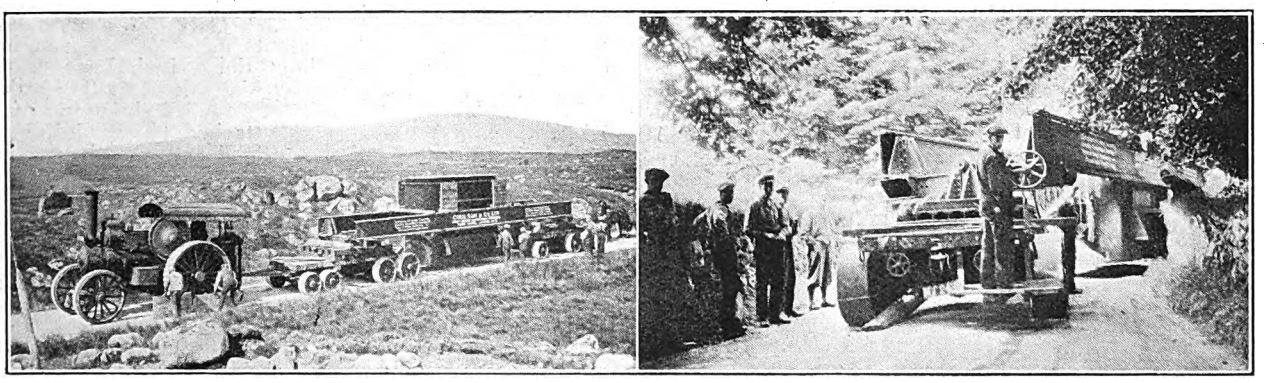


LEFT: 22-TON HALF STATOR B.T.H. CROSSING BOG ON TIMBER. RIGHT: 22-TON HACKBRIDGE TRANSFORMER.

Such however was not the case and as progress (though slow) was made it was found that softer ground was yet to be encountered.

After several experiments it was eventually found that the only method of proceeding with any degree of safety was to lay tracks of steel plates over which the load could pass and to collect accurate data for future hauls.

Local labour was consequently called upon and with eight men and some 30 plates the machinery was taken step by step in three yard stages to its destination, the plates being hauled from the rear to the front as the vehicle passed over them.



LEFT: 60-TON B.T.H. TRANSFORMER, NOTE PLATES BEING LAID. RIGHT: TRANSFORMER ROUNDING RIGHT ANGLE BEND AT FOOT OF STEEP HILL.

The necessarily slow progress and the narrowness of the road called for special arrangements for dealing with normal traffic passing to and from Rannoch Station and as to drive an ordinary touring car off the road for even a yard meant that it would sink into the soft peat up to the axles, passing places comprised of sleepers were placed on the bog at frequent intervals.

It will be realised that the difficulties to be overcome were colossal, but these will be even more emphasised when it is realised that for a greater part of the journey only from ¼ to ½ a mile was covered in a full working day.

In addition to the experiences already described several steep hills in some cases of a gradient of one in ten with sharp curves over the mountain roads had to be negotiated, but with the use of the winding drum fitted to the traction engine these presented comparatively minor difficulties and were overcome without event.

Successive loads which comprised three more half stators

Digitized by Google

and two rotors—these latter weighing 35 tons each were successfully transported and with the knowledge gained progress became considerably speeded up, though it must be observed that weather conditions created great variations on the carrying capacity of the road.

It was not until the arrival of the first transformer that the supreme test was to be made and the special transformer equipment above illustrated taken on its first journey under a load for which it was designed, double the number of plates and men, also another traction engine having been first obtained. It is of interest to note that this equipment was designed entirely by Mr. R. Coulson and Mr. H. E. Shepperd of Coulson & Co., Ltd., was built in their own works and embodies several unique features for ensuring absolute safety in carriage and an arrangement of the bolsters which entirely eliminates all risk of distorting the transformer case combined with a system of steering which permits this huge vehicle, 60 feet in length and weighing 35 tons, to be turned from a 30 ft. roadway into a 12 ft. 6 in. gateway with ease.

Fortune again favoured the contratcors and it is a matter of congratulation that each successive transformer, the largest of which was 60 tons, reached its destination in safety and the vehicle, on which they were carried, showed not the slightest sign of the enormous strain put upon it under such abnormal conditions.

Still greater strain was yet to be placed upon the transformer equipment, for after the completion of the work above described the haulage of two further transformers from Newburgh Station in Fifeshire to the sub-station at Abernethy built for the Grampian Electric Supply Co., Ltd., by Balfour, Beatty & Co., Ltd., had been contracted for, these each weighing over 75 tons.

Happily the road over which these were taken was of a normal character and though not a first class road, successfully withstood the test put upon it by the huge load which together with the bogies and girder amounted to well over 110 tons.

With the exception of a very bad turning out of Newburgh Station, which consisted of an "S" bend down a steep hill and necessitated the backing of the load over the whole distance, no untoward difficulties were experienced and both loads were safely delivered without damage of any description.

So ended one of the most remarkable feats of heavy haulage ever undertaken.

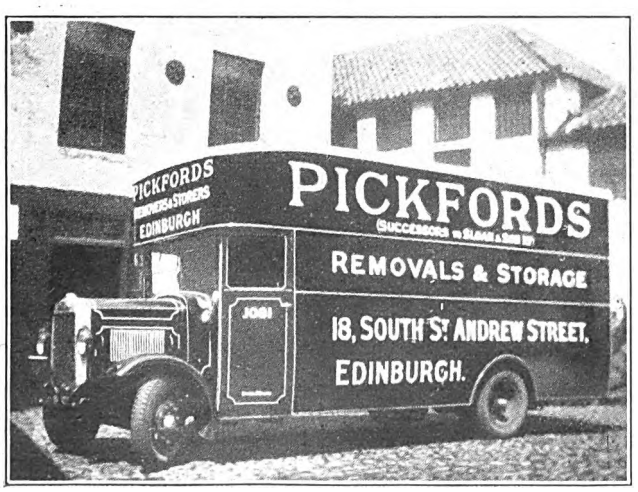
## Sloan & Son Ltd., Edinburgh.

THE old established removal and storage business of Messrs. Sloan & Son, Ltd., has now been acquired by Pickfords, Ltd., whose chief office is at 205 High Holborn, London, W.C.1. This is indeed a merging of two old firms, the former being established about 1850 by the late Bailie Sloan as a cartage contractor, and the latter well over 200 years ago. An extract from Harrop's "Manchester Mercury," August 24th, 1756, reads as follows: "This is to acquaint all Gentlemen, Tradesmen, and others, that James Pickford, the London and Manchester Wagoner, has removed his Wagon from the Blossom's Inn in Laurence Lane, to the Bell Inn, in Wood Street, Cheapside, from whence it goes every Wednesday. Gentlemen, etc., may depend on having their goods safely delivered by their humble Servant, James Pickford." Pickfords to-day cover transport in all its many phases, and have over 100 branches throughout the British Isles, backed by a modern fleet of motor vehicles kept at the peak of efficiency. The photographs reproduced show one of the latest type of removal vans attached to the Edinburgh office, and a section of the trained and experienced staff of packers.



ONE OF PICKFORDS REMOVAL VANS.

In 1834 Pickfords removed the furniture of Thomas Carlyle from Arran to London, who wrote to his brother William that "Jane arrived with the furniture all close following her in one of Pickford's trade boats. . . ." We are exceedingly content so far, and have reason to be so."

One of the first jobs Messrs. Sloan had, was in connection with the building of Sir Walter Scott's monument. Later they specialised in "Covered vans for Removals" and the price lists of 1872 make very interesting reading. The various types of vans demonstrated how loads had increased as roadmaking improved. Thus, the small high-wheeled vehicles, which in the days of soft and muddy roads required two heavy horses to pull them, were superseded by the large low-wheeled pantechnicon of nearly four times the capacity.

Pickfords have excellent depositories in all the principal towns and take special care, using modern methods to avoid all possible risk of damage. The Depositories at Barony Street have a somewhat interesting history. The buildings were originally the Tiend Farm of the Barony of Broughton and are of the "Defended Courtyard" type, being designed so that when any of the Border Raiders came along, the cattle and sheep could be driven in and secured until help came from the Castle.

Pickfords, as removal and storage specialists, have a wide experience, and the most up-to-date equipment for all kinds of removal work, with motors of various sizes for removals large or small.

The district offices are situated at 18 South Street, Andrew Street, and full information and free estimates may be obtained on application there.

# Institute of Transport.

## Manchester—Liverpool and District Section.

### Annual Dinner.

THE relation of transport to trade and commerce was specially emphasised in the various speeches at the annual dinner of the Manchester, Liverpool and District Section of the Institute of Transport, held at the Queen's Hotel, Manchester, on November 28th, last.

Mr. R. W. Royle presided and amongst those present were: The Hon. Sir Arthur Stanley, G.B.E., C.B., M.V.O., President, Institute of Transport, Sir Joseph Nall, Mr. C. le M. Gosselin, President, Commercial Motor Users' Association, the Lord Mayor and Lady Mayoress of Manchester, Mr. Cecil Bentham (past chairman), Mr. T. Abbott (past chairman), Mr. A. L. Bagley, Mr. J. H. Blackburn, Mr. G. R. Blackburn, Mr. and Mrs. Harry Bourne, Mr. and Mrs. Norman E. Box, Mr. Ashton Davies, Mr. and Mrs. Dunbabin, Mr. and Mrs. D. Halliwell, Mr. and Mrs. H. L. Marsden, Mr. R. S. Pilcher, Mr. and Mrs. H. H. Robinson, Mr. and Mrs. R. W. Royle, Mr. E. D. Simon, M.P., Major Sippe, Mr. A. W. Windsor.

Sir Joseph Nall, D.S.O., T.D., proposing the toast to the "City and Corporation of Manchester" said business people were going through difficult times but they would come through just as they had successfully emerged from their troubles of the past. Although Manchester had been a pioneer in many respects, he was not aware of any outstanding pioneering event last year, unless it was in showing one of the Manchester double deck motorbuses to the people of France. "I am surprised," said Sir Joseph, "that at a gathering like this where the motorbus people are so well represented, that it should have been left to the municipality to embark upon this enterprise."

The Lord Mayor of Manchester, Ald. G. F. Titt, replying, assured Sir Joseph Nall that Manchester Corporation had not modified in its zeal to make facilities for modern road transport, far better than they had ever been. A great deal of preliminary work had been done by the town planning, highways and transport committees. The question of an eastern by-pass road which was now about to be gone on with as quickly as possible, would be of tremendous value to traffic coming in from the Oldham side and would cut out the city altogether. Then, in conjunction with the Cheshire County Council, they were undertaking improvements to Princes Road which would be brought out opposite Toft Hall, to enable south bound traffic to proceed in a straight line and avoid Knutsford. That would save the ancient beauty spots of Knutsford.

He was deeply interested in the question of roads, but there was just one thing that sometimes made him a little apprehensive. Would the growth and development of aviation be so fast, that all the roads that had been made fit for modern transport, fall into desuetude or at least be found no longer necessary because everybody and everything were going through the clouds? New conditions or new diseases demanded new remedies. The responsibility devolved upon everybody to closely observe modern tendencies and utilise them to the fullest possible extent in negotiating the difficult times through which we were passing and to bring about a much desired condition of normality.

Mr. E. D. Simon, M.P., who proposed "The Institute of Transport," ventured the opinion that transport was going to be made much quicker than it is to-day. The railways, motor lorries, motor buses and motor cars of to-day were efficient, fast, and fairly cheap, and all made immensely useful contributions to the progress of society. He was interested to learn that the objects of the Institute were "the conduct and handling of traffic in the interests of the people." Science, the application of science, and engineering had placed in the hands of man, a tremendous power over nature, but man had not yet learnt how to use those powers to the fullest advantage. There was, therefore, scope for the engineer, the scientist and the transport expert. In the last century we had been passing through an industrial revolution. The development of transport, however, had enabled us to envisage a second industrial revolution when works, instead of being set in thickly populated industrial areas, would be established in the country. Human beings and goods could be transported by road or rail with remarkable facility and that, of course, encouraged the erection of country factories and workshops. The development of a new industrial civilisation would enable the worker to live and enjoy the amenities of the countryside. The coming of the next industrial revolution when factories and workshops would be set up in the country, depended to a large extent on organising the existing units of transport. He was interested to see in the majority report of the Royal Commission on Transport that they wanted to control transport so as not to countenance the evils of monopoly yet not encourage wasteful competition. That sounded very simple but it was an extraordinarily difficult and complicated formula. All the problems of transport were as difficult and as interesting as any that were being faced to-day. With the best will in the world, Parliament could not do anything to solve our transport problems until the technical experts were fairly unanimous as to what should be done. Hence there was a great task before the Institute in trying to secure a co-ordinated viewpoint. The experts of transport had to make up their minds how transport should be controlled, how monopolies were to be done away with, and how competition could be eliminated without weakening the incentive to progress. The Institute was doing a good work. It had to see that skilled men were trained in the principles of transport and in the technique of administration or what he might call, the political principles of transport. That was to say finding men to fill responsible positions to handle the controls, and who knew how transport should be organised and conducted. Parliament could never do that effectively, unless the Institute trained the right sort of people in the right sort of way. He knew of no professional institute on which a greater responsibility rested.

In an amusing speech, the Hon. Sir Arthur Stanley, G.B.E., C.B., M.V.O., who was described by a previous speaker as "the statesman of transport," said he had the honour of being the first chairman of a company formed long, long ago for the carriage of goods by road. It was an interesting company while it lived. "We got a few lorries," continued Sir Arthur, "and we ran more or less to time—I think very much less—but we did not have a lot of money." I found out afterwards that one of the reasons why we did not succeed was because we had a very adventurous general manager. He told me with pride one day that he took a large order for the carriage of goods from St. Helens to Liverpool. Naturally I was very delighted at the news, but a few days later I got a furious letter from the firm in question asking why we had never sent for the goods. I asked my general manager and he replied "I could not send lorries because I had not any to send." I said "but goodness gracious me, why did you accept the order?" He replied, "It was such a good order that it was a pity to refuse it." (laughter). Our fate was the fate of most pioneers; we lost our money but probably somebody benefited as the result of our experience."

Mr. Ashton Davies, O.B.E., proposed "Trade and Commerce" and emphasised the close relation between transport and trade and commerce. Everybody had to play his part in restoring business, not merely to normal activity, but to its former prosperity, and in that task transport had an important part to play. In that function there was no rivalry between one form of transport and another. Each was out to assert its advantages and to make its contribution to the problem of beating industrial depression. Everybody in transport looked forward to brighter trade conditions, which meant more goods to be transported and more passengers to be carried. Transport was always the index industry of trade.

Mr. Robert Fleming, director of the C.W.S. agreed that transport had a primary place in the nations of the world. There was, he said, need for more order and businesslike arrangement in the distribution of goods from the sources of production to the consumer, because it seemed absurd that granaries and warehouses should be full to overflowing at a time when markets were bad, and millions were out of work and were wanting, but had not the money to buy. Practical methods were needed to enable us to recover our trade and commerce from the terrible thraldom into which it had fallen. Commercial methods of to-day were deplorably lacking in idealism.

In a happy speech, Mr. C. le M. Gosselin paid generous tribute to the chairman, Mr. R. W. Royle who, he said, had been a close friend of his for many years.

Mr. Royle suitably responded.

As usual, all the arrangements for the dinner were in the hands of Mr. David Halliwell, O.B.E. The guests were seated in parties at small tables and this naturally conduced to a free and easy, and pleasant social atmosphere.

# The New A.E.C. Overseas Chassis.

A VERY important move has been made by the Associated Equipment Co., Ltd., of Southall, Middlesex, to increase its overseas sales by producing chassis specially designed to meet average overseas requirements.

Practically every country in the world is now busily engaged in building roads of a type suitable for carrying motor traffic; but, quite contrary to the general impression that there are new roads everywhere, a very moderate amount of travel is sufficient to convince one that roads are the exception rather than the rule. Indeed, there are roads nearly everywhere, but of a sort which impels the question "When is a road not a road?" In nearly all parts of the world there are roads which have every appearance of being all that the motor user can desire, but which, in fact are so lacking in strength that they can carry only the lightest traffic. There are roads which are quite capable of carrying the heaviest traffic, but which are so rough that none but the strongest vehicles can travel over them. There are good roads but so steep that only vehicles of great horse power can climb them. There are roads so deep in either mud or dust, according to the season of the year, that not only great power is required in vehicles using them, but also maximum wheel adhesion. There are roads of every condition and variety, in fact and if all nations worked their hardest at them it would be a century or more before they could all be brought up to what is the modern conception of a good motor road.

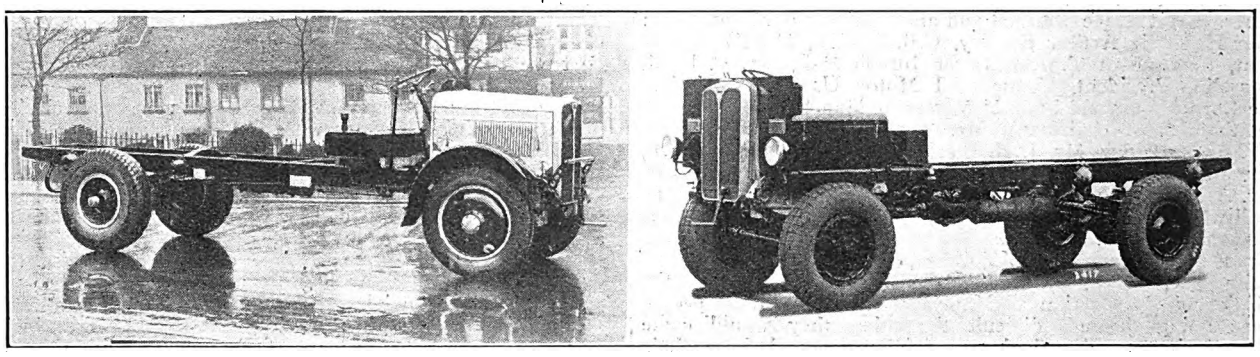
In only comparatively small areas are there roads fit to carry even the "ordinary traffic of the district," therefore, there must be embodied in the vehicles such special qualities as will counteract the imperfections of the road. Fortunately this can be accomplished and what the Associated Equipment Company has done is; they have made a study of requirements for vehicles working under moderately bad conditions (as distinct from extremely bad), and have built vehicles which will provide transport at reasonable cost under such conditions. In short they will provide practical transport covering a far wider area than that covered by good roads.

Though the first class road is ultimately the cheapest, the wonderful mobility of the motor vehicle enables it to test a district's traffic requirements and thus the engineers are able to decide with some accuracy as to how much money may be spent justifiably on the road for immediate needs. Such in fact has been the vast improvement in the mobility of the motor vehicle that it provides an easy selection of route with minimum preliminary expense, very nearly equal to sea transport.

The following are brief descriptions of the four overseas models the Associated Equipment Co., Ltd., Southall, Middlesex, has placed on the market and proposes to exhibit at the British Trade Exhibition, Buenos Aires to be held in March next year:—

(1) THE ACLO "MERCURY" 3½ TON FREIGHT CHASSIS.

This vehicle may be used also as a passenger chassis and has given excellent performances during the past season in this country but the design has been modified to meet overseas conditions in the following respects:—

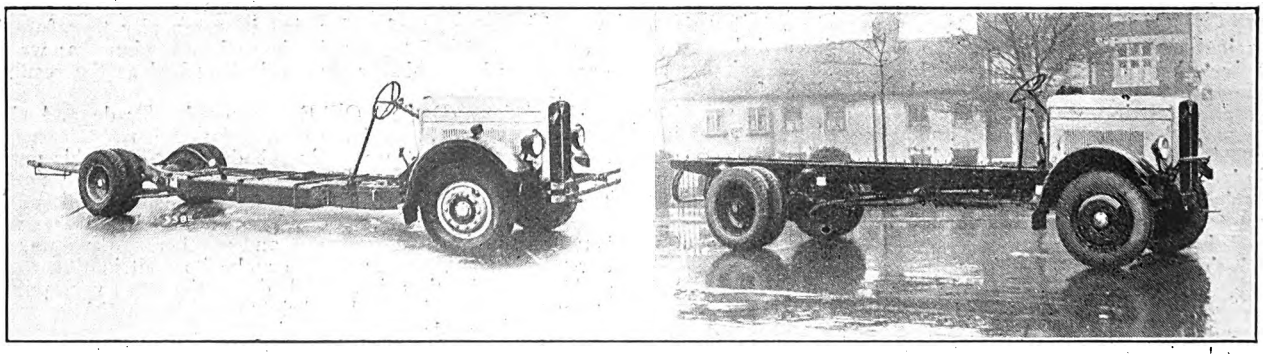


LEFT: THE ACLO "MERCURY" 4-CYL. 65-H.P. 3½-TON FREIGHT CHASSIS. RIGHT: ACLO F.W.D. 4-TON FREIGHT CHASSIS, INCORPORATING "MERCURY" POWER UNIT, FRONT WHEEL DRIVE AND AUXILIARY GEAR BOX.

It is equipped with a 1,600 m.m. track this being the width of the ordinary bullock cart track, which enables it to be operated successfully over dirt roads such as those in many parts of the Argentine. The 1,600 m.m. track enables the vehicle to run in ruts made by bullock carts.

A steering damper is fitted to reduce vibration in the steering. It has a deep robust colonial type frame and heavy colonial springs. The rear wheels are fitted with 44 in. by 12 in. giant single tyres and the front wheels with 30 in. by 7 in. tyres. The advantage of using large section tyres at the rear is that this increases the tractive effort, enabling operation under very adverse conditions.

It is fitted with a four cylinder engine rated at 31.1 h.p. and developing 65 b.h.p. at 2,000 r.p.m. The engine is of straight forward design, comparatively light in weight but of robust construction. It has accessible overhead valves needing little attention and automatic advance is provided. The cylinder head is easily removed if necessary.



LEFT: ACLO "RANGER" 6-CYL. 110-H.P. SINGLE DECK BUS OR COACH CHASSIS. RIGHT: ACLO "MAJESTIC" 6-CYL. 110-H.P. 6-TON FREIGHT CHASSIS AS USED IN THIS COUNTRY.

There is ease of access to all parts such as magneto, sparking plugs and carburetter, which are conveniently fitted on the near side. Die-cast, split skirt aluminium pistons are used and both cooling fan and dynamo are positively driven by automatically adjustable timing chains, thus belt trouble is avoided. Forced lubrication is used, pressure being controlled by the throttle. The maximum pressure of 80 lbs. is obtained on full load and 5 lbs. when idling. The crankshaft is of the five bearing type with bearings 2¾ in. in diameter. The engine is insulated from frame distortion. The water pump, easily detachable, is fitted with a spring loaded gland which automatically compensates for wear.

Power is transmitted through a single plate clutch 16 in. in diameter to a four speed gear box, of very heavy unit

Digitized by Google

construction. The gear ratios are first 4.37, second 2.69, third 1.59, fourth direct, and reverse 5.33.

The change speed lever is a spherical mounting to the left of the driver.

The rear axle is of the semi-floating type and the driving shafts are made from 100 ton steel and are of 3 in. diameter carried on taper roller bearings mounted back to back to take all end thrust. The axle is a one piece nickel stamping and the worm is carried in an over-head aluminium housing and runs on taper roller bearings.

Both sets of brakes act on the rear wheels but four wheel brakes can be fitted as an extra. Steering is of the Marles type and the chassis is lubricated on the central lubrication system.

(2) ACLO "MAJESTIC."

This chassis is a 6-ton freighter and is fitted with a six cylinder engine 110 m.m. bore by 130 m.m. stroke, rated at 45 h.p. developing 110 h.p. at 2,500 r.p.m. Its outstanding features are a stout and rigid seven bearing crankshaft, a large diameter clutch and unit construction gear box with short rigid shafts, automatically adjusted timing chains and throttle controlled forced lubrication.

This chassis is designed principally for operation in cities and towns over cobble and tarmacadam roads, but it can also be widely used on rough roads during the dry season. Like the "Ranger" it has a deep robust colonial type frame, heavy colonial springing, 1,600 m.m. track for camp roads and bullock cart tracks, steering damper to minimise shocks, trailer draw bar equipment, mechanical tyre pump and alternative gear ratios of 9½ and 10.6 to 1.

(3) THE ACLO FOUR WHEEL DRIVE 4-TONNER.

This model is designed for transport over ground impassable to the orthodox four wheeler. It has a capacity of 4-tons and, in addition, it can haul a trailer, a towing attachment being provided for that purpose. The power unit is similar to that of the Mercury described above.

It is provided with an auxiliary gear box by the use of which eight speeds are provided. The auxiliary gear box provides ratios of 1 to 1 and 1 to 1.86, the two wheel drive being on top ratio and the four wheel drive on low. The front axle is of the fully floating type and the rear axle of the semi-floating type. Independent hand and foot brakes are provided, the latter being assisted by the Vacuum servo system. Pressed nicket steel is used for the frame which is held together by rigidly riveted carbon steel cross members. The tyre equipment is 38 in. by 9 in. single pneumatics on all wheels.

(4) THE ACLO "RANGER."

This chassis is designed as a swift powerful single-deck bus and is fitted with a six cylinder engine similiar to that used in the "Mercury" type as described above.

The rear axle is off-centred to reduce the floor height of the body. The axle shafts are of the semi-floating type.

The chassis is fitted with a special colonial type frame 11 in. by 3 in. channel section. The wheelbase is 19 ft., heavy duty springs are provided and twin servo brake equipment. The tyre equipment consists of 38 in. by 9 in. pneumatic tyres.

With reference to the four wheel drive vehicle described above; this is the product of Hardy Motors whose works are at Slough. The firm is affiliated to the Associated Equipment Co., Ltd., the London office is 46, Charing Cross, London, S.W.1.

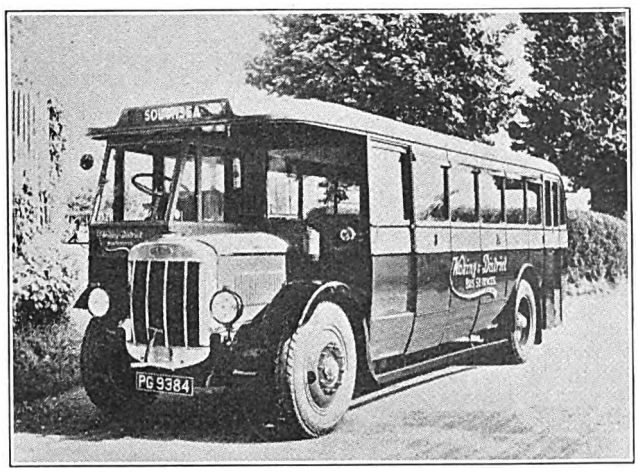
# Motor Coach and Bus Notes.

**"Commers" at London Coaching Station.**—Our photograph shows a fleet of six Commers about to leave the London Terminal Coaching Station. These vehicles, we are informed by Commer Cars, Ltd., of Luton, are the property of Blue Belle Motors, Ltd. Commer Cars, Ltd., have received an order for ten Invader chassis for the Kowloon Bus Company of Hong Kong.

A FLEET OF SIX COMMER COACHES OWNED BY BLUE BELLE MOTORS, LTD.

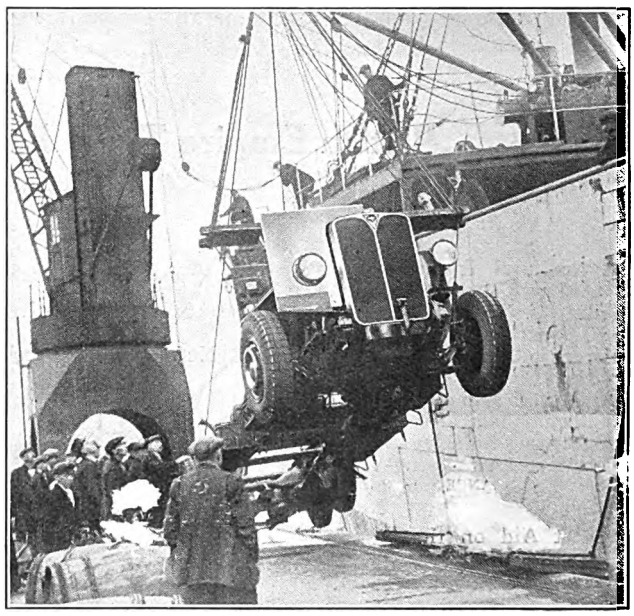
**T.S. Buses for Woking and District.**—The Woking and District Bus Services have recently taken delivery of several "Express" gear-driven 32-seater omnibuses from T.S. Motors, Ltd., 5 Iddesleigh House, Caxton Street, Westminster, London, S.W.1. The vehicle shown in the photograph is a typical example. The chassis used is the type B.10.A.2 with forward drive and is equipped with 38 in. by 7 in. pneumatic tyres and C.A.V. "M" type electric lighting. T.S. Motors claim that there are more "Express" vehicles of this type operating throughout Great Britain than of any other make; also that the petrol consumption is from 10/11 miles per gallon. The firm have also received repeat orders from the East Kent Road Car Co., Ltd., Aldershot and District Traction Co., Ltd., Scottish General Transport Co., Ltd., and the Widnes Corporation.



THE T.S. "EXPRESS" LIGHTWEIGHT BUS.

**Noiseless Buses.**—Representatives of municipal and private transport undertakings throughout the North East were interested participants of a demonstration in Newcastle on December 2nd of Daimler motor buses fitted with the new fluid flywheel and pre-selective (self-changing) gear-box, an immense advance in modern transport. This new bus was described on page 62 of our November issue. "What we have seen to-day will give us a great help over a stile. It is not sufficiently true to merely say trams are done, but tram lines have been laid where they should not have been laid had we foreseen such developments. Whole districts have established tramways where they should not have had them." This was a statement by Alderman R. Mayne, chairman of the Newcastle Corporation Electricity and Transport Committee, when speaking at a luncheon given by the Daimler Company, Ltd., of Coventry, following the demonstration. Alderman Mayne then made the interesting point that one of the difficulties of the transport undertaking was the question of the future of tram drivers if trams were to be replaced by buses. They were not inclined to take the callous view of saying they should take their chance. "One of the difficulties of tram drivers coming on to buses is changing gear. It seems to be a matter of "knack," which some never easily acquire, but this device relieves us of one of the difficulties of a tramway authority in bringing men from the trams to the buses."

**Denmark's First English 6-Wheeler.**—Denmark is the latest of the Continental countries to offer Great Britain the opportunity of demonstrating the capabilities of the modern type of bus chassis. The Associated Equipment



AN A.E.C. "RENOWN" SIX-WHEEL SINGLE DECKER BUS CHASSIS EN ROUTE FOR DENMARK.

Co., Ltd., of Southall, have sent, for service with the Copenhagen Tramways, a 6-wheel single-decker "Renown" model. It is a standard chassis with the exception of the frame, which has been extended to take a longer body, and the engine, the horse power of which has been increased from 95 to 110. The body is being built to the specification of the Operating Company, and as soon as it is completed, the vehicle will be placed in service. Its work, in and around Copenhagen, will be arduous and its capabilities and performance will be matched against several chassis of foreign manufacture. Accompanying the "Renown"—as in the case of all A.E.C. models being placed in service abroad for the first time—will be an engineer from the A.E.C. Southall factory, specially trained in foreign operating conditions, to ensure that the trial chassis is driven and maintained in a manner productive of the best results.

**Newcastle's Bus Bill.**—Newcastle City Council last March authorised the expenditure of £70,000 on buses. Thirty-four were bought at a cost of £58,875, leaving £11,125. The Transport Committee is replacing 14 single deck buses bought in 1925 by 14 new double-deckers and buying four extra of the latter, the whole at a cost of £33,750 (or £22,625). This makes £146,996 spent by Newcastle on municipal buses since 1925.

**New Jersey Garage.**—The Red Band Bus Co. (Safety Coach Service) has acquired for £2,500 part of the former Jersey Eastern Railway Co., Ltd.'s, locomotive sheds near the Green Street crossing as a garage.

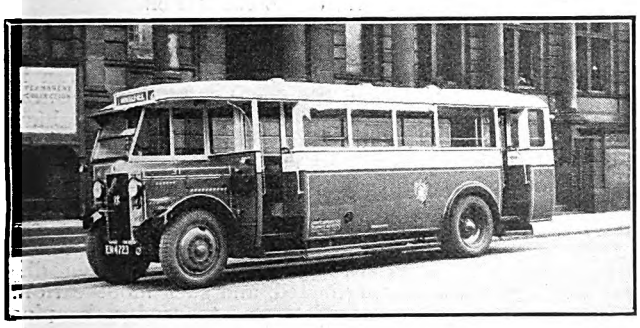
Digitized by Google

**Cumberland Motor Services.**—The directors of the Cumberland Motor Services entertained the staff Social Club to dinner at Whitehaven, 80 being present. Mr. H. Meageen (Managing Director) presided, and presented prizes for cricket, etc.; and the Mayors of Whitehaven and Workington were among the guests. He mentioned that the company uses 500,000 gallons of British petrol in a year. The club's activities include cricket, football, billiards, ambulance classes, and a male voice choir, while a string band is projected.

**Bus Enterprise.**—The United Automobile Services, Ltd., inaugurated on December 1st a new direct motor coach service between Newcastle and Edinburgh, which offers through travel to Glasgow. It runs via Wooler, Coldstream and Kelso. The company already had Newcastle-Edinburgh services via Alnwick and via Berwick respectively.

**Bus Passenger Awarded Damages.**—In respect of injuries sustained in a collision that occurred between two buses of the Irish Omnibus Company, Miss Josephine Hartnett, of Thomondgate, Limerick, was awarded £191 and expenses in the Limerick Circuit Court. She was a passenger on one of the buses on September 24th, and on the journey to Limerick City another bus of the same company came into collision with it, and in the impact she sustained serious injuries to her face and legs, receiving a scar on the head that would remain permanent. At the hearing of the action Judge McElligott said there was no exaggeration in the case, and gave plaintiff a decree for £191, and expenses.

**A Crossley Single Decker for Bury.**—We illustrate a Crossley Single Decker supplied by Crossley Motors, Ltd., Gorton, Manchester, to Bury Corporation.



A CROSSLEY 38/110 H.P. SIX-CYLINDER 32-SEATER DUAL ENTRANCE BUS SUPPLIED TO BURY CORPORATION.

**First Aid on the Roads.**—A scheme for organising a unified road ambulance service has been formulated by Mr. G. R. Curry, County Officer for the St. John Ambulance Brigade in Northumberland and Durham, and is now receiving the attention of the Ministry of Transport. Among Mr. Curry's proposals are that bus drivers and conductors should be trained in first aid and that all vehicles carrying 10 or more passengers should be fitted with a standardised first-aid equipment, while all motor buses should be built so as to carry two or four stretchers. First-aid ports would, moreover, be established at convenient places on the roads. Mr. Curry estimates the full cost for the country at £15,300 a year, which, he says, "can be largely met by contributions from the insurance societies, transport companies, and, say, 1s. per annum on each motor licence issued."

**Buses to Replace Trams.**—The abolition of tramcars and the substitution of omnibuses over the tram routes in the Borough of Tynemouth (North Shields) has been approved in principle. Sanction has meanwhile been given to the Tynemouth and District Electric Traction Co., Ltd., to operate a 15 minutes' bus service for a 10 minutes' service on the tramway routes between the Quay at North Shields and Whitley Bay.

**A Bus Pioneer.**—Mr. John Pyle, pioneer of the first bus service between Bedlington and Bedlington Station, commenced in 1889 with a single horse and wagon, charging 3d. for the single journey. He developed the business till he had 12 horses, three brakes, and a landau, and has retired at the age of 75. Mr. Pyle's son, Lance, is now running a service of motor buses on the same route.

**Speaking in Millions.**—It was stated at the fourth annual staff dinner of Crosville Motor Services, Ltd., whose headquarters are at Chester, that the organisation employed 2,300 men who received £7,000 in wages per week; controlled 600 vehicles and had an interest in 30 others; mileage per annum 20,000,000; over 2,000 miles of actual route; petrol consumption per annum 3,000,000 gallons; oil consumption per annum 100,000 gallons; 60,000,000 passengers carried last year, gross receipts being nearly £1,000,000; 31 separate inquiry offices and ten private hire departments which could provide travel accommodation for 2,295 persons at once. Mr. Claude Crosland Taylor, the managing director, spoke of the remarkable progress of the company in the last four years and to the changes in its title in that period. First it was the Crosville Motor Co., next L.M.S. Crosville and now Crosville Motor Services, Ltd. He felt that amalgamation was the only solution of the problem of North Wales coast road traffic, because amalgamation was not only in the interests of the operators themselves but of the public as well.

**Airvac Ventilators.**—Airvac Ventilators, of Honeypot Works, Darlington, inform us that they have just executed their twentieth repeat order for the Sheffield Corporation Tramways and Motors.

**Crossleys for Stockport.**—Crossley Motors, Ltd., Gorton, Manchester, have received an order from the Stockport Corporation for six 38/110 h.p. six-cylinder chassis fitted with 32-seater saloon service type bodies of Crossley manufacture.

**Licences Granted.**

The Watch Committee of the Newbury Corporation has granted licences to the International Express Services, of Sheffield; Underwood Express Services, Ltd., of Southsea, and Mr. John Prothero, of Beedon.

The Watch Committee of the Cheltenham Corporation has granted the application of the Black and White Motorways, Ltd., for 18 additional bus licences.

The Watch Committee of the Cheltenham Corporation has granted an application from the International Express Services for three bus licences and drivers' licences in respect of their proposed Newcastle via Sheffield service, subject to the route through the borough and stopping place and drivers being approved by Superintendent Goulder.

The Watch Committee of the Cheltenham Corporation has granted an application from the Reliance Bus Company, of Bidford-on-Avon, for two omnibus licences for extending their Pershore to Eckington service to Cheltenham. Mr. G. Crompton, manager of the company, attended and stated that their route into the borough would be via Evesham Road and Portland Street.

At the Watch Committee of the Merthyr Corporation, a letter was received from the Pilot Road Services, Ltd., stating that they had found it necessary to augment their London-Llanelly motor coach service via the Merthyr borough, and applying for two further licences to cover the additional buses. The licences were issued.

The Watch Committee of the Merthyr Corporation has granted six licences to the South Wales Transport Co., Ltd., for services between Merthyr and Swansea.

The Watch Committee of the Sheffield Corporation has granted licences to Messrs. Leavesley Bros., Ltd., of Blackpool, for a service between Blackpool to Sheffield in conjunction with the United Motor Services and Messrs. A. F. Hancock, Ltd.

At the Watch Committee of the Chorley Corporation, a letter was read from Ribble Motor Services, Ltd., stating that the company has purchased the concern known locally as "Freeman's Services" and applying for the renewal of the licences in respect of thirteen omnibuses operating in connection with the services. The licences were granted.

The Licensing Committee of the Otley Urban District Council has granted the application of Messrs. J. Bullock and Sons, Ltd., Featherstone, for licence to run a bus service, through Otley from Wakefield and Leeds to Blackpool, on condition that the bookings are for Blackpool only.

The Watch Committee of the Stalybridge Corporation has granted licences to the International Express Services, Ltd., in connection with their Nottingham to Liverpool service.

The Swanscombe Urban District Council has granted licences for coaches to Green Line Coaches, Ltd., in connection with a new service between Gravesend and London.

The Watch Committee of the Oldham Corporation has granted an omnibus licence to Messrs. Wood Bros., Ltd. (Blackpool), in respect of a motor coach to ply for hire in the borough.

The Watch Committee of the Oxford Corporation has granted an application by Mr. H. F. King, of London, for six bus licences to ply for hire in the city operating from London to Oxford.

Digitized by Google

The Watch Committee of the Oxford Corporation has granted the application of Ensign Motor Coaches, Ltd., for motor bus licences to ply for hire in the city operating on the route from London to Aberystwyth.

The Watch Committee of the Chesterfield Corporation has granted a joint application from the East Midland Motor Services, Ltd., and the North Western Road Car Company, Ltd., for permission to run a daily service between Chesterfield and Buxton, via Baslow and Wadshelf.

The Licensing Committee of the Blyth Corporation has granted the Tynemouth Traction Co., Ltd., a temporary licence for a demonstration double decked bus.

The Watch Committee of the Bournemouth Corporation has granted licences for two vehicles to Bournemouth Coachways, Ltd.

Manchester Corporation Watch Committee has granted the applications of the undermentioned for permission to run motor omnibus services from the city:—T. Swan, Manchester; P. Prestwich, Manchester; Manchester Corporation Transport Department.

**Entrances and Exits on Omnibuses.**—At the Licensing Committee of the Blyth Corporation, a letter was read from the Minister of Transport in regard to the question raised by the Council as to the position of entrances and exits of omnibuses. The Minister stated that he was now disposed to the view that a single decked omnibus should be fitted with an exit at a side of the vehicle other than that in which the normal entrance is placed, for which purpose side is deemed to include the front and rear of the vehicle, and that the question of entrances and exits in the case of double decked vehicles was still under consideration. The Committee decided to take no action in the matter at present, pending the operation of the Road Traffic Act, in which provision is made for the observance of prescribed conditions as to the fitness of public service vehicles.

**Must be Up-to-date!**—The Watch Committee of the Stoke-on-Trent Corporation has instructed the chief constable to inform the owners of obsolete types of buses that unless such vehicles are replaced, the Committee will consider the question of withdrawing the licences.

# Manchester Coachowners Merge Interests.

## Arrangements for 1931 Season.

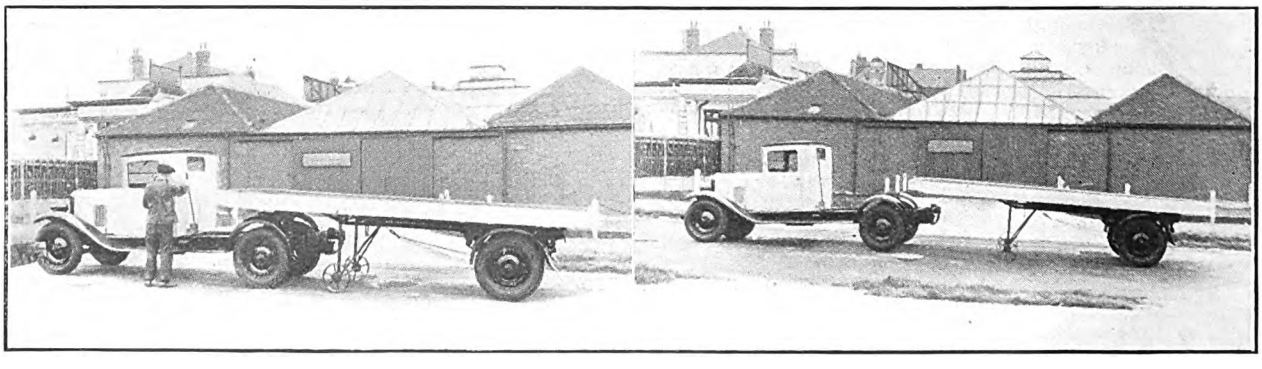
FURTHER news of the Manchester motor coach merger is available. At first the amalgamated services will be administered by a small company consisting of contracting parties who have adopted the title, Manchester Joint Services. Then in the spring it is proposed to form a public company in order the acquire the separate constituent companies and their coaches at a valuation. Negotiations are in progress for a convenient loading station. Time-tables and tickets are now being prepared and will be put before the Watch Committee for their approval; already tickets and time-tables are being printed for submission to the Watch Committee. About seventy coaches owned by seventeen firms form the nucleus of the combine which, by the beginning of the next motor coaching season, expects to double its vehicle resources. Manchester Joint Services intend to concentrate on tours to Blackpool, to which town there will be coach departures six times a day in the summer, and to Southport, Morecambe, and North Wales once a day on five days of the week and two trips on Saturdays. Modified arrangements will obtain during the winter months, such as a daily trip to and from Blackpool and perhaps once a week to Southport. The combine also intends to operate a number of long-distance tours to the South Coast, Wales and Yorkshire. Individual coach owners will receive profits according to their holdings in the pool and each will be responsible in the first place for the maintenance and operating costs of his machines. The plan, in some respects, is similar to the co-ordination scheme which was worked last season by the Manchester Transport Owners' Association and the Commercial Motor Users' Association (Joint Organisation).

### ANOTHER SCHEME OF CO-ORDINATION.

The motor coach owners section of the C.M.U.A. (Manchester area) and the Manchester Transport Owners' Association, has been busy considering the application in various parts of the Road Traffic Act. They are now awaiting the final regulations, and when circulars have been received from the Ministry, concerning Part 4 of the Act, a general meeting of members will be called in order that a scheme of co-ordination may be considered. Inquiries have been received from many parts of the country concerning the Manchester coach owners co-ordination scheme which was successfully introduced a few months ago. Where weak points have been discovered they will be strengthened, and such modifications or improvements will be made so as to render the plan efficient and capable of yielding the maximum benefit to those directly concerned.

# The Carrimore "Quick-Fit" Carrier.

WE have received from Carrimore Six Wheelers, Ltd., High Road, Gt. North Road, North Finchley, London, N.12, the two photographs which we reproduce. This is an interesting development of the old system of using a steam tractor with two or three trailers which can be employed at the same time, one trailer being loaded while another is being hauled and a third is being unloaded at destination. Many of our readers will be interested in some brief particulars of this new trailer.



TWO VIEWS SHOWING THE CARRIMORE "QUICK-FIT" CARRIER.

A patented hydraulic lifting device, comprising a pump box and a hydraulic ram is fitted to the prime mover, the ram operating in the centre of the turntable. When it is desired to detach the carrier, the following operations are carried out:—a few strokes of the hand lever of the hydraulic pump raise the front part of the attachment sufficient to allow the jockey wheels to drop into position, where they are locked by means of a pin, the brake cable is uncoupled and the prime mover is driven away.

The operation of coupling or uncoupling can be carried out in less than 1½ minutes, and the tractor can be coupled up at any angle relative to the carrier.

It is obvious that if several of these carriers are used with the same prime mover on the shuttle system, all terminal delays are obviated, and under certain circumstances an outfit of this description can carry out the work of several 3/4 ton lorries.

Only one lifting device is of course necessary for any number of carriers.

The device can be supplied to any make of prime mover.

## THE IMPORTANCE OF MODERNISING OUR INLAND WATERWAYS.

*To the Editor of* THE WORLD'S CARRIERS.

SIR,—Surely it is remarkable that only one of our leading canal companies—the Grand Union Company—has availed itself of the Government's offer to assist public utility schemes which will help to provide employment. One would have thought that such an opportunity of bringing the country's canals up to the most modern standard would have been seized upon more readily.

The Grand Union Canal Company is to spend more than £1,000,000 and (apart from the employment which this will give) the result will be a thoroughly efficient waterway on which larger boats, motor-propelled and capable of carrying bigger cargoes, will provide a service for all practical purposes as speedy as the railway goods service, and, at the same time cheaper than, and in other respects just as efficient as, either road or rail transport. It seems a pity, however, that, because the other companies concerned cannot see their way to follow this excellent example, the chance of making our great trunk canals into a system which would contribute so much to the solution of our national traffic tangle should be neglected.

Without giving any legitimate grounds for complaint to either railway or road interests, a very large percentage of the heavy and bulky merchandise which now retards industry by causing obstruction and delay, could be carried on the canals even in their present state.

But the efficiency of a great national asset, a third transport system consisting of 4,000 miles of inland waterways, would be enormously increased if the other principal canal companies would follow the example of the Grand Union Company, and, by availing themselves of the facilities offered by the Government, produce schemes for a similar ambitious development.

Yours faithfully,
J. A. CORCORAN,
Director,
National Union of Manufacturers, Inc.

6, Holborn Viaduct,
London, E.C.1.
26th November, 1930.

## AVOIDANCE OF STREET ACCIDENTS.

*To the Editor of* THE WORLD'S CARRIERS.

SIR,—The season of frosts and fogs is upon us. May I plead for a little more consideration on the part of motor drivers, a little more care on the part of the cyclist and pedestrian, while conditions are at their worst? Most accidents can, and should be avoided.

At the beginning of last autumn the National "Safety First" Association issued some suggestions in connection with slippery road surfaces. May I add a special winter hint for the motorist? See that the treads on your tyres are good; if not, renew them now. We hear much to-day of the need for road surfaces which offer a firm grip, but it takes two to effect that grip. The wise motorist sees to it that he supplies his share.

Yours faithfully,
J. A. A. PICKARD,
General Secretary.

National "Safety First" Association,
119, Victoria Street, S.W.1.
December 2nd, 1930.

# British Industries Fair.

**Chelmsford Committee's Report.**

THAT a site easily accessible from Central London should be acquired for permanent buildings for the British Industries Fair and that the Government should establish a regular annual publicity grant of a minimum of £100,000 (instead of £25,000 granted for a year at a time as at present), are among the recommendations of the Committee, under the Chairmanship of Lord Chelmsford, whose Report on the future of the Fair has recently been published.

"The Fair should be developed—and this," the Committee states, "is the basic recommendation of our Report—so as to become a truly national manifestation of the quality and range of British products and an increasingly powerful factor in the expansion of our trade. The Government and manufacturers generally should accord it more vigorous support, and the public should be encouraged to learn through the Fair that British manufacturers can supply their needs."

"Sell British Goods" is not less important than "Buy British Goods."

The Committee received overwhelming evidence that £25,000 was totally inadequate for effective publicity for the Fair throughout the world and it expresses entire agreement with the view that the advertisement of the Fair abroad is of value to British industry generally and not merely to exhibitors.

The preponderance of evidence was emphatically against a contribution to the publicity fund by increasing charges for space in the Fair and in recommending the substantial increase in the Government grant the Committee states: "We are convinced that expenditure of this character, by assisting in the restoration of British industry, will prove to be a national economy, and, even from the financial point of view, amply justified by results . . . . If our premises are sound and the Fair is to be regarded as a means of expanding our national industry, the contribution we recommend from national funds is insignificant compared to present expenditure on unproductive relief of unemployment which it is designed to reduce."

The Committee, although holding divergent views in regard to the scope of government activity in trade matters, is unanimously of opinion that the successful administration of the London Section by the Department of Overseas Trade should not be disturbed on theoretical grounds and it is stated that evidence shows that the development of the Fair owes much to the enthusiasm and efficiency of the officers of that department and the authorities of the Birmingham Chamber of Commerce.

The Committee, which was appointed by the President of the Board of Trade in February, 1930, to "examine the present situation as regards the British Industries Fair and to consider what means can be adopted to consider still further its utility to British Trade," consisted of : Viscount Chelmsford (Chairman); Lord Barnby (Messrs. Francis Willey & Co., woollen merchants), who, however, was unable to attend the sittings; Mr. John Beard (Trade Union Congress General Council); Alderman Sir Percival Bower (ex-Lord Mayor of Birmingham); Sir John Corcoran (Director, National Union of Manufacturers, Inc.); Sir Robert Donald (representing Press and Publicity); Sir William J. Larke (Director, National Federation of Iron and Steel Manufacturers); Mr. Guy Locock (Deputy Director, Federation of British Industries); Sir Sydney Skinner (Chairman, Messrs. John Barker & Co.); Sir Gilbert Vyle (Association of British Chambers of Commerce); Mr. Robert Waddington (Messrs. James Rothwell Ltd., manufacturers of cotton sheeting and blankets, etc.); Mr. E. B. Lewis (President, National Chamber of Trade).

# Answers to Inquiries.

LIABILITY FOR COMPLIANCE WITH PETROLEUM ACTS.

**Question:**—We operate a large number of commercial motor vehicles. Some of these vehicles we garage on our own premises but a considerable number go to a garage owned by someone else and over which we have no control. This being the case have we any responsibility for the necessary fire appliances and precautions required under the Petroleum Acts. In other words, can an Inspector coming to the garage and not being satisfied with the safety arrangements find out to whom the vehicles belong and hold them responsible, although they have no control or interest in the garage at all?

**Answer:**—Garages fall under two heads:—

(a) Garages licensed under the Petroleum Acts and the regulations made thereunder.

(b) Garages not so licensed.

Any garage or other place storing more than a specified amount of petroleum spirit must be licensed, subject to penalties if not.

A different body of regulations applies to a licensed garage as compared with the regulations which apply to an unlicensed garage. (By "unlicensed" we, of course, mean a garage or place *not requiring* a licence. A garage or place which ought to be licensed, but does not happen to be licensed, is for the purpose of this reply a "licensed garage.")

Until the new Petroleum regulations were issued in 1929, there was some doubt as to whether there was not some overlapping as to the regulations applicable to an unlicensed garage as compared with a licensed garage, but the 1929 Regulations now make it clear that, upon grant of the licence, that particular body of regulations alone applies, to the exclusion of what might be called the "general" regulations applicable to all unlicensed garages.

As regards a licensed garage, the occupier thereof, being the licence holder, is wholly responsible for fulfilling the regulations, and for penalties for their non-observance.

In the case of an unlicensed garage, every person using the same is responsible for any breach of the regulations occasioned by or during the user.

Applying these principles, therefore:—

(a) If a lorry is driven into a licensed garage, and at that time, or by virtue of such lorry, a breach of the appropriate regulations exists, then the licence holder is responsible.

(b) If a lorry is driven into an unlicensed garage, and at that time, or by virtue of such lorry, a breach of the appropriate regulations exists, every person using the garage, including the owner of the particular lorry is liable for breach of the regulations.

The logical outcome of the above is as to the manner of ascertainment by a "casual" user of a garage as to whether that garage is licensed or unlicensed. There is no absolute means of knowing. A licensed garage is under no obligation to exhibit a notice to the effect that it is licensed under the Petroleum Acts. Such licence is often exhibited at garages, for the reason that a licence holder is required by the regulations to acquaint his employees with certain of the regulations and conditions of the licence. So as to be on the safe side by ensuring that he has duly brought to the notice of his employees all the conditions with which he ought to have acquainted them, certain garage proprietors exhibit the whole of the licence, on the ground that, if they put up the entire licence, they must perforce have advised their employees of all material conditions. But, as mentioned above, this is only a matter of personal precaution on the part of the licence holder, and while, of course, exhibition of the licence is clear evidence that the garage is licensed, the fact that no licence is exhibited is no indication that a garage is not licensed.

Inability to determine definitely whether a garage is, or is not, licensed is, however, as a general rule, more theoretical than practical. If it is anything like a garage at all, selling petrol by retail, it is almost definitely sure to be licensed. The local authority sees to that. On the other hand, if the "garage" partakes of a shed or yard, without retail sales of petrol, the possibilities are that it is not licensed.

RUNNING COSTS.

**Question:**—Will you kindly oblige us with particulars of the cost of running a Ford 30-cwt. truck. We want to form an idea of depreciation, running costs, cost of driver, garaging, vanguard, etc. We estimate that the vehicle would cover about 10,000 miles per annum.

**Answer:**—The cost of the truck is, we understand, £210. We think you can safely rely upon a five year life for the vehicle if reasonably used and cared for. Petrol consumption is from 12-18 miles per gallon, depending upon the state of the road and the number of stoppages either due to traffic congestion or in the course of business. The driver's wages amount to £171 per year, Trade Union rates, and the tax £25 per year, provided the entire weight of the vehicle with body, ready for the road, does not exceed 2 tons. If, however, it exceeds 2 tons then the tax is £32 per year, provided the vehicle is shod with pneumatic tyres.

From the above the standing charges are computed as follows:—

| | |
|---|---|
| Interest on Capital at 5 per cent. | £10 10 0 |
| Depreciation at 20 per cent. ... ... | £42 0 0 |
| Insurance inclusive policy ... ... | £20 0 0 |
| Garage ... ... ... ... ... | £25 0 0 |
| Driver ... ... ... ... ... | £171 0 0 |
| Tax ... ... ... ... ... | £25 0 0 |
| | £293 10 0 |

Running expenses per mile in pence.

| | |
|---|---|
| Tyres ... ... ... ... ... ... ... | .75 |
| Petrol at 15 miles per gallon at 1/3 per gallon | 1.00 |
| Oil and grease ... ... ... ... ... | .15 |
| Repairs ... ... ... ... ... ... | 1.00 |
| | 2.90 |

The cost per annum, therefore, on a 10,000 mile basis would be £414 approximately, or approximately 10d. per vehicle mile, and this we consider quite an outside estimate and in actual practice you would no doubt get better results. You will understand that 10,000 miles per annum is small for a commercial vehicle, a higher mileage would result in lower costs per mile as the standing charges would be spread over a greater mileage.

ROAD TRAFFIC ACT.

**Question**:—With reference to the article on the Road Traffic Act, 1930, in your issue of November 15th, I should be obliged if you would inform me where your contributor has obtained the information contained in the last paragraph of the article referring to part one of the Act, namely, "That a person receiving a driving licence is required to sign it with his ordinary signature, etc," as under clause four of that part, sub section five, it does not give any such obligation, and leaves it to be inferred, as far as I can see that the name and the address of the holder of the licence will be put on it, the same as at present, by the issuing authority.

If, however, there is some further information on this matter in another part of the act, I should be glad if you would let me know the reference.

**Answer**:—The stipulation that a person receiving a driving licence must sign it with his ordinary signature under a penalty is not contained in the Act itself but it is one of the regulations now being drafted* by the Minister of Transport.

* The Motor Vehicles (Driving Licences) Regulations, 1930, containing this provision, have now been issued and are referred to in another part of this issue.

# Two Well-known Firms Amalgamate.

THE British Oxygen Company, Ltd., Angel Road, Upper Edmonton, London, N.18, and Allen-Liversidge, Ltd., Victoria Station House, Westminster, London, S.W.1, in letters addressed to their respective shareholders, outline proposals for fusion of the two companies. For many years these two companies have been working in close co-operation. Several working agreements have been entered into from time to time between the two companies which have proved in practice to be of great mutual benefit, but it has become increasingly obvious that the full benefit of co-ordination can only be achieved by a complete amalgamation of the two companies. It is now announced that an agreement has been entered into whereby The British Oxygen Company, Ltd., has offered to acquire the whole of the issued shares of Allen-Liversidge, Ltd., in accordance with certain provisions.

# Round the Lancashire Associations.

**Liverpool C.M.U.A.**

Motor users in South West Lancashire and Cheshire have learnt with deep regret of the passing of Mr. Charles Whitnall, secretary of the Liverpool Area Committee of the Commercial Motor Users' Association, after a long and trying illness. During the twelve years he held this position, it was his ambition to see the branch attain to a position of power and influence in the politics of transport. Although he always shunned publicity he and his staff were always to the fore when there was work to be done. The transport industry will miss his kindly presence. An accountant by profession, he was a past president of the Liverpool Philomathic Society and of the Liverpool Society of Incorporated Accountants.

Liverpool Area Committee of the Commercial Motor Users' Association intimates that arising out of the construction of the new East Lancashire Road, it has been necessary to close Longborough Road for traffic from its junction with Hewitt's Lane to its junction with Blind Foot Road, Vehicles travelling to and from St. Helens should make use of the road through Prescot on the south side of Knowsley Park.

**N.W. Institute of Transport.**

Members of the Manchester and Liverpool Section of the Institute of Transport paid a visit on December 10th, to the Head offices and Tobacco Factory of the Co-operative Wholesale Society, whose traffic manager is Mr. R. W. Royle, the chairman of the local Section of the Institute. After tea. Mr. Royle gave an address on "The Transport Interests of the C.W.S." He not only described with some detail the system of handling huge tonnages of goods by road vehicles but how his organisation placed reliance on every form of transport. Equally interesting were Mr. Royle's comments on the principles of transport to which the C.W.S. worked.

**Manchester Horse & Motor Owners and C.M.U.A.**

Several matters of importance to motor haulage contractors and coachowners in the South East Lancashire area were considered at the half yearly meeting of the Commercial Motor Users' Association (South East Lancashire Area), and the Amalgamated Horse and Motor Owners' Association (joint organization), held at Oldham. Councillor W. Farnorth of Middleton presided over a good attendance.

In the report of the General Council submitted by Mr. J. S. Howarth, secretary, it was stated that an application had been made by employees of co-operative societies for an extra week's holiday with pay. No decision had yet been reached on the matter. Mr. Howarth gave a full report of the wages situation and of negotiations that had taken place through the Lancashire and Cheshire Joint Road Transport Council.

**Conference of Road Transport Employers.**

Negotiations between the Liverpool and District Road Transport Employers' Conference and the Liverpool and District Carters and Motormen's Union on the subject of the accumulative working week, for motormen engaged on distances beyond the ten mile radius of the city of Liverpool, have had a satisfactory outcome. Employers because of the severity of the competition which they experienced from towns where the accumulative working week was in operation, pressed for the option of employing their men on similar terms. The accumulative working week will not come into operation in Mersevside district until February 1st. There is a safeguarding clause in the agreement between the Union and the Conference in respect of men engaged partly on local and partly on up country haulage. Only the hours worked locally between 7 a.m. and 7 p.m., will count as accumulative work. Time worked locally after 7 p.m. will have to be paid for as overtime. Motormen who are employed on the accumulative week system will receive one week's holiday annually with pay. The first 48 hours worked will constitute the working week. The first six hours after that will be paid for at ordinary day rates; further time at time and a quarter; Sunday work will be paid for at double time. We understand that other negotiations are proceeding between the Conference and the Union. The Road Transport Employers' Conference comprises representatives of the Liverpool Cart and Motor Owners' Association, Liverpool and District Short Cart and Motor Owners' Association, the Motor Transport Employers Federation and the following trades:—flour millers, wholesale provision merchants, coalowners, and seed, oil and cake dealers.

**Manchester Committee of Road Users.**

At their last meeting the Committee considered the details for instituting one-way traffic round Shudehill Market and its environs, the whole of the details being negotiated by Mr. H. Howard Robinson and the Chief Constable of Manchester. The following streets have been made "one-way" streets, viz:—

Tib Street—Traffic to flow from north-east (Swan Street) to south-west (Thomas Street). Oak Street—Traffic to flow from south-west (Thomas Street) to north-east (Swan Street). Carpenter's Lane—Traffic to flow from Oak Street to Tib Street. Green Street—Traffic to flow from Tib Street to Oak Street. Whittle Street—Traffic to flow from Oldham Street to Oak Street. Scholes Street—Traffic to flow from Oak Street to Tib Street. Foundry Lane—Traffic to flow from Tib Street to Oak Street. Edge Street—Traffic to flow from High Street to Oak Street. Copperas Street—Traffic to flow from Oak Street to High Street. Thomas Street—(between Tib Street and Shudehill) Traffic to flow from south-east to north-west. Hanover Street—(between Danzic Street to Shudehill) Traffic to flow from south-east to north-west. Mayes Street—(from Dantzic Street to Shudehill) Traffic to flow from north-west to south-east. With a view to further reducing the amount of congestion in Oak Street, a line of market vehicles will be allowed to stand in Oldham Street, between No. 71 and a point opposite No. 143 on the westerly side, up to 8 a.m. daily, the vehicles to be parked facing New Cross. A line of market vehicles will be permitted to stand in Turner Street on the southerly side between Tib Street and Elbow Street up to 8 a.m. daily, such vehicles to be parked facing High Street.

**Manchester Transport Owners' Association.**

The Wages and Labour Executive Committee of the Manchester Transport Owners' Association has carefully considered the provisions of clause 19 of the Road Traffic Act limiting the hours of drivers, and the secretary was authorised to attend another conference convened with a view to framing joint representations to the Minister of Transport prior to the clause becoming operative.

**Manchester C.M.U.A.**

A special Committee of the Manchester Area Committee of the C.M.U.A., has held meetings to examine in detail the draft heads of the regulations under the Road Traffic Act furnished by the Minister of Transport. The views of the Manchester members have been forwarded to the National Council and deal with many interesting points.

**Lancashire and Cheshire Joint Transport Council.**

At the last meeting of the Lancashire and Cheshire Joint Road Transport Council, held at Manchester, a request was submitted from the North Midland Joint Transport Board for representatives to attend a conference for the purpose of discussing certain matters arising under the Road Traffic Act. The Lancashire and Cheshire Council decided to fall in with the suggestion.

# R.I.A. National Council Meeting.

**Acceleration of Road Work.**—The varied activities of the Roads Improvement Association to accelerate the actual commencement of a larger volume of road work as rapidly as possible formed the chief business at the meeting of the National Council of the Association held at the Royal Automobile Club on November 26th. The frequent references made by the Government to the "millions" authorised for road work and the great extensions in road development that are intended have given the impression, it is stated, that the amount of road work actually in hand at present is several times greater than that of corresponding periods of past years. This is not the case. Numerous political and domestic difficulties are hindering actual commencement of a large number of approved and authorised schemes. A certain amount of progress has been made but, as Mr. William Haigh, M.A., B.Sc., who occupied the chair, pointed out, much more work must be started at once if road development is to be tackled upon a scale commensurate with traffic needs. He indicated that the Association's work through its parliamentary organisation and provincial branches would be continued and needed all possible support.

**International Road Congress.**—Mr. W. E. Cone made a general report on behalf of the delegates of the R.I.A. who attended the International Road Congress at Washington. His conclusions were that the Congress had been particularly beneficial in directing attention to the importance of road development and in particular to the latest and most useful methods of utilising the various materials used in road work to the best advantage.

**Co-ordination of Road Research Work.**—The Committee recently appointed to make recommendations in connection with the desirability or otherwise of asking the Government to set up a National Road Research Committee reported that considerable information had been collected and various investigations made. The findings of this Committee, embodying a suggested line of action to be taken by the Association, will be submitted to the National Council at an early date.

# Institute of Transport.

THE following gentlemen were recently elected to membership of the Institute of Transport.

MEMBERS.

| | |
|---|---|
| Baghurst, George | Rolling Stock Engineer, New South Wales Government Railways. |
| Ballantyne, Charles William Hastings | Secretary, Penang Harbour Board. |
| Blake, Percy Roberts | General Manager, Scottish General Transport Co., Ltd. |
| Cermak, Josef | Chief of Department of Finance, Ministry of Railways, Czecho-slovakia. |
| Cleary, William James | Chief Commissioner, New South Wales Government Railways. |
| Easton, Thomas Potts | General Manager, Newcastle-on-Tyne Corporation Transport. |
| Fewtrell, Albert Cecil | Supervising Engineer, New South Wales Government Railways. |
| Gibb, Roger | Chairman, Rhodesia Railway Commission. |
| Howie, Andrew | Joint Accountant, Southern Railway. |
| Kitching, John Everley | District Goods Manager (Newcastle - upon - Tyne), London and North Eastern Railway. |
| Le Clair, Louis Jean | Engineer, Westinghouse Brake and Saxby Signal Co., Ltd. |
| Mailer, James | Chief Mechanical Engineer, Cordoba Central Railway. |
| Makin, Llewellyn Williams | Chief Storekeeper and Maritime Agent, Buenos Aires Pacific Railway. |
| Mills, George | Assistant to Goods Manager (Southern Scottish Area), London and North Eastern Railway. |
| Morris, Samuel | Divisional Superintendent (Gloucester), Great Western Railway. |
| Myers, Walter Harold | Chief Electrical Engineer, New South Wales Government Railways. |
| Stevens, Lieut. Colonel Thomas Harry Goldsworthy, O.B.E. | Managing Director, Trafford Park Estates, Ltd. |
| Ward, Col. John Chappell, C.I.E., D.S.O., M.B.E. | Port Director and Director General of Navigation, Iraq. |
| Thackwell, Edward Hillyar Roche | Chairman and Managing Director, H. C. Motor Works, Ltd. (Hull). |
| Tipton, Fred William | Manager, Thames Steam Tug & Lighterage Co., Ltd. |

ASSOCIATE MEMBERS.

| | |
|---|---|
| Asher, James Mitchell | London and North Eastern Railway. |
| Atkinson, Arthur Reginald | London and North Eastern Railway (London). |
| Barker, George | Schweppes, Ltd. |
| Beeston, Robert James | London and North Eastern Railway (London). |
| Bostock, Enoch | London and North Eastern Railway (Ilkeston). |
| Bowler, Richard Blackburn | London and North Eastern Railway (Nottingham). |
| Brazill, John William Gerald | Mitchells & Butlers, Ltd. |
| Cheetham, John Ryder | London, Midland and Scottish Railway (Derby). |
| Clark, George Christopher | London and North Eastern Railway (Bradford). |
| Cott, Sydney | London Midland and Scottish Railway (Derby). |
| Course, Alfred George | Port of London Authority (Tilbury). |
| Crisp, Walter John | London Midland and Scottish Railway (Rugby). |
| Daniels, Albert Victor | London and North Eastern Railway (Newcastle-on-Tyne). |
| Dove, Clifford Alfred | Port of London Authority. |
| Douthwaite, Clive Empson | British Extracting Co., Ltd., Hull. |
| Farbrother, Allan Edward Pauling | Port of Bristol Authority. |
| Furnivall, Sidney Lionel | Southern Railway. |
| Green, Joseph Victor | District Traffic Superintendent (Werris Creek), New South Wales Government Railways. |
| Green, William Ewart | London and North Eastern Railway (Manchester). |
| Gripton, George | District Manager (Birmingham), Pickfords, Ltd. |
| Hastie, William Fairlie Syme | London and North Eastern Railway (Edinburgh). |
| Holmes, Percival Alfred Sand | Transport Manager and Engineer, G. & T. Earle, Ltd., Hull. |
| Hutchings, Stanley Walter | Great Western and Southern Railways (Chard). |
| Jackson, Arnold Arthur | Deputy General Manager and Engineer, Coventry Corporation Transport Department. |
| Jacobson, Carl Johan | London Midland and Scottish Railway (Liverpool). |
| Jubb, Edward Clifford Victor | London United and South Metropolitan Tramways, Ltd. |
| Lowry, Francis Bernard | Chief Traffic Superintendent, Ottoman Railway Company. |
| Mathew, Ernest Archbell | South African Railways and Harbours (Cape Town). |
| Mathews, Wilfred John | South African Railways and Harbours (Cape Town). |

# The Railways and Goods by Road in Glasgow and the West of Scotland.

*(By our Special Correspondent.)*

THE London, Midland and Scottish Railway Company has taken up the matter of transporting goods by road in real earnest. Several months ago a prominent official of the company hinted very broadly that as regards the transport of goods and parcels by road, progress in this direction was likely to follow the lines on which development has taken place in passenger transport.

There is, however, a vast difference between passenger and goods transportation. The former, by its very nature, lends itself to the drawing up of scheduled times, rates, distances, etc., whereas the latter is decidedly more differentiated and involved, consequently, whilst the company may aspire to develop the transport of goods by road on passenger lines such development must necessarily be much slower. For this reason it was to be expected that the railway companies would start off by expanding their own goods services, study the general conditions and explore their own limited sphere of operation before embarking upon a widespread co-ordination scheme with private firms.

In so far as Glasgow and the West of Scotland is concerned the effects of the L.M.S. road programme are already making themselves felt. Very wisely the company started off on their programme by propagating "salesmanship" among their administrative staff and inculcating them with ideas for selling transport. To this end the company officials have been studying the different local requirements of traders and manufacturers and set themselves the task of meeting these requirements by efficient transport organisation and facilities. They are now in a position to take over the whole of the delivery work of a large company, handling its goods by rail or by road, as may be more suitable to the individual. Not only this, but they are prepared to sort out and deliver any number of goods, thereby relieving the sender of all transportation work.

The companies are rapidly developing the railhead-distribution service embodying warehouse facilities which traders are allowed to make use of. They are also contemplating the formation of concentration centres in different parts of the country which will enable the distribution of goods from important railway stations to be handled on a large scale. As far as Scotland is concerned these schemes for road distribution services over a wide area are only in the embryonic stage, but there is every indication that the same lines will be followed as in north Wales where the L.M.S. have something like 14 railhead-distribution centres from which goods are forwarded to and from every small village on a scale which only applied to big industrial centres formerly.

The question of transport rates has been receiving very serious attention, but whilst the company's rates are invariably higher than those charged by the private contractors for road work they are attracting more and more business through the application of up-to-date methods in the matter of handling facilities. Every effort is made however, to meet the trader on the important item of rates. Where the lowest rate offered by the company is undercut by a private contractor, it usually happens that one of the company's subsidiary contractors enters the field and quotes against the private competitor. By this method the railway company very often secures the business either for itself or its subsidiary firm, which would otherwise have gone to the private contractor. As yet the company has not seen fit to reduce its rates to the level of the average private contractor, and one reason is that they believe the Road Traffic Act will make it impossible for many outside firms to carry on for any length of time if they persist in quoting uneconomic rates. It was pointed out by an official of the company that some private firms were carrying goods between England and Scotland at extraordinary low rates, and the railways could not possibly compete without incurring a loss. The company's rates were based on the actual costs of transport including all standing charges, and it was felt that many of these firms who were engaged in long-distance transport of goods were either prepared to work for no profit or gambled on the return journey furnishing a chance load.

During 1930 the railway company has made great strides in Scotland towards the development of a comprehensive goods service by road. The MacBrayne road service provides a good example. The L.M.S. Railway acquired a controlling interest in the firm of David MacBrayne (1928), Limited, Glasgow, in 1928, and after the re-organisation scheme which followed the prospect of a goods and passenger service was considered. About a year ago a goods service was inaugurated between Glasgow and Ardrishaig, and 3-ton Albion lorries with bodies specially adapted for carrying merchandise and livestock were commissioned. This service has proved very successful, and a similar service is now running between Inverness and Fort-Augustus whilst other routes are under consideration.

It is too early to pass criticism on the projected schemes for co-ordinated transport of goods by rail and road, but it is quite apparent that the railway companies have started on a sound basis which, backed by their organisation and capital should bear good fruitful results in the future.

# A Review of the Carrying Trades in Glasgow and the West of Scotland.

**A United Policy the Imminent Need.**

*(By our Special Correspondent.)*

INQUIRIES made among the various sections of the carrying trades in Glasgow and the West of Scotland reveals the existence of an element of disruption which is spreading with alarming rapidity. There is little or no semblance of co-ordination on the road, and it is high time that a concerted effort was made to put a definite check on the pernicious rate-cutting war which has been pursued with increasing intensity throughout the present year.

There is a veritable panic among members and what is most extraordinary, they are making no serious effort to deal with the situation as common-sense dictates. The transport of goods by road in Scotland has been mainly undertaken by private carriers and removers for the past 50 years, and those now engaged in this class of work should bear in mind that unless they pursue a sane policy they are in grave danger of being mulct of a large share of that goodwill which has taken half a century to build.

Warnings such as these, of course, have been given out many times in the past, but the carrying trade has never been called upon to face such difficult problems as confront it to-day. During the past year there have been a considerable number of newcomers on the road in Scotland, and with the sparcity of business there has not been sufficient tonnage to give everyone a fair share of profit. Furthermore, long distance haulage and removal vehicles have invaded the Scottish territories from different parts of England, and these invariably quote very low rates—sufficient to cover fuel cost—for return journey loads. Within the trade itself there is no accepted standard rate. Individual firms, whether members of associations or not, endeavour to undercut everyone else with the result that a large percentage of tonnage carried at the present time is not sufficiently remunerative to allow a reasonable margin of profit. It is a fact that many carriers and removers are transporting goods for practically next-to-nothing, and this is exampled daily on the Glasgow-Edinburgh road on which there are twice as many goods vehicles in daily service as are actually necessary. It has got to such a pitch that one finds erstwhile regular patrons severing their long connections with certain carrying firms simply because they know that by bartering with different members of the trade they will obtain lower rates.

But perhaps the worst feature of all is that whilst dissension and strife is rapidly weakening the organisation of the private trader, a formidable competitor has sprung up in the form of an organised effort by the L.M.S. railway company to secure a grip of the transport of goods by road. They are making progress, partly because they have the power as well as the finance to fall back on, but much of their success up to the present has been facilitated by the ineptitude of their opposition.

Instead of keeping together and displaying a united front the carriers and removers literally took fright and embarked upon the insane policy of rate-cutting in extremis—the first step to bankruptcy.

Every individual member of the trade knows full well the utter futility of pursuing this policy; every association official realises that drastic action of some kind is needed to remedy matters, but all agree that there never was a time before when unity among members was so necessary as it is to-day.

What then is the next move? It would appear in the first place that the different associations should immediately set to work and tackle the situation by a two-fold effort. In the first place the whole position of the carrying trade in Scotland

Digitized by Google

should be carefully reviewed in all its different aspects and a definite scheme drawn up for co-ordination between members themselves as well as between the trade in general and those industries for which it caters. This of course is no small task but present conditions demand it.

Conditions in Scotland are entirely different from those in England. The basic transport cost of forwarding goods by road in the North must be higher than those contracted for in the South because towns and industrial areas are separated by longer road distances on the average than in the latter.

The second point is that of disloyalty on the part of association members or it might be better to call it disinterestedness. A strong association carrying the full support of the majority of its members is certainly a power to be reckoned with, but that in no way applies to the carrying trades. It is no use blaming individuals or officials. Before any effectual remedy is possible, members as a whole must shake off their apathy and take an interest in association affairs. What is the use of formulating association rules and regulations when they will only be observed in the breach by those who voted in favour of them?

At the present time considerable thought and attention is being given to these matters, and it is understood that various sections of the trade are intending to thrash out the question of standard rates, and other equally important items. Already these have been placed on the agenda for early meetings.

There is one important point which should be mentioned before concluding. It is quite evident that as Associations are constituted it is practically impossible to deal effectively with firms and members who wilfully depart from whatever policy has been previously decided upon, and it would appear beneficial if some means could be found whereby offenders could be adequately penalised.

As a concluding note, it must be remembered that all sections of industry with which the carrying trade is connected are undergoing numerous changes, and the trade would do well to take notice of the fact that the railway companies are making a special study of these changes for the express purpose of adapting their road organisation to meet each and every demand in the future.

## Transport and Electricity Developments.

IN his speech on the debate on the Address in the House of Commons last month, Mr. Morrison, the Minister of Transport, referred to the large volume of schemes for the economic development of transport and electricity supply, representing a total expenditure of over £100,000,000, which had been authorised under the present Government with a view to stimulating employment.

It is understood from the Ministry of Transport that of this total about half represents schemes towards which grants are being made from the Road Fund; towards the remainder grants are being made out of funds provided under the Development (Loan Guarantees and Grants) Act, 1929, on the recommendation of the Development (Public Utility) Advisory Committee, under the Chairmanship of Sir Frederick Lewis, Bart., and the Unemployment Grants Committee under the Chairmanship of Viscount St. Davids, P.C., G.B.E.

The total is composed approximately as follows:—

| | Million £. |
|---|---|
| Improvement or reconstruction of classified roads and bridges (under the Trunk Road, Five Years and Annual Programmes)..... | 50 |
| Improvement of unclassified roads (Unemployment Grants Committee)..... | 6 |
| Docks and Harbours..... | 10 |
| Underground and Metropolitan Railways (over) | 11 |
| Main Line Railway Companies..... | 10 |
| Canals.....(nearly) | 1 |
| Electricity.....(over) | 12 |
| | 100 |

The schemes for improvement or reconstruction of classified roads or bridges which have been approved out of the Road Fund since August, 1929, have reached a figure of £50,000,000 (in addition to the annual expenditure on maintenance of classified roads of some £20,000,000 per annum and on improvement and maintenance of rural and other unclassified roads of some £10,000,000 per annum). Definite approval has been given to £24,000,000 of this £50,000,000 total; for the remainder, plans and details are still being worked out by the highway authorities concerned or are under final discussion with the Ministry. The above figures exclude the special London schemes, such as the Dartford-Purfleet Tunnel and Elephant and Castle improvements.

The amounts shown in all cases represent the total estimated cost of the schemes: the measure of Government assistance given varies according to circumstances.

In addition to these works of road improvement towards which grants are to be made from the Road Fund, some 6 million pounds of expenditure for improvement of unclassified roads has been approved for grant by the Unemployment Grants Committee

That Committee, which deals with works administered by Local Authorities or Trusts not trading for profit, has approved schemes for improvement of docks and harbours, including a comprehensive scheme of modernisation on the Mersey (over £2,000,000), a number of improvement schemes on the Clyde, the Tees, the Wear, and at Aberdeen, as well as a number of smaller schemes. On the advice of the Development Committee, which deals with applications from railway and other statutory companies, the Government has recently approved for grant a further extension of Southampton Docks involving expenditure by the Southern Railway of some £3,000,000; and the Great Western Railway have put in hand a scheme at a cost approaching £2,000,000 for the development of modern handling appliances at the South Wales Docks, while the London and North Eastern Railway have in hand schemes approaching £500,000 for various improvements at Middlesbrough, Hull and Grimsby. The total dock schemes approved on the advice of the two committees are over £10,000,000.

Schemes representing over £11,000,000 are being put in hand by the London Underground and Metropolitan Railways.

The main line railways, apart from the dock schemes already mentioned, have undertaken works involving expenditure of over £10,000,000. These embrace widenings of the Great Western Railway in the Birmingham, Bristol and Didcot and Newton Abbot districts, substantial improvements of lay-out at Paddington, Bristol, Taunton and Cardiff, a large extension of the system of automatic train control, and numerous improvements of goods depots and locomotive sheds. The London, Midland and Scottish are extending their electrification and building new stations on the Dagenham sections of their system. They have also undertaken other works involving the strengthening of bridges, widenings and the provision of further facilities for handling locomotives, as well as an expenditure of over £250,000 on further conversion of coaching stock to electric lighting. The London and North Eastern are undertaking substantial widening of the main line in the York area as well as doublings near Montrose. Their approved programme includes expenditure of over £500,000 for new marshalling yards, as well as a number of improvements or reconstructions of locomotive sheds.

A large programme of reconstruction involving an early expenditure of approaching £1,000,000 has been approved in principle for the Grand Union Canal Company.

Grants have also been approved for schemes of electrical development, involving a total expenditure of over £12,000,000. The greater part of this total relates to works connected with the standardisation of frequency on the North East coast but schemes of smaller amounts are fairly distributed throughout Great Britain.

**Exhibition of Empire Films.**—The London Chamber of Commerce advises us that an opportunity is being given to members of the Chamber on December 23rd next to attend a private exhibition of "Drifters" and "Conquest," two outstanding films produced by the Empire Marketing Board as part of their propaganda on behalf of Empire Trade. Admission will be by ticket only and any member desirous of being present should communicate with the Secretary of the London Chamber of Commerce, Oxford Court, Cannon Street, E.C.4, without delay.

**Royal Commission on Transport. Safety First Dinner.**—Viscount Brentford, President of the National Safety First Association, is to preside at a dinner to be given by that Association to the Members of the Royal Commission on Transport on January 15th, to celebrate the conclusion of its labours. Among the speakers will be Mr. Herbert Morrison, M.P., Minister of Transport. The final report of the Commission, of which Sir Arthur Griffith Boscawen is Chairman, is expected to be published this month.

# Liverpool Shipping and Forwarding Agents Association.

## Annual Meeting.

SOME important business came up at the annual meeting of the Liverpool Shipping and Forwarding Agents' Association (Inc.), held at the Exchange Station Hotel, Liverpool, on November 19th, last. Mr. G. C. Horton presided.

The meeting was attended by representatives of the following, amongst other, firms:—Messrs. G. W. Wheatley & Co., Ltd.; W. R. Lloyd & Co.; R. and D. Jones, Ltd.; James Hewitt & Co.; Thos. Cook & Son, Ltd.; Bishop's Wharf Carrying Co., Ltd.; J. H. Hughes; Donaldson Bros., Ltd.; Langstaff, Erembert & Co.; J. H. Lewis & Co.; F. Bower & Co.; Escombe, McGrath & Co.; H. and W. Nelson, Ltd.; Browne, Geveke & Co.; Transport and Export Co., Ltd.; G. H. Fletcher & Co.; Stockwell & Co., Ltd.; Benj. Ackerley & Son; C. Shaw Lovell & Sons, Ltd.; Gerhard & Hey, Ltd.; Collins & Co.; R. Steinmann & Co.; Pacific Steam Navigation Co.; R. W. Stewart & Co., Ltd. Apologies for absence were received from the President (Mr. David Jones), Mr. J. Mitchell Jones and Mr. R. Steinmann.

The chairman (Mr. G. C. Horton), in the course of his review of the year's work said:—

"Our association plays an important part in the transport industry of the port of Liverpool and in which we are ably assisted by the steamship companies, Mersey Docks and Harbour Board, Chamber of Commerce, etc. It is gratifying to report that the Dock Board have been able to reduce some of the charges on ships and cargoes. We are pressing for other reductions, but recognise that the high rate of interest the Board have to pay for their Bonds, etc., must be a very severe handicap to reductions in charges. Another handicap the Dock Board suffers is the lack of a representative of the Liverpool, Shipping and Forwarding Agents' Association on their Board.

"As our accounts show, we have a fair reserve and your Council has been considering how best to use it in your interests; it was suggested that it might be the nucleus of a Benevolent Fund. On taking legal advice it was found that certain changes would be necessary in our Articles of incorporation entailing heavy expenditure, so for the present the matter stands in abeyance.

"It was particularly pleasing to him personally, and he was sure to all members of the association, that a most useful member of the Council has been elected Chairman of the Liverpool Chamber of Commerce—Major Eckes.

"As one of the important links in the chain of the universal circulation of the world wealth, as exemplified by commerce, we, as an association must undoubtedly welcome freer trade, even in the solid wealth now 'stored in the vaults,' whilst on the other hand we must cogitate seriously before supporting measures that would restrict the sphere of British trade and commerce.

"Some of you may have noticed in your not too far off journeys the posters reading '. . . . goods for . . . . Docks.' The Liverpool Shipping and Forwarding Agents' Association sounds a somewhat different slogan; 'The World's Goods for Liverpool Docks' and—like the boy in the picture—will not be happy until its object be achieved.

"We are asked occasionally what is the chief aim of our Association and what does it achieve. Briefly it is—improvement in the shipping trade and commerce of the port of Liverpool, seconded by the friendly rivalry of our members, whose prosperity is so very closely allied to the volume of traffic passing through the port. The principal function of the Council is to negotiate with the various authorities such as steamship companies, railway companies, the Mersey Docks and Harbour Board, Foreign Consuls, H.M. Customs, etc., for the elimination of anomalies, excessive charges, restrictions, etc., on traffic passing through the port of Liverpool, in comparison with those prevailing at other ports.

"In conjunction with other Associations, we are collecting details of railway rates, and steamship rates to and from Liverpool, in comparison with those at competitive ports, with the object of having Liverpool placed on terms of equality which—from available evidence—she does not seem to enjoy at present.

"National and local economy is necessary if British traders are to successfully compete in the World's markets. To-day Extravagance, not Economy, seems to be the watchword of our rulers. It is sometimes stated that as the trade depression is almost universal, the heavy charges on British industry cannot be the cause of the depression under which we are suffering—a strange fallacy—which will prevent our being able to counteract the activities of our competitors in the rush for new business as the clouds of depression begin to lift.

"When trade does show any signs of revival, the competition to secure new business will be keener than ever, and the inability of British traders to secure their proper proportion of such new business would be fatal to the nation's foremost position in the world's markets and lead to serious disasters in the country.

"The past year has been one of almost continuous increasing depression and the clouds do not appear to be showing any of the long-looked-for silver lining; yet it may be that this depression, even with its painful effects, is not without its lesson; that it is the preparation for the foundation of a more solid and permanent structure of prosperity and peace based on real values.

"The personal element and touch is still necessary to the success of all business, and in no business is it so assiduously applied as it is by the Liverpool shipping and forwarding agents."

The annual report and statement of accounts were adopted on the motion of the chairman, seconded by Mr. W. R. Lloyd, who congratulated the chairman on the comprehensiveness of his survey of trading conditions. Some might think the report was of a pessimistic character, but he was convinced it would be the view of every firm represented there that day, that nothing had been left undone to follow trade wherever it had gone.

The Secretary, Mr. S. L. Jude who at a later stage of the meeting received a hearty vote of thanks for his services to the association, announced that all members of the Council retired this year and were eligible for re-election. No new nominations had been received. The Council, therefore, was re-elected en bloc.

The chairman mentioned that the question had been raised as to whether it was desirable to have a private and confidential reference list to be kept by the secretary, for the use of members of the association. Whenever a member wished for information as to the standing of a firm he would have the opportunity of using the reference list, which, if adopted by the Council, would be compiled on information supplied by members whose support, of course, would be invited.

There was discussion of this question and it is understood that the Council will draw up a series of proposals.

The Chairman alluded to a highly controversial topic, i.e., competition by Forwarding Agents who hold Freight Agencies at inland points and who are paid a Freight brokerage by S.S. Companies they represent. In some cases this Freight Brokerage or Commission is being used to subsidise their own Forwarding business to the detriment of the members of the Forwarding Agents' Association. What the Association is concerned about is the possibility to rule out this unfair competition. Another form of unfair competition is S.S. Companies acting as Forwarding Agents without proper remuneration—thus making their Freight Department carry an unnecessary burden. The Chairman ventured to suggest that the Forwarding Departments of S.S. Companies should be made to pay in just the same way as the freight departments.

Mr. J. Jude, C.C., was of the opinion that the steamship companies should not countenance their agents using their commissions to compete for forwarding business.

Major Eckes suggested the passing of a resolution pointing out to all the shipping companies of Liverpool the fact that (1) steamship agents were using the commissions paid by the shipping companies to compete for forwarding business, and (2) suggested that where forwarding departments are operated by the companies they should be run independently and made self-supporting.

He emphasised that all they were complaining against was work being done under cost price and that was only possible by the use of commissions paid to steamship agents for another purpose.

Mr. John Walton said unless something was done, forwarding agents might be wiped out altogether. Every forwarding agent introducing traffic should be entitled to commission. Members of the Association canvassed the country which resulted in consignments being brought into Liverpool from all parts. From their point of view, there was no need for steamship agencies canvassing for traffic in the country. Taking all things into consideration, he thought it might be desirable to revive consideration of the subject of the desirability of licensing forwarding agents. Competition between steamship agents and forwarding agents would be settled were licensing the rule of the port. No business in this country, excepting shipping and forwarding was working on pre-war rates, and in many instances the remuneration of agents was below that of 1914.

Digitized by Google

He suggested the adoption of the following resolution:—"That this meeting recognising the unequal competition that is arising through certain forwarding agents holding divers steamship agencies, requests the Council to consider a scheme of licensing similar to that operating for the ship brokers."

Eventually it was decided that subject to the approval of the president, a letter be sent to the Liverpool steamship companies on the subject of steamship agents' commissions and their abuse.

Mr. John Walton then formally moved the resolution mentioned above. This was seconded and carried.

Replying to a vote of thanks to the President, chairman and officials of the Association, Mr. G. C. Horton spoke of the deep and genuine interest of Mr. David Jones on the welfare of the Association. He was not only president, but he was a private member, and had, at all times, showed a ready willingness to use all his personal influence to advance the interests of shipping and forwarding agents.

The chairman also referred, with feelings of deep regret, to the loss of so many of their colleagues in the service of the shipping companies. Through the reduction of staffs, many long ties had been severed.

# News from the Ports.

**New Luxury Tender for Ocean Passenger Traffic.**—In view of the continuous growth in the number of ocean liners calling at Plymouth and the number of passengers landing and embarking, the Great Western Railway have placed an order with Messrs. Earle's Shipbuilding Company, Ltd., Hull, for the construction of a new twin-screw passenger tender. The new boat will have a length of 170 ft., breadth of 42 ft. 6 in. and a moulded depth of 15 ft. 9 in. It will be equipped with two sets of triple expansion surface condensing engines, supplied with steam from two single-ended marine type multitubular boilers, with a working pressure of 185 lbs. per square inch. These boilers will be heated by oil burning apparatus, which is a distinct innovation so far as the Plymouth tender service is concerned. The vessel will have a comfortable lounge and smoke-room, tastefully panelled in light oak, and a dining room with seating accommodation for 64 passengers. Arrangements will be made for the boat to be steam-heated throughout, a facility which will be greatly appreciated by overseas travellers landing during the winter months.

**New Canal Tug.**—The Minister of Transport has accepted a tender submitted by Messrs. Henry Robb, Ltd., of Leith, for the construction of a steam tug for the Caledonian Canal. The vessel will be constructed with a view to its use on the Canal as a tug and also an ice-breaker.

**The New United States Liners.** — The keel for the largest American passenger vessel ever to be built in the United States was laid in Camden on December 4th. This is the first liner to be constructed for the United States Lines' North-Atlantic passenger trade in the contemplated extensive construction programme which, when completed, will establish a well rounded out fleet of modern, luxurious and speedy ships. The contract for two ships was signed by Paul W. Chapman, President of the United States Lines, last May, and the preliminary design work was immediately started at the plant. The keel for the second vessel will be laid in about three months on the adjoining ways and both ships will be delivered in 1932—the first one in July and the second in November of that year. These ships will rank among the largest vessels now operating on the Atlantic and will be slightly over 30,000 gross tons.

**£1,000,000 Canal Scheme.**—A Bill seeking powers to enable the Grand Union Canal Company to proceed with their £1,000,000 development scheme was deposited at the House of Commons on November 27th. The first part of the proposed scheme involves the re-building of locks, at a cost of £383,000 and the reconstruction of bridges, passing places, pumping stations and other works at a cost of a further £123,000. This part, it is expected, will be completed within three years if the Bill is approved, but six years will be necessary for the dredging, concrete walling and other works to be carried out at the cost of another £375,000. Further improvements are to be made by the Grand Union Canal Company, to bring the whole of their undertaking to a state of the highest efficiency, and these will involve still additional expenditure of at least £150,000. The immediate aim is to enable barges in pairs, one motor propelled and the other towed and between them carrying 137 tons, to pass anywhere along the canal from Regent's Canal Dock, Limehouse, to Birmingham. Each pair will be able to navigate the Thames and load cargo there or from the various docks, thus avoiding the present necessity for transhipping cargo from barges to narrow boats. The Grand Union Canal Company's scheme has already been approved in principle by the Government's Development Advisory Committee.

**Lamport & Holt, Ltd.**—Mr. Walter Runciman recently made the following statement concerning the Royal Mail Group affairs. The statement published that Lamport and Holt, Limited, "may have to go" is incorrect. Lamport & Holt, Ltd., are in the hands of a Receiver and Manager appointed in August and the Company's services are being conducted regularly and punctually under his management. Since August, Lamport & Holt, Ltd., and its operating subsidiary, the Liverpool, Brazil and River Plate Steam Navigation Company, Ltd., are being run more effectively, and very substantial economies have been put into force by the Receiver and Manager.

**South Shields Quayside Scheme.**—An ambitious project is afoot for a new quayside at South Shields. The idea is to remove derelict property on the river front and replace it with a modern quayside which would accommodate the largest ships.

**Jarrow and Tyne Docks.**—Speaking at the annual meeting of the Tyne Commissioners, the Chairman, Mr. H. P. Everett, said that plans had been prepared for new quays at Jarrow, and the Government was not only ready with financial support but was urging them to commence operations. They had, he added, been negotiating with the L.N.E.R. for the transference of Tyne Dock to that Board, and figures were still under scrutiny.

**More Ships Come to Newcastle.**—The total number of vessels which used Newcastle quay for discharging or loading cargo in the last financial year was 1,538, with an aggregate net registered tonnage of 1,010,856 tons, an increase of 98 vessels and 40,438 tons as compared with the previous year. The total imports and exports dealt with at the quay, 522,131 tons, showed an increase of 2,765 on the tonnage of 1928-29.

**An Interesting Shipment.**—A very interesting shipment has been made from Hull. A steamer to carry 950 tons of cargo and 86 passengers was built by Earle's Shipbuilding and Engineering Company for the Peruvian Corporation, Ltd., for service on Lake Tilicaca, South America. As Lake Tilicaca is 12,500 feet above sea level, at the top of the mighty Andes, and 250 miles from the sea coast, with no connecting river or canal, the steamer, after completion, had to be taken to pieces, packed up in cases and bundles, and shipped on the motor vessel, "La Paz," for Mollendo, Peru. At Mollendo the parts will be loaded on trains for the Lake, where they will be reassembled by Peruvian workmen under the superintendence of Mr. W. R. Smale, who is going out from Hull for that purpose. The steamer, which is named "Ollanta," is 265 feet long with a beam of 35 ft. 6 in. and a moulded depth of 14 ft. She is fitted with twin engines and four oil-fired boilers and will have a speed of 14½ knots an hour. In 1906 Messrs. Earles built a somewhat smaller vessel, "Inca," for the same service, which is still running. Two years ago they sent out a new bottom for her.

**S.S. "Georgic."**—The White Star Line announce that their second motor vessel, now in course of construction at Messrs. Harland & Wolff's Queen's Island (Belfast) yard, is to be christened "Georgic." The "Georgic" is a sister ship to the "Britannic," the White Star Line's first and very successful experiment in motor shipping. When completed the "Georgic" will have a tonnage of about 27,000 and will accommodate 1,500 passengers in three classes—Cabin, Tourist Third Cabin and Third Class. She will be engaged on the Liverpool-New York service, alongside her sister the "Britannic."

**Liverpool Shipping and Forwarding Agents' Association.**—The Council of the Liverpool Shipping and Forwarding Agents' Association has welcomed into membership, the firm of Messrs. Benjamin Ackerley and Son, forwarding agents, of Dock Board Offices, Liverpool. This firm was a member of the Association for many years and Mr. Purton Ackerley was one of the founders of the Association, being its first chairman in the period 1908/10. Consideration has been given to a communication on minimum freights received from the London Shipping and Forwarding Agents' Conference. As the Liverpool

Digitized by Google

Chamber of Commerce now has this subject under consideration, the Council decided to remit the matter to them. The difference between the definition of f.o.b. Liverpool and f.o.b. London formed the subject of a communication which has been under the consideration of the Council of the Association. The topic is not a new one and some years ago an acknowledged expert in commercial shipping law drew up the f.o.b. Liverpool clause which is now recognised by all members of the Association and the port authorities. That the London clause should be different is no reason for interfering with the Liverpool definition, which has stood the test of time remarkably well.

**Liverpool Shipping and Forwarding Agents' Association Annual Dinner.**—We are informed that the Annual Dinner of the Liverpool Shipping and Forwarding Agents' Association will take place at the Midland Hotel, Liverpool, on Saturday, 17th January, 1931. Acceptances have already been received from the Lord Mayor of Liverpool and Mr. G. M. Gillett, M.P., Parliamentary Secretary of the Department of Overseas Trade. In order to make the dinner a more popular event, the Council has taken its courage in both hands by deciding to reduce the price of tickets from 15s. to 12s. 6d. (exclusive of wines).

**Mersey Master Porterage.**—Mersey Docks and Harbour Board has adopted a reduced master porters' rate in respect of empty palm oil or similar sized casks.

**Manchester Ship Canal Traffic.**—Traffic receipts of the Manchester Ship Canal Company for the month of October were £93,198, or £17,674 less than in the corresponding month of last year. The total for the ten months of this year is £1,076,089 and the decline in the period from 1929 figures is brought up to £114,591. The gross receipts to October 31st have been affected by reductions in the company's tolls arising out of the Derating Act. Against the reductions in receipts, the company have savings in local rates and from decreases in other expenditure to October 31st, which amount approximately to £40,000. The saving of £40,000 in rates, etc., is thus an offset to the ten months decrease of £114,591.

**Consular Changes.**—Senhor Luiz Ferreira de Faro, jun., has been appointed Consul General of Brazil in Liverpool. He will succeed Senhor Luiz Villares Fragoso, who left Liverpool recently on his appointment to the Consular office at Oporto. Nicolas Khalil Bey has taken over duties as Egyptian Consul in Manchester in succession to Mr. A. A. Ghaleb who was transferred to Rome a short time ago.

**Importation of Canadian Cattle into the Cardiff Docks.**—The first consignment of Canadian cattle to be landed at the Cardiff Docks for some years arrived last month. The s.s. "Salacia" with 150 head of cattle from Calgary, Canada, berthed at the Great Western Railway Company's up-to-date cattle lairs at Roath Dock, Cardiff. The importation of Canadian cattle into the United Kingdom ceased some few years ago, as a consequence of the serious floods on the Mississippi, in the North American Continent. Cardiff is one of the comparatively few ports in Great Britain at which live cattle may be imported, being licensed for this purpose by the Minister of Agriculture and Fisheries. Every facility is provided for this important branch of the import trade and advantages are offered at Cardiff which are comparable with any of the cattle-importing ports.

**The Rt. Hon. Walter Runciman, LL.D., M.P.**—It is officially announced that the Rt. Hon. Walter Runciman, LL.D., M.P., has been appointed Deputy Chairman of the following companies:—White Star Line, Ltd., The Oceanic Steam Navigation Company, Ltd., Pacific Steam Navigation Company, Mac Andrews & Company, Ltd., The Union-Castle Mail Steamship Company, Ltd., The Nelson Steam Navigation Company, Ltd., H. & W. Nelson, Ltd., Elder Dempster & Company, Ltd., The African Steam Ship Company, Elder Line, Ltd., The Imperial Direct Line, Ltd., The British & African Steam Navigation Company, Ltd., Glen Line, Ltd.

**Port of London Authority Arts and Crafts Exhibition.**—Mr. D. J. Owen, General Manager of the Port of London Authority, speaking on the occasion of the opening by Sir William Goscombe John, R.A., of the P.L.A. Arts and Crafts Exhibition, said that all grades of the Authority's staff—nay, indeed, of the Authority's Board—were represented in the Exhibition from the Chairman down to the boy messengers, not forgetting an old pensioner of the Authority who was 91 years of age. They knew that hard work seemed to him (Mr. Owen) to be the one quality which above all else in the world accounted for the progress and efficiency and the advancement of civilisation, and if there was one thing that had distinguished the Port of London Authority more than anything else and enabled it to keep its high position, it was the grim determination to have very little talk and a lot of work, and he thought that this country in the present difficult times through which we are passing might take to heart that lesson of the Port Authority and instead of talking about justification by faith, faith in tariff reform, duties on imported articles and so on might devote some time to the gospel of salvation by work.

**London's Million Tons Shipping Increase in 12 Months.**—Almost exactly 1,000,000 tons additional shipping used the Port of London during the 12 months to October this year, compared with the 12 months to October, 1929. The respective figures are:—for 1930, 58,333,377 n.r.t. For 1929, 57,332,956 n.r.t.

**Southampton Docks.**—The overhaul season for the big liners engaged upon the North Atlantic services is, as usual, providing the local ship-repairing firms with a large volume of contract work, and from the time that the "Berengaria" terminated her last voyage this year on November 4th until the "Majestic" re-enters service on March 18th, each of the "big six" domiciled at Southampton will spend a period of several weeks undergoing overhaul at the port. The shortest stay in port will be made by the Cunarder, "Mauretania," which lies up on January 10th for a period of 25 days, whilst the "Berengaria" is scheduled to spend 113 days off service this winter to enable extensive re-conditioning to be effected. The Southern Railway Company have decided, following upon the promise of financial assistance under the Government's Development (Loans, Guarantees and Grants) Act, 1929, to proceed immediately with the second portion of the gigantic Dock Extension Scheme at Southampton. The first section, which is now in an advanced stage towards completion, will provide 3,500 feet of quays capable of berthing the largest liners afloat, and is being constructed at an estimated cost of £3,000,000. Similarly, the second portion involves an expenditure of approximately £3,000,000, will take five years to complete, and provide an additional 3,500 feet of quayage with a depth of water alongside of 40 feet L.W.O.S.T. Reclamation of 200 acres of mudland forms a prominent feature of this part of the scheme and the installation of all requisite modern quayside equipment, etc., besides railway connections, is provided for in addition to the erection of four passenger and cargo sheds. December witnesses the inauguration of the Union-Castle Line's intermediate steamers regular service with Southampton, and this month three ships will be dealt with from South Africa each landing passengers here and discharging a substantial amount of freight during a stay in port of two or three days

**Clyde Navigation Trust.**—At the election to the Clyde Navigation Trust of six representatives of the Harbour ratepayers of Glasgow, which took place last month, all the retiring members, including Mr. William E. M'Caig, who was recently appointed to the Trust in room of the late Mr. James S. Craig, were nominated for re-election. The nominations were as follows:—Mr. George William Service, shipowner, 175 West George Street, Glasgow; Mr. William Francis Robertson, shipowner, 45 West Nile Street, Glasgow; Mr. John Crawford, coal exporter and shipbroker, Glasgow; Mr. Henry Melvill Napier, shipbuilder, Milton House, Bowling; Mr. Allan Alexander Dick, drysalter and oil merchant, Glasgow, and Mr. William Edward M'Caig, fruit broker, 30, Wilson Street, Glasgow. As the number of nominations did not exceed the number of vacancies there was no contest and the above named members were declared duly elected.

**Appointment of Chairman of the Clyde Trust.**—At a special meeting of the Clyde Navigation Trust last month Mr. William F. Robertson, the Deputy Chairman, was appointed as Chairman in succession to the late Mr. James S. Craig. In shipping circles Mr. Robertson is well known and is the head of the 73 year old Glasgow firm of coasting shipowners—the Gem Line. He entered the Trust in 1918. Besides being a member of the Clyde Trust he is a member of the Glasgow Committee of Lloyds Register of Shipping, and a Past-President of the Clyde Steamship Owners' Association. At the same meeting Mr. William Cuthbert was elected as Deputy Chairman. He entered the Trust as one of the Harbour Ratepayers' representatives in July, 1919, and had been convenor of the Harbour Committee since November, 1927.

**Large Floating Dock for Stockholm ?**—A committee has been appointed to inquire into the question of acquiring a floating dock for Stockholm able to take big ships.

**Improved Communication with Palestine.**—A message from Trieste says that the sailings of the vessels of the Lloyd Triestino Line to Palestine, which have hitherto been fortnightly, will, from December 31st, become weekly. Calls will be made at Brindisi, Larnaca (Cyprus), Jaffa, Haifa and Beyrout.

# Railway Notes and News.

**The Railway Barometer.**—The Railway Traffic Receipts of the four Group Railway Companies have now been published for the first 47 weeks of 1930 compared with the same period in 1929, and are as under:—

| | 1930 £ | 1929 £ |
|---|---|---|
| Passengers, Parcels, etc. ... | 67,730,000 | 70,589,000 |
| Merchandise, etc. ... ... | 56,451,000 | 60,862,000 |
| Coal, Coke, etc. ... ... | 30,660,000 | 32,753,000 |
| | 154,841,000 | 164,204,000 |

**Automatic Train Control.**—It is understood that the automatic train control system singled out and recommended for trial and investigation by the Ministry of Transport Automatic Train Control Committee, whose report is now published, is now undergoing a series of tests by the Southern Railway Company. This new control system, which is said to be remarkable for its simplicity, operates on purely magnetic principles, thus eliminating all necessity for a ramp or other form of mechanical contact device between the locomotive and the permanent way. No electric batteries are required on the locomotive itself, and the system is designed to fit in with the existing compressed air or vacuum braking arrangements. When a locomotive equipped with this device passes a distant signal that is in the clear position a short audible blast is given on a hooter in the driver's cab; when a signal in the stop position is approached the audible blast is continuous, and the brake is automatically applied. The system is also associated with the home or starting signals, and is designed effectually to stop a train overrunning a danger signal.

**London & North Eastern Railway Magazine. December Issue.**—There is a good selection of articles of general interest in this issue of the L. & N.E. Railway Magazine. Chief of these is one contributed by Mr. C. H. Newton, Chief Accountant, under the title "A Railway Company's Annual Accounts." It forms a valuable guide to the financial side of railway affairs, a subject so very much under notice at the present time.

**Facts About British Railways.**—This is the title of an interesting booklet issued by The British Railways Press Bureau, 35, Parliament Street, London, S.W.1, on behalf of the Great Western; London and North Eastern; London, Midland and Scottish; Metropolitan; and Southern Railway Companies. In the foreword it is pointed out that in little more than a hundred years railways have grown to be by far the largest and most important transport agency in the world. Modern industry depends on the rapid movement over long distances of an immense weight of commodities, and it is fostered and developed through the services which railways are able to render. The railway industry is the largest private undertaking in the country. The capital invested totals nearly £1,100,000,000 and its normal income is over £200,000,000. There is only one concern in the country larger than the railways and that is the State itself. Cheap and efficient transport are essential to a highly industrialised community, such as that of Great Britain. The railways are facing the problem of rail and road co-ordination in a practical manner. Their purpose is to develop highway services, both passenger and freight, as an integral part of their transport system, and whereas on the passenger side they are relying mainly upon co-operation and agreement with independent omnibus companies, on the freight side they have instituted their own road services in connection with those of the railway. Many hitherto unpublished facts about British Railways are set out in the booklet, the subjects dealt with including Capital and Revenue; Equipment; Maintenance and Renewal; Passengers; Freight; Purchases; Docks and Steamships; Hotels and Catering; Transport and Food Costs; Rail and Road; Publicity; Employment; Welfare and Education.

**Great Western Railway Magazine. December Issue.**—Well illustrated and containing many items of interest, the December issue of the G.W.R. magazine amply repays perusal. An example of the Railway Companies endeavour to exploit every avenue of economy, is the introduction and extension of the use of the Arc Electric Welding plant for renewing rail crossing points which have become worn and which are subject to heavy wear and tear. By means of the new plant, described in this issue, the worn rail is rebuilt to its original size, new metal of the same type as of the original rail being added to the worn crossing by passing an electric current through an electrode or metal rod held almost in contact with the crossing. The necessity of replacing a worn crossing by a new one is thus avoided and an additional advantage of this system is that work can be proceeded with without interference to traffic. An ordinary crossing can be repaired in a single day with the result that economies are effected in permanent way maintenance and the life of the crossing considerably extended. The plant which is easy to handle can be conveyed on an ordinary plate layers' trolley to the site. It has been considerably experimented with in the Bristol Division of the Company's system.

**Road Transport Companies in Association with the Southern Railway.**—This is the title of an article in the November issue of the Southern Railway Magazine and is No. 7 of a series. The activities of the Hants. and Dorset Motor Services, Ltd., are described and there are some excellent illustrations. The next article in the series will deal with the Maidstone and District Motor Services, Ltd. Another article, "Southern Railway Bridges over the Thames—a photographic survey," is of outstanding merit.

**Excursion Sleepers for Christmas.**—The L.M.S. and the L.N.E. Railways announce that for the first time in travel history third class sleeping cars will be attached to the special Christmas and New Year excursion expresses between London and Scotland. Third class passengers, on payment of a supplement of 7/- in addition to the cheap excursion fare, will be able to enjoy the comfort of sleeper third accommodation precisely similar to that provided on the "Night Scot," "Aberdonian" and other well-known Scottish night trains. This new facility is also to be available from Scotland to London and amongst the towns to be served by these sleeping car excursions are Edinburgh, Glasgow, Dundee, Perth, Aberdeen and Inverness. Scottish excursion trains leave Euston, St. Pancras and King's Cross on December 23rd, 24th, 30th and 31st.

**Enterprise in Steam Cars.**—A new articulated steam rail car came into service on the L.N.E.R.'s line between Monkseaton and Blyth on December 3rd. This is the first twin car on 12 wheels to be introduced on any railway in the world and it has two engines of the 6-cylinder single acting type, giving a steam pressure of 300 lb. per square inch, and has reached a speed of 64 miles per hour.

**New Railway Line in Bulgaria.**—Reuter's Trade Service learns from Sofia that the new railway line between Tverditza and Sliven is completely finished and will be officially opened before long.

**£31,000,000 Lost on Australian Railways.**—The report of the Commonwealth Railway Commissioner shows an aggregate loss for the past five years on the Commonwealth State Railways of £31,488.000. For the year ended June 30th the revenue was £45,853,000, working expenses £38,321,000 and interest £16,024,000. The Commissioner advocates the elimination of the present divided control of the railways.

**New Giant Locomotive. Hauls 1,000 Tons Train at 80 Miles an Hour.**—A new locomotive capable of hauling an all-steel train weighing 1,000 tons at a speed of 80 miles an hour has just been placed in service by the Canadian National Railways. It is the fastest locomotive in the Dominion and is the first of five to be used for hauling "The International Limited." The new engine measures 92 feet from the tip of the "cowcatcher" to the end of the tender. Its tender carries 20 tons of coal and 14,000 imperial gallons of water. The driving wheels are 80 inches in diameter. Developing a tractive effort of 43,300 pounds and an additional 10,000 pounds with a "booster," it is capable of attaining a speed of 80 miles an hour when required on the daily run of "The International Limited" between Montreal and Chicago. To attain simplicity of line similar to that found in British engines, practically all piping has been concealed and the sand dome, hitherto carried on the top of the boiler, has been eliminated in favour of a sand chamber inside the smoke box.

# Air Transport Notes.

**Royal Aeronautical Society Council Dinner.** — On November 18th a dinner was given to Colonel the Master of Sempill, A.F.C., F.R.Ae.S., Past-President of the Royal Aeronautical Society, by those members of Council who had served under him during his period of office from 1926-30. The dinner was held at the Army and Navy Club and was presided over by Mr. C. R. Fairey, M.B.E., F.R.Ae.S., President of the Society. As is well known, during the years that Colonel the Master of Sempill has been President, the growth of the Society has been most remarkable and the Council unanimously decided to pay him the honour of a special dinner on his retirement and at the same time to give him a permanent souvenir of their appreciation of his untiring energy and devoted services on behalf of the Society. Colonel the Master of Sempill was presented with a case of cutlery suitably inscribed and engraved. During the evening many messages were read expressing regret at the retirement of the Master of Sempill. They included messages from the two Patrons of the Society, H.R.H. The Prince of Wales and H.R.H. The Duke of York and also from members of the Society, including Sir Joseph Petavel, Mr. Orville Wright, Lord Wakefield, Major Lester Gardner, Mr. Edward Warner and many others.

**Armstrong Siddeley Air-Cooled Radial Engines.**—The present range of Armstrong Siddeley air-cooled aero engines embodies the accumulated experience of fourteen years steady development of the radial type. The range, which includes the choice of plain, geared, supercharged or geared and supercharged types on certain models ensures that there is an Armstrong Siddeley engine to suit any particular set of conditions. Both the Armstrong Siddeley supercharger and the Armstrong Siddeley reduction gear are thoroughly proved and tested productions and, like the engines, have been standardised for many years in the British Royal Air Force. The engines themselves are used in over twenty different countries of the world and are operating with equal success under extremes of climatic condition on varying types of fuel.

**Steel Aircraft.**—The policy of Sir W. G. Armstrong Whitworth Aircraft, Ltd., is to use all the resources of engineering, metallurgy and applied science to produce aircraft of the highest quality. The firm's constant aim is to obtain the highest performance consistent with safety and durability. It is twelve years since the firm began to make steel aeroplanes and until quite recently they were the only concern in the world to produce steel aeroplanes in series. These aeroplanes are made in a large and magnificently laid out factory equipped with an aero dynamic laboratory and wind tunnel, a well laid out laboratory for experimenting with materials and their treatment and much special plant for dealing with the manipulation of the steel strip. The British Royal Air Force has standardised two types of steel aircraft, the Siskin single-seater and the Atlas two-seater. The firm have made large numbers of the Siskin, and two other British constructors are now making these machines under licence in still larger quantities. The Atlas is in production only at Armstrong-Whitworth's own works at Whitley, near Coventry, England. Messrs. Armstrong Siddeley Motors, Ltd., have developed an engine known as the Jaguar Major. In general design it is similar to the Jaguar, but it develops more horse power. The Jaguar Major is interchangeable with the standard Jaguar, and may be fitted to any aircraft when extremely high performances are required.

**Development of Air Transport in the Irish Free State.**—Mr. O. Grattan Esmonde, T.D., who organised and founded the Irish Aero Club, visited Cork last month. Mr. Esmonde said that it was fairly obvious to the citizens of Cork that in a short time Cork was going to play a very important part in the development of civil aviation, not only in Ireland, but in the Atlantic as well.

**Imperial Airways.**—In a foreword to the programme of winter services issued recently it is pointed out that Imperial Airways is the British National Air Transport Company. It was formed in 1924 by the amalgamation of the four original British pioneer air transport companies. Since that time it has completed nearly 6,500,000 miles flying, carried over 159,000 passengers, and 5,500 tons of cargo. No other British air company operates services between London and the Continent, or uses three and four engined aircraft on the London-Paris route. The air liners used by Imperial Airways are entirely British, and are regularly subjected to the tests imposed by the British Air Ministry. The pilots are picked men. The British mid-day service between London and Paris and *vice versa* has been in regular daily operation for ten years without a single accident. The aircraft used on this service are larger and more luxurious than those on any other air service in the world. The "Silver Wing" de Luxe service will, this winter, be operated chiefly by aircraft of the famous "Argosy" class, built by Messrs. Armstrong-Whitworth, Ltd. Seating accommodation is provided for 19 passengers, in addition to a steward and buffet. Each of these aeroplanes is powered by three Jaguar motors, developing more than 1,200 total horse-power. The time-table gives full details of the following services:—London and Paris, London and Brussels, London and Cologne, London and Amsterdam, London and Hanover, London and Berlin. A separate time-table is issued for the England-Egypt-India services. Imperial Airways' London offices are at Airways House, Charles Street, S.W.1. Telephone: Regent 7861. Telegrams: "Impairlim."

**Model Airship for Museum.**—A model of the airship R 100 is to be added to the aircraft section of the Liverpool Museums. The cost will be about £30, towards which the Board of Education has promised a grant.

**Royal Air Force Display, 1931.**—The Committee of the Royal Air Force Display notifies us that the Twelfth Annual Display of Flying by the Royal Air Force will be held on Saturday, 27th June, 1931, at the R.A.F. Station, Hendon, N.W.9. Gates open at 10 a.m. Flying commences at noon and the programme is completed about 5.30 p.m. New types of aircraft will be exhibited in a speal park set apart for the purpose inside the 10/- enclosure. Prices of admission will be as in 1930. Tickets of admission for spectators to the 2/- enclosures are sold only on the day of the Display. Additional charges will be made for seats on Stands as heretofore. The number of Boxes is very limited and early application should be made to the Secretary for reservation to avoid disappointment. There will again be no internal car parking in the 2/- enclosures. The offices of the R.A.F. Display Committee are at Royal Air Force Station, Hendon, The Hyde, N.W.9.

**New Landing Grounds for Civil Flying.**—During the past year National Flying Services, Ltd., have located 107 landing grounds which it is hoped will be made available in the near future for use by private aircraft and the N.F.S. air taxis. Sir Alan Cobham said on November 27th that these grounds help to fill in the gaps between recognised aerodromes and will greatly increase the convenience and safety of flying. They have been approved by the Air Ministry and, if required, may be licensed for regular use as flying develops.

**The Royal Aeronautical Society.**—The Akroyd Stuart Memorial Prize Lecture on "The Origin and Development of Heavy Oil Aero Engines" was delivered by Mr. D. R. Pye, M.A., F.R.Ae.S., Deputy Director of Scientific Research at the Air Ministry, on December 11th. This is the first award of the important Akroyd Stuart Prize. The offices of the Society are at 7 Albemarle Street, Piccadilly, London, W.1.

**Manufacture of Aeroplanes in Sweden.**—A Stockholm message says that with reference to the planned manufacture of aeroplanes by Svenska Jaernvaegsverkstaederna at Linkorping, it is announced that it is proposed to establish the manufacture of aeroplanes on a large scale. The works will only manufacture planes of the most modern type, with a steel construction covered with cloth, wood as a material for the body of the planes being abandoned as far as possible. High-grade Swedish steel will furnish an excellent material. The manufacture of several types is planned, both civil and military, and licences will possibly be acquired for the manufacture of certain foreign types. The works will produce not only for the home market, which is not able to absorb very much, but also for export, chiefly to small countries. Hitherto, only two Swedish works have been engaged in the production of aeroplanes.

**Air Service to Afghanistan.**—According to news from Afghanistan, reported by Reuter's correspondent at Teheran, the Junkers Company has reached an agreement with the Afghanistan Government for the establishment of an air service between Meshed in Persia and Herat, Kandahar and Kabul. The service will commence next spring.

# Law Cases.

## RIVALRY OF BUS COMPANIES ON IRISH FREE STATE ROADS.

IN the District Court, at Dunshaughlin, before District Justice Reddin, Peter Kinsella, of Ivan Street, Dublin, and Christopher Duignan, of Headfort, Kells, County Meath, were summoned for reckless driving of motor buses, and for failing to stop after an accident at Rathhill, near Dunshaughlin.

Having heard the evidence, District Justice Reddin dismissed the cases for failure to stop, as both parties did report the collision. As to the more serious charge, he could deduce from the evidence that a very serious state of affairs existed, caused by the rivalry of bus companies on the road. He did not believe that this attitude of bus drivers of "besting" each other came from personal inspiration. He believed their employers were at the back of that attitude, and he was of opinion that that attitude came well within the criminal code. He had very little interest in the fate of either of the companies named, or which of them survived the other, but he had an interest and duty to perform to the public who used those vehicles, and he had come to the conclusion that both the companies referred to allowed their employees, if not directly, to act in a criminal manner. He was satisfied that there was no criminal negligence committed by one of the defendants. He dismissed the charge against Kinsella, and he convicted in the case against Duignan and fined him 40s., and he ordered the suspension of his licence for seven days. He ordered him also to pay 35s. witnesses' expenses.

## HIRE PURCHASE.

THE responsibilities of hire purchase were emphasised in the Brampton (Cumberland) Police Court, recently. A haulage contractor, of Farlam, Cumberland, bought a motor lorry for £284. All but £91 had been paid when he resold the lorry. He was summoned for larceny as bailee, but the solicitor for the Finance Company interested withdrew the prosecution.

Under these hire purchase agreements, the Solicitor said the article does not become the property of the purchaser until the last instalment is paid, and this fact cannot be too well-known.

Mr. Russell, solicitor for the defence, said that defendant acted quite innocently, and without any intention to defraud.

The magistrates agreed to the withdrawal of the summons.

## WEIGHING OF 8-WHEELERS; COURT COMPLAINT.

THE methods adopted by the police in weighing an eight-wheeled vehicle were questioned at Warrington. Thomas Herbert Wolstenholme of 91, Briardale Road, Mossley Hill, Liverpool, was summoned for driving a heavy motor car with excessive axle weight in Warrington. The vehicle was too large to go on the Corporation weighing machine and was weighed in two portions, front and back axles. The load was found to exceed the registered weight by 3 tons 4 cwt.

Mr. Joseph Latin, solicitor, Liverpool, for the defence, said this method of weighing a vehicle could not be correct. The vehicle was carrying segments for the Mersey Tunnel and the load was invoiced at 14 tons.

A fine of £3 and 5s. costs was imposed.

## A QUESTION OF WEIGHT.

ONE interesting point raised in the prosecution of a motor lorry driver who was fined £5 at Warrington recently, was that he refused to have his lorry weighed when requested to do so by the police, who desired to ascertain the weight of the axles.

According to the evidence of the police, defendant's lorry appeared to be overloaded and he was asked to drive to a weighing machine, He refused to do so on the grounds that it might break the machine. When pressed further, defendant asked the police officer to give him a guarantee that he would accept responsibility for any damage done if he passed his vehicle over the weighbridge. This, of course, the officer declined to do.

Before the fine was imposed, the chief constable said defendant's conversation with the police officers demonstrated that he knew very well he was carrying an excess load. From the fact that he asked for a certificate that he would not be held responsible for any damage done to the weighing machine, it was reasonable to infer that the lorry was of such weight that the weighing machine would have been damaged, if he had placed it on the scale.

## ABUSE OF WATER SERVICE BOXES.

As is well-known, water service boxes fitted with lock mechanisms which can only be operated by a key and a specially designed token, are in service in Liverpool and district, this type of supply hydrant having been approved by the British Waterworks Association after consultation with the motor users' organisations. Certain abuses of the device may lead to the discontinuation of the system.

This was stated at the Liverpool stipendiary's court when two men employed on a steam wagon belonging to a local firm of motor haulage contractors were summoned for jointly stealing water valued at sevenpence from a service box at Hunt's Cross. Mr. J. Alun Davies for the Liverpool Corporation said that unless a stop could be put to the irregularities that had been taking place, the various water authorities might have to discontinue the use of the service boxes. Tokens were sold by the authorities and the Commercial Motor Users' Association, which could be used to get the water in conjunction with a key which itself amounted to a licence for the vehicle carrying it. Recently, however, instead of the tokens, wooden chips, pieces of tin, wire, bits of spring and lead tokens had been found in the containers after water had been obtained.

A model of the service box and lock mechanism was demonstrated in court.

It was stated that defendants employers had stopped using tokens on account of complaints about men trafficking in them.

Defendants were each fined 10s. but the Stipendiary uttered a warning that if such offences recurred, the offenders would be dealt with more severely.

## SELLING TOBACCO OUT OF A DELIVERY VEHICLE.

IN the District Court at Ballycastle, County Mayo, Patrick Jordan, egg merchant, was prosecuted for selling tobacco and cigarettes on the highway from out of a vehicle, used as a travelling shop.

It was stated in Court that the tobacco could be supplied only from the vehicle if the commodity had been previously ordered. A person licensed to sell tobacco was then entitled to convey the ordered tobacco in his travelling shop, to the person who had ordered it.

Mr. Thornton, State Solicitor, said that the maximum penalty for such offence was £500.

District Justice Guy, said that as it was the first case of the kind, and the defendant did not know that he was committing an offence, he would apply the Probation Act in the case, and ordered the defendant to pay the costs of the prosecution.

CONSIGN SHIPMENTS FOR NORTHERN

INDIA

TO

THE EASTERN EXPRESS Co. LTD

Forwarding, Shipping & Clearing Agents,

KARACHI

This Advertisement is inserted to bring before Forwarding Agents and Shippers in Great Britain and abroad the name of a Firm to whom shipments for any part of India should be consigned. Every description of merchandise cleared and forwarded to consignees. C.O.Ds. collected and remitted promptly.

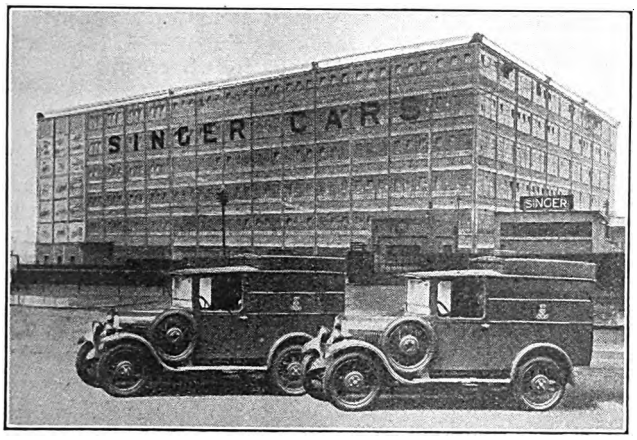
# News from all Parts.

**Change of Address.**—We are informed by The National Traction Engine Owners' and Users' Association (Incorporated), that they have removed to new offices at 17, Victoria Street, London, S.W.1, and in future all communications should be sent to this address.

**British Cars for the Danish Post Office.**—Our illustration shows two of the Singer Junior 5-cwt. delivery vans

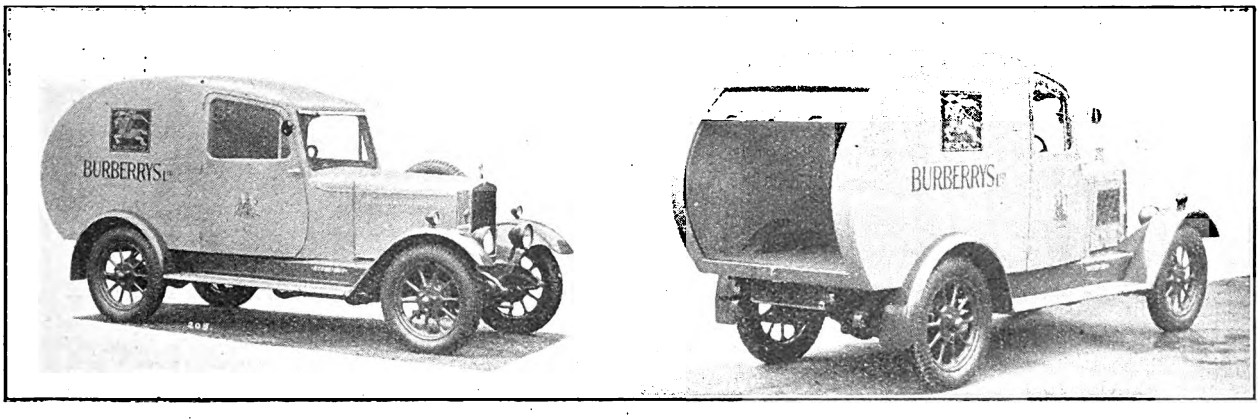


TWO OF THE SINGER JUNIOR 5-CWT. DELIVERY VANS FOR COPENHAGEN POSTAL AUTHORITIES.

which have been supplied by the Singer Motor Co., Ltd., of Coventry, to the order of the Copenhagen Postal Authorities.

**Varsity Express Motors, Ltd.**—In the November issue we referred in an article dealing with bus services at Cambridge to those carried out by this company. We are asked to state that, although the company was formed in 1929, the services referred to commenced in the middle of 1927 and were operated by two of the Directors of the present company who were then in partnership.

**An Interesting Trade Delivery Van.**—We are indebted to Messrs. Stewart & Ardern, Ltd., sole distributors of Morris cars, The Vale, Acton, London, W.3, for the photograph which we reproduce of a Morris Cowley chassis fitted with an interesting body supplied to the order of Burberrys, Ltd.



AN INTERESTING BODY ON MORRIS COWLEY CHASSIS.

**P. Eastwood, Ltd., Burnley.**—This old-established firm of motor and carriage proprietors, which has been in business since 1864, has recently been carried on by the liquidators. We are asked to say that the business is being continued and run as usual and the management are busy getting out their summer list of tours and tour books for 1931.

**World Motor Rally at Rome.**—We are interested to hear that a World Motor Rally is being organised in Rome to be held at the end of April, 1931. Delegates to the World Motor Transport Congress, held in Rome in 1928, will learn with interest that this is being promoted by Count Gallenga Stuart and that the organisation of the event has been entrusted to Miss Kohnberger, the able and energetic Secretary of the Congress. The official programme is not yet ready, but there will be the usual hill climb, a race on the autostrade of Ostia, a reliability competition of brakes, etc. Many festivities will be arranged, such as big garden parties in the two famous historic castles near Rome, while on Sunday, April 27th, the annual competition of elegance is to take place at the Pincio.

**Car Lights on Private Roads.**—In a case just decided at Guildford (Surrey) the solicitors to the Automobile Association defended a motorist charged with leaving a car on the highway without lights, the explanation being that as the car was on a private road, it was not thought necessary to exhibit lights. Cases of this nature are frequently reported to the Association. It is essential for motorists to know that the Road Transport Lighting Act, 1927, makes it clear that for the purpose of lights on vehicles, "road" means any public highway and any other road to which the public has access.

**Institute of Transport.**—There will be an ordinary meeting of members of the Institute of Transport at the Institution of Electrical Engineers, London, on January 12th next at 5.30 p.m., when Mr. H. M. Cleminson will speak on "Shipping and its relation to road, rail and air, in co-operation and competition."

**Leyland Bradford Service.**—For the convenience of users of Leyland vehicles in the Bradford district, Leyland Motors, Ltd., has further extended its service facilities in that district, by opening another service station in the town of Bradford itself. This Service Depot, which is situated at 177, Thornton Road, Bradford, was opened on December 1st. It will be recalled that a short time ago the Leyland West Riding Service Depot at Brighouse was very much enlarged and the stocks of spares increased. This new Bradford Depot will be operated in conjunction with the existing West Riding Service Depot. A comprehensive range of spares is stocked and complete repairs, including breakdown service, will be undertaken.

**Scottish Roads are Safe.**—The Scottish Transport Company, one of the biggest and most progressive bus concerns in Scotland, announces that 87 per cent. of its drivers have been awarded the Diploma of the National Safety First Association for freedom from Accidents in 1929. It also states that the average number of miles run by its buses for each breakdown is over 75,000. The "Freedom from Accidents" Competition for drivers is steadily gaining in popularity throughout the country. When the Competition started in 1918 some 2,200 drivers entered. This year the number will exceed the 40,000 mark, and will include the Post Office drivers, whose entry has recently been sanctioned by the Postmaster-General.

**Drivers Licences.**—The Minister of Transport having certified that satisfactory provision is made by the law of Northern Ireland for the granting of licences to drive

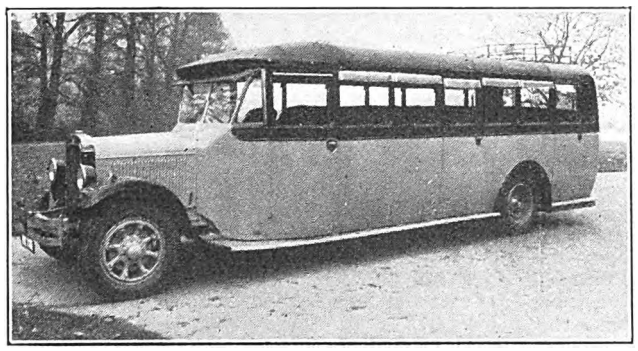
Digitized by Google

motor vehicles, the holder of a Northern Ireland driver's licence may now legally drive or be employed in driving in Great Britain, a motor vehicle of the class or description which he is authorised by that licence to drive, provided he is not disqualified from driving such a vehicle under the Road Traffic Act, 1930.

**New Haulage Association.**—At the Highways Committee of the Morecambe Corporation, a letter was submitted from the Morecambe Haulage Association in which it was stated that the hauliers in the borough had formed an association with the exception of certain persons who had remained outside. It was resolved that haulage orders be distributed between those in the Association and those outside, on an equitable basis.

**Change of Address for Advertising Department of Well Known Firm.**—Messrs. C. A. Vandervell & Co., Ltd., inform us that as from November 24th last their advertising department has been removed to Birmingham and all communications should now be sent to The C.A.V. Advertising Department, Messrs. Joseph Lucas, Ltd., Great King Street, Birmingham. As applications for C.A.V. and Rotax literature and advertising material will be similarly affected all our readers who are interested should make a note of this change.

**W. J. Bence, Ltd., Longwell Green, nr. Bristol.**—We are interested to hear from Mr. W. A. G. Hasell, formerly a Director of Harris & Hasell, Ltd., and now associated with W. J. Bence, Ltd., passenger and commercial motor body builders. He has sent us the photograph which we reproduce showing a very attractive 28-seater Allweather Coach on the "Reo" G.E.L. Pullman chassis. This was recently supplied to Mr. L. W. Andrews, of Bristol, who runs a fleet of coaches under the style of "The Clifton Greys." In our last issue we showed a group of Commer Car vehicles fitted with pantechnicon bodies and we are interested to learn that these also were built by W. J. Bence, Ltd.



W. J. BENCE COACHWORK ON "REO". G.E.L. PULLMAN CHASSIS.

**Proposal to Institute in London the Unilateral System of Dealing with Waiting Vehicles.**—It is understood that the Minister of Transport is of the opinion that the introduction of the "Unilateral" system of dealing with waiting vehicles would not prove advantageous, and that he does not, therefore, feel able at the present to approve the inauguration of this method of dealing with this problem in London.

**"On Guard." How to Avoid Lift Accidents.**—In the November issue of "On Guard," the little pocket magazine issued by the National Safety First Association, Sir Gerald Bellhouse, the Chief Inspector of Factories, gives some sound advice to those concerned with the handling of cranes, lifts and hoists. These, it is pointed out, cause over 3,388 accidents a year. Many accidents, writes Sir Gerald, are caused by the carelessness or indifference of people who make use of cranes, and he gives five useful rules, concluding with the warning to "beware of tampering with hoists and elevators unless you are thoroughly familiar with them."

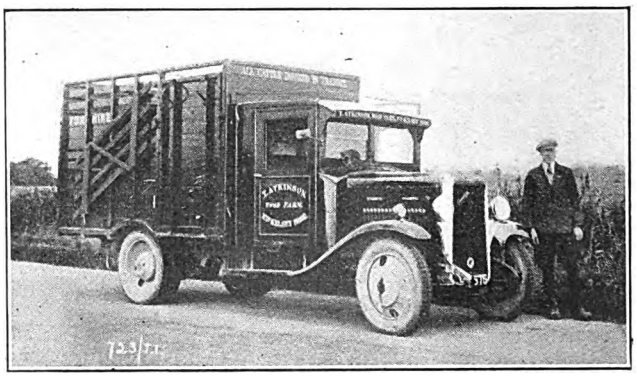
**Recent "Commer" Deliveries.**—Amongst the deliveries made recently by Commer Cars, Ltd., Luton, are six G2 chassis (40/50 cwt.) to Messrs. Pickford's; one 3-ton drop sided lorry to the Gas Department of the Coventry City Council; two 6-tonners to the Cement Marketing Co., these being repeat orders, and a number of G3 3-ton chassis, to the Anglo-American Oil Co., Ltd.

**F.W. & R.A. New Members.**—The following firms have been elected to membership of the Furniture Warehousemen and Removers' Association:—Messrs. Frederick Kirkham, Preston; C. Beaumont, Birmingham; and Owen Owens, Ltd., Liverpool.

**Institution of Petroleum Technologists.**—There will be a general meeting of members of the Institution of Petroleum Technologists at the House of the Royal Society of Arts, John Street, Adelphi, London, at 5.30 p.m., on January 13th next. Light refreshments will be provided at 5 p.m. for members and visitors attending the meeting.

**The Liverpool Traffic Club.**—The Liverpool Traffic Club was formed in May, 1927, for the promotion of traffic knowledge amongst traffic men and women by holding periodical addresses and discussions on transport topics and problems. On January 5th, Mr. A. D. Sharpe (L. & N.E. Railway) is to lecture on "Goods Transport by Rail—advantages and economies," to be followed on February 2nd by Mr. S. L. Jude, the Secretary of the Liverpool Shipping and Forwarding Agents' Association, who will speak on shipping and forwarding in Liverpool. The meetings will be held at the White Cafe, Cook Street, Liverpool, at 7.30 p.m. Mr. J. C. Purcell, 75, Heygarth Road, Eastham, Cheshire, is the Hon. Secretary and he will be pleased to forward further particulars to any of our readers who are interested.

**A Commer for the Conveyance of Cattle.**—Our illustration shows a Commer G2 type chassis mounted with a specially designed body, for the conveyance of cattle. This is a product of Commer Cars, Ltd., of Luton. The chassis was supplied through the firm's dealership organisation, but the body was built locally.



A "COMMER" FOR CATTLE TRANSPORT.

**Modern Heavy Transport by M.R.S., Ltd.**—This is the title of an interesting publication issued by M.R.S., Ltd., the well-known transport specialists, of Liverpool. The illustrations show some of the types of vehicles included in the firm's fleet and examples of the intricate transport problems they are called upon to solve. The purpose of the brochure is two-fold, first to call attention briefly to what is nowadays no mean problem to many manufacturers and engineers—the transport of their heavy productions, second to illustrate how M.R.S. methods, vehicles and apparatus have progressed to the extent of solving this problem and the haulage difficulties associated with all the heavy trades.

**Our Overseas Trade.**—The Department of Overseas Trade has issued a guide to the services which the Department offers to British firms interested in the development of our export trade. The information it contains is of undoubted value. Mr. G. M. Gillett, M.P., Parliamentary Secretary to the Department of Overseas Trade in a foreword makes an appeal to British traders to make fuller use of the facilities which the Department can offer to them in the conduct and extension of their export trade. "I know very well," he says, "and have seen good evidence, that traders already make good use of the services of the Department; but it is not the fullest possible use. The Department does not and cannot create trade in the sense of directly producing a demand for goods; but it can assist traders to find where such a demand exists or might be created. No trader should be satisfied with the volume of his exports until he has consulted the Department, explored the various channels of information set out in this pamphlet, and has satisfied himself that he has taken full advantage of the services offered." Copies of this guide may be obtained on application to the Department of Overseas Trade, 35, Old Queen Street, London, S.W.1. The Comptroller-General of the Department is Sir Edward T. F. Crowe, K.C.M.G.

Digitized by Google

**National Traction Engine Owners' and Users' Association.**—The report for the year ending September 30th last of the National Traction Engine Owners' and Users' Association, presented at the thirty-sixth annual general meeting held at the Royal Agricultural Hall, London, on December 11th, deals comprehensively with the Road Traffic Act as affecting traction engine owners and users. The Committee are preparing a memorandum on the Act and the Regulations made under it and this memorandum will be forwarded to members as soon as possible. The report points out that it is now more essential than ever that every owner should rally to the Association and assist the Committee in their fight against any unfair restrictions. The address of the Association is 17, Victoria Street, London, S.W.1.

**Middlesbrough's "Disastrous" Venture.**—Middlesbrough Town Council on December 2nd considered proposals made by the London and North Eastern Railway Co., which has offered to take over all the transport services within the borough; and it was eventually agreed, by a large majority, that the negotiations should be continued with a view to securing better terms. Councillor W. H. Crosthwaite, in moving that the Tramways Committee continue negotiations, said that financially this venture had been disastrous. They purchased the tramway system 10 years ago for £228,000, and had spent £194,000 since that time on the undertaking—the written-down value of the assets of which was now £304,000. They had taken from the rates £100,000 in the last 10 years to balance accounts, and were expecting a loss of £15,000 this year.

**P.R.A. Bulletin.**—We have received a copy of the first issue of the P.R.A. Bulletin, which is the official organ of the Petrol Retailers Association. The Bulletin contains some very useful information and under the heading "What we stand for" the following appears:—"In any dispute within the trade, or in connection with the public concerned with the selling of petrol, you have the backing of your fellow traders—obviously a more powerful argument than an individual with his 'lone voice in the wilderness'; the P.R.A. can represent your personal interests more strongly, and carry far more weight than any firm or individual, should representation or protest be necessary to the Government, concerning legislation or taxation affecting the trade; free legal advice is available to you on all business matters; A comprehensive service bureau is at your disposal, without cost, concerning any commercial or Technical aspect of your business; you will be kept advised through the medium of Bulletins, of all important developments, and all interesting news connected with the trade. This news will be red-hot, and accurate; you cannot afford, in your personal interests, to keep out of the P.R.A.; the annual subscription is 10/6, and there is no entrance fee." At a recent meeting of the Council it was resolved that Local Centres should be formed, and that these Centres should be empowered to deal with their domestic petrol policy and complaints in connection with their wholesale suppliers. The holding of local meetings will bring traders together, and this getting together on their part is bound to have beneficial results. The offices of the Association are at 157, Great Portland Street, London, W.1. The Secretary is Mr. E. W. Garnon, who for many years has done most valuable work on behalf of the motor industry.

**Star Motor's London Service Depot.**—We are informed by The Star Motor Co., Ltd., of Wolverhampton, that their London Service Depot has been moved from 1-3, Brixton Road, London, S.W.9, to Porteus House, Porteus Road, Paddington, London, W.2, Telephone No. Paddington 6351-2, which is more central and where better service facilities are offered.

**Unilateral Traffic Control.**—The system of "Unilateral" traffic, which was recently adopted in Derby, for which the Automobile Association introduced a special type of sign, has now been instituted in three of the important streets in Newcastle, Bishop Auckland, and in Belfast. The special A.A. signs are supplied in pairs, showing on which side of the road traffic should pull up on odd and even dates of the month.

**Ford Motors' Reply to Business Depression.**—A Detroit message says that the Ford Motor Company announces that it is expanding and speeding up its building programme throughout the world "in spite of the prevailing business depression." It is added that an expenditure of twelve million sterling is contemplated for the construction and enlargement of the plants in the United States, Europe and other parts of the World.

**B.A.I.F.R. New Members.**—The following firms have been elected to membership of the British Association of International Furniture Removers:—Messrs. Davies, Turner & Co., Ltd., 39 King William Street, London Bridge, E.C.4.; A. Welti Furrer, S.A., Barrengasse 29, Zurich, Switzerland, and Rohner Gehrig & Co., Ltd., 44, Whitehall Street, New York, N.Y., U.S.A.

**Industrial Councils Bill.**—A Bill to encourage the formation of industrial councils and to legalise voluntary agreements when so desired has been presented in the House of Commons by Mr. Mander, supported by Mr. Foot, Mr. Ernest Brown, Mr. Harris, Major Nathan, Mr. Philip Oliver, Mr. Simon and Mr. Graham White.

**Third-Party Insurance.**—A Bill to compel insurance companies to issue third-party insurance certificates to motor drivers having no convictions for careless, reckless, or dangerous driving against them has been ordered by the House of Commons to be brought in by Mr. Remer, Mr. D. G. Somerville, Colonel Moore, Sir Philip Dawson, Major Lloyd George, and Mr. Glassey.

**Welcome to Great Britain.**—New Greeting Cards are now being issued by the Travel Association of Great Britain and Ireland to their members for inclusion in foreign and overseas correspondence. Considerable supplies will also be sent to the Travel Association's representatives in New York and Buenos Aires and to British Government representatives abroad, who will assist in giving them a useful distribution. These new greeting cards, like many hundreds of thousands distributed overseas earlier in the year, are printed in English, French, German, and Spanish. Of the two cards in English, one is a greeting from the British Isles illustrated with pen drawings emblematic of England, Ireland, Scotland and Wales, and the other is an illustrated greeting from London. Evidence has been received by the Travel Association from many parts of the world that the inclusion of these little cards in business correspondence and in parcels of goods has given pleasure to the recipients and has stimulated in many a determination to visit Great Britain and Ireland. The offices of The Travel Association of Great Britain and Ireland are at Kinnaird House, 1, Pall Mall East, London, S.W.1.

## MERSEYSIDE.

**Catering for Modern Traffic.**—For the purpose of facilitating the weighing of the extra large sized lorries now employed on the haulage of goods to and from the Liverpool docks, the Mersey Docks and Harbour Board has installed new high capacity weighing machines at various points. At the south-east corner of Canning dock, a 25-ton weighing machine and a 45-ton weighing machine have been installed.

**New Depots.**—M.R.S., Limited, heavy haulage contractors, of Lightbody Street, Liverpool, announce the opening of three new depots:—(1) On the New Birmingham-Wolverhampton Road, Birmingham; (2) 117, Borough High Street, London; and (3) St. Vincent Crescent, Glasgow. Each of these establishments is fully equipped to supply petrol, spares, etc., as well as full general service to the carrying units and staffs.

**Growth of Container Traffic.**—In a talk on "The Use and Development of Containers" at Chester, Mr. G. O. Williams, M.B.E., L.M. and S. Railway Goods Agent, Chester, said that from Chester L.M.S. Station they had used 636 containers for traffic forwarded by Chester firms, with a weight of 1,299 tons. Those figures demonstrated at once the fact that the container was popular and in Chester had met a long felt want and was greatly appreciated by the traders. Containers were used for window frames, electrical machinery, cheese, furniture (new and old), dressed stone, automatic machinery, etc.

**Rail Engines Transported by Road.**—Interesting facts concerning the haulage of 65-ton locomotives for shipment abroad, are mentioned by Mr. E. C. Marston, chairman of M.R.S., Ltd., Liverpool. They were required for use in Egypt but the consignees stipulated they must arrive complete and not in parts. A multi-wheeled vehicle of special design fitted with rubber tyred wheels and weighing 34 tons, was used for hauling the locomotives from Leeds to Manchester. At Stanidge the lorry successfully negotiated a hill with a gradient of one in eight at a speed of half a mile an hour, this part of the journey occupying five hours. The vehicle was staffed by two drivers in front and one at the tail end of the vehicle, with a telephone connecting the two cabins. At the dock side M.R.S., Ltd. found a way of dispensing with the costly crane process of shipping the locomotives. The bed of the lorry was sunk and the engines were run aboard the ship on rails.

**What Pneumatic Tyres have Done.**—In the address he gave to the Preston Scientific Society on "The Development of Urban Transport," Mr. E. J. Pearson, M.Eng., outlined the history of urban transport from the first days of the industrial revolution down to the present century with special reference to developments in Preston. The

Digitized by Google

advent of the large pneumatic tyre for buses, he said, had brought about a revival of the electric trolley bus. Each form of transport had definite applications to the present day transport problems and it was probable that they would all continue to develop in the situations to which they were most suited.

## MANCHESTER.

**R.M.S. Take Over Freemans.**—Ribble Motor Services, Ltd., have taken over the bus services operated from Chorley and known as Freeman's Silver Star Bus Services. The Chorley firm operated between Chorley, Bolton, and Wigan principally, with other local services. Thirteen buses have changed hands.

**Another Co-ordination Plan.**—Salford Corporation has appointed a special committee to discuss a scheme for the re-organisation of the transport services of the various municipal departments. A suggestion has been made that vehicles should be run from a co-ordinated transport department.

**Injunction Threatened.**—Having received a report from the Town Clerk with reference to unlicensed omnibuses plying for hire in Manchester, the Watch Committee has adopted a resolution that, unless unqualified undertakings to cease plying for hire in the City are received from the persons concerned, the Town Clerk be authorised to institute proceedings for an injunction in the High Court.

**Cutting Down Transport Costs.**—Speaking at a meeting of the Manchester Institution of Mechanical Engineers on November 27th, Mr. A. E. L. Chorlton said that the competition between roads and railways might compel railways to use oil electric power in the form of Diesel engines. The oil electric system, which cost less in capital charge, could reduce working costs to half that of steam.

**Diesel Engined Bus.**—Manchester Corporation Transport Committee has accepted the quotation of Messrs. Crossley Motors, Ltd., for the supply of a double-deck motor bus chassis, with Gardner six-cylinder Diesel oil engine to be fitted to one of the double-deck motor bus bodies which Crossley Motors, Ltd., are supplying to the Corporation under their existing contract for motor buses.

**Preston Seeks New Powers.**—Preston Corporation has decided to promote a bill in the present session of Parliament to authorise the substitution of trolley vehicle systems on the tramway routes of the Corporation within and outside the borough, and to confer further powers upon the Corporation with respect to their tramway undertaking.

## HULL.

**The Humber Bridge.**—The proposed bridge over the Humber is still the chief subject of discussion in Hull. The time when its fate will be settled is rapidly approaching. The Bill has been published and shortly will come before the appropriate Parliamentary committees at Westminster, assuming, that is, that the town's meeting authorises the Corporation to go forward with it. No new points are revealed by a study of the Bill. As to the desirability of the bridge there are no two opinions. The whole question is whether its erection would injuriously affect the tides of the river. On that opinion is divided. The promoters have retained experts who are prepared to say that no ill will result, but, on the other hand, the Humber Conservancy Board (an independent body), the London and North Eastern Railway Company (owners of the Hull docks) and the Aire and Calder Navigation (owners of the docks at Goole) are advised by their own, and other eminent engineers, that the placing across the river of a line of over a score of large piers to carry the bridge would be fraught with the utmost danger. The Ministry of Transport has called a meeting of the experts but it is impossible to think they can come to a common agreement. A big fight in the committee room at Westminster would appear to be inevitable.

## NORTH-EAST COAST.

**Tyne Tunnel Scheme.**—Representatives of the Corporations of South Shields and Tynemouth (North Shields) are conferring on the expert engineers' report with regard to improved cross-river facilities at the mouth of the Tyne. The construction of a tunnel, with one footway, between North and South Shields, at an estimated cost of £1,300,000, is recommended in lieu of a high level bridge which, it is stated, would cost a million more. The suggestion is that the Ministry of Transport should provide 90 per cent. of the cost, leaving 10 per cent. to be found by the two Corporations. Yet a Shields tunnel was proposed 130 years ago, to cost £6,993 only!

**Tyne Bridges Problem.**—While Newcastle is anxious to secure two independent routes through the city for traffic moving south, Gateshead's traffic difficulties run on different lines. Thus, while Newcastle's only real interest is concerned with the freedom from tolls of the L.N.E.R. Co.'s High Level Bridge, Gateshead is much more anxious to free the Redheugh Bridge and so deflect a mass of heavy traffic from the Tyne Bridge. The point is that the Ministry of Transport has intimated its willingness to make a grant of 50 per cent. towards the cost of freeing either the High Level or the Redheugh Bridge, but will not promise a grant for freeing both.

**Traffic Act Fears.**—Mr. A. E. Millard, immediate Past-President of the Furniture Warehousemen and Removers' Association, in reporting to the Transport Committee of Newcastle Chamber of Commerce on the new Road Traffic Act, said that organised efforts were being made by the railway companies to obtain traffic which had hitherto gone by road; and he was afraid the Act would take the bread out of the mouths of thousands of small people. It was decided that the secretary of the Chamber (Mr. H. Shaw) would discuss the situation with the railway authorities; and that proposals for modifications of the Act would subsequently be laid before the Ministry.

**Morris Car Films.**—Films relating to the manufacture of Morris engines and cars were shown in Newcastle recently by Mr. Goyder Smith, one of this progressive company's travelling representatives.

**Benzole Production.**—Members of the Newcastle and Gateshead Chamber of Commerce recently, on the invitation of the National Benzole Co., Ltd., visited its distribution depot at Blaydon and then two of the local plants producing National Benzole—the Derwenthaugh coke ovens of the Consett Iron Co., Ltd., and the Redheugh works of Newcastle and Gateshead Gas Co. At Derwenthaugh 20,000 gallons of crude benzole are produced weekly.

**Traffic Dangers and Control.**—To further the work of the Newcastle Safety First Committee, its hon. secretary, Mr. F. J. Crawley (Chief Constable of Newcastle), is compiling a booklet, illustrated with photographs and diagrams, dealing with methods of traffic control. Attention will be drawn to danger spots in Newcastle, with suggestions for minimising the danger.

**Staff Dances.**—The Sports Club of the Northern General Transport Co., Ltd., held a successful dance at the Old Assembly Rooms, Newcastle, on December 3rd, following a similar function in connection with the Majestic Saloon Coaches Co. at the Oxford Galleries. The Yellow Bus Service has handed £30 to the Richard Murray Hospital as the result of a whist drive and dance at Medomsley.

## NORTHERN IRELAND.

**Appointment of Chairman of North-Western Traffic Area.**—Mr. William Chamberlain, general manager and engineer of the Belfast City Tramways, has accepted the chairmanship of the Regional Traffic Commission of North-West England, which extends from Cumberland to Mid-Wales, and includes Liverpool and Manchester. This appointment was offered him by the Ministry of Transport. Mr. Chamberlain was formerly manager of the Leeds tramways, and in October, 1928, he was appointed manager of the Belfast undertaking. When he came to Belfast private bus owners had invaded the streets and challenged the public transport monoply which the Corporation had held for years. A settlement of the situation was made after Government intervention, and Mr. Chamberlain's advice was invaluable to the Corporation, as was his evidence at a subsequent Government inquiry. In his two years in Belfast he has commenced the modernisation of old rolling stock, increased the bus services, ordered fifty new tramcars of the latest type, and six double-decker buses, the first of the type in northern Ireland. The receipts of the undertaking and the number of passengers carried has risen very considerably. Mr. Chamberlain is president of the Northern Ireland Route Bus Owners' Association.

**Obituary.**—Mr. T. Edens Osborne, who died in Belfast on November 18th, was an intimate friend of the late Mr. J. B. Dunlop, inventor of the pneumatic tyre, and he introduced this tyre, and Humber cycles, into Ulster.

**Air Beats Rail.**—The Westland-Wessex three engined, six-seater monoplane which visited Ireland last month for exhibition flew from Aldergrove, near Belfast, to Dublin, in 54 minutes. The train journey occupies two and a half to three hours.

**Mr. James Pepper.**—Mr. James Pepper, manager and secretary of the London, Midland and Scottish Railway (Northern Counties Committee) which connects Belfast

Digitized by Google

and the counties Antrim and Down, is about to retire. He has held this position since 1922. A native of Westmoreland, Mr. Pepper started his career as a boy clerk at a wayside station on the Furness Railway. At 20 years of age he was advertising inspector. He afterwards served with the L. & N.W. and the Lancashire, Derbyshire and East Coast company, afterwards absorbed by the Great Central. In 1908 he joined the staff of the Chief Goods Manager's office of the Midland Railway and in 1916 became London Outdoor Goods Manager. In 1918 he was made London District Goods Manager, and in 1919 Assistant Chief Goods Manager for the company. Under Mr. Pepper's management many improvements in services, etc., have been made on the L.M.S. line in Northern Ireland.

## IRISH FREE STATE.

**Value of Tractors and Tractor Parts Exported from the Irish Free State.**—From the trade returns of the Irish Free State for the first nine months of the present year, it appears that the number of tractors exported from the Free State from 1st January to 30th September, 1930, was 15,133, which were of the total value of £1,575,928, as compared with 2,948 tractors, of a value of £308,070, shipped from the Free State during the first nine months of 1929. Tractor parts to the value of £832,314 were exported from the Free State during the January-September, 1930, period, as against £630,102 during the first nine months of 1929. During the month of September last 617 tractors were exported from Cork, and tractor parts to the value of £44,347 were shipped.

**Restoration of Canal Services on the River Shannon.**—The Grand Canal Co., of Ireland, have taken steps for the restoration of canal traffic on the river Shannon. They gave intimation to the Limerick Harbour Board that they were carrying out necessary tests on the Abbey river at Limerick, so that the canal services there could be resumed as soon as possible. The Harbour Board considered this very satisfactory in the interests of trade.

**Bus Services in the Irish Free State.**—The receipts, the number of passengers carried, and the mileage run by bus services in the Irish Free State, continue to increase. From the statistics issued with respect to the Free State bus services for the month of September last it appeared that the number of passengers carried by buses in the Free State during that month totalled 4,502,000, as compared with 4,390,000 in September, 1929, and that the receipts were £84,961, which included cross-border services, as against £83,416 in September, 1929. The number of vehicle miles run by buses in the Free State during September last was 2,170,000, as compared with 1,871,000 miles during September, 1929. During the first nine months of the present year the number of vehicle miles traversed by buses in the Free State was 19,347,000, which included 1,462,000 miles in cross-border services, compared with 17,828,000 vehicle miles run during the first nine months of 1929, a total that included 885,000 miles in cross-border services. The number of passengers carried from 1st January to 30th September last, including cross-border travellers, was 37,916,000, as against 36,398,000 during the first nine months of 1929.

**Traffic on Irish Railways.**—Receipts from merchandise carried on the Great Southern Railways for the half year ended June 30th last were £1,159,787, as compared with £1,209,342 during the first six months of 1929, which showed a reduction of £49,555, or 4.10 per cent. this year. On the Great Northern Railway the receipts from merchandise carried during the first six months of the present year were £395,054, as against £429,147 for the first half year of 1929—a decrease of £33,093, equivalent to 7.71 per cent. With respect to the Great Northern Railway these merchandise traffic receipts deal with the whole of that company's system, in Northern Ireland and in the Irish Free State.

# "Karriers" Parcel Delivery Service.

THE interesting photograph which we reproduce has been sent to us by "Karriers" Parcel Delivery Service, 26, Strand Street, Liverpool. It shows three "Thornycroft" lorries, part of the fleet which they are employing, with their well known decoration in black and white stripes and over this large posters showing the publicity method which the company adopted during the Railway Centenary Celebrations held in Liverpool recently.

THREE "THORNYCROFT" LORRIES, PART OF THE FLEET USED BY "KARRIERS" PARCEL DELIVERY SERVICE.

The firm inform us that they employ at present three "Thornycroft" A.1's and three "Thornycroft" A.2 vehicles on the outside services and they are contemplating the purchase of some "Thornycroft" A.3 six-wheelers on new services which are now being organised. In addition to these vehicles they use light type "Morris" vehicles for local collections and deliveries in Liverpool.

The mileage covered by the "Thornycrofts" last year was 750,000 miles, a total tonnage of 120,000 tons was carried, involving 150,000 deliveries consisting of 1,000,000 packages.

Daily services are now run to the following places: Southport, Blackpool, Preston, Manchester, Runcorn, and Chester. Regular services to North Wales and East Lancashire and in addition a daily service to Nottingham is run in conjunction with the Nottingham Chamber of Commerce. Light traffic is also handled in connection with Newcastle, Glasgow, Northampton and London road services.

The firm have three large warehouses where goods are stored and held against disposal instructions and in this way firms out of Liverpool are enabled to give a speedy delivery. We are informed that this part of the service has greatly increased of late and has been much appreciated by their customers.

*REUTERS TRADE SERVICE.—By special arrangement with Reuters Trade Service we are publishing news items from all parts of the world dealing with transport matters.*

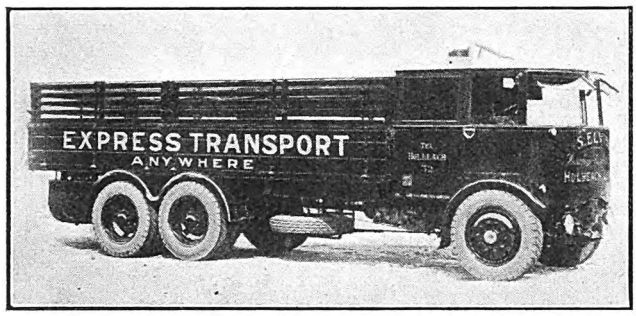
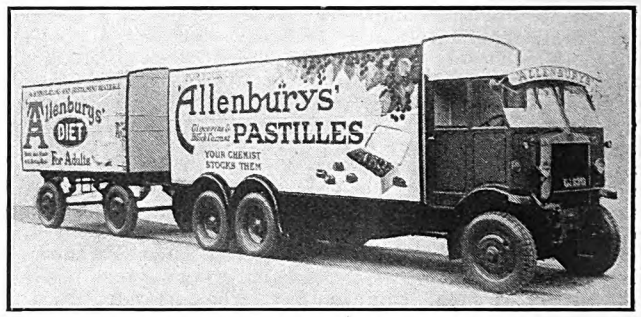
# Motor Notes.

**The Foden "Speed-Twelve."**—We have been supplied with the following showing a typical day's work with a Foden "Speed-Twelve" pneumatic tyred six-wheeler. The owner is Mr. S. Elvis, Holbeach, Lincs. The run was from Holbeach to Snettisham (empty)—a distance of 33 miles. The vehicle was loaded with 12 tons at Snettisham with which it travelled to Boston, a distance of 49 miles. It then returned empty to Snettisham and was loaded with a further 12 tons which it again delivered in Boston. From Boston it returned to Holbeach. The distance covered was 196 miles between the hours of 7 a.m. and 7 p.m. The coal consumption was 21 miles per cwt.



THE FODEN "SPEED TWELVE" PNEUMATIC TYRED SIX-WHEELER OWNED BY MR. S. ELVIS, HOLBEACH, LINCS.

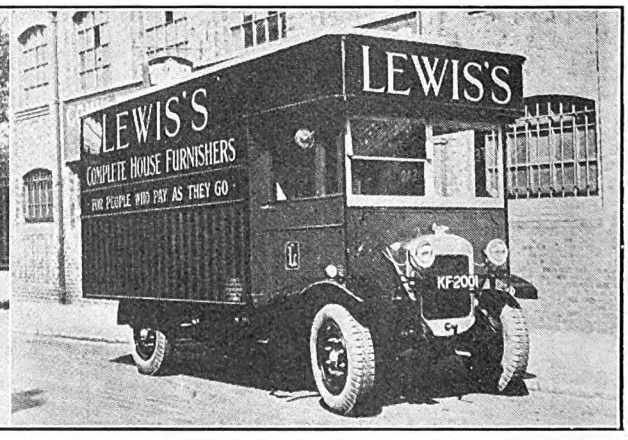


ALLEN & HANBURY'S GUY 7-TONNER AND TRAILER REFERRED TO IN TEXT.

**Shefflex Orders.** — Shefflex Motors, Ltd., Tinsley, Sheffield, supply us with the following list of typical orders received amongst others:—W. Caudle & Co., Ltd., Queen's Road, Sheffield, for one D.L.6. 4-tonner (six-wheeler) chassis (repeat order). Marsh & Hare, Rotherham, for one D.H.6. 5/6-tonner (six-wheeler) chassis. Taylor & Co., Ltd., Rotherham, for one D.L.6. 4-tonner (six-wheeler) chassis (repeat order). Rt. Hon. The Earl Fitzwilliam (Malton Estate) for one D.L.2. ton tipping lorry (repeat order). Hull Co-operative Society, Ltd., for Dairy Dept., one D.H. 50-cwt. lorry with special body for milk collection (repeat order).

**Allen & Hanbury's Guy 7-Tonner.**—Allen & Hanbury, Ltd., Bethnal Green, London, E.2, have been supplied with a Guy 7-tonner and trailer for the purpose of delivering to Allen & Hanbury. The Duramin Engineering Company, Limited—the body builders in this case—claim that the increase in pay-load by reason of the introduction of duralumin and aluminium into the body construction will give this result, which they say might also be compared with the saving of the initial outlay on a 30 cwt. vehicle plus its running costs over a period of years. The actual weight-saving by the introduction of these materials is 15 cwts. on the vehicle itself and 10 cwts. on the trailer, as compared with average well-built bodies of ordinary construction. This, of course, results in decreased petrol and oil consumption, less wear and tear to mechanical parts and longer tyre life. The body builders additionally claim that a 90 per cent. saving on up-keep costs, as a duralumin body will last almost indefinitely and, further, there is always the value in the material used in the construction even on a scrap metal basis. Another interesting point in regard to this 7-tonner is that the order was placed as a result of the very lengthy experience which Allen & Hanbury had with a Guy six-wheeled 5-tonner, which proved that as compared with other makes of 5-tonner the Guy six-wheeler definitely reduced running costs.

**Thornycroft Orders.**—John I. Thornycroft & Co., Ltd., Thornycroft House, Smith Square, London, S.W.1, announce that they have received orders from the L.N.E.R. for seventeen 30 cwt. and 2-ton vehicles and from the G.W.R. for one of their 10-ton six-wheeled chassis.



LEFT: THE LATEST AND LARGEST THORNYCROFT SIX-WHEELER, A "JC" 10-TON LORRY SUPPLIED TO A WELL-KNOWN FIRM OF LONG DISTANCE HAULAGE CONTRACTORS. RIGHT: A THORNYCROFT TYPE "A1 FORWARD" 30-CWT. CHASSIS WITH CAPACIOUS BOX VAN FOR LEWIS'S THE WELL-KNOWN FURNISHERS.

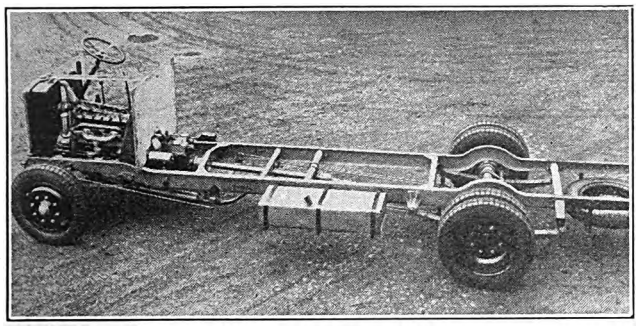
**The Largest Thornycroft Six-Wheeler.**—The latest and largest Thornycroft six-wheeler is now in the service of L. E. Fox & Co., long distance haulage contractors, 84 Colborne Road, N. Kensington, London, W.10. It is known as type "JC" and is of 10-tons capacity. This vehicle we illustrate together with a Thornycroft box van on chassis type "A1 Forward." The vehicle is now in the service of Lewis's the complete house furnishers of Liverpool.

**Economic Transport.**—Savings which will enable the entire cost of a vehicle and trailer to be written off in four to five years are claimed by the builders of the body and trailer supplied with a Guy 7-ton vehicle recently

**New Bean Models.**—Bean Cars, Ltd., Tipton, Staffs., now announce their new "Bean Commercial" policy, resultant from the reconstruction which has been going steadily forward during the past 18 months. The models, of which they have sent us brief particulars, include two entirely new types which were exhibited for the first time at the Scottish Show. The full range of models is as follows:—(1) A new model 20/25 cwt. van (tax £20). The chassis price is £198, open lorry £235 and as a van £250. (2) A 30 cwt. model, not new, but now has an

Digitized by Google

enclosed driver's cab, without additional charge. (3) A 40/45 cwt. model, not new, but for the same price includes magneto ignition as optional. (4) A 50/60 cwt. model, not new, but supplied with lighting equipment as standard. This chassis is supplied with short wheelbase at £540 or with long wheelbase at £560. The price reduction in each case is £15. (5) An 80 cwt. chassis the price of which has been reduced by £42 to £698. The equipment remains as previously. (6) This model is a new one and consists of a 26-seater low loading passenger chassis very completely equipped. The general appearance is all that can be desired. Price £598. The accompanying photograph gives a good idea of the layout.



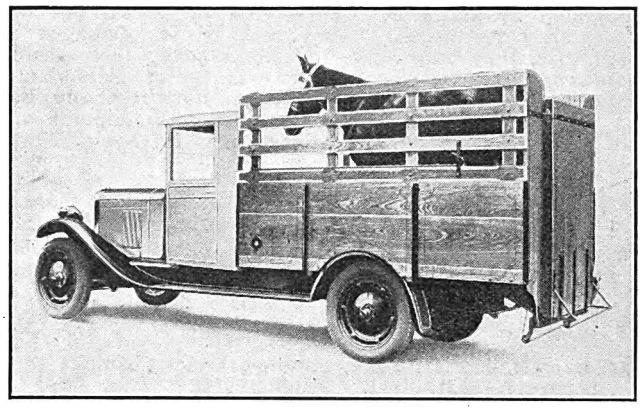
THE NEW BEAN 26-SEATER LOW-LOADING PASSENGER CHASSIS.

**The B.P. Commercial Consumers Pump.**—The "Consumer" pump is a pump placed on the market by the British Petroleum Co., Ltd., Britannic House, Moorgate, London, E.C.2, specially designed for the commercial user who wishes to secure the advantages of bulk storage at minimum cost. It has a one gallon capacity and is simple and rapid in operation. It is light to operate and occupies very little space. The pump is of rigid construction with cast iron base, barrel, tie rods and pump handle; the piston barrel is dull nickel. The totaliser reads up to 99,999 gallons before returning to zero. It has a discharge register from 0 to 10 gallons to show individual deliveries. The overall height of the pump does not exceed 5 ft. 10 in. and the base is 10½ in. square.

**Vulcan Deliveries.**—Vulcan Motor & Engineering Co. (1906), Ltd., Crossens, Southport, have sent us a selection of photographs showing recent deliveries made by them. The two we reproduce show a Vulcan 50/60 cwt. farmer's forward control lorry, and also a 30/35 cwt. chassis supplied to Goodlass, Wall & Co., Ltd., manufacturers of colours, enamels, etc., of London. The chassis is fitted with a box van body built by Whitmee & Sons, Battersea, London.

**B.E.N. Air Compressors.** — We have received from B.E.N. Patents, Ltd., 92 Tottenham Court Road, London, W.1, a copy of their latest list No. C.B.12 featuring the firm's air compressors and spray paint equipment. The firm's object has been to try and give the reader some idea as to the high quality of this equipment as well as its very extensive range, and they claim that no other catalogue is published which deals with air and spray paint equipment in a more comprehensive manner. In our opinion there is good foundation for this claim and we suggest our readers would do well to apply to the firm for copies.

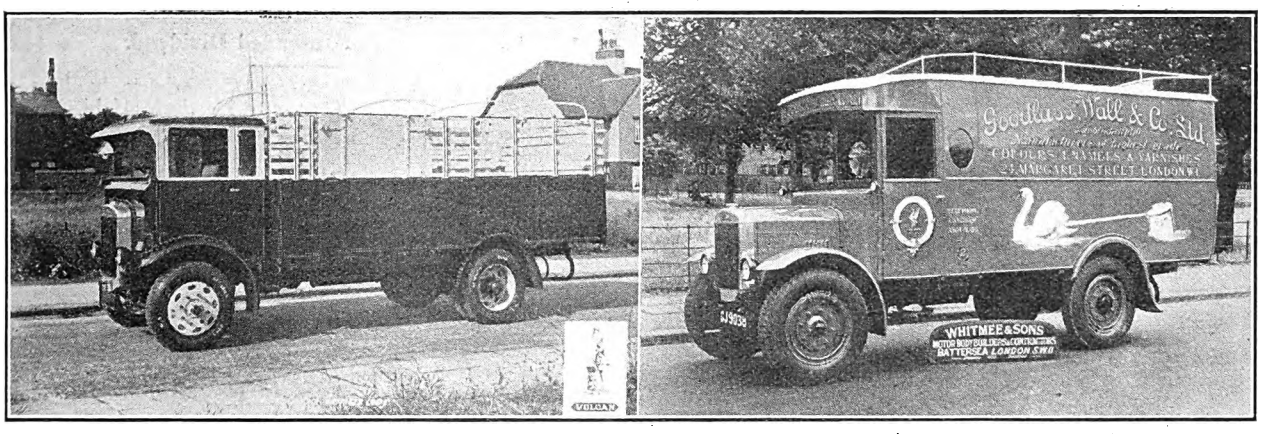
**The Chevrolet Cattle Truck.**—The cattle truck, as illustrated, supplied by General Motors, Ltd., Edgware Road, The Hyde, London, N.W.9, has been designed to load cattle with the minimum of trouble. The tailboard is slung 17 in. from the ground and, when lowered, the back portion of the floor of the wagon automatically lowers at the same time to the level of the tailboard.



CHEVROLET SPECIAL CATTLE AND HORSE CARRYING TRUCK.

This gives a gradual incline from the roadway to the interior of the wagon allowing the animals to enter without difficulty. When the wagon is loaded the tailboard is closed up and the floor automatically raises the animals to a level position. The rear of the wagon provides room for two full sized animals and, in addition, there is a space partitioned off in front of their legs for carrying sheep or calves. The entrance to this compartment is by a sliding door in the off-side front of the side panel.

**A Big Order for Trojans.**—Trojans, Limited, Purley Way, Croydon, announce that they have recently obtained a further order from Brook Bond & Co., Ltd., for 275 commercial vehicles which brings the total number of orders received by Trojans from Brook Bonds to 2,140. Another interesting announcement by Trojans is that they have recently procured, for extension purposes, six acres of land adjoining their present works on the Croydon by-pass road.



LEFT: A VULCAN 50/60 CWT. FORWARD CONTROL FARMER'S LORRY. RIGHT: A VULCAN 30/35 CWT. CHASSIS SUPPLIED TO GOODLASS, WALL & CO., LTD., BOX VAN BODY BUILT BY WHITMEE & SONS, BATTERSEA, LONDON.

**G.V. Electric Vehicle Catalogue.**—The General Vehicle Co., Ltd., manufacturers of electric commercial vehicles, 15 Devonshire Street, Bishopsgate, London, E.C.2, have sent us a copy of their recent catalogue dealing with electric vehicles for public authorities. These are principally designed for refuse collection, but they are equally serviceable for general local transport purposes. The capacities are from 2 tons to 3½ tons. A list of 30 cities in which these vehicles are used, which includes Birmingham, Blackpool, Bradford, Bristol, Liverpool and Manchester, is given, together with photographs of vehicles they have in service. The specification for each vehicle is given.

## County Court Judgments.

THE following returns from the Registry of County Courts' Judgments, Whitehall, have been received relating to judgments entered up in the respective County Courts of England and Wales. Publication does not imply inability to pay. Many judgments may have been settled between the parties or paid. Judgments settled otherwise than through the Court may appear unless "satisfaction" is entered up within twenty-one days from judgment or allocatur. Registered judgments are not necessarily for debts. They may be for damages or otherwise, they may relate to actions *bona fide* contested between the parties, or they may be against defendants, liable in a representative capacity, and not personally; but no distinction is made on the register. Judgments are not returned to registry if satisfied in Court books within twenty-one days.

F. L. Beazley, South Warnborough, Basingstoke, Hants., haulage contractor. £45/19/6. August 7th.

D. F. W. Rabbits, 14, Beaconsfield Road, Basingstoke, Hants., motor haulage contractor. £24/6/1. August 11th.

H. Ranger & Sons, Micheldever, Hants., haulage contractors. £54/5/1. August 19th.

E. Greenwood (managing director), J. T. Hart (both permanent, subject to each holding £100 shares). Registered office: Bucks Garage, High Street, Watford.

**Stanley Collis and Co., Ltd.** (251,916).—Private company. Registered November 8th. Capital £1,000 in 750 7½ per cent. cumulative preference and 250 ordinary shares of £1 each. Objects: To acquire the business of Stanley Collis & Company, and to carry on the business of bonded lightermen and barge owners, freight contractors, wharfingers, warehousemen, railway and forwarding agents, etc. The directors are: F. A. Collis, R. S. Stanley. Registered office: 33 Great Tower Street, E.C.

**Litoral Transport Company, Ltd.** (251,929).—Private company. Registered November 10th. Capital £5,000 in £1 shares. Objects: To carry on business as general carriers, merchants, shipowners, warehousemen, omnibus, van, lorry, aeroplane, airship and steamship proprietors, carriers of passengers and goods; to establish, maintain and work lines of aerial, land and marine transport, etc. The first directors (to number not less than 2 nor more than 7) are to be appointed by the subscribers.

**Consolidated Coaches, Ltd.** (251,984).—Private company. Registered November 13th. Capital £10,000 in 5,000 8 per cent. cumulative preference and 5,000 ordinary shares of £1 each. Objects: To acquire the business of motor coach proprietors and booking agents carried on by C. Thomson and H. Holmes at 32 Stroud Green Road, Finsbury Park, N. The first directors are not named. Secretary: C. Thomson.

**T. Hawkins & Sons (Epsom), Limited.** (251,004).—Private company. Registered November 13th. Capital £16,000 in £1 shares. Objects: To acquire the business of horse and animal transporters carried on by T. Hawkins, T. W. Hawkins, F. Hawkins and A. E. Hawkins at East Street, Epsom. The directors are: T. W. Hawkins, F. Hawkins, A. E. Hawkins, T. Hawkins (permanent and controlling director and chairman). Secretary: Mrs. Nellie L. Dann. Registered office: East Street, Epsom, Surrey.

**British Mineral Transport Co., Ltd.** (251,982).—Private company. Registered November 13th. Capital £100 in 1/- shares. Objects: To carry on business as carting contractors, hauliers and lightermen, carriers of goods and passengers, shipping, chartering, forwarding and transport agents, motor car, lorry, coach, omnibus and garage proprietors, etc. The first directors (to number not less than 2 nor more than 3) are: A. M. Harding, B.A., G. A. Thompson, F. Montague-Smith. Secretary: C. Barwell. Registered office: L. & N.E. Railway, Goods Depot, Marylebone Station, N.W.1.

**Motor Express Services, Limited.** (252,034).—Private company. Registered November 15th. Capital £2,400 in £1 shares. Objects: To acquire the business of motor coach proprietors, carried on by G. Barney and A. Barney at Grays, Essex, as "The Motor Express Services." The permanent directors are: G. Barney, A. Barney, S. Caplan. Registered office: 54 Orsett Road, Grays, Essex.

**R. Mackay & Company, Ltd.** (252,189).—Private company. Registered November 22nd. Capital £1,500 in £1 shares. Objects: To acquire the business of a road rolling and haulage contractor now carried on by R. Mackay at Westwood, near Coventry. The permanent directors are: S. Dawkins, E. Dawkins.

**Frosts (Motors), Limited.** (242,234). — Private company. Registered November 25th. Capital £8,000 in £1 shares (1,500 8 per cent. cumulative preference and 6,500 ordinary). Objects: To carry on the business of proprietors of motor omnibuses, motor carriages and mechanically-propelled vehicles of all kinds, etc. The directors are: H. W. Frost, W. H. Frost. Registered office: 70 Hallwood Road, Kettering.

**Overseas & Continental Produce Co., Ltd.** (252,262).—Private company. Registered November 26th. Capital £2,100 in £1 shares. Objects: To carry on the business of general import and export merchants, agents and traders, general railway, shipping and forwarding agents; haulage, cartage and transport contractors, etc. The permanent directors are: Boris Schakow, Siegfried G. Zinnow, Otto Dissen, Rene A. Caraman. Secretary: E. May.

**Alvarez Carriers, Ltd.** (252,246).—Private company. Registered November 26th. Capital £3,500 in £1 shares. Objects: To carry on business as garage proprietors, motor car and motor and other cycle manufacturers, motor car and cab proprietors, carriers of passengers and goods, and general haulage contractors, etc. The first directors (to number not less than 2 nor more than 5) are: F. E. White, H. Alvarez (both permanent). Registered office: 23 Woodstock Street, W.1.

**Broad and Montague, Ltd.** (252,276).—Private company. Registered November 27th. Capital £200 in £1 shares. Objects: To acquire the business now carried on at Blackheath, Kent, and elsewhere, by R. Broad and T. J. Montague as "Broad & Montague," and to carry on the business of haulage contractors, general carriers, warehousemen, wharfingers, lightermen, barge owners, bonded and common carmen, proprietors and repairers of and dealers in motor or steam lorries, garage proprietors, etc. The permanent directors are: R. Broad, T. J. Montague. Secretary: R. F. C. Baker.

**Bouts Bros., Ltd.** (252,335).—Private company. Registered November 29th. Capital £30,000 in £1 shares (5,000 8 per cent. cumulative preference and 25,000 ordinary). Objects: To carry on the business of common carriers for hire, motor transport contractors, motor coach proprietors, motor bus proprietors, etc. The directors are: E. L. Bouts, R. W. Bouts, C. C. Clarke. The two first named are permanent. Registered office: 137 Bow Road, E.3.

**Tyne Ferries & White Star Transport Co., Ltd.** (252,396).—Private company. Registered December 1st. Capital £7,500 in 3,500 6 per cent. preference and 4,000 ordinary shares of £1 each. Objects: To carry on the business of general carriers by land, water and air, Wharfingers, railway and forwarding agents, warehousemen, bonded and common carmen, proprietors of omnibuses, watercraft, aircraft and other vehicles, etc. The first directors are not named.

## Mortgages and Charges.

**Collister & Co., Ltd.**—Particulars filed on October 15th of debentures for an amount not exceeding in the aggregate £1,000, authorised July 30th, 1930, charged on the company's undertaking and property, present and future, including unpaid capital, the amount of the present issue being £1,000.

**Smith's Safeway Services, Ltd.** — Debenture dated October 15th, 1930, to secure £453 9s. 3d., charged on the company's undertaking and property, present and future, including uncalled capital. Holder: W. G. Edmond, 90 Aire Street, Middlesbrough.

**London Coastal Coaches, Ltd.** — Land Registration Charge on freehold land in Westminster, dated October 19th, 1930, to secure all moneys due or to become due from the company to the Westminster Bank, Ltd.

**Holt Brothers (Rochdale), Ltd.**—Particulars filed of debentures for an amount not exceeding at any one time £10,000, authorised October 20th, 1930, charged on the company's property, present and future, including uncalled capital, the amount of the present issue being £5,000.

**A. Hamson & Sons, Limited.**—Debenture charged on the company's undertaking and property, present and future, including uncalled capital and goodwill, dated October 28th, 1930, to secure all moneys due or to become due from the company to Barclays Bank, Limited.

**Wortley & Clifford, Ltd.**—Mortgage on land and buildings in road leading from Holly Lane to Chilwell, Notts., with fixtures, dated October 29th, 1930, to secure all moneys due or to become due from the company to the Midland Bank, Ltd.

**Renown Traction Company, Ltd.** — Debenture dated November 1st, 1930, to secure £1,900, charged on the company's undertaking and property, present and future, including uncalled capital. Holders: Christopher Dodson (1930), Ltd., Cobbold Road, Willesden, N.W.

**F. W. Jermy & Company, Ltd.**—Mortgage dated November 3rd, 1930, to secure £2,800, charged on land with freehold garage and buildings at Damside, Morpeth. Holders: The Misses E. and H. Wight, 2 Alma Place, Morpeth.

**J. W. Stocks, Ltd.**—Particulars filed of debentures for sums not exceeding £7,500, authorised November 5th, 1930, charged on the company's undertaking and property, present and future, including uncalled capital and goodwill, the amount of the present issue being £3,500.

**Lonsdale Motor Haulage, Ltd.** — Debenture dated November 6th, 1930, to secure £1,500, charged on the company's undertaking and property, present and future, including uncalled capital. Holders: H. M. Hilbery and F. C. Hilbery, 4, South Square, Gray's Inn, W.C.1.

**D. Mylon & Company, Ltd.**—Debenture dated November 6th, 1930, to secure £2,000, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: D. Mylon, "Beltrim," Chertsey Road, Shepperton.

**Public Works Transport, Ltd.**—Debenture dated November 12th, 1930, to secure £2,000, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: D. Mylon, "Beltrim," Chertsey Road, Shepperton.

## Satisfactions.

*Note: Where the amount "originally secured" is stated, that is not necessarily the amount outstanding at the date of the satisfaction recorded below. There may have been previous partial satisfactions, registered or unregistered. The registration of Satisfactions is not compulsory.*

**Rutherford & Company (Tees-side), Ltd.**—Satisfaction in full on August 29th, 1930, (1) of mortgage securing moneys due or to become due from the company to the National Provincial and Union Bank of England, Ltd., dated December 20th, 1921, and registered December 22nd, 1921, and (2) of debenture dated August 28th, 1922, and registered September 11th, 1922, securing £3,500.

**Enterprise Bus Company (Clacton), Ltd.**—Satisfaction in full on September 12th, 1930, of debenture dated June 23rd, 1930, and registered June 25th, 1930. (According to the register of mortgages, the debenture registered June 25th, 1930, originally secured sums to Barclays Bank, Ltd., not exceeding £6,000).

**Enterprise Bus Company (Clacton), Ltd.**—Satisfaction in full on September 12th, 1930, of deposit of deeds dated July 1st, 1924, and registered July 8th, 1924. (According to the register of mortgages, the memorandum of deposit registered July 8th, 1924, originally secured all moneys due or to become due from the company to Barclays Bank, Ltd.).

**Richard Abel & Sons, Ltd.**—Satisfaction to the extent of £150, on October 8th, 1930, of second debenture dated August 10th, 1905, and registered August 14th, 1905. (Previously satisfied £250).

**Bucks Mechanical Transport, Ltd.**—Satisfaction in full on October 17th, 1930, of debentures 6, 7, 8, 9 and 10, for £100 each dated November 22nd, 1920, and registered December 1st, 1920. (According to the register of mortgages, the debentures registered December 1st, 1920, originally secured £1,500).

**Renown Traction Company, Ltd.**—Satisfaction in full (1) on October 30th, 1929, of debentures dated October 3rd, 1927, and registered October 4th, 1927, securing £1,300 and (2) on December 14th, 1929, of debenture dated March 17th, 1927, and registered same date securing £1,500. (Notices filed November 4th, 1930).

**Miller Traction Company, Ltd.**—Satisfaction to the extent of £1,000 on November 14th, 1930, of debenture dated July 12th, 1928, and registered July 13th, 1928.

## Receiverships (Appointment or Release).

**Fisher's Saloon Services, Ltd.**—C. G. Jolliffe, F.C.A., of Belvoir House, 45 Chepstow Road, Newport, Mon., ceased to act as Receiver on October 4th, 1930.

**Varney and Baker, Ltd.** — H. G. C. Wilson, Certified Accountant, of 13 Queen's Road, Coventry, was appointed Receiver and Manager on October 6th, 1930, under powers contained in debentures dated January 24th, 1927, and January 4th, 1929.

**Commercial Road Haulage, Ltd.**—I. Haylock, C.A., of Hull, was appointed Receiver and Manager on October 13th, 1930, under powers contained in a first mortgage debenture dated May 13th, 1929.

**Blue Band Bus Services, Ltd.**—C. P. Barrowcliff, of 55/57 Albert Road, Middlesbrough, ceased to act as Receiver and Manager on October 18th, 1930.

**Woodstock and Lait, Ltd.** — R. H. Andrews, of 68 Munster Road, Fulham, S.W.6, was appointed Receiver and Manager on October 18th, 1930, under powers contained in instrument dated January 12th, 1925. J. S. Hall ceased to act in the above capacities on October 9th, 1930.

**Gray's Coaching Service, Ltd.** — E. A. Froud, of 35 Craven Street, W.C.2., was appointed Receiver and Manager on October 22nd, 1930, under powers contained in debenture dated May 16th, 1930.

**Dawes' Motor Transport Company, Ltd.**—H. J. Herbert, of 40/42 Oxford Street, W.1, who was appointed Receiver and Manager on September 4th, 1930, under powers contained in instrument dated January 28th, 1930, ceased to act in those capacities on October 24th.

**Northern Roadways, Ltd.**—J. J. Hawkins, of 209/11 Abbey House, Victoria Street, S.W.1, ceased to act as Receiver on November 1st, 1930.

**R. & N. Barker Transport Company, Ltd.**—H. Longrigg, C.A., of 1 Dickinson Street, Manchester, was appointed Receiver on November 5th, 1930, under powers contained in mortgage debenture dated July 5th, 1922.

# The Co-ordination and Development of Transport.

THE Royal Commission on Transport appointed in August 1928, under the Chairmanship of Sir Arthur Griffith-Boscawen, has now presented its third and Final Report and they have received high praise on all sides for the masterly way in which the reports have been presented. This Royal Commission, in fact, constitutes a record in as much as they have not waited until, after a long lapse of time their full report could be presented, when as has often been the case the need for action had passed, but by dividing their work up into three distinct sections they have had the extraordinary good fortune to see during their lifetime almost all the recommendations contained in the first two reports translated into an Act of Parliament. It is perhaps too much to expect after this that the third report will be acted upon with equal celerity and in fact the final report rather sets out the facts of the problem to be solved and makes recommendations which in the opinion of the Commissioners will help to ameliorate the difficulties of the situation, without pretending to have reached a definite solution.

The three sets of questions comprised in the Terms of Reference to the Royal Commission were as follows:—(1) those concerning the free and easy movement of traffic on the roads and its control, mainly from the point of view of safety; (2) those concerning the licensing of public service vehicles, and the co-ordination of the various forms of road passenger transport with the object of obtaining the best and most economical public service; and (3) those concerning the general co-ordination and development of all available means of transport.

The first set of questions were dealt with and conclusions and recommendations reached were embodied in the first report which was signed unanimously on July 19th, 1929. The second set of questions were considered and conclusions and recommendations signed, again unanimously, and presented on October 18th, 1929. The third set of questions are dealt with in the present report, for which the Commission have adopted the title of "The Co-ordination and Development of Transport." This report has been signed by every member of the Commission, but reservations have been made by Sir William Lobjoit, who disapproves of the proposals for licensing road hauliers; by Sir William Lobjoit and Major H. E. Crawfurd, who take a contrary view of the other members of the Commission on the suggestion put forward in some quarters for the capitalisation of the Road Fund. The Commission as a whole disapprove of this proposal, whereas the two members in question are of opinion that it should be investigated further. There is also a comprehensive memorandum submitted by Major H. E. Crawfurd dealing with the progressive reconstruction of built-up areas and further additional recommendations by Sir Robert Donald, Mr. F. W. Galton and Mr. William Leach. These members advocate the unification of transport under a National Transport Trust.

While we congratulate the members of the Royal Commission on the admirable way in which the final report has been drawn up and presented and the way in which they have made recommendations, have criticised all kinds of transport, and have made suggestions for their improvement, there are one or two questions which inevitably rise to the mind as the report is read through and considered. The first question is—Where are all these proposals leading? Is the day of competition drawing to an end, to be succeeded by rationalisation in its intensest form, leading to unification and finally nationalisation? Does co-ordination mean equal in order or rank between two or more forms of transport or does it mean subordination, one form being kept on top while another is either suppressed or kept under by means of legislation, taxation, and regulation? These thoughts and questions are all brought to the surface in reading this report. While the Royal Commission are concerned for the development of transport yet there is, underlying the report and springing up in various parts of it, the fixed idea that the railway companies must be maintained and restored to prosperity as a national asset and while many good

Digitized by Google

recommendations are made for improving and developing other forms of transport, yet this is only proposed within certain definite limits and the result of the restrictions and recommendations which have been made is undoubtedly to assist the railway companies by making it very much harder for their competitors to carry on their business at a profit.

The first section of the report deals with railways and the Commission find that the present difficulties of the railways are due in the main to two causes, the long continued depression in trade and the road competition, the former being the more important. The Commission do not altogether approve of the policy of the railway companies in taking such a large financial interest in road passenger undertakings; they consider that the railway companies should be under a statutory obligation to provide a seat for each passenger who joins a main line train at its starting point; they express surprise that containers are not more generally used; they recommend the use of larger wagons for the heavy industries; they also recommend abolition of private ownership of railway wagons.

The next section of the report deals with Highways and the Commission do not favour any further construction of new arterial roads. They recommend that the activities of the Ministry of Transport and of the highway authorities should in future be concentrated on :—(1) the complete reconstruction of many existing roads; (2) the widening of roads; (3) the improvement of road junctions and lines of sight; (4) the construction of by-pass roads; (5) the strengthening of weak bridges; (6) the freeing of toll roads and bridges; and (7) the progressive reconstruction of built-up areas. The urgent need for improving existing roads is apparent to all road users but we are not sure that the recommendation to increase the number of by-pass roads is a good one, as we believe it is becoming increasingly general for vehicle owners to revert to the old established road, instead of using the by-pass roads which have been constructed. The recommendations of the Commission as to weak bridges deserve special attention and we trust that these will be carried out with all possible speed. To strengthen our main roads, to make wider and straighter roads and still to allow the bridges which form a vital link between one section of the road and another to remain in their present condition is to stultify entirely the benefit which would otherwise result.

The third section deals with road transport and the first subject considered is a highly controversial one upon which opinions are divided : it is the proposal to licence road hauliers, this scheme being supported by the Transport & General Workers' Union, the National Road Transport Employers' Federation, and the Long Distance Road Haulage Committee of Inquiry. On the other hand the Commercial Motor Users' Association are definitely opposed to a system of this kind. One can easily understand the attitude of established and well organised road transport undertakings who are constantly subject to what they consider is unfair competition from mushroom concerns, not established on financially sound lines or properly organised to carry on a road haulage business successfully. It is not easy to see, however, where this system would lead as it is estimated that a large proportion of the present road traffic is in the hands of merchants and manufacturers carrying their own goods and having their own transport department. Any licensing system which resulted in increased charges would inevitably result in still more traffic being carried by the trader instead of being handled by the road transport contractor.

The fourth section deals with tramways and trackless trolleys and the Commission have come to the conclusion that tramways, if not an obsolete form of transport, are at all events in a state of obsolescence. They recommend therefore, that no additional tramways should be constructed and that they should gradually disappear and give place to other forms of transport.

The fifth section deals with canals and inland waterways and the Commission report it as their considered opinion that certain canals still possess considerable value as a means of transport and that properly rationalised and developed they can be made to render much useful service to the community in the future.

The sixth section deals with harbours, docks, and coastwise shipping and the recommendations reached by the Commission are that the first step to be taken to assist coastwise traffic is the improvement of the ports used by coasting vessels as the evidence which they have received shows that many of the ports most used by and most useful to coastwise traffic are in a state of decay.

Finally the Commission deal with the co-ordination of transport, excluding transport by air. The difficulty they find in the way of co-ordinating goods transport is that they have reached the conclusion that this branch of transport is not organised. If goods transport by road were organised then it would be comparatively simple to co-ordinate it with railway transport. They consider it would be a great mistake to attempt to coerce road transport and that it would rightly be strongly objected to by the transport agencies as well as by the traders and would probably prove quite ineffective in practice. They believe that a great deal can be done by other means and they recommend the appointment of a permanent Advisory Council on Transport which would study transport problems and advise the Minister as to action which he might usefully take to promote the co-ordination, improvement and development of transport generally. We presume the intention is to do on a national basis what is at present being done by the London and Home Counties Traffic Advisory Committee. When they come to consider what should be the place of each form of transport in the general scheme of things they realise the immense difficulty involved in answering such a question. For instance they ask who is to decide what rail services are desirable in the public interest and what amount of coastwise shipping? Or what goods should in the national interest be sent by rail, road, canal or ship?

This is the crux of the whole question and upon a right solution of the problem the future welfare of this Country may depend.

In another part of this issue we give an abstract of the main conclusions of the report which deserves and will certainly receive the closest consideration and scrutiny of all directly concerned with transport in general, and road transport in particular.

## Railway Traffic and Trade Depression.

The Royal Commission on Transport, whose report is dealt with at length in this issue, state that the railways of this country are suffering from two main causes, the first being the general trade depression and the second road transport. While it is inevitable that any competitive form of transport should take a certain amount of traffic from the older form, yet we are firmly convinced that the only way to prosperity for the railway companies lies in a return of prosperity to the country generally. Transport is indeed a barometer of trade and nothing could show more clearly the state of depression in industry and trade than the figures of the railway companies returns for the past twelve months. It is no good attempting to bolster up anything which is obsolete and uneconomical by inflicting heavier burdens on its competitors. We do not agree for a moment that this is the case with the railways and we consider the Royal Commission on Transport have made a great mistake in endeavouring to legislate in favour of the railways at the expense of their competitors. The one essential, as we have said, is the return of prosperity and all our energies should be employed to secure this great end.

## The Motor Coach Ban.

In our last issue we referred to the proposed ban on motor coaches in the central area of London. The Motor Hirers and Coach Services Association has been actively engaged in fighting this proposal and has held meetings of protest and has brought all its influence to bear on the Minister of Transport to prevent the scheme being put into operation. So great has been the outcry that it is stated that the Minister is reconsidering the question and as a matter of equity we maintain that it is impossible to support any such decision. If it be necessary to ban any class of road vehicle from the streets of London, and we do not admit this for a moment, then the first line of attack should be on the private cars, which come into the central area each day in thousands and in many cases containing only one passenger driven by a chauffeur. These are the business and professional men who in former days occupied the first-class carriages of the railways and whose motor cars add tremendously to the congestion of our streets at their busiest times. Motor coaches, containing from 20 to 30 passengers each, are a great convenience to the general public and have become a necessary part of our transport system and there is no ground that we can see for excluding them from any part of the metropolis. Proposals to differentiate between one class of vehicle and another or to ban one type of motor car while admitting another are unfair and unjust and if once the principle is admitted there are no lengths to which such legislation or regulation cannot be carried.

## Newport Chamber of Commerce.
### Annual Banquet.

THE principal guest at the Annual Dinner of the Newport Chamber of Commerce was Mr. Richard D. Holt, Senior Partner of Alfred Holt & Co., and Chairman of the Mersey Docks and Harbour Board. Mr. Lod M. Rees, President of the Chamber presided at the Banquet which took place on December 12th, last.

A distinguished company gathered for this important occasion, amongst the guests being The Mayor of Newport, The Lord Mayor of Cardiff, Sir Leolin Forestier-Walker, the Hon. Evan Morgan, Mr. A. W. Heard, Chairman of the British Association of Shipping & Forwarding Agents, a Past President, Councillor J. H. Swallow, Deputy Chief Docks Manager, Great Western Railway, and Councillor Alfred E. Pugh, the Secretary of the Chamber.

The Toast of "Trade, Commerce and Industry" was proposed by Sir Leolin Forestier-Walker in one of the happy, racy speeches for which he is noted.

Mr. Richard Durning Holt, responding, said that they were all worried about the state of our commerce. We were undoubtedly in serious trouble, but it was true that almost everywhere else things were worse. On the other hand it was well to remember the extent to which all countries were dependent upon one another. Nothing, in his opinion, would do more to re-establish the trade and commerce of the world than the establishment of a good Government in China. The troubles in India also were causing a serious set-back to our trade. Though the staple trades were doing badly there was a considerable number of new trades that were not doing badly at all, and on the whole, perhaps things were not altogether as bad as they seemed.

Freedom was needed, too, for the man of enterprise. We should never get commercial success unless the men who entered it were allowed to have a free run for their money and were permitted to reap the reward of their enterprise. He thought the men who succeeded were taxed too much. Public economy was needed, too. Nobody was going to work to earn and to save money if the sole result was to be the coming round of the tax-collector. We were not going to return to prosperity save by hard work and self-sacrifice, and by drastic economy during the next four years.

Speaking of the coal trade he said that he wished the people concerned in it would realise that there were now other sources of heat and power, and that unless they were a little more obliging to their customers than they had been during the last ten years their customers would look around for other sources of supply.

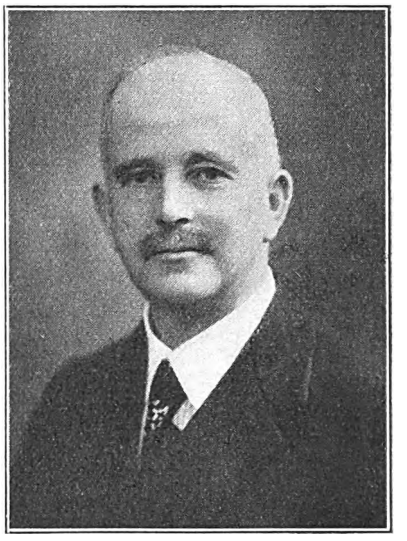
The Hon. Evan Morgan proposed Newport Chamber of Commerce, to which the President replied.

## New Year Honours.

THE list of New Year Honours announced on January 1st contains several names of interest in connection with transport.

**BARON.**

**Sir Ernest Lamb, C.M.G., J.P.,** although no longer actively connected with the transport industry is still remembered by a large circle as the Chairman and Governing Director of Foster's Parcels & Goods Express, Ltd. He was appointed C.M.G. in 1907 in recognition of his services as Chairman of the Colonial Premiers' Reception Committee in the City of London. This was followed by a Knighthood in 1914. He sat in the House of Commons as Liberal Member for Rochester from 1906 to 1910 and again from 1910 to 1918. He has been a Justice of the Peace for the County of Surrey since 1907. He has been a member of the City of London Corporation since 1903 and is one of H.M. Lieutenants for the City of London. He was Chairman of the Bridge House Estates Trust when H.M. the King opened the new Southwark Bridge. He has been Chairman of the City of London Schools' Committee and of the City of London Police Committee. He is a Trustee of the Crystal Palace. In 1928 he was appointed Joint-Chairman, with the Bishop of Lichfield, of the National Emergency Committee of Christian Citizens. For over 20 years he has been a Connexional Treasurer of the Wesleyan Methodist Church.



SIR ERNEST LAMB, C.M.G., J.P.

He has kept in close connection with transport, having been for the past 10 years on the Panel of Experts of the Ministry of Transport under Section 23 of the Transport Act, 1919, and latterly has been very much engaged in Conferences at the Ministry of Transport in connection with the Co-ordination of Road Passenger Transport.

**PRIVY COUNCILLOR.**

**Herbert Stanley Morrison, J.P., M.P.** Mr. Morrison is well known to every member of the transport industry and particularly those engaged in road transport through the Road Traffic Act, 1930, which has just come into operation. He has been a Member of Parliament for South Hackney having been elected in 1923 and again in 1929, being appointed Minister of Transport in the latter year. He was Mayor of Hackney 1920/21, Hon. Secretary to the London Labour Party; Chairman of the National Labour Party 1928/29; a Justice of the Peace for the County of London.

MR. HERBERT MORRISON, M.P., MINISTER OF TRANSPORT.

Digitized by Google

**KNIGHTS BACHELOR.**

**Henry Howard Piggott, C.B., C.B.E.,** Deputy Secretary Ministry of Transport. Sir Henry Piggott was educated at Kingswood School, Bath, and Corpus Christi College, Oxford. He was Assistant Master, Bradfield College, 1895-1902, H.M. Inspector of Schools, Board of Education, 1904-1915; joined the Ministry of Munitions 1915; made Private Secretary of Minister of Munitions 1916; Assistant Secretary, Ministry of Munitions 1917.

**David John Owen,** General Manager of the Port of London Authority. Sir David Owen has been General Manager to the Port of London Authority since 1922 and during this period has served at the premier port of Great Britain with distinction. Born and educated in Liverpool he was in the service of the Mersey Docks and Harbour Board for 13 years and afterwards was Manager and Secretary of Paul Bros., Flour Millers, of Liverpool and Birkenhead. In 1908 he was appointed Assistant Manager, subsequently becoming Manager of Goole Docks. In 1915 he was appointed General Manager and Secretary of the Belfast Harbour Commissioners. He is Lt.-Colonel in the Engineer and Railway Staff Corps of the Royal Engineers; a Vice-President of the Institute of Transport and a member of the Executive Committee of the Dock and Harbour Authorities' Association. He has published several books, including "A Short History of the Port of Belfast," "A History of Belfast," and "The Port of London —Yesterday and To-day." He is interested in art and is President of the P.L.A. Staff Arts and Crafts Society.

SIR D. J. OWEN.

## Personal Notes.

**Director of Civil Aviation.**—The Secretary of State for Air has, with the consent of the Government of India, appointed Lieutenant-Colonel Francis Claude Shelmerdine, O.B.E., at present Director of Civil Aviation in India, to the vacant post of Director of Civil Aviation in the Air Ministry. Lt.-Col. Shelmerdine was born on 25th October, 1881. He first served with the 11th (S) Battalion, Yorkshire Regiment, and was transferred to the Royal Flying Corps, with the rank of Temporary 2nd Lieutenant in July, 1915. By the 22nd June, 1917, he had risen to the rank of Temporary Lieut.-Col., which rank he retained upon the formation of the Royal Air Force on 1st April, 1918. His war service with the Air Services extended from 10th July, 1915, until the Armistice, for which he received the Order of the British Empire (Military Division). Lt.-Col. Shelmerdine subsequently held appointments under the Directorate of Civil Aviation, both at home and in Egypt, up to the time of his appointment as Director of Civil Aviation in India in 1927.

**Traffic Commissioner for the Metropolitan Traffic Area.**—The Minister of Transport has appointed Mr. Gleeson Edward Robinson, M.C., LL.D., to be the Traffic Commissioner for the Metropolitan Traffic Area under the Road Traffic Act, 1930. Since February, 1925, Mr. Robinson has been the British Member of the Third Division of the Anglo-German Mixed Arbitral Tribunal set up under the Treaty of Versailles to carry out the work of adjusting and deciding claims between British nationals and Ex-Enemy nationals and Ex-Enemy Governments. Before the War, he was in private practice as a solicitor, which he surrendered to join the Army during the War. From 1920 to 1925 he was Secretary to the Clearing Office (Enemy Debts). He was called to the Bar in 1920.

**Chairman of Traffic Commissioners for Yorkshire and Eastern Areas.**—Sir Haviland Hiley, K.B.E., whose appointment as a Traffic Commissioner under the Road Traffic Act was announced by the Minister of Transport on December 10th last and recorded by us in our December issue will be the Chairman of the Traffic Commissioners in the Eastern Area. Mr. J. Farndale, C.B.E., Chief Constable of Bradford, has been appointed Chairman of the Traffic Commissioners in the Yorkshire Area. Mr. Farndale has for some considerable time been connected with the control of traffic and the licensing of vehicles. He was Chairman of the Conference of Representatives of Police Forces in Great Britain and Road Users in 1924 and was a member of the Ministry of Transport Committee on Street Traffic Noises. While chief constable of Bradford he was executive officer of the local licensing committee controlling public service vehicles.

**Liverpool C.M.U.A.**—The new secretary of the Liverpool Area Committee of the Commercial Motor Users' Association is Mr. C. Dudley Whitnall, A.C.A., A.S.A.A., who succeeds his father, the late Mr. Charles Whitnall, whose death was reported in our last issue. Mr. Whitnall is quite familiar with the affairs of motor users and in the last five years was in partnership with his father. During that time he has made himself quite au fait with the work of the organisation and the difficulties of its members. At the December meeting of the Area Committee, at which Mr. A. C. Bloomer presided, sympathetic reference was made to the passing of Mr. Charles Whitnall and Members were singularly united in the desire to see his son fill the office of secretary. The other business of the meeting was mainly of a routine character.

MR. C. DUDLEY WHITNALL, A.C.A., A.S.A.A.

**British Railways' Advertising and Public Relations Committee.**—Mr. W. H. Fraser, Publicity Agent, G.W.R., has been appointed Chairman of the British Railways' Advertising and Public Relations Committee for the year 1931.

**F. S. Heaton—a new development.**—We offer good wishes to Mr. F. S. Heaton, who is well-known in his connection with John Fowler & Co. (Leeds), Ltd., and who has now opened up on his own account as agent for several well-known firms, these comprise John Fowler and Co. (Leeds), Ltd., agent for the sales of mechanical street gully emptiers in England; William Bunce & Son, Ashbury, Swindon, agent for the North of England and Scotland for the "Ashbury" road gritting machine; John King & Co. (Leeds), Ltd., agent for Yorkshire, Lancashire and Cheshire; the Box Grouting & Spraying Co., Broadheath, agent for grouting and spraying contracts. Mr. Heaton's address is 45 Estcourt Avenue, Headingley, Leeds, where he will be pleased to hear from any of his friends.

## Obituary.

**Death of Mr. George Martin Gamble.**—It is with very deep regret that we have to record the death of Mr. George Martin Gamble, A.M.I.Mech.E., which took place suddenly on December 18th last from heart failure. Only as recently as October 1st last Mr. Gamble was appointed Sales Manager to Karrier Motors, Ltd., Karrier Works, Huddersfield, and his death whilst in the prime of life came as a tremendous blow to the staff for he was busily engaged in his office only twelve hours previously.

**Death of Mr. Alfred H. Wilde.**—We regret to record the death, which took place on December 25th last, of Mr. Alfred H. Wilde, chief engineer of the Standard Motor Co., Ltd. It was recently announced that Mr. Wilde was shortly resigning from the Standard Motor Co. in order to become consulting engineer to the Humber Hill combined companies.

# Co-ordination and Development of Transport.

## Licensing of Road Hauliers—Advisory Council on Transport.

### Final Report of Royal Commission.

FAR-REACHING recommendations for the regulation and control of all forms of transport in Great Britain are made in the third, and final, report of the Royal Commission on Transport, just issued.

The Commission was appointed to take into consideration the problems arising out of the growth of road traffic and, with a view to securing the employment of the available means of transport in Great Britain (including transport by sea, coastwise, and by ferries) to the greatest public advantage, to consider and report what measures, if any, should be adopted for their better regulation and control, and, so far as is desirable in the public interest, to promote their co-ordinated working and development.

In its essentials the report is a unanimous one, and it is signed by Sir Arthur Griffith-Boscawen (the Chairman), the Marquis of Northampton, the Earl of Clarendon, Sir Matthew G. Wallace, Sir Robert Donald, Sir Ernest W. Hiley, Sir William G. Lobjoit, Major I. Salmon, M.P., Major H. E. Crawfurd, Mr. J. Learmouth, Mr. W. Leach, M.P., and Mr. F. W. Galton.

The Secretary was Mr. R. H. Tolerton, D.S.O., M.C., of the Roads Department, Ministry of Transport, and the Assistant Secretary, Mr. A. Spence, also of the Ministry of Transport, and to these gentlemen the Commissioners tender their warmest thanks and appreciation of their services.

The Report begins by pointing out that it soon became apparent to the Commission that three different sets of questions were involved in their Terms of Reference—(i) those concerning the free and easy movement of traffic on the roads and its control, mainly from the point of view of safety; (ii) those concerning the licensing of public service vehicles, and the co-ordination of the various forms of road passenger transport with the object of obtaining the best and most economical public service; and (iii) those concerning the general co-ordination and development of all available means of transport.

The conclusions and recommendations of the Commissioners concerning the first set of questions were embodied in the Commission's First Report, "The Control of Traffic on Roads," signed unanimously on July 19th, 1929, and their Second Report, "The Licensing and Regulation of Public Service Vehicles," contained recommendations on the second set of questions and was signed, also unanimously, on October 18th, 1929.

The third set of questions form the subject of this, the Third (and Final) Report.

#### AIR TRANSPORT.

IN the Introduction the Commissioners point out that their terms of Reference cover the whole field of transportation, not excluding air, but air transport is still in its infancy from a commercial point of view and they have not felt it necessary to report upon it but they express the hope that a timely guidance be exercised so that its development may be directed on sound lines and so that this latest form of transport is not allowed to expand in the more or less casual and haphazard way in which earlier forms —particularly road transport—have been permitted to develop.

The importance of adequate, efficient and cheap transport facilities cannot be over estimated, particularly in a country such as Great Britain whose trade consists to so great an extent in the importation of food and raw materials and the exportation of manufactured goods.

#### ROAD AND RAIL COMPETITION.

Progress in the development of transport facilities has always produced rivalry between the established and the newer forms, and the existing state of competition between road and rail is but a repetition of history. Prior to the development of the mechanically-propelled road vehicle, the railways provided by far the greatest proportion of the transport facilities in Great Britain, and there can be no doubt that during what has been called the "railway era" they reached a very high standard of efficiency and contributed more, perhaps, than any other single agency to the building up of our trade. The growth of road traffic, however, has been so rapid during the past decade that an entirely new situation has developed. At first regarded as complementary, road transport soon became highly competitive with rail transport, and this, accentuated by the depression in the heavy basic industries and the staple textile trades—an unfortunate feature of recent years—has created problems not peculiar to this country alone. If allowed to continue unchecked or uncontrolled the evil results of this competition will become even more serious, and will not only adversely affect the financial stability of those who provide transport facilities but will also hamper the development of trade and the economic progress of the Nation. Throughout our enquiries we have constantly kept in view the desirability of securing the use of all available means of transport to the greatest advantage in the national interest, and of harmonising conflicting interests, so far as possible, with a view to avoiding the disastrous consequences we have indicated. In particular, we have kept prominently before us the results of the great development of transport by road, which was without doubt the principal reason for our appointment, and it is from this aspect chiefly that we have approached the problems involved.

#### THE POSITION OF THE RAILWAYS.

In the chapter dealing with Railways the Report points out that no civilized country can exist without railways and notwithstanding their recent competitors on the roads and in the air, railways hold their place and, so far as can be seen, are indispensable for many purposes. Long-distance passenger traffic, intensive "business" passenger traffic, and the conveyance of all kinds of goods traffic in bulk could not be carried on without the existence of railways. Whatever else may happen—and without for a moment questioning the great advantages which mechanical transport by road has conferred and may further confer upon trade, or the possibility of the far greater development of air services—it is clear that the maintenance of an efficient railway system is a national necessity.

The Report then proceeds to indicate, in a general way, the extent to which railways are subject to regulation, and then continues:—"No doubt much of it was desirable and indeed necessary in the public interest in the case of an undertaking which enjoyed a virtual monopoly, but times have changed; much of the element of monopoly has now disappeared and we are tempted to wonder whether in present circumstances regulation is not over-done in certain directions. Certainly it proved a serious handicap to railways when they found themselves faced with road competition which, in striking contrast, has been allowed up to the present to develop with an extraordinary lack of regulative control even from the very important point of view of public safety."

The effect of grouping under the Railways Act was to abolish competition between rival companies over the greater part of the country; competition remains only at points which may be called frontier towns between respective territories. Although these territories were no doubt planned with a view to causing as little disturbance as possible to the companies as they then existed, they were not scientifically arranged on a geographical basis, and in many cases one group extends far into the territory of another. It would appear to be desirable from the point of view of economical working that each company should confine its attention to the needs of its own particular area. Joint lines should be merged in one or other of the groups. With regard to competition at points where two territories join it would be advisable that the traffic at these points should be pooled.

#### PUBLIC NOT LIKELY TO GIVE UP ROAD TRANSPORT.

The Commission recognises that the present difficulties of the railways are due, in the main, to the long continued depression in trade, and road competition. Road competition must continue to affect the railways adversely. The advantages of cheap and comfortable road transport are so great that the public, now that it has become accustomed to them, is not likely to give them up—nor is there any reason why it should. Similarly, the conveyance of certain classes of goods direct from door to door is so advantageous that the railways are bound to lose permanently to the road a certain amount of traffic. But as regards competition generally between road and rail, the question arises whether the railway companies have done and are doing everything possible to meet it.

It has been suggested to us, the Report continues, that when road competition first began to be serious from a railway point of view—that is, immediately after the War—the railways were caught napping and failed to take sufficient steps

Digitized by Google

to meet the new situation. We have already referred to the exhausted condition of the companies after the War and the serious nature of the problems which engaged the attention of their staffs in connection with the amalgamations effected under the Railways Act. It is only fair to make due allowances for these matters. But it cannot be denied that in the days of their monopoly the railways had in some ways insufficiently studied the needs of the public, and that their policy had become unduly conservative. It is remarkable that there has been practically no improvement in locomotive speed in this country during the last eighty years. It seems obvious that if the railways desire to prevent further losses in passenger traffic, their schedules should be thoroughly overhauled and the whole of the services should be speeded up and made more convenient to the travelling public.

### FARES.

In connection with passenger traffic on the railways, the Report states that the fares quoted by road companies are generally much less than those charged on the railways, and the Commissioners suggest that a general revision and lowering of fares by the railway companies would do far more towards the recovery and restoration of their passenger traffic than the methods adopted by them at present.

### A SEAT SHOULD BE PROVIDED.

The mere fact of purchasing a ticket for a journey by motor coach assures the intending passenger of the certainty of obtaining a seat for the journey, but this is not the case when one takes a railway ticket and the Commission recommend that railway companies should be placed under a statutory obligation to provide a seat for each passenger who joins a main line train at its starting point and with regard to passengers joining a train at other stations on the route, the companies should make greater efforts to find this accommodation, the lack of which causes much discomfort.

### RAILWAYS' ROAD TRANSPORT POWERS.

The chief method adopted by the railway companies to protect themselves against road competitors appears to be to "get on the road" themselves, the Report continues. Since the four railway groups obtained their road transport powers in 1928, they have displayed almost feverish activity in acquiring existing road transport undertakings, or at least a substantial interest in them, and have expended a great deal of capital in so doing; in many cases they have done this in co-operation with municipal authorities. This policy is being continued and it appears likely that in a few years the railway companies will become the largest road operators, at any rate so far as passenger services are concerned. In so far as this policy makes for the better co-ordination of rail and road services—the road services feeding and supplementing the rail services with through bookings and other facilities—we welcome it; but any attempt on the part of the railway companies to starve road services for the purpose of putting an end to reasonable competition would be bitterly resented and opposed by the public and would not, we feel confident, be permitted by the Area Traffic Commissioners set up under the Road Traffic Act.

On the general principle of the policy now being followed by the railway companies, we cannot refrain from expressing a feeling of doubt whether it is wise for the companies to expend large capital sums for the purpose of establishing services which may be in direct competition with their business as railways. We feel that possibly such capital would be better applied to the electrification of their suburban lines.

### USE OF CONTAINERS.

The use of containers is another direction in which the Commissioners think greater progress might be made. The great advantages of containers, particularly in minimizing the risk of damage and in reducing the amount of handling, are so obvious that it is a matter of some surprise that they are not more generally used.

The Commissioners do not fail to recognise the great services railways have rendered and are rendering to the country and are profoundly conscious of the importance of maintaining an efficient and prosperous railway system. Railways are far from having been rendered obsolete by newer forms of transport. For many purposes—in fact for the main business of transport—they are indispensable, even though newer forms of transport have, in some ways, modified the position they previously held. In addition to this, an immense proportion of capital is invested in the railways, and, so long as they remain indispensable, the Nation cannot afford to place this capital on the scrap heap or even to render it partially unremunerative. The aim should be to harmonize and co-ordinate the newer and the older forms of transport with the object of obtaining from each the maximum of advantage.

## HIGHWAYS.

In the Chapter headed "Highways" the Commissioners state it would probably be no exaggeration to say that our roads are the best in the World, but, while readily giving credit for all that has been accomplished in the past ten years it is felt that much more remains to be done. There is much talk of the congested state of our highways, but in referring to road congestion it is necessary to exercise considerable caution. An examination of them shows conclusively that our highway system as a whole is not congested and that for the most part it affords adequate facilities for traffic. On Saturdays and Sundays the almost complete absence of commercial traffic gives a sense of spaciousness in our city streets which is completely lacking on other days, but the largely increased number of motor coaches and private cars brings on some roads outside the built-up areas a condition of congestion which does not exist during the rest of the week.

Recording their observations and recommendations regarding roads outside urban centres the Commissioners say, looking at the network of highways which spreads over the country, and considering the mileage of new construction which has been completed during the last ten years and that which is either now in hand or about to be commenced, they have come to the conclusion that they cannot support any scheme which would involve the expenditure of very large additional sums of public money on the provision of new arterial roads.

While they see no need for the construction of new roads on a large scale the Commissioners do not wish to convey the impression that they are opposed to all new construction. There is, for example, the important question of the provision of by-pass roads which they consider very desirable and, in many cases, absolutely essential. Apart from these, however, they feel that the chief direction in which progress can most usefully be made lies in the improvement of existing roads.

Taking a broad survey of the highway system of to-day they make a strong recommendation that the activities of the Ministry of Transport and of the highway authorities should in future be concentrated on:—

(i) the complete reconstruction of many existing roads;
(ii) the widening of roads;
(iii) the improvement of road junctions and lines of sight;
(iv) the construction of by-pass roads;
(v) the strengthening of weak bridges;
(vi) the freeing of toll roads and bridges;
(vii) the progressive reconstruction of built-up areas.

### BRIDGES.

The Commissioners state that they have received a good deal of evidence from users of the highway regarding the difficulties and loss of time caused by bridges which are now of insufficient strength to carry with safety many of the vehicles wishing to pass over them.

There is a large number of these bridges, probably about 7,000, and among them are those owned by bodies (*e.g.*, railway and canal companies) other than highway authorities. Such bridges have been constructed under statutory powers and, broadly speaking, the legal requirements regarding strength are based on the needs of the traffic which existed at the time of the construction of the bridge. In effect this means that no account whatever has been taken of the needs of modern traffic.

It is understood that some progress is being made with the reconstruction of weak bridges, principally those which are vested in highway authorities, and that they are being dealt with at the rate of three hundred to four hundred a year. But, in the opinion of the Commissioners this is not sufficient. They recommend that special efforts should be made by the Ministry to secure reconstruction at a much quicker rate and a special programme should be formulated in regard to weak bridges; that the programme should provide for the work to be done at the rate of not less than one thousand bridges a year; and that special sums from the Road Fund should be definitely set aside for the purpose. The programme recommended would soon eliminate the number of weak bridges vested in highway authorities; there remain, however, those bridges which are privately-owned. The owners of these bridges are in most cases bound to maintain the bridge only to the standard required to carry the traffic in existence at the time the bridge was built, and they are naturally not prepared to incur any expenditure in excess of their statutory obligations. Further, it might be argued by, say, a railway company or a canal company that for them to improve a bridge so as to permit heavier weights to pass over it would mean helping their competitors on the road.

The Commissioners recommend that private ownership of all bridges carrying public highways should be abolished, and that such bridges should be vested in the appropriate highway authority. A start should be made with those bridges which carry classified roads, and the process should be pressed forward with all practicable speed. The initiation of these transfers should normally rest with the highway authorities, but to this they would add another recommendation—and one to

Digitized by Google

which they attach great importance—namely, that the Minister of Transport should be empowered to direct the transfer of any bridge or bridges should he be of opinion that such transfer is particularly desirable, or should he be dissatisfied with the rate at which transfers are taking place, either in the country generally or in any particular district.

LEVEL-CROSSINGS.

Railway level-crossings should be speedily eliminated and replaced by bridges or tunnels.

TOLL ROADS AND BRIDGES.

In this century a toll road or bridge is an anachronism and should be abolished. The difficulty of expense should not be allowed to stand in the way of a very desirable end.

FIT THE STREETS TO THE TRAFFIC.

The great schemes of reconstruction of the highway system that the last ten years have witnessed outside built-up areas have followed the revolution of road traffic consequent upon the appearance of the motor car. But nothing has been done up to the present that touches more than the fringe of the problem in our great cities. To regulate and co-ordinate existing traffic, to prohibit the increase of licensed vehicles on particular routes, and similar measures, are quite inadequate to deal with the problem. The Commissioners admit that certain improvements have been made—notably in the matters of one-way traffic, "round-abouts" and signalling—but it is clear that the object of these improvements is to fit the traffic to the streets and not the streets to the traffic. Instead of restricting traffic to the existing street accommodation exactly the reverse is the aim which should be kept in view—the street area should be planned to accommodate not only existing but possible future increases in the volume of traffic.

"MOTORWAYS."

Periodically proposals are put forward for the construction by private enterprise of special roads reserved for motor traffic. The suggestion is that the necessary capital should be sought in the open market and that the promoters should look for their revenue to the tolls to be charged to users. The Commissioners are strongly opposed to any suggestion of this nature. They have recommended the abolition of tolls, and are not prepared to support any proposal which would have the effect of creating new tolls or prolonging the life of existing tolls.

HIGHWAY EXPENDITURE AND MOTOR TAXATION.

Considering the difficult subject of the relationship between highway expenditure and the taxation of mechanically propelled vehicles the Commissioners state that a considerable volume of evidence has been directed to this matter, and they confess that in spite of the great amount of thought they have given to it, they have been unable to reach a conclusion which they could confidently put forward as demonstratively and mathematically sound and they wish to enunciate the general principle that in relation to highway expenditure the owners and users of mechanically propelled road vehicles should have no preferential treatment on the one hand, and on the other, they should not, because they happen to employ a particular form of transport, be subjected to anything in the nature of a sumptuary tax.

The total annual cost of the highways in Great Britain is £60,000,000: towards this the ratepayer finds £40,000,000 and the motorist £20,000,000. That is to say, the ratepayer finds two-thirds, and the motorist one-third of the annual cost. But the £20,000,000 paid into the Road Fund does not represent the total of the taxation paid by the motorist, since one-third (about £5,000,000) of the proceeds of taxation on private cars and motor cycles does not find its way into the Fund. In addition, the proceeds of the petrol tax (towards which the motorist contributes about £14,000,000) remain outside the Fund; these are paid into the Exchequer and are used for general purposes. Taking these additional sums into account, the motorist, *qua* motorist, is paying £40,000,000 a year, a sum equivalent to two-thirds of the annual cost of the highway system. Further, in 1927, the Road Fund was "raided" to the extent of £7,000,000, and in 1928 to the extent of an additional sum of £12,000,000. The Commissioners are deeply concerned that two raids have taken place practically without warning, and that two very large sums of money, collected for a certain purpose and definitely hypothecated for that purpose, should have been diverted to other purposes. And they are concerned, too, with the possibility of similar raids taking place in the future. In their opinion, these raids present no redeeming feature; they are bad finance since the ever-present fear of a recurrence makes it quite impossible for any Minister of Transport to formulate with any degree of confidence a firm policy to be followed in years ahead, and adds greatly to the difficulties of highway authorities.

The Commissioners are satisfied that the users of mechanically propelled vehicles are not, as a class, paying too much in taxation. Nor do they think that in a general way they are paying too little. But they consider that the ratepayers are bearing too great a proportion, and that their burden in respect of roads is becoming intolerable. It is the Commissioners unanimous opinion that, unless some relief is given, the improvement of the highways, which is so necessary, will be greatly retarded. The present proportions should be reversed, and in future one-third of the cost of the highways should fall on the ratepayer and two-thirds should be borne by the motorist. On the present figures, this relief to the ratepayer can be given without involving any increase in the amount paid by the motorist if the amount now retained by the Exchequer from the proceeds of taxation on private cars, as well as the proceeds of the petrol tax, are credited to the Road Fund. No proceeds of taxation (including the petrol tax) on mechanically propelled vehicles used on the roads should be diverted from the Road Fund if such diversion involves a reduction of the amount contributed in respect of these vehicles to a proportion less than two-thirds of the total annual cost of the highway system.

The Commissioners recommend that the normal rates of grant made from the Road Fund should be increased to 75 per cent. in the case of Class I and to 65 per cent. in the case of Class II roads, and that a suitable adjustment should be made as regards the amount included in respect of highways in the block grants now given to certain authorities, so as to bring the total contribution from the Road Fund in respect of all highways to a sum equivalent to two-thirds of the total cost.

INCIDENCE OF TAXATION.

Although the Commissioners are satisfied that the users of mechanical transport on the roads are not, as a class, paying too much towards the cost of the highway system, they make recommendations on the subject of the relative proportions paid by the various classes of mechanical propelled vehicles.

When we attempt the Report continues to deal with the question of the precise amount of damage which a particular vehicle or class of vehicle does to the road, we immediately enter the field of speculation. Expert opinion, however, is not absent and it supports the conclusion we have reached that the class of vehicle responsible for by far the greater part of the wear and tear on the highway is the heavy commercial lorry, particularly when travelling at speeds in excess of the legal maximum. It is the combination of speed and weight that has such disastrous effects on the carriageway. We have used the expression "heavy commercial lorry," but this, although popularly understood, is not one recognised in any Act. The type of vehicle to which we refer is that coming within the definition of "heavy motor cars" contained in Section 2 of the Road Traffic Act, 1930.

MAXIMUM UNLADEN WEIGHT.

The Commissioners recommend that no heavy motor car should be allowed to exceed 10 tons in weight unladen; that the maximum laden weights should not be increased; and that the maximum weight on any wheel should not exceed 4 tons. While they recognise that in certain circumstances heavy loads must be carried by road and that for this purpose the vehicle with six and eight wheels has advantages over that with only four, they recommend that, as a general principle, the use of lighter vehicles—say, 4 tons or less in weight unladen—should be encouraged in the interests of the highways and their users, and that the use of vehicles with an unladen weight in excess of 4 tons should be discouraged.

INCREASED TAXATION?

Apart from actually prohibiting the use of vehicles over 4 tons in weight unladen—a course which they do not propose—the only means of effectively discouraging their use is to increase the licence duty payable. They recommend, therefore, that the amount of duty payable in respect of these vehicles should be increased. Further, as they observe that a flat rate is applied to all vehicles exceeding 5 tons in weight unladen they recommend that additional steps at each ton should be provided for the purpose of taxation, and that at each step there should be a substantial increase in the duty payable. They do not propose to recommend the adoption of any particular scale, but see no reason why the duty payable in respect of a heavy motor car with an unladen weight between 9 tons and 10 tons should not be as high as £120 per annum.

In making these recommendations the Commissioners are not influenced solely by the question of damage to the highway. They have prominently in mind the question of competition between road and rail and the relative suitability of traffic for conveyance by the one or the other. While fully recognising the convenience of the facilities offered by the road vehicle for collection and delivery from door to door—especially in the case of goods particularly liable to breakage in handling—they are very definitely of the opinion that it is not in the national interest to encourage further diversion of heavy goods traffic from the railways to the roads. Such further

Digitized by Google

diversion would add greatly to the expenditure on highways and tend to make the railways unremunerative, without conferring any commensurate advantage.

The Commissioners state that they have not entered into any consideration of how taxation on mechanically propelled vehicles should be levied and they recommend that a small expert committee be appointed by the Treasury and the Ministry of Transport to investigate the subject in consultation with the manufacturing interests.

### TYRES.

The Commissioners recommend that every mechanically propelled vehicle using the roads, other than heavy and light locomotives as defined in the Road Traffic Act, 1930, and steam rollers, should be required to be fitted with pneumatic tyres. As to the reasonableness of this recommendation, the Commissioners are satisfied that the pneumatic tyre has now reached a pitch of perfection which renders its use eminently practicable. They see no reason why even steam wagons should not be fitted with pneumatic tyres. They realise that it would not be practicable to require that all locomotives should be fitted with pneumatics—nor do they consider it necessary since the maximum legal speed limits are very low—but these vehicles should certainly be fitted with tyres of soft or elastic material. Steel tyres on mechanically propelled road vehicles or on vehicles drawn by them should be abolished and made illegal on any vehicle, with the exception of road-rollers and agricultural vehicles intended primarily for use in the fields.

### THE ROAD FUND.

The Commissioners do not recommend that loans should be raised on the security of the Road Fund, and think it would be unwise to mortgage any part of the income and thus reduce, *pro tanto*, the amount available annually. Capitalisation of the Road Fund is neither desirable nor, in present circumstances practicable.

## ROAD TRANSPORT.

In the introduction to the chapter dealing with road transport the Commissioners say that the primary reason for their appointment as a Royal Commission is the growth of road traffic.

### TRANSPORT OF GOODS BY ROAD.

The use of the mechanically-propelled commercial vehicle for the carriage of goods by road has increased in common with the general use of motors. But of the total increase, the greatest proportion appears to be due to the increase in the number of vehicles owned and operated by manufacturers and traders for the conveyance of their own products, and in the number owned by contractors working exclusively for particular traders. The Commissioners do not propose to make any recommendations regarding the control or regulation of this particular type of transport which would interfere with its natural development, since they believe that its future depends solely on its economic value to traders.

### ROAD HAULIERS.

Of commercial vehicles, therefore, there remain those owned by what may be described as general haulage contractors. By these the Commissioners mean persons or companies who hold themselves out as willing to carry the goods of others for hire or reward, although not necessarily holding themselves out as "common carriers." As a class, the number of such vehicles does not appear to be increasing.

There is still a complete lack of organisation in this part of the road transport industry and very unsatisfactory conditions exist.

"Summarising the evidence which we have received on this subject," the Commissioners state, "we find that the persons employed (so far as they are represented by the Transport and General Workers' Union) and the employers (so far as they are represented by the National Road Transport Employers' Federation and the Long-Distance Road Haulage Committee of Inquiry) are strongly in favour of a licensing system, while those interests represented by the Commercial Motor Users' Association appear to be as definitely opposed to a system of this kind. It is upon such evidence—conflicting though it may be—that we must draw our conclusions and frame our recommendations."

The carriage of goods by road presents at all times very great problems when considered from the point of view of any general scheme of co-ordination between the various agencies engaged in the transport of goods. But to-day it presents one outstanding difficulty which must be overcome before any progress whatever can be made in that direction. Railways, inland waterways, shipping, are all organised agencies of transport. Each claims to suffer in a greater or lesser degree from the competition—sometimes described as "unfair"—of road transport. Broadly speaking, we have on the one side organised undertakings bound by their statutes, agreements, rules, practices, and all other adjuncts which are associated with a highly organised business; while on the other we find that the goods branch of the road transport industry is in a condition which lacks all unity and is operated by a number of independent firms and individuals who, while endeavouring to compete with other forms of transport, are at the same time engaged in bitter and uneconomic strife with each other in their own particular branch.

In the recommendations which we make, we are influenced by two main considerations. First, we believe that it would be greatly to the advantage of the road haulage industry itself if it were placed on an organised basis. Second, in our opinion the organisation of the industry is an essential precedent to any attempt at general co-ordination with other forms of transport.

### ROAD HAULIERS TO BE LICENSED.

We fail to see any means by which such organisation can be brought about except by some system of licensing on the lines suggested to us in evidence. We recommend, therefore, that road hauliers should be placed under a system of licensing to be administered by the Area Traffic Commissioners.

We recommend that, subject to the exception mentioned later, it shall not be lawful for any road haulier to engage in the business unless and until he is licensed so to do by the Traffic Commissioners of the area in which his vehicles are normally kept.

### DEFINITION OF ROAD HAULIER.

For the purposes of our recommendations, we define a road haulier as any person, firm or company who holds himself out as willing to carry the goods of others for hire or reward. We see no cogent reason why road hauliers should be sub-divided into classes—"long-distance" and "short-distance" hauliers—as was suggested to us. To do so would only result in adding unnecessary complications—particularly as we realise that there must be a very large number of hauliers who operate both long and short distances.

### EXEMPTIONS FROM LICENSING.

We recommend that a person, firm or company contracting to carry for one employer only and not offering vehicles for hire to the public generally should be excepted from the scheme and should not be made subject to licensing.

The reasons for making this exception are fairly obvious when it is remembered that we do not propose that firms doing their own haulage shall come under the licensing system. The difference, if any, between the two practices is very slight—too slight in our opinion to justify the inclusion of this type of haulier in the scheme.

But we would like to make it clear that it is only while a firm or company is operating its own transport solely for the carriage of its own goods, and only while a contractor is working solely for a single firm, that this exemption from licensing should be granted. If a firm undertakes the transport of the goods of other persons (e.g., return loads), even though only occasionally, or if a contractor works for more than one firm, they should then be treated in every respect as ordinary road hauliers and be required to be licensed.

### DUTIES OF AREA TRAFFIC COMMISSIONERS.

The system of licensing which we contemplate and recommend is very simple compared with that which we recommended and which is about to be put into force in connection with public service vehicles.

We think that applications for hauliers' licences need be considered from two aspects only, and that the Area Traffic Commissioners should have regard only to:—

(a) the fitness of the vehicle;
(b) the wages and conditions of service of persons employed in connection therewith.

In regard to (a) we have already dealt with the question of damage done to the highways by commercial vehicles, and it does not seem necessary for us here to say more than that we consider it highly desirable that everything should be done to secure that only mechanically sound vehicles shall be used.

The second point, however, is of even greater importance. Much of the competition between road hauliers and between the road haulage industry and railways and other forms of transport is unquestionably open to severe criticism on the ground that the wages and general conditions of service in the industry leave much to be desired.

# Restricted Zone for Motor Coaches in London.

REGULATIONS which the Minister of Transport proposes to make under the London Traffic Act, 1924, are in draft and will have the general effect of restricting the operation of certain classes of public service vehicles within the central London area. The regulations will not come into force sooner than February 1st, next. The object of the regulations it is stated is to relieve congestion in Central London.

The regulations will apply to all public service vehicles as defined in the Road Traffic Act, 1930, other than contract carriages or stage carriages plying for hire by short stages as defined in that Act. In other words, they will apply to vehicles commonly known as motor coaches or chars-a-banc (as distinct from the short stage omnibus) except in cases where the vehicle has been hired as a whole and is used on a special occasion for the conveyance of a private party.

The draft Regulations prescribe two areas "The Inner Area" and "The Outer Area."

"The Inner Area" means the area enclosed within the following streets but excluding these streets: High Holborn from Kingsway, New Oxford Street, Oxford Street, New Bond Street, Old Bond Street, Piccadilly from Old Bond Street to Hyde Park Corner, Grosvenor Place, Grosvenor Gardens, Victoria Street, Broad Sanctuary, Parliament Square, Bridge Street, Victoria Embankment, Approach Road, Norfolk Street, Aldwych East, Kingsway.

"The Outer Area" means the area enclosed within the following streets but excluding these streets: Euston Road, Marylebone Road, Edgware Road, Marble Arch, Park Lane, Hamilton Place, Piccadilly, Hyde Park Corner, Grosvenor Place, Grosvenor Gardens, Buckingham Palace Road, Eccleston Bridge, Belgrave Road, Gillingham Street, Vauxhall Bridge Road, Vauxhall Bridge, Albert Embankment, Lambeth Road, St. George's Circus, Borough Road, Borough High Street, Trinity Street, Great Dover Street, Old Kent Road, Tower Bridge Road, Tower Bridge, Tower Bridge Approach, Mansell Street, Royal Mint Street, Leman Street, Commercial Street, Great Eastern Street, Old Street, City Road, Pentonville Road.

No public service vehicle as defined in the Road Traffic Act, 1930, other than a contract carriage or a stage carriage plying for hire by short stages as defined in that Act, shall

(1) at any time on any week-day be upon any street within the inner area, or

(2) on any week-day be upon any street within the outer area except

(i) between the hours of 7 p.m. on any week-day except Saturday and 3 a.m. on the succeeding day and 3 p.m. and midnight on Saturdays.

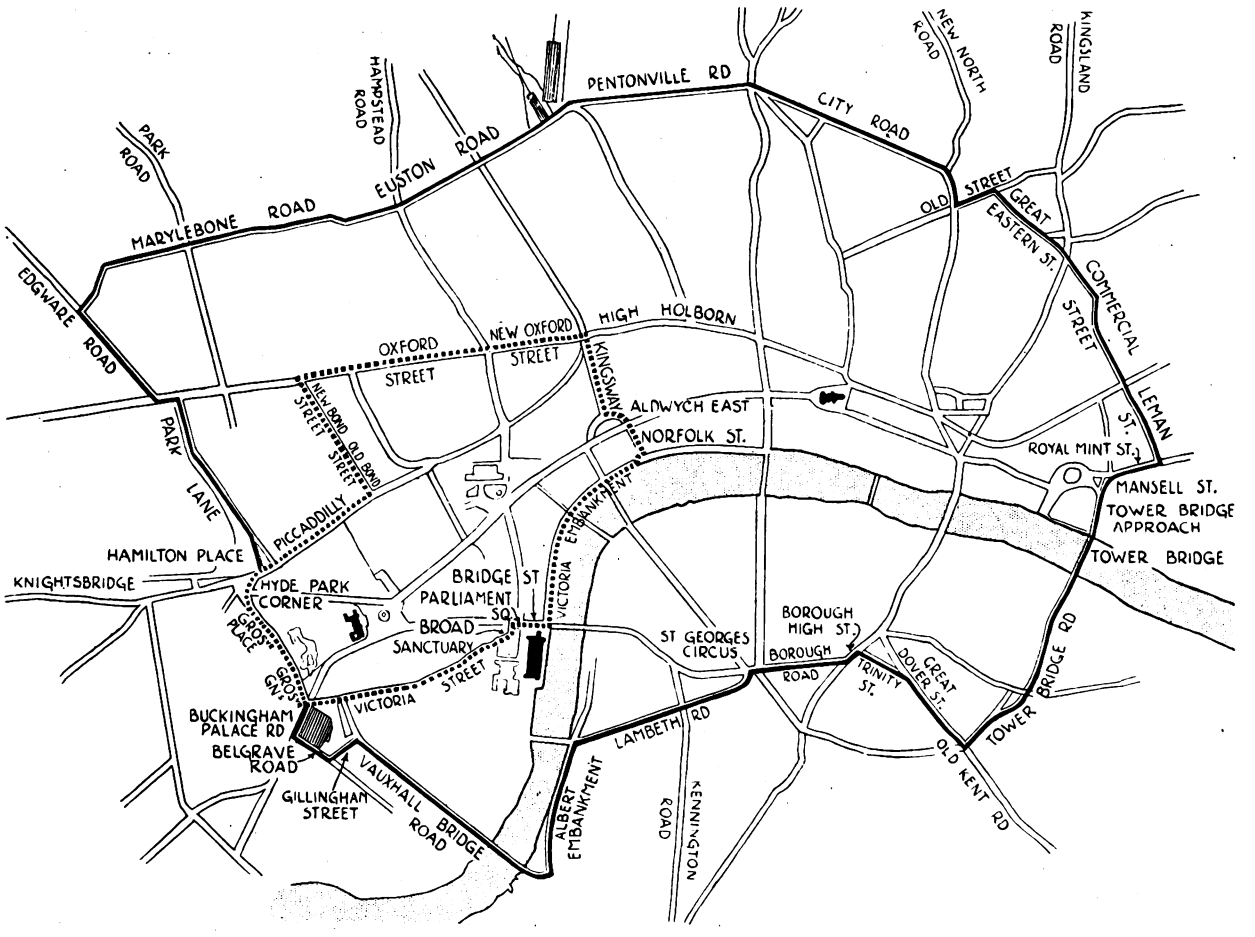
The Regulations will not apply on Good Friday, the day following Good Friday, Bank Holidays and days appointed by Proclamation to be Bank Holidays.

Every person who causes or permits any public service vehicle to be upon any street in contravention of the Regulations will be guilty of an offence and liable on summary conviction in the case of the first offence to a fine not exceeding five pounds, or in the case of a second or subsequent offence to a fine not exceeding ten pounds.

The Regulations will also provide for the vehicles affected by them to have access by prescribed routes to certain existing motor coach stations and omnibus garages situated close to the fringe of the larger area referred to above.

As regards the boundary of this area, the Minister wishes it to be understood that it may be necessary, at some future date, to apply the prohibition to a larger area.

Representations in regard to the Draft Regulations must be made in writing to the Secretary, Ministry of Transport, 7, Whitehall Gardens, London, S.W.1, not later than 28th January, next.



Plan reproduced by courtesy of *The Commercial Motor*.

**The smaller of these areas is barred to coaches—other than those carrying private parties—at all times except between 3 p.m. Saturday and 3 a.m. Monday. The large area may be entered only between 7 p.m. and 3 a.m. on week-days and is unrestricted, at week-ends as in the case of the inner area.**

# Road Traffic Act, 1930.

## Proposed Regulations Governing Mechanical Road Transport.

### Important Meeting Convened by the London Cartage and Haulage Contractors' Association.

AN extraordinary general meeting of members of the London Cartage and Haulage Contractors' Association was held at the offices of the Rubber Growers' Association, Idol Lane, London, on December 15th, last.

**MR. PHILIP R. TURNER, M.Inst.T.**, the President of the Association, who presided, said that the meeting had been called to consider the position arising through the coming into force of the Road Traffic Act, 1930, and to give the members an opportunity for discussion.

At the last general meeting of the Association he had referred at some length to the Act then being framed, making particular reference to the conferences which were being attended by representatives of the Association in connection with Section 19 of the Act dealing with the limitation of time for which drivers of certain vehicles might remain continuously on duty.

The Road Traffic Act had now become law, certain sections were in force and other sections would be brought into operation in the immediate future.

#### SPEED LIMITS.

The Association had made representations to the Minister of Transport with regard to the proposed speeds of vehicles and had drawn attention to the fact that the speeds proposed did not take into consideration practice which had been in vogue for many years. However, the speeds were inserted in the Bill and the Act became law. It would be the duty of the Association in the near future to make further representations in order to get the speeds scheduled varied. He would like to say, however, that the process involved in an attempt to alter speed limits laid down by the Act was not simple and was one of considerable difficulty from a Parliamentary point of view.

#### THIRD-PARTY INSURANCE.

Compulsory third-party insurance which had the blessing, more or less, of members of the Association would become operative on January 1st, 1931, and contractors would have to hold, in respect of each vehicle using the roads, a certificate issued by an Insurance Company showing that they were covered against third party risks. There was no necessity for this certificate of insurance to be carried on the vehicle as under the Act, they had five days in which to produce this document if called upon to do so. He thought that the general practice would be to keep the Certificate of Insurance with the registration card and if wanted it could be easily produced.

#### THE ARTICULATED VEHICLE.

A point which had caused a considerable amount of inquiry was as to the definition of an articulated vehicle. There was no doubt that it was a heavy motor car with a trailer.

#### DRIVING UNDER INFLUENCE OF DRINK OR DRUGS.

It would be well to pay attention to the section dealing with persons driving motor vehicles when under the influence of drink or drugs. The offence was defined as driving or attempting to drive under the influence of drink or a drug to such an extent as to be incapable of having proper control of the vehicle. In addition there was a new offence under the Act known as "Careless Driving."

#### AGE OF DRIVERS.

A person over seventeen years of age could drive a motor car, but no one under twenty-one years of age could, in future, drive a locomotive, tractor, or heavy motor car unless he could show that he was during the six months immediately preceding January 1st, 1930, in the habit of driving a motor vehicle of that class.

#### HEAVY PENALTIES.

The penalties under the Act were very onerous. If a person was convicted of aiding and abetting the breaking of the speed regulations he would be liable on a first conviction to a fine not exceeding £50, in the case of a second or subsequent conviction to a fine not exceeding £100 or to imprisonment for a term not exceeding three months or to both fine and imprisonment.

#### Construction and Use of Motor Vehicles.

The Minister of Transport had circulated draft heads of regulations which he proposed promulgating under the Act governing the construction and use of motor vehicles and considerable time had since been spent in conference with the Minister of Transport, with members of the industry and with kindred Associations discussing these proposed regulations. He was happy to be able to say that after three sets of proposed regulations had been considered, the regulations were now likely to emerge in a very much better form than was originally proposed so far as the cartage industry was concerned. (Applause.)

It was true to say that in no less than thirty-four cases we had succeeded in obtaining either the deletion of certain proposed regulations or getting alterations made to suit the industry. (Applause.) The body chiefly instrumental in making the views of the industry heard and in obtaining for them due consideration, had been the Standing Joint Committee of Mechanical Road Transport Associations, which Committee represented, amongst other bodies, the London Cartage and Haulage Contractors' Association. (Applause.) Undoubtedly the Standing Joint Committee had been by far the most successful body in the conferences to which he had referred. (Applause.)

He would outline briefly some of the regulations as originally proposed and indicate how certain of them were likely to be amended as a result of the representations made to the Minister of Transport.

#### General.

| *Original Proposals.* | *As amended after conferences.* |
|---|---|
| (1) A motor vehicle shall be so constructed that no smoke or visible vapour is emitted therefrom except from any temporary or accidental cause. | A motor vehicle shall be so constructed that no *avoidable* smoke or visible vapour is emitted therefrom. (remaining words deleted). |
| (2) Every motor vehicle and any trailer drawn thereby shall be constructed with suitable and sufficient springs between each wheel and the frame of the vehicle. Existing vehicles were exempted for 6 years. | Total exemption for existing vehicles registered before 1st January, 1932. |
| (3) A suitable reflecting mirror must be fixed to a motor vehicle. | Buses were exempted at first but regulations now apply to all motor vehicles. There is exemption when a trailer is drawn if a person is on the trailer and can give signals to following traffic. |
| (4) The braking systems or one of the braking systems shall be so designed, constructed and maintained that it can be set so as to effectually prevent two at least, or in the case of a vehicle having only three wheels, one, of the wheels from revolving when the vehicle is stationary. No exemption. | Existing vehicles registered before 1st January, 1932, are exempt until 1st January, 1937. |
| (5) Overall length of vehicles with 4 wheels shall not exceed 27 ft. 6 in. and more than 4 wheels 30 ft. | This is existing law and remains unaltered. |
| (6) All vehicles using solid fuel must have efficient spark or grit arresters and a tray to prevent ashes falling into the road. | This is existing law and remains unaltered. |

Digitized by Google

| *Original Proposals.* | *As amended after conferences.* |
|---|---|
| (7) All wheels fitted with tyres other than pneumatic tyres shall have a rim diameter of not less than 670 mm. Existing vehicles exempt for 5 years. | Exemption extended to 1st January, 1940, if registered before 1st January, 1933. Exemption for vehicles under 30 cwt. if used on private premises or to motor cars owned by local authorities for collecting refuse. The Association protested strongly against this regulation and told the Ministry that under no circumstances could they agree to it. They pointed out the great value of the low loading machine for special requirements, and said they saw no reason why such vehicles should not continue to be legal, and that if the Ministry insisted on a rim diameter of not less than 670 mm. the new development, *i.e.,* the mechanical horse would become illegal as it was quite obvious that if the rim diameter of this machine was so increased it would be useless for the purpose for which it was designed. |
| (8) Windscreens must be of unsplinterable glass. Existing vehicles exempt for 5 years. | Existing vehicles exempted until 1st January, 1937, if registered before 1st January, 1932. The Association pointed out that unsplinterable glass was by no means satisfactory as yet as it was likely to become badly affected by the course of time, *e.g.,* there was bad discolouration in the case of many unsplinterable glasses, bubbling occurred and all sorts of difficulties arose from manufacture. They suggested to the Minister that perhaps he was rather too premature in making such a provision compulsory. The Association said that this was absolutely impossible and succeeded in getting the regulation deleted. |
| (9) Steam vehicles shall not be allowed to attain a pressure such as to exceed the limit fixed by the safety valve so that no steam shall blow off when the vehicle is on the highway. | |
| (10) Every motor vehicle propelled by steam shall carry two persons for driving and attending the vehicle save as provided in Section 17 (1) of the Act in the case of a road roller while engaged in rolling a road. | In the case of a motor vehicle propelled by steam, other than a motor car, unless two persons are carried for the purpose of driving or attending to the vehicle, the driver shall stop the vehicle when attending to the furnace. |
| (11) No motor vehicle which exceeds 26 ft. shall draw a trailer. | This is existing law and remains unaltered. |
| **Locomotives.** | |
| (12) A locomotive shall not exceed 9 feet in width. | 9 ft. was reduced to 7 ft. 6 in. but altered again to 9 ft. |
| (13) The unladen weight shall not exceed 15½ tons. | This is existing law and remains unaltered. |
| (14) The maximum total weight of a locomotive shall not exceed the permissible unladen weight by more than 3 tons. | This is existing law and remains unaltered. |
| (15) Not more than three quarters of the total weight of a locomotive shall be borne by any two wheels. | This is existing law and remains unaltered. |
| (16) Tyres must be of soft or elastic material, either wholly or in sections provided that— (a) no point of any section be separated by more than ¾ of an inch. | Exemption first given to 1st January, 1931, afterwards extended to 1st January, 1932. |

| *Original Proposals.* | *As amended after conferences.* |
|---|---|
| (b) the aggregate extent of all spaces shall not exceed three inches. | (b) Aggregate extent of the spaces increased to 6 inches. |
| (17) Every locomotive shall be fitted with a brake in good and efficient working order and of such design and efficiency that its application will, even under the most adverse conditions, cause all the wheels of the locomotive other than the steering wheels to be so held that they shall be effectually prevented from revolving, or shall have the same effect in stopping the vehicle as if such wheels were so held, provided, nevertheless, that in the case of a locomotive which is propelled by steam, the engine of such locomotive shall be deemed to be a brake if such engine is capable of being reversed and is incapable of being disconnected from all the road wheels other than the steering wheels except by the sustained effort of the driver. | Every locomotive shall be fitted with an efficient braking system, the brakes of which act upon all the wheels of the vehicle other than the steering wheels so designed and constructed that the application of the brakes will bring the vehicle to rest within a reasonable distance. Provided that this regulation shall not apply to a locomotive registered under the Roads Act, 1920, on or before the 1st January, 1933, if the locomotive is propelled by steam and the engine thereof is capable of being reversed. |
| (18) The maximum total weight and the unladen weight to be painted on the off side of the vehicle. | This is existing law and remains unaltered. |
| (19) A light locomotive shall not draw more than two trailers. | The association had got this deleted. |
| **Tractors.** | |
| (20) Overall width shall not exceed 7 ft. 6 in. | This is existing law and remains unaltered. |
| (21) Overhang shall not exceed 6 ft. | This is existing law and remains unaltered. |
| (22) Overall length of a tractor and a single trailer shall not exceed 40 feet. | Deleted. (Sec 38.) |
| (23) Braking system same as in 17 except that there must be at least two brakes. | |
| (24) A tractor shall be fitted with tyres of soft or elastic material. No exemption. | Exemption until 1st January, 1937, for vehicles with wheels of which the tyres are smooth and not less than 2½ inches in width if registered before 1st January, 1932. Maximum speed when drawing a trailer only is to be indicated. |
| (25) The registered unladen weight and the maximum speed both with and without a trailer to be painted on the offside of the tractor. | |
| (26) The total load borne on all the wheels of a trailer drawn by a tractor shall not exceed twice the load borne on all the wheels of the tractor. | Deleted. |
| **Heavy Motor Cars.** | |
| (27) Overall width shall not exceed 7 ft. 6 in. | Width extended by 6 in. for existing vehicles to permit of conversion from solids to pneumatics |
| (28) The load carried by any wheel of a heavy motor car shall not exceed, for a vehicle with—4 wheels, 4 tons; more than 4 wheels, 3¾ tons; and the sum of all the loads carried shall not exceed in the case of a vehicle with—4 wheels, 12 tons; 6 wheels, 19 tons; more than 6 wheels 22 tons. | Axle weights have been substituted for wheel weights. The Association had refused to agree to maximum weight of 4 wheeler, 12 tons; pressing for 14 tons. They had made a very strong fight on this question and it was still going on. |

Digitized by Google

| *Original Proposals.* | *As amended after conferences.* |
|---|---|
| (29) The total weight of a heavy motor car together with its load—shall not *exceed* 10 *tons* on any strip of roadway 2 ft. wide drawn across the vehicle at right angles. | This is existing law and remains unaltered. |
| (30) The overall length of a heavy motor car and trailer shall not exceed 40 feet. | They had succeeded in getting this regulation deleted. (See 38.) |
| (31) A heavy motor car shall be equipped with pneumatic tyres.<br>Exemption for 6 years. | They had succeeded in getting the exemption increased to January 1st, 1940, if machines were registered before January 1st, 1933, with general exemption for machines primarily used for working over rough ground or unmade roads. They had taken the matter considerably further and had told the Minister of Transport that the day had not yet arrived for legislation regarding the compulsory fitting of pneumatic tyres. So far as the Association was concerned they could not agree to such legislation. They pointed out that the trend of events was sufficient to encourage the greatest possible number of vehicles being put on pneumatic tyres in the shortest possible time so as to secure the advantage of increased speed and a rebate in taxation. They would no doubt have an opportunity to re-open the matter if necessary at a later date. |
| (32) The overhang shall not exceed half the wheel base. | Amended to conform with present conditions—7/24ths. |
| (33) From 1st January, 1932, Guard rail, running board or other similar device shall be fixed 1 foot from the ground. | They objected to this regulation on the ground that many of their vehicles were unsuitable for the fitting of a guard rail or similar device and they had contended that such a regulation would not be of real assistance from the point of view of public safety, and that in the case of tipping vehicles used over rough ground, such a fitting would be continually broken and if, as had been suggested, they fitted a guard rail which would fold up, it would be a continual source of nuisance inasmuch as they would be pulled up from time to time on the ground of noise under the "Excessive Noise" regulations. If the proposal was proceeded with they hoped to get the matter referred to in the House of Commons when the proposed regulations were laid upon the Table. |
| (34) Total load of a trailer drawn by a heavy motor car shall not exceed the total load of the heavy motor car. | They had succeeded in getting this regulation deleted. |
| (35) A heavy motor car shall be provided with wings so far as practicable to catch mud or water thrown up by the wheels. | |
| (36) Registered unladen weight and maximum speed both with and without trailer to be painted on offside of the vehicle. | Altered as in 25. |
| **Motor Cars.** | |
| (37) Overall width, 7 ft. 2 in. | This is existing law and remains unaltered. |
| (38) Overall length of a motor car together with its trailer shall not exceed 40 ft. | They had made a fight on this question and the position now was that overall length of any motor vehicle drawing a trailer, 26 feet. |
| | Overall length of a trailer (excluding drawbar), 22 feet.<br>Total length (excluding drawbar), 48 feet.<br>This does not apply to vehicles drawing indivisible loads. |
| (39) A motor car shall be equipped with pneumatic tyres. | They had objected strongly to having it made compulsory to fit pneumatic tyres, and the regulation was not to apply until 1st January, 1940, to any vehicle registered before 1st January, 1933, if fitted with soft or elastic tyres.<br>Exemption for motor cars not exceeding 30 cwt. working on or near neighbouring works or premises or to motor cars owned by local authorities and used for the collection of refuse. |
| (40) Guard Rails, to be fitted to motor cars as in 33, 35. | Unaltered. |
| (41) Wings, to be fitted to motor cars as in 33, 35. | Unaltered. |
| (42) Total load of trailer drawn by a motor car shall not exceed the total load borne on all the wheels of the motor car. | Deleted. |
| **Trailers.** | |
| (43) Wheel weight fixed at 3¾ tons. | Axle weight of 6½ tons instead of wheel weight. |
| (44) Total load 13 tons. | Deleted. |
| (45) As from 1st January, 1931, all trailers to be fitted with soft or elastic material. | Date extended to 1st January, 1932, and trailers constructed before 1st January, 1931, which are especially designed for the carriage of household furniture and effects are totally exempt.<br>Any trailer constructed after 1st January, 1933, drawn by a heavy motor car or motor car shall be fitted with pneumatic tyres. |
| (46) As from 1st January, 1931, a trailer drawn by a motor car or heavy motor car must be fitted with pneumatic tyres. | Date extended to 1st January, 1933. They had advised the Minister that under no circumstances could they agree to this regulation. |
| (47) Towing rope not to exceed 10 feet. | They felt that this was inadequate and had got the length extended to 15 feet and to be made easily distinguishable, *e.g.*, a white cloth or piece of rag must be tied to the rope so that it can easily be seen.<br>A trailer drawn by a locomotive or heavy motor car shall not exceed 7 ft. 6 ins. in overall width.<br>A trailer drawn by a motor car shall not exceed 7 ft. 2 ins. in overall width. |

LIMITATION OF DRIVING HOURS.

Referring to Section 19 of the Road Traffic Act which deals with the limitation of time for which drivers of certain vehicles may remain continuously on duty, the President said that considerable alarm was being felt now that the time when the clause would become operative was drawing nearer, and approaches had been made to the Association by various bodies with a view to representations being made to the Minister with regard to the working of the section.

The Minister had power under the Section upon application being made to him by a joint industrial council, conciliation board, or other similar body, or on a joint application by an organisation representative of employers and workpeople and after referring the matter to the Industrial Court for advice, to vary the periods of time prescribed by the Act, *i.e.*, under certain circumstances the Minister might exempt a particular class of work from the provisions of the Section. The exemptions which would be required by the cartage trade if their work was not to be very considerably hindered were multitudinous. The matter was to be fully discussed at a meeting of interested parties to be held shortly. He was rather of opinion that it would be better to wait and see what effect the Section had in actual practice, before anything further was done. He knew there were some who held

Digitized by Google

an entirely opposite view but he thought that if they went to-day to the Industrial Court or to the Minister they would be told that they had not gained any experience of the operation of the Section and why did they come without practical experience and without trying to operate their vehicles within the Section. After the meeting to which he had referred the Association would report to members.

**MR. F. HOAR** said that the results so far achieved by the President were wonderful and all the members should be very grateful to him. (Hear, hear.) The amount of time Mr. Turner had devoted to the interests of the members had been enormous. What annoyed him (Mr. Hoar), was that not only members of the Association got the advantage of the many modifications so far obtained in the proposed regulations but many others engaged in the industry reaped the benefit and yet still kept outside the Association. Members were indeed fortunate to have in Mr. Turner a gentleman who was so competent to represent their interests. (Applause.)

In reply to a question regarding the limitation of working hours, the President said that the London Cartage and Haulage Contractors' Association was a body recognised by the Minister of Labour as a proper body to make an application for a variation in the application of the Section.

### HINDERING CARTAGE WORK.

**THE PRESIDENT** said that another matter to which he wished to call attention was the proposal made by the London Traffic Advisory Committee to forbid the use of horses and those motor vehicles limited to a speed of eight miles an hour in Oxford Street and certain streets running into Oxford Street between the hours of 12 noon and 7 p.m. from Monday to Friday, and between the hours of 12 noon and 3 p.m. on Saturdays. Further it was proposed that no vehicle should be permitted to stand in Oxford Street for the purpose of loading or unloading for a period of more than six minutes.

This matter had been considered at a meeting of the Council of the Association and they were pledged to resist such proposals by every means in their power and to create as much opposition to it as possible. The industry could not agree to piecemeal legislation with regard to horse-drawn vehicles, nor could they agree to it in the case of vehicles forced to travel at a speed not exceeding eight miles an hour. They could not submit to being jockeyed out of the use of the horse. The matter should be tackled by the authorities upon straightforward lines, and those people who had to replace horses by other forms of transport should be compensated. As to vehicles which were restricted to eight miles an hour, the haulage contractors said that they did not wish to travel so slowly, and it was not a reasonable speed. No one could reasonably expect to restrict a motor with trailer to a speed of eight miles an hour. The National Horse Association of Great Britain were resisting the proposal regarding the horse and he was quite sure that the traders in Oxford Street and vicinity would strongly resist the proposal. It was impossible to carry on business under such restrictions. Goods and parcels had to be brought to vehicles standing in Oxford Street from distances that made it humanly impossible to do the job in six minutes. The Council of the Association had expressed the view that it might be possible to agree to a limitation of fifteen minutes. The proposal as it stood must be resisted by every means possible.

### HOURS OF INDUSTRIAL EMPLOYMENT BILL.

The Association had made out an excellent case why the Hours of Industrial Employment Bill should not apply to the transport trade, but it was quite obvious that the Government had every intention of proceeding with this measure as a political gesture. The country was suffering from political gestures and if we were not very careful in due time we should be regulated out of existence. He thought that the time was coming when employers would find that for their own preservation they would be obliged to take a greater interest in protecting their interests than they had done since the time of industrial unrest when they thought they might have to pay a little more in wages.

**MR. T. FEAST,** proposing a hearty vote of thanks to the President for presiding, said he did not know whether the members realised the enormous amount of work Mr. P. R. Turner had to do before being in a position to draw up the report he had presented that afternoon. Their President had devoted weeks of his time to the task of getting the proposed regulations into the form in which it was probable they would be promulgated. He felt that the members owed a very great debt of gratitude to the President for devoting so much of his time in the service and for the benefit of members of the Association. (Applause.) He was sure he was voicing the opinion of each member when he said they had the greatest confidence in Mr. Turner's leadership. (Applause.)

He thought the President would agree that he had received very great assistance from Mr. R. P. Bailey from whom the members also got great assistance. If at any time a member had a question to put to Mr. Bailey he was always able and willing to put that member right. (Applause.)

The vote of thanks was carried with acclamation.

Acknowledging the vote of thanks, **MR. P. R. TURNER** said that the work of the Association at the present time occupied a tremendous amount of time and he thought that few could possibly conceive how much time was actually so spent.

Recently he had been engaged on work for the Association for the major part of four days in each week and he had asked himself whether he was quite right to devote so much time, and there was a vast amount of work to be done in the immediate future. Heavy work fell upon the shoulders of Mr. Bailey to whom he was indebted as well as to the Council for most valuable assistance.

They would have to consider in the future, he thought, how a greater division of the labour could be arrived at, because, after all if a man carried on business he must devote a certain amount of time to it.

If he had been able to do anything to assist the trade, then he was happy, but he hoped that the calls made upon the Chair would not increase as at present they came near the breaking point.

The meeting then terminated.

## British Industries Fair.

ADVANCE overseas editions of the catalogues of the British Industries Fair were issued on New Year's Day—over six weeks before the opening of the Fair in London and Birmingham on February 16th.

For the first time the catalogues of the two sections are in the same form, each having a classified index in nine languages—an innovation in the Birmingham volume. The languages are English, French, Spanish, Portuguese, Italian, German, Dutch, Swedish and Danish.

The London catalogue already contains descriptions of the exhibits of about 1,200 manufacturers and the Birmingham entries bring the total to over 2,000. Both sections will have more exhibitors and will cover a greater area than in 1930 and the total area of the Fair will be still further increased by the holding of the cotton textile section at the White City, London, for which a separate catalogue is to be issued.

The catalogues are being despatched to 10,000 business men and potential buyers in Europe, Africa, parts of Asia, North America and the East coast of South America, all of whom will receive their copies before their departure for the Fair.

"The re-arrangement of the Olympia and Castle Bromwich catalogues is just another step in our policy of making the buying of British goods as easy as possible," an official of the Fair said. "The buyer from abroad looks first at the classified index in his own language. That refers him to a list of firms exhibiting the particular goods in which he is interested. He can obtain further information about the firms from the alphabetical list of exhibitors which gives a description of everything shown by them."

## Calendars, Diaries, etc.

WE acknowledge with sincere thanks receipt of gifts from a number of our friends and amongst others:—Associated Equipment Co., Ltd., desk pad and calendar, motorist's diary; Parry, Leon & Hayhoe, Ltd., diary; Trojan, Ltd., desk calendar; P. & O. Steam Navigation Co., diary and almanack; John I. Thornycroft & Co., Ltd., wall calendar; Schenkers, Ltd., calendar; Dunlop Rubber Co., Ltd., calendar; Chloride Electrical Storage Co., Ltd., calendar; International Harvester Co. of Great Britain, Ltd., calendar; Willys Overland Crossley, Ltd., season's greetings; E. W. Garnon, Motor Trade Assn., season's greetings; Morris Commercial Cars, Ltd., season's greetings; Ernest Bevin, Transport & General Workers' Union, season's greetings; Institute of Transport, season's greetings; Severn & Canal Carrying Co., Ltd., season's greetings; Midland Red Travel Bureau, calendar; Atlas Express Co., Ltd., wall and desk calendars; National Horse Association of Great Britain, calendar; D. P. # London Passenger Transport.
## Minister of Transport on the Government's Proposals.

MR. HERBERT MORRISON, the Minister of Transport, in a speech at the Annual Banquet of the City of London Tradesmen's Club held in London on January 6th, dealt with the Government's proposals on London Passenger Transport.

In the course of his remarks Mr. Morrison said that he did not propose that London passenger transport should be managed by a state department on departmental lines or by a joint municipal authority which would inevitably be cumbersome in its composition and would not be able to move with that rapidity and freedom which was one of the advantages of the best modern business undertakings. He had plumped for a small board of public spirited men with business heads who could see to it that the undertaking was alive, that decisions were commercially sound, that public needs were met with every possible rapidity and completeness, and would be free from the meticulous interference of politicians who might be tempted to think more about the next election than the welfare of this vast undertaking. The general body of members of the board would not of necessity be salaried traffic experts. He should seek men with both public spirit and good business heads, the appointment of the Chairman being, of course, a matter of exceptional importance. The board would employ salaried traffic and engineering experts.

Effective machinery would be provided to safeguard the interests of the travelling public of London against any tendency on the part of the board to be narrowly commercial, and not fully to take into account the wider social aspect of London passenger transport. To protect the travelling public very definite rights would be conferred upon the local authorities in the area. They would have collective rights and they would have individual rights. Collectively they would function through the London and Home Counties Traffic Advisory Committee, which had already done good work in the better regulation of London Traffic. The composition of the Advisory Committee was bound to be modified in the new order of things, and he should desire to make of it more than ever a Local Government institution. It would not manage the combined traffic undertakings, but it would function very largely at a joint municipal body, acting as a liaison between Mr. and Mrs. John Citizen of London and the Board of Management. It would confer with the Board as to complaints and suggestions. It would receive and give information.

The local authorities individually would have conferred upon them the right of enforcing a fair hearing and decision upon those central issues with which the travelling public was primarily concerned, namely, fares, facilities and development. If a local authority held that fares were high or if the Board proposed to increase fares, the local authority would be able to force a hearing before the Railway Rates Tribunal for which purpose the Tribunal would be modified in its composition so as to include the Local Government viewpoint, and the Railway Rates Tribunal after hearing the evidence would give a judicial decision.

In all the controversy and turmoil that had taken place in connection with London Traffic there had been almost universal agreement as to the necessity for complete co-ordination. In this type of service wasteful competition must in the end be paid for. That was the case for co-ordination and it was unanswerable. Only by co-ordination could London traffic be made commercially prosperous or could the necessary funds for new capital expenditure required for essential development be secured.

Real co-ordination meant that all the undertakings had got to be brought together and that even the suburban lines of the main line railways, which could not be physically separated from the main lines themselves, must in some way be given an opportunity to co-operate with the road services and the tubes as closely as possible. If co-ordination was to be complete, it meant that there must be a single ownership.

He had, therefore, gone for the policy of a public business corporation in which would be vested the ownership of all these great undertakings, but he was doing it in a way that would secure a commercial management of the highest order, combined with public accountability.

# Limitation of Time for which Drivers of Certain Vehicles may remain continuously on Duty.

MR. HERBERT MORRISON, the Minister of Transport, speaking in London recently referred to section 19 of the new Road Traffic Act which he said he regarded as of very great importance. Section 19 laid down a limitation of the time for which drivers of locomotives, tractors, public service vehicles and goods carrying motor vehicles might remain continuously on duty or might remain on duty without adequate rest periods. From newspaper reports the public had become familiar with the cases of drivers of motor coaches who had become involved in accidents owing to inattention brought about by excessive hours of duty without sufficient periods of rest. Motor coach cases got the greatest publicity, but the evil was also present in the case of goods motor transport. From the point of view of public safety, therefore, the Government had decided that the scandal must be ended and section 19 was passed accordingly.

Mr. Morrison expressed the hope that neither employers nor workpeople would in any way get the impression that the provisions of section 19 could be tacitly or actively ignored. Public interest in safety on the roads was very much involved, and he was determined—as he was sure the bulk of the employers and the Trade Unions were similarly determined—that section 19, which was to come into force on February 1st, should be operative. Any employer or any workman who endeavoured to avoid the provisions of the section would be guilty of anti-social conduct, for they would be endangering the life and limb of transport workers and the general public on the King's Highway.

He had made provision in sub-section (3) for relaxation, always consistent with public safety, in order to meet the reasonable requirements of industry. The Minister of Transport could grant such relaxation on the joint representation of representative bodies of employers and workmen, after taking the advice of the Industrial Court. He could assure everybody in the industry that it would be his desire that decisions should be given as rapidly as possible and that everything consistent with public safety should be done to meet the problems which he knew existed in a certain number of cases.

The best thing that the transport industry could do, therefore, would be for all the employers and workpeople to get together and to agree as to what was desirable in the interests of the industry and of the wider public. The most complete organisation of employers and workpeople was, therefore, desirable. It should be understood, however, that time pressed. When the Road Traffic Bill was published in November, 1929, a provision of this nature was included, so everybody had ample notice, and he had by order specially postponed the operation of the section until February 1st, on the representation of the employers' and the workers' organisations in order that reasonable time might be given to prepare for the new order of things. February 1st would soon be with us and it was very necessary that no time should be lost by those in the industry in order that the section should work smoothly in the interests of everybody concerned.

At his end he would be found to be reasonable in meeting the practical problems. He wanted the Trade Unions to be reasonable in the same way, and he had the right to rely upon the employers to co-operate to the full in observing the law and to take special pains to avoid long spread-overs in the working day. The employers knew that he was always anxious to meet them in their difficulties and this was the spirit in which he desired the new section to be administered but everybody must understand that the section was going to be administered. He looked to the active co-operation of the organised employers and the organised workmen in securing that, if necessary, prosecutions before the Courts should be undertaken with all vigour.

The penalties for a breach of this section of the act, having regard to the magnitude of the offence, were severe, namely, in the case of a first offence a fine not exceeding £20, and in the case of a second or subsequent offence a fine not exceeding £50 or imprisonment for a term not exceeding 3 months.

Mr. Morrison expressed his sincere appreciation and thanks both to the representatives of the employers and the unions for the great help they had already given him in this matter. It was only in respect of a minority that he had any apprehension. Whilst the law must be enforced he much preferred that everybody concerned should enter into the spirit of the purpose behind the new law, and see to it that the great industry of road transport should be lifted above the abuses which had hitherto disgraced it in a certain number of cases.

# The Transport of Heavy Traffic.

## By E. C. Marston of M.R.S., Ltd.*

THE actual transport of heavy goods to-day is only one phase of modern industry. With it also are the attendant operations of loading, offloading, dismantling of plant and machinery, the provision of suitable seatings for boilers, and the building of the flues and installation of boilers, the erection of machinery, chimneys and tanks, also the erection of heavy girder work. Any heavy haulage business to make a success must specialise in each and all of these lines also. One of the great essentials in the business is an abundance of tackle of every kind and highly skilled labour.

This class of traffic is looked upon by many as being something entirely new, misleading letters appear in the press, showing an entire lack of knowledge of the subject, with the result that we are looked upon as people who go about the country ripping up the roads, spoiling them for everybody else, and generally making ourselves public nuisances, all at the expense of the ratepayers.

There have been Acts of Parliament since the year 1867 to allow and provide for such traffic, which is usually referred to in all the Acts as "exceptional traffic." The new 1930 Road Traffic Act, also makes special provision for "exceptional traffic" by road, and such transport is exempt from the general provisions laid down in that Act for ordinary traffic. The movement of abnormal loads by road has always been considered an essential trade. In the case of the Glasgow Corporation v. Barclay Curle & Co., the Corporation brought an action against Barclay Curle & Co., who are boilermakers, to recover damages caused by hauling heavy boilers, weighing 71 tons each, from works to the Glasgow docks. It was claimed such traffic was likely and had caused damage to the roads. Unanimous judgment was delivered against the Glasgow Corporation in July, 1923, and each of the learned Lords concurred on the fact that this exceptional traffic by road had been going on for 25 years and was necessary.

Until fairly recently abnormal loads were conveyed by road on trailers constructed with cast-iron wheels, open ended uncambered axles, devoid of bearings, and drawn by traction engines with wheels and axles of a similar type. Traffic hauled in such a manner was likely to cause serious road damage. My Company has in its possession several such vehicles, built to carry loads up to 100 tons. They were built about 25 years ago but are not used now. In this place we operate types of vehicles constructed to run on multi-oscillating wheels all with rubber tyres and roller bearings.

Owners of vehicles registered under the Locomotives on Highways Acts, are liable to pay for all road damage. Notification must be given to Surveyors and County Police before a load is moved and a suitable route is agreed. The Surveyor naturally searches for any damage done by the passage of the vehicle, and the Contractor pays for such damage.

Even 8 or 9 years ago every load consisting of a single piece in excess of 8 tons or so was a traction engine job, but the advent of the six-wheeler largely took that traffic up to weights of about 12 tons. The eight-wheeler still further reduced the use of traction engines. I believe my Company was the first to operate a petrol lorry as a Locomotive. It was registered as a private motor car. After a number of prosecutions the lorry was recognised as coming under the Locomotive class. It had to carry three men, was restricted as to speed, but had no maximum restriction as to weight. This new class opened up a large field of business because for many types of jobs a petrol vehicle with no legal weight limit is more preferable to traction engines.

My Company recently transported a special tank which measured 48 feet long by 15 ft. 3 in. diameter. Owing to the diameter it was impractical to load on a low bogey because the height would not clear bridges en route. We made special axles bent to the periphery of the tank so that the underside was only 10 in. from the ground. The job was hauled 130 miles and it weighed 34 tons. The tank was too large to go into the works, we had therefore undertaken to lift the whole job over a one-storey building 22 feet high to get to the site. Ultimately we placed the tank in a vertical position on the site with the lower end 7 feet from the ground. Such a job requires all manner of tackle, and it is only by being able to draw on ample supplies of timbers, baulks, slings, chains, blocks, plates, jacks, etc., that any haulage contractor can hope to perform the terminal work which secures him his haulage portion.

On all abnormal loads the draughtsman sets out the whole job to scale showing all measurements packing and means of securing. The quotations are made up by the Haulage Contractor after his draughtsman has finished or, if the load is particularly difficult, the route is traversed by a surveyor. It will be obvious that unless these important items are done effectively before pricing a job, any quotation can only be guesswork because the difficulties which may be encountered may be serious, and cannot always be foreseen. The same applies to all boiler work. Every site must be surveyed and complete drawings taken out.

We were recently parties to an interesting experiment. Two second-hand boilers were lying in a boiler house and had to be taken out, loaded, transported about 130 miles, off loaded and placed into a boiler house on to prepared seatings. It was decided to experiment by hauling one to the nearest rail station, collecting on arrival, and hauling to site, and the other one to be taken by road all the way. The boilers weighed 30 tons each, and the railway company who were a party with us to the experiment very rightly agreed to operate at a special low figure. The total cost of the rail borne boiler, allowing for haulage to station, etc., was over £80, the total cost of the one by road was £24. The latter cost is arrived at before charging any profit, but after charging all other costs including depreciation, establishment charges, in fact everything except profit.

These figures alone prove that heavy haulage is of advantage to industry. The economies saved by the absence of second handling on such large traffic is obvious, and can only be to the general good.

* Extracts from an Address by Mr. E. C. Marston to the Liverpool Traffic Club.

## Institute of Transport.

THE following gentlemen were recently elected to membership of the Institute of Transport.

MEMBERS.

| | |
|---|---|
| Hudson, Wellesley Burgoyne ... ... ... | Assistant Engineer-in-Chief, New South Wales Government Railways. |
| Lemon, Ernest John Hutchings ... ... | Chief Mechanical Engineer, London, Midland and Scottish Railway. |

ASSOCIATE MEMBERS.

| | |
|---|---|
| Aldred, Joseph Alfred ... | Metropolitan Railway. |
| Alldred, James ... ... | Traffic Manager, Lancashire United Transport and Power Co., Ltd. |
| Atkinson, Arthur Carlisle | Acting District Engineer, Maintenance (East London), South African Railways and Harbours. |
| Dunning, John Weir ... | Traffic Superintendent, Cardiff Corporation Tramways and Motors. |
| Mannes-Abbott, William Somerset Erskine ... | Assistant Traffic Manager, Karachi Port Trust. |

**Courtesy Rewarded.**—For the eighth year in succession, Mr. H. P. Batchelor, proprietor of the Trinity bus service in Jersey, was the recipient of a gift from the staff and scholars of Trinity Central School in recognition of his unfailing courtesy. The driver, Mr. J. Hogg, was also remembered.

**The New Travel Restrictions.** — Most of the motor coach owners on long distance routes such as London-Newcastle, have met the situation in which they were placed by the prohibition from travelling at a greater speed than 30 miles an hour by having fewer halts and shortening the periods of stopping en route.

# The Transport Organisation of the C.W.S.

ONE of the greatest of the national transport organizations, is that of the co-operative movement—the Co-operative Wholesale Society and its numerous subsidiaries, the retail societies. Perhaps that is putting the cart before the horse, because the retail societies existed before the formation of the C.W.S. and may, therefore, claim paternity. The combination of combines, the C.W.S., whose traffic department is centralised at Manchester under the able supervision of Mr. R. W. Royle, M.Inst.T., is a federation of about 1,300 co-operative societies and it functions as a manufacturing and wholesaling unit. Profits are returned to the shareholding societies in much the same way that profits on retail purchases are returned to the customer. Year by year, the sales of the Co-operative Wholesale Society have grown from tens of thousands to hundreds of thousands; then to a million per year; then to two millions; and so upwards until 1929 showed £89,288,125 sales in a single year.

MR. R. W. ROYLE, M.INST.T.

Convert sterling into goods and here we have the background of this extraordinary traffic organization. It regularly handles 98 per cent. of the traffic scheduled in the railway classification. Produce is drawn from all parts of the world, sometimes carried in the Society's own steamers and sometimes in craft which have been chartered, and is landed at Manchester or Liverpool or other depots, whence it is passed into consumption by the ordinary handling processes.

Working on the theory that there is a solution for every problem, the traffic department has often been called upon to exercise its inventive genius to meet difficulties not created by the growing demands of its own trade. Mr. Royle recalls that 22 years ago, when the C.W.S. used certain premises in Oldham for the storage of grain, they were served with notice to quit because the buildings were required for the accommodation of cotton, trade in which at that time was beginning to boom. No particular sympathy was shown by the landlords to the predicament in which the Society was placed. Hence it had to improvise and find a quick way out. Mr. Royle then conceived the idea of putting on the road, hopper motor wagons capable of carrying seven ton loads. The bodies were designed by the C.W.S. architect, then an advertisement was published inviting tenders for the conveyance of grain from Manchester to Oldham. The accepted tender was 2s. per ton compared with the rail rate of 3s. 6d. per ton.

The Co-operative Wholesale Society operates 519 commercial lorries and vans and 207 passenger cars, four steamships (another is now being built), ten lighters, 500 railway owned wagons and 500 privately owned railway wagons. The number of motor vehicles in service must run into thousands, for every local society has its own fleet, the one at Liverpool alone having between 90 and 100 lorries and vans in addition to a number of railway trucks. Every C.W.S. depot and works has its own decentralised transport organization and its activities are the subject of a weekly report to headquarters, which is thus enabled to keep itself *au fait* with everything that is taking place all over the country.

LIVERPOOL CO-OPERATIVE SOCIETY. A MORRIS MOBILE SHOP LOADING UP AT A DEPOT WITH MEAT AND GROCERIES.

The complete story of co-operative transport has never been written. How supplies are drawn from the swampy expanses of the West Coast of Africa, the prolific prairies of Canada and the middle west, the sun baked plantations of India and Ceylon, the wild and rugged expanses of the Argentine, must read like a romance, but one can anticipate at least one page from this volume.

Managers of the C.W.S. who are installed at Sierra Leone and Nigeria traverse the whole of the West Coast of Africa right up to the Sahara desert in connection with the Society's business. In this part of the world primitive transport is employed in the form of carriers who carry head loads of about 80 lbs. of produce for which they receive 2s. 6d., this

Digitized by Google

after a journey of three or four days from the hinterland. These carriers spend the money generally in textile goods at the local store, often a C.W.S. establishment. If the store happens to be closed through the absence of the manager, the native will wait sometimes days until he returns, patiently squatting on the doorstep. Having done the business, the natives have another three or four days journey back to their village. Produce from up country goes into the factories and from the export stores to the lighters, side by side with modern motor transport, which is used for conveying the produce down country where the roads are suitable for the purpose, and in conveying imported merchandise back to the bush homes. At Rano on the edge of the Sahara desert, the produce is brought on the backs of camels, donkeys and

horse transport, extending as far across the Sahara as Khartoum in the east, Timbuctoo in the west and Tripoli on the Mediterranean. In Sierra Leone, canoe loads come down the Rockel River bringing palm kernel and palm oil to Freetown Hand trucks with a team of ten men are used to convey the merchandise from the ships and wharves to the C.W.S. premises. From Accra on the Gold Coast, cocoa is shipped out in canoes having a capacity of about one and a half tons propelled by eight paddlers, four aside and a steersman; thousands of tons are loaded in this manner. Tea is brought from C.W.S. plantations in Ceylon and India by wagons drawn by oxen miles are covered in this particular manner up to the rail heads. Here again coolies are used. All this produce from nature's prolific vineyard is shipped to Liverpool, Manchester and London, but by that time it is merely a commodity bereft of all its romantic associations. It is merely raw material, work for thousands of hands itching to pass it into consumption, and loads for motor lorries and railway trucks. By the way, it may not be inappropriate here to mention that the C.W.S. finds work for 65,200 employees.

There is an important depot at Liverpool. It might be of interest to quickly summarise the work of the year ended July 12th, 1930:—171,619 tons of goods forwarded (exclusive of over 2,000 tons of sugar per week), including 3,080 railway wagons loaded by own warehouse staff and 675,181 cases of canned goods despatched; 1,807 bills of lading were handled; 1,573 dock board dues bills; 1,590 customs entries and large quantities of various kinds of food stuffs inspected, supervised and averaged.

During twelve months over 20,000 tons of sugar are dealt with at the Oldham Road Station, Manchester, alone, the aggregating value being something like £200,000.

At the Sun flour mills, 65 to 70 railway wagons are loaded per day and the total tonnage sent out in a recent week was 4,785, made up as follows:—2,319 tons per rail; 578 tons per canal; 1,504 tons per road; and 384 tons to packing factory per conveyor band. From the margarine works and lard refinery, Higher Irlam, the tonnage forwarded is 1,500 to 2,000 tons per week with corresponding receipts in the shape of raw materials. This traffic is by road, canal and rail borne. The tonnage received at the Irlam soap works inwards representing raw materials and coal, amounts to over 1,500 tons per week, whilst the outward traffic varies between 700 and 1,000 tons per week, the bulk of which is road borne. Inward goods at the Crumpsall biscuit works in the shape of flour, sugar, etc., amounts to 320 tons per week whilst the outward goods, biscuits, cake, fruit, jellies, etc., amount to 180 to 200 tons per week the larger percentage of which is road borne. Tins of biscuits are loaded on to the motor lorries overnight and are not packed in cases or boxes. Empty tins are always brought back on the return journeys.

When members of the Institute of Transport visited the C.W.S. establishment at Manchester recently, Mr. Royle explained this system of working traffic with some detail and made his audience gasp when he said that through dispensing with the use of containers and packing cases, a saving of £2,000 per annum had been made in rope, twine and packing cases alone.

The Society has its own farms, stock raising establishments, forest estates, etc. For the transport of milk, 12 motor tank wagons each with a carrying capacity of 1,000 gallons are used for transferring milk from the farms to the milk depots and 3,000 gallon tanks for rail borne milk. Leyland tank wagons are also used for the transport of oil extracted from seeds and nuts imported from West Africa and crushed at Liverpool. This oil is transported whilst it is warm, to the margarine and soap works near Manchester.

During the potato season, C.W.S. steamers load up with potatoes at Jersey on the Friday night and deposit their cargoes at Manchester before midnight on the Sunday. Potatoes are in the hands of consumers by noon on the Monday, motor vehicles being used to distribute traffic to all the distributive stores within a convenient radius of Manchester.

The members of the Manchester and Liverpool Section of the Institute of Transport had an interesting time when Mr. R. W. Royle, described the many sidedness of this great traffic organization which is conducted on strictly scientific lines. The student members particularly, were impressed by the precautions taken to meet every possible contingency and the seniors at the success achieved in handling enormous tonnages week in and week out, with clock-like precision and efficiency.

## Wakefield Gold Medal.

THE Institute of the Motor Trade, 157, Great Portland Street, London, W.1, inform us that Lord Wakefield has again handed to the Council of the Institute a gold medal to be awarded for any object that will further the work of the Institute. It has been decided to award the Wakefield Gold Medal to the author of the best Paper of not more than 2,500 words in length on the subject of "What are Six Essentials of a Successful Garage and Motor Agency Business?" Of the Papers submitted, the Council propose to select those which, in the opinion of a Committee appointed for the purpose, are the three most useful contributions to this important question of good trading. The writers of the three selected Papers will then be invited to read their own Papers before a meeting of the London Centre, and the meeting will be asked to make the final choice of the Paper for which the Wakefield Gold Medal is to be awarded. Replicas of the medal in silver will be awarded for the other two Papers. If the author of a selected Paper prefers not to read it personally, arrangements will be made for it to be read on his behalf. Only Fellows, Members and Graduates of the Institute are eligible to enter this competition. It is a condition of this offer of the Wakefield Gold Medal that no competitor retains any copyright in any Paper which he may submit in connection therewith. Only one entry may be submitted by each competitor. The competitor's name should not appear on his Paper, but should be attached on a separate sheet of paper. The last date for receiving entries is February 16th.

# Answers to Inquiries.

PROVISION AGAINST THIRD PARTY RISKS. ROAD TRAFFIC ACT, 1930.

**Question:**—We have four motors on the road, and are not quite clear whether it is necessary for our drivers to carry the Certificate of Insurance with them, or whether it would be best for the Insurance Certificates to be retained in the office. We shall be pleased to have your opinion on this matter.

**Answer:**—This point was considered at a recent meeting of the London Cartage and Haulage Contractors' Association reported in another part of this issue. It was pointed out that there is no necessity for the Certificate of Insurance to be carried on the vehicle and that the general practice will probably be to keep the Certificate with the Registration Card so that, if wanted, it can be easily produced. Under the Act a police constable may require the driver of a motor vehicle to produce his Certificate of Insurance, but no offence is committed if the driver within five days after the date on which the production of his Certificate was so required, produces it in person at such police station as may have been specified by him at the time its production was required.

SUMMONED FOR EXCEEDING 8 M.P.H.

**Question:**—I have been summoned for exceeding eight miles per hour with a lorry and trailer. The lorry is fitted with pneumatic tyres and the trailer with solid tyres. If I exceeded 8 m.p.h. with this outfit did I commit an offence?

**Answer:**—The following extract from the speed schedule in the Road Traffic Act, 1930, which schedule came into force on January 1st last, answers the question.

Goods vehicles—when drawing a trailer—

(a) If all the wheels both of the drawing vehicle and of the trailer are fitted with pneumatic tyres, or if the trailer is attached to the drawing vehicle by partial superimposition in such manner as to cause a substantial part of the weight to be borne by the vehicle and all the wheels both of the drawing vehicle and of the trailer are fitted with soft or elastic tyres—16 miles per hour.

(b) If all the wheels both of the drawing vehicle and of the trailer are not fitted with pneumatic tyres but are fitted with soft or elastic tyres—8 miles per hour.

CONVERSION OF HEAVY MOTORS FROM SOLID TO PNEUMATIC TYRES.

**Question:**—We have a number of 4/5 ton motors we want to put on pneumatic tyres, but to do this would bring the overall to 8 ft. whereas formerly the maximum width was 7 ft. 6 ins. We understand that the Minister of Transport is likely to agree to 8 ft. overall in view of the very large number of motors in the country which will now be changed to pneumatic tyres. We do not want to spend a lot of money and then find we have exceeded the width. Can you let us have some information on the matter?

**Answer:**—Regulations under Part I. of the Road Traffic Act are now in draft. Conferences have taken place at the Ministry of Transport at which representatives of transport associations have discussed the proposed regulations. The draft regulations, we understand, originally laid it down that the overall width of heavy motor cars should not exceed 7 ft. 6 in., but it is now very probable that when the regulations are promulgated, it will be laid down that the overall width of heavy motor cars shall not exceed 8 ft. for existing vehicles to permit of conversion from solids to pneumatics.

ATTEMPTING TO PUT BACK THE CLOCK.

**Question:**—We have been cautioned by the police on the ground that a tractor and trailer licensed under the Heavy Motor Car Act is compelled to have a man walking in front of it some distance ahead when it is travelling along a road which is more than 100 yards long and less than 15 feet in width. We assumed that this applies to heavy locomotives, but are not aware that it refers to the Heavy Motor Car Act. Could you kindly advise us?

**Answer:**—To the best of our belief there is no such Clause in any of the Motor Acts. It is a law which was repealed when the red flag was abolished in 1896. It is just possible there may be a local by-law and it would be as well for you to make enquiries of your local police on this point. Even heavy locomotives have no such regulation concerning their use.

# Round the Lancashire Associations.

**Conference of Liverpool Transport Employers.**—At the December meeting of the Conference of the Liverpool and District Road Transport Employers, further consideration was given to the restoration of the agreement with the Liverpool Carters and Motormen's Union. The proposals set out in our last issue concerning the introduction of an optional arrangement for the accumulative working week will come into operation simultaneously with section 19 of the Road Traffic Act, namely, 1st February, which is also the date upon which the old agreement will be recognised. The Conference has drawn the attention of the Union to the disparity which exists concerning the requirements of the Act as to the employment of motor drivers and attendants as compared with the conditions laid down in the agreement. For example, under the Act a second man need only be carried on a heavy motor car where a trailer is drawn, whereas under the local agreement second men must be employed on all vehicles of three tons capacity and upwards, and on local traffic a trailer man as well when a trailer is used. This and several other points are now engaging attention and, it is believed, will be successfully negotiated before 1st February.

**Liverpool Cart and Motor Owners' Association.**—By the death of Mr. Edward West, Liverpool Cart and Motor Owners' Association has lost one of its oldest members. He was 78 years of age. Born and educated in Liverpool, Mr. West was for over forty years head of the firm of John West and Sons, one of the oldest cartage and forwarding agents in the country and was a former President of the Liverpool Cart and Motor Owners' Association. He retired from business in 1920. Mr. West regularly acted as a judge of draught horses for the Liverpool May Day Parade, and he was a well-known figure in shipping and transport circles. He was a member of Liverpool City Council for over twenty-one years. In 1927 he was elected an Alderman but resigned from the Council in October, 1929.

**Liverpool Cart and Motor Owners' Annual Meeting.**—Arrangements are now being made for the annual general meeting of members of the Liverpool and District Cart and Motor Owners' Association which will take place towards the end of this month at the Common Hall, Hackins Hey, Liverpool.

**Liverpool Traffic Club.**—The meeting of the Liverpool Traffic Club, which will be addressed by Mr. S. L. Jude, Secretary of the Liverpool Shipping and Forwarding Agents' Association on 2nd February, promises to be an unusually interesting one. Mr. Jude will make a survey of shipping and forwarding conditions in the port of Liverpool and will give many points of information, as well as ample opportunity, for anyone to raise questions of general appeal to those who are engaged in the handling of traffic.

**Liverpool Short Cart and Motor Owners.**—The past year has not been an eventful one for members of the Liverpool Short Cart and Motor Owners' Association, and now that the new Mersey Tunnel is approaching completion, there is naturally some anxiety as to the flow of traffic in the months ahead. Fortunately, building work is finding employment for a fair number of vehicles, but otherwise the demand for teams and lorries is by no means brisk. The annual meeting of the Liverpool Short Cart and Motor Owners' Association will be held towards the end of this month, but at the time of writing the date has not been fixed.

**Airvac Ventilators.**—Airvac Ventilators, of Honeypot Works, Darlington, inform us that they have recently received their seventh repeat order from the South Indian Railway for 260 Airvacs Type R, and their eighth repeat order from The Bombay, Baroda and Central India Railway for 25 Type RM Airvacs with interior fittings.

**Presentations.**—Mr. R. Hopkins, who has relinquished an inspectorship with United Automobile Services, Ltd., to join the London-Newcastle service of Messrs. Orange Bros., was the recipient of a wireless set, a clock, and a salad bowl and dish from the various depot staffs on leaving. He began his career with Glasgow Corporation.

# The British Motor Industry and the British Empire Trade Exhibition at Buenos Aires.

It has been increasingly evident of late that British Motor Manufacturers are leaving no stone unturned in their endeavours to place their Industry in a position of pre-eminence in the Motor Markets of the World. British Manufacturers are finding growing appreciation of the fact that there is nothing fundamentally wrong in British motor design; that a certain measure of stability exists in the Home Market; and that a real start has been made on the wider problem of Exports.

Realising the potentialities existing in South America, the Industry is, in connection with the British Empire Trade Exhibition in Buenos Aires, which will be held from March 14th to April 27th, making a determined effort to extend its market in the Argentine, believing that the range of vehicles designed and built in Great Britain will be found on examination and demonstration to meet every transport requirement in South America.

### SPECIAL PAVILION.

It may be interesting to recall that the decision of the Industry to participate in this Exhibition was largely the outcome of discussions between representatives of the Industry and the Rt. Hon. J. H. Thomas when he occupied the position of Lord Privy Seal, and a special building in the Exhibition will be used for exhibits of individual British Manufacturers, the amount of space allocated in this building being in the neighbourhood of 20,000 sq. ft. As a centre of attraction the "Golden Arrow" is being brought from New Zealand where it has, as in Australia also, succeeded in focussing considerable interest in the British Motor Industry wherever it has been shown in connection with the exhibit of the products of the Motor Factories of Great Britain.

It will occupy a central position in the building, while in connection with an ambitious Regatta programme of the Yacht Club Argentine, "Miss England II," the boat in which the late Sir Henry Segrave set up a World's Record with a speed of 85.762 nautical miles per hour in June last, will endeavour to beat her own record over a 10 mile course at Buenos Aires.

### EXHIBITORS.

Vehicles representative of the whole range of British Manufacturers will be exhibited, as will be seen from the list of firms participating:—

*Private Cars*:—Austin Motor Co., Ltd.; Armstong Siddeley Motors, Ltd.; Daimler, Ltd.; Humber, Ltd.; Hillman Motor Car Co., Ltd.; M. G. Car Co., Ltd.; Morris Motors, Ltd.; Rolls-Royce, Ltd.; Singer & Co., Ltd.; Triumph Motor Co., Ltd.; Vauxhall Motors, Ltd.

*Commercial Vehicles (Petrol & Steam)*:—Aclo (Associated Equipment Co., Ltd.); Commer Cars, Ltd.; Dennis Brothers. Ltd.; Fodens, Ltd.; Guy Motors, Ltd.; Leyland Motors, Ltd.; Morris Commercial Cars, Ltd.; Scammell Lorries, Ltd.; John I. Thornycroft & Co., Ltd.; Vulcan Motor & Engineering Co. (1906), Ltd.

*Accessories & Tyres*:—Dunlop Rubber Co., Ltd.; Dorman, W. H., & Co., Ltd.; Lodge Plugs, Ltd.; Joseph Lucas, Ltd.; Simms Motor Units, Ltd.; S. Smith & Sons (M.A.), Ltd.; Tungstone Accumulator Co., Ltd.

*Marine Engines*:—Brooke, J. W., & Co., Ltd.; Norris, Henty & Gardners, Ltd.; Parsons Oil Engine Co., Ltd.

The special building in which the majority of the exhibits will be housed will be Pavilion No. 14, but certain of the Motor Industry exhibits will also be on view in Pavilion No. 12, adjoining and connected to No. 14, and others in the general engineering Pavilions.

### BRITISH-ARGENTINE TRADE.

It can be correctly claimed that Great Britain is the best customer, for in 1929 the value of products imported from the Argentine was 306,832,391 Gold Pesos, an amount three times in excess of the next best customer, Belguim, to which country the Argentine exported goods to the value of 102,053,337 Gold Pesos. Next in importance, from the point of view of the Argentine came Germany and U.S.A. with 95,452,221 Gold Pesos, and 93,558,334 Gold Pesos respectively.

The export of British Motor Vehicles to the Argentine has shown a slight but steady increase. In 1926 British Motor Vehicles to a total value of £193,038 were exported to that market, rising to £286,138 in 1927, to £307,857 in 1928 and to £345,006 in 1929.

The possibility of the extension of the British Motor Trade with South America is a matter that has received a careful and anxious consideration in the past, both by the British Manufacturers Section of the Society of Motor Manufacturers & Traders, Ltd., and by individual Manufacturers and the participation of the Industry in this Exhibition may be taken as but the first step towards the developing of this large if difficult market in the interests of British Manufacturers.

The originators of the Exhibition are the British Chamber of Commerce in the Argentine Republic, the Exhibition being held in the grounds of the Argentine Rural Society at Palermo, Buenos Aires. H.R.H. the Prince of Wales is to visit the Exhibition.

# The Prince of Wales and Buenos Aires Exhibition.

THE forthcoming visit of H.R.H. The Prince of Wales to South America is arousing the keenest possible interest, especially in view of the sentiments which he so ably expressed at the Guildhall recently. The fact that The Prince will be in the Argentine during the progress of the British Empire Trade Exhibition, which opens at Buenos Aires on March 14th, next, indicates that Commerce between the two countries will receive a distinct fillip as a result of the Prince's patronage.

On such occasions as these, the matter of transport requires a good deal of attention, for the Prince and his staff will obviously have to cover great mileages in the course of their official visits.

The actual cars chosen by his Royal Highness are Humbers, and of the four models, three are "Snipe" Saloons and the other a "Pullman" Limousine. In addition to these a Commer 40/50 cwt. vehicle will form part of the convoy for the purpose of carrying baggage, etc. Both these makes are comprised in the Humber-Hillman-Commer combine, for which Messrs. Rootes, Ltd., who are closely allied with them, act as World Exporters. These cars will be supplied by Rootes, Ltd., and will shortly be shipped to Buenos Aires to await the Prince's arrival.

The Department of Overseas Trade has ordered a 16/50 h.p. Humber for the Commissioner General of the Buenos Aires Exhibition.

A COMMER G.2 TYPE 40-50 CWT. CHASSIS WITH SPECIAL BOX VAN BODY PAINTED DARK BLUE. TO BE USED IN CONNECTION WITH THE VISIT OF H.R.H. THE PRINCE OF WALES TO SOUTH AMERICA FOR TRANSPORTATION OF THE PERSONAL BAGGAGE OF THE PRINCE.

**Institution of Petroleum Technologists.**—There will be a general meeting of members of the Institution of Petroleum Technologists at the House of the Royal Society of Arts, John Street, Adelphi, London, at 5.30 p.m., on February 10th next. Light refreshments will be provided at 5 p.m. for members and visitors attending.

**Institute of Transport.** — There will be an ordinary meeting of members of the Institute of Transport at the Institution of Electrical Engineers, London, on February 9th next, at 5.30 p.m., when Mr. H. H. Gordon, a former Vice-President, will lecture on "The sale of passenger transport."

# Long Distance Road Haulage.

## Important Meeting.

AN important and representative meeting of haulage firms engaged in long-distance transport took place on December 16th last at Winchester House, London to consider the report of the Long-Distance Road Haulage Committee of Inquiry and to decide what further steps, if any, should be taken.

The Committee was appointed in May last to inquire into the special problems of this section of road transport and to report. The Committee's report, to which reference was made in our last issue, was before the meeting, and after this had been approved the Committee was dissolved and the meeting became an open one to discuss and decide what further steps, if any, should be taken.

**SIR MAXWELL HICKS, C.B.E.,** Chairman of the original Committee, who presided, supported by other members, said that the Long-Distance Road Haulage Committee of Inquiry was appointed some six or seven months ago by some of the leading firms engaged in long-distance road haulage. It was appointed to enquire into the position of the industry and to make any recommendations that seemed to them to be advisable and it was also given power to tender evidence to the Royal Commission on Transport, if the Commission desired to receive it.

After the appointment of the Committee many firms signified their wish to be represented in the movement.

The Committee consisted of Mr. J. A. M. Bright (Southern Roadways, Ltd.), Mr. L. W. Gupwell (A. J. Gupwell, Ltd.), Mr. E. C. Marston (M.R.S., Ltd.), Mr. W. Donaldson Wright (Transport Department, Nottingham Chamber of Commerce), and the Committee also co-opted Mr. P. R. Turner whom they all knew. Mr. Turner, unfortunately, found it necessary, through pressure of work and other engagements, to resign from the Committee, but they had the advantage of his assistance and advice in preparing the evidence to be submitted by the Committee to the Royal Commission on Transport.

In the Committee were gathered together four or five personalities who, if friendly, were, nevertheless, definite competitors, yet he thought he could say without fear of contradiction that they had, without exception, found, when they came to know one another better, that not one of them was as black as expected, and if nothing else transpired from the work of the Committee it had brought representatives of many of the leading firms into personal touch and they were all very friendly to-day. (Applause.)

### RATE CUTTING.

They were told how certain firms were cutting this and that, but his opinion was that if the principals came together they would find that there was some adequate reason; possibly the circumstances and details of the quotation were different, and he believed that half the trouble in this connection arose through their respective staffs getting it into their heads that a particular firm was cutting and was up against them. It was necessary to get it into the heads of those engaged in long-distance road haulage that they were all out for a living and for the trade, and were all reasonable people, and he hoped they would now hear the views of individual members of the trade.

The Committee had taken a tremendous amount of trouble to investigate the conditions of the industry, and it had been a privilege for him to act as Chairman.

The Committee felt that at the present time none of the existing organisations clearly or definitely represented the long-distance road haulage industry, and they advocated that, as far as possible, existing competitors should come together, as a multiplicity of separate units made the industry liable to attack. If they were to visualise their industry in the years to come as occupying a position somewhat approaching that of our railways, it could only come about through greater co-operation, possibly amalgamation and perhaps absorption of the different interests.

The Committee was formed to inquire and report, and for no other purpose, and he proposed that the report of the Committee be accepted. If the proposal was carried he would retire from the Chair, the Committee would cease to function, and he would declare the meeting open.

**MR. W. DONALDSON WRIGHT,** seconding the proposition, assured the meeting that the report of the Committee and the work preceding it had been undertaken in no light-hearted manner. Only those who had sat on the Committee had any idea of the amount of detail work which had been done, particularly in connection with the preparation of the evidence presented to the Royal Commission on Transport, and the evidence of their Chairman, Sir Maxwell Hicks, was listened to with great attention. As to the report generally, some might think that the observations in regard to existing associations were perhaps a little too severe, but the Committee had examined the position most carefully and the Report was the honest expression of the opinions of members of the Committee.

The Report was adopted unanimously.

A proposal that Sir Maxwell Hicks continue as Chairman of the meeting was seconded and carried with acclamation.

A discussion then took place on the question of rate cutting. It was pointed out that the first thing to look into when there was a suspicion of rate cutting was whether those who thought they were being undercut were certain they were quoting on similar lines to the man who was supposed to be cutting.

**MR. J. A. M. BRIGHT** pointed out that there might be many factors in one's own business that were helpful against one's competitors, e.g., if the head of one business was taking a thousand pounds a year out of it whilst the head of another business was taking five hundred pounds there was a sum of five hundred pounds difference to play with. One did not always have the same set of circumstances to consider when quoting. Those in the industry were themselves responsible for the position, and were getting the stick they had made. They had allowed traffic men to pull their legs and to put one contractor against another to such an extent that they thought they had only to hold up their fingers and the transport contractors would abide by their decisions. Stop that practice to-day, he urged, and see what the traffic managers would then do.

### RATES AND SERVICE.

A representative of Northern Motor Utilities, Ltd., said that it seemed to him there were two ways in which the transport contractors competed with each other—one was the rating basis and the other was service. As to the rating basis, most firms appeared somewhat to treat each particular run and each bit of traffic on its own merits, and quoted rates having in mind whether they had a return load. It seemed to him that one of the first problems they had to tackle was to formulate a common rating basis, and he suggested that the question of setting up a committee to consider this matter be given attention. As to service, if one firm gave better service than another the former should be able to get the job.

**THE CHAIRMAN,** on the question of standard rates, said that as they all knew the conditions appertaining to loading and unloading could make a difference of at least 2/- a ton. That was one of the difficulties.

**MR. BLYTHE** then referred to some contractors overloading their vehicles. His firm believed in underloading rather than overloading, and he contended that the man who overloaded had a short life, and as he got to the end of his tether he began cutting rates. If a man had been in business a number of years operating five-ton lorries, how could he expect to compete with another man who started in opposition with ten-ton vehicles? Had the old-established man to go out of business or must he buy a new fleet of machines? The trouble for the long-distance haulier was not the rate so much as the vehicle. The rate would rectify itself if the vehicle was right.

**THE CHAIRMAN** submitted that there was scope for the eight-wheeler taking a fifteen or twenty ton load as well as for the five-ton lorry. There was certain traffic for the fifteen-ton vehicle which left the bulk of the traffic for the five-ton man. Most of the traffic in Tooley Street, for instance, consisted of two tons here and two tons there, and was of no use to fifteen tonners, but it was traffic for the five-ton man. On the other hand, if the five-ton man had to send three lorries to take a fifteen-ton load he was going to lose money.

**MR. J. A. M. BRIGHT** said that the question of the

Digitized by Google

larger vehicle as against the smaller was purely one of economics. With regard to overloading, he contended that each long-distance haulage man was literally cheated out of his due earnings by habitually taking loads which were said to be twelve or fifteen tons but which, if weighed, would be found to be as much as twenty per cent. over, and this extra tonnage they were carrying for nothing.

It must be clear to all that there was not an association in existence really interested in the affairs of the long-distance road transport contractors. If it was suggested that they should attempt to form an association to regulate rates and methods of operation then it would fail, as such matters were simply trade and pure business. There was only one way of regulating rates and methods, and that was either to amalgamate and merge interests or for somebody to come along and amalgamate the lot compulsorily.

A Voice: I wish they would. (Laughter.)

Mr. Bright: Are you afraid of your business. Certainly I am not afraid of mine nor of the future. (Applause.)

RESTRICTED BRIDGES—NEED FOR AN ASSOCIATION.

**MR. E. C. MARSTON** referred to the action of the railways in regard to putting restrictions upon bridges as a means of stopping the competition of road transport.

He referred to Section 25 of the Road Traffic Act which gives a bridge authority power to prohibit the use of bridges by motor vehicles weighing more than a certain maximum weight, and said that when that section became effective it would be up to the police to prosecute in cases of infringement. The responsible people for imposing the weight restrictions on bridges were the railway companies. It was a serious matter. The Minister of Transport was holding Conferences with various road interests in regard to the Road Traffic Act, but the long-distance haulage people were not represented directly or indirectly at those conferences. Under the Road Traffic Act any person or body of persons aggrieved by any bridge restriction could appeal to the Minister of Transport, who, if he considered that a bridge was able to bear a weight greater than that specified and after considering any representations made by the bridge authority, might order the restriction to be removed or varied. It seemed to him, continued Mr. Marston, that an individual affected would have great difficulty in getting the Minister of Transport to exempt certain bridges in different parts of the country, and therefore he was in favour of the suggestion that some association to represent long-distance road transport contractors should be formed. If the railway companies bridge policy was allowed to go unchallenged it would strike at the very root of the road transport business. There was also Section 19 of the Road Traffic Act dealing with the limitation of time for which drivers of certain vehicles might remain continuously on duty. He did not think the Minister was aware of the difficulties the long-distance road haulage operators would be up against in trying to comply with that section of the Act. If they had an association he had no doubt they would be advised of the holding of such conferences at the Ministry and would be invited to attend.

**MR. BERESFORD** said that his experience of associations had not been happy. He had found that he had pledged his company to a rate agreed to between the members, only to find that some cut it, and the only redress he then had was to cut again which he would not do, as the agreed rate was the only economic one. Unless there was some penalty in force by which they could make members of an association comply with decisions arrived at, all effort was futile. He thought there was plenty of scope for the formation of some association for long-distance road transport contractors, but its rulings must be binding upon those who participated in the benefits.

In the course of further discussion it was pointed out that the standardisation of rates would not be the primary object of the proposed association. The primary object would be to enable them to place before the Minister of Transport and other bodies, the case for the long-distance road haulier. It might be that the question of some standardisation of rates would be discussed by such an association.

**MR. R. W. SEWILL** (London and Southern Counties Transport Co., Ltd.) agreed that the long-distance road hauliers needed some kind of an association, and he enquired why it should not be the C.M.U.A. He was told that 65 per cent. of members of the C.M.U.A. were ancillary users of motor transport and but 25 per cent. were haulage contractors. Whose fault was that he asked —would they get haulage contractors to join a new association when they would not join an established body?

**THE CHAIRMAN** said he thought that a big and powerful association such as the C.M.U.A. ought to be able to represent the long-distance road haulage section of the great transport industry, but from the evidence given by the C.M.U.A. to the Royal Commission on Transport it appeared that 65 per cent. of the members were ancillary users, ten per cent. were passenger men and 25 per cent. were haulage contractors. He submitted that ancillary users were users of motor transport to a limited extent for their own delivery services, whilst a few might run up to Manchester, etc. The 65 per cent. were traders, and no doubt would think it to be in their interests to have low rates quoted for long-distance motor transport, so would it help them to join up with the C.M.U.A.? It was not the fault of the C.M.U.A.; that Association had grown up from the early days of motoring, and personally he looked upon it as a very useful organisation to deal with taxation, petrol questions and so on.

**MR. HORACE WYATT** suggested the possibility of the long-distance road transport contractors joining up with the Motor Hirers' Association, the members of which, he believed, looked at matters almost from the same point of view as the long-distance haulage contractors. He thought it possible that if the Motor Hirers' Association were approached they would be willing to consider making their organisation an association of motor hirers in a wider sense than at present. It was an existing body having access to the Minister of Transport and to other authorities. This would give the long-distance haulage contractors an organisation straight away.

**MR. E. C. MARSTON** proposed that a committee should be formed to deal with the matter, and when it was suggested that the Chairman should be a member of such committee, Sir Maxwell Hicks intimated that he would be away for a few weeks but if he could be of assistance to the Committee at a later date that would be another matter.

Several gentlemen present expressed the great appreciation of those engaged in the long-distance road transport industry of the work done on their behalf by Sir Maxwell Hicks, and upon being pressed to act on the Committee, the Chairman said that if at a later date an invitation was extended to him by the Committee to come back he would gladly consider doing so. (Applause.)

**MR. E. C. MARSTON** then proposed that a committee composed of the following members:—Messrs. J. A. Bright (Southern Roadways, Ltd.); L. W. Gupwell (A. J. Gupwell, Ltd.); F. S. Kneller (Kneller and Chandler, Ltd.); E. C. Marston (M.R.S., Ltd.); J. F. Nicholls (McNamara & Co. (1921), Ltd.); R. W. Sewill (London and Southern Counties Transport Co., Ltd.); W. Donaldson Wright (Transport Department, Nottingham Chamber of Commerce), and E. B. Hutchinson, Honorary Secretary, be appointed to approach existing associations to see if proper representation could be given to the interests concerned, or, failing this, the Committee was empowered to proceed with the formation of an active association to watch and foster the interests of long-distance hauliers.

All firms engaged in this business are invited to register their names without delay with the Honorary Secretary, Mr. E. B. Hutchinson, Lloyds Bank Chambers, Vicar Lane, Leeds, who will advise them from time to time of the progress made.

## Amalgamated Horse and Motor Owners.

Mr. J. S. Howarth, secretary of the Amalgamated Horse and Motor Owners' Association and the Commercial Motor Users' Association, South East Lancashire Area (Joint Organisation), has sent out to members a document drawing attention to the much discussed clause 19 of the Road Traffic Act, 1930. He states that negotiations are still taking place between the trades unions, the employers' associations and the Ministry of Transport with a view to meeting the position in respect of the various classes of traffic and the difficulties which are likely to arise. Difficulties, he adds, will arise in a number of cases in arranging for a stretch of 5½ hours only that a man shall be permitted to work in connection with a vehicle. He, therefore, invites members to communicate particulars of any difficulties which they anticipate in connection with their business in the carrying out of clause 19, so that these may be considered by the committee of the joint association.

# John Boyd Dunlop.

## Tablet Unveiled in Belfast.

By the generosity of the Dunlop Rubber Co., Ltd., a large ebonite tablet has been placed upon the wall of the premises in May Street, Belfast, where the late Mr. J. B. Dunlop invented the pneumatic tyre.

The tablet was unveiled on December 9th last by the Lord Mayor of Belfast, The Rt. Hon. Sir William Coates, Bart., D.L., in the presence of a large number of prominent citizens and persons interested in the transport industry. Subsequently, in the Grand Central Hotel, Belfast, more than one hundred guests, representative of many interests and of all parts of the country, were entertained at luncheon by the Dunlop Rubber Co., Ltd.

When Mr. Dunlop made the first pneumatic tyre he was practising as a veterinary surgeon, having gone to Belfast from Scotland, where he was born at the village of Dreghorn in Ayrshire. It is interesting to note that the premises he occupied are still used by a veterinary surgeon, though in this part of Belfast motor garages and salerooms abound.

The tablet itself was manufactured at the Dunlop works in Birmingham. The material used is a special ebonite capable of remaining black, and of retaining its polish and withstanding the weather conditions found in these islands. The size of the block before carving was 51 ins. by 31 ins. by 6 ins. deep on the thickest portion, and the weight is 270 lbs. It was very carefully built up from material one-sixteenth of an inch thick. In order to obviate any chance of air blisters, each ply had to be warmed and rolled down with a 5 cwt. roller. To vulcanise this block to the requisite hardness necessary for carving, it was cured for 110 hours under a hydraulic pressure of 1,500 lbs. per square inch, and cooled for forty-eight hours under weights. Very few, if any, perfect pieces of ebonite have been produced of this size, and big possibilities are now foreseen for the production of ebonite in all sizes and for numerous purposes.

JOHN BOYD DUNLOP MEMORIAL TABLET.

Mr. D. Telford, F.C.A., of Dublin, a director of the Dunlop Rubber Co. (Ireland), Ltd., presided at the unveiling ceremony and at the luncheon. Amongst those present were Mrs. M'Clintock, of Eastbourne, a daughter of the late Mr. Dunlop, and her husband and daughter.

The Lord Mayor of Belfast, in his speech following the luncheon, said that in 1887, while Mr. Dunlop was watching his nine year old son, John, riding a tricycle fitted with the usual solid rubber tyres of small section, he had an inspiration. He got a small disc of wood, made an air tube of sheet rubber, and secured it to the wooden disc in a temporary fashion with a strip or cover of linen cloth. The air tube was fitted with a non-return valve, and when the tyre was tested with the solid rubber one in Mr. Dunlop's yard, it was immediately evident that in riding over a rough surface the new tyre afforded greater comfort and much more speed than the solid rubber tyre. Subsequently, after further experiments, the success of the invention being assured, Mr. Dunlop, with the assistance of a friend, had the patent protected. "I wish I had been that friend," added the Lord Mayor, amid laughter. He mentioned that the first pair of pneumatic tyres ever made were presented to the Governors of the Royal Scottish Museum, Edinburgh, by Mr. Dunlop. The first bicycle to be fitted with pneumatic tyres was made in Belfast by a Mr. W. Edlin. In conclusion, the Lord Mayor proposed the toast of "Prosperity to the Dunlop Company."

Mr. Telford, in reply, said that the world wide organisation known as the Dunlop Rubber Co., with a share capital of over twelve millions sterling, had its origin in the idea of a Belfast gentleman, and Belfast should feel proud of the fact. The tablet that had been unveiled would remind the present and future generations of the distinction the city held as the original home of the pneumatic tyre. It was not without interest to recall the early history of the company that was formed to exploit and market Mr. Dunlop's invention. Of the five original directors four were dead, and the other was Mr. Fred Woods, of Dublin. Formed in 1889 with a modest capital, none of those associated with the flotation believed that the public would subscribe for the shares if they were not offered solid assets in addition to Mr. Dunlop's invention. So two cycle agencies, one in Belfast and one in Dublin, were acquired. But the pneumatic tyre swept everything before it, and soon the whole energies of the company were devoted to the manufacturing business. Mr. Dunlop's invention had conferred benefits on every form of transport.

The inscription on the tablet is as follows:—

*"John Boyd Dunlop.*
*Born, 5th February,* 1840. *Died, 23rd October,* 1921. *Member of the Royal College of Veterinary Surgeons. Practising in this city. Inventor and Patentee of the pneumatic tyre in* 1888. *The purchase of this invention and the subsequent development by the Dunlop Rubber Co., Ltd., inaugurated one of the largest industries in the world. This tablet erected A.D.* 1930."

The tablet bears a representation of the head and shoulders of the late Mr. Dunlop, set within a motor car tyre of Dunlop type.

# Publications Received.

CHANGES IN MOTOR CAR LAW EFFECTED BY THE ROAD TRAFFIC ACT, 1930. By N. R. Fox-Andrews, B.A., LL.B., Barrister-at-Law and A. C. Crane, J.P., Solicitor of the Supreme Court. (The Solicitors' Law Stationery Society, Ltd., 31, Breams Buildings, Fetter Lane, London, E.C.4. Price 12s. 6d. net). This is a most useful text book for the operators of mechanical transport, and the transport manager. The authors point out in the foreword that under the Road Traffic Act the Minister of Transport has wide powers to make regulations but the Act is specific in many new points of principle and must obviously be made a subject of study by those directly concerned, irrespective of subsequent regulations—the effect of many of which will probably be difficult to appreciate without a previous knowledge of the statute itself. The observations of the authors on the various sections of the Act will be found very helpful in elucidating knotty problems, and sound advice is given on the new points to be observed. The Act itself is printed in full and there is a complete Index.

THE PRINCIPLES OF MARINE LAW. By Lawrence Duckworth, Barrister-at-Law. Fourth Edition by Wm. Marshall Freeman, Barrister-at-Law. (Sir Isaac Pitman & Sons, Ltd., Parker Street, Kingsway, London, W.C.2. Price 7s. 6d. net.) This volume is intended for the use of shipowners, shipbrokers, shipbuilders, underwriters, shipping clerks, and all persons interested or engaged in the shipping industry. Since the previous edition was published a number of new statutes and a lengthy succession of new Statutory Rules and Orders have appeared. This Edition incorporates the new principles governing bills of lading introduced by the Carriage of Goods by Sea Act, 1924, the Act with its Schedule being printed with a short explanatory note as to its general applicability. The Appendices have been reviewed and enlarged by the addition of several more recent statutes including the text of the Merchant Shipping (International Labour Conventions), Act, 1925. The book is a complete treatise on Marine Law.

# Transport in Scotland.

**A New Road Goods Station.**—Considerable interest centres around the preparations now being made for the permanent establishment of a new road goods station in Glasgow. The site chosen is in Washington Street, and, apart from its central position it is in close proximity to the river wharves and principal docks. The building is not only intended as a goods station with storage facilities, but in addition there will be sleeping quarters for twenty men, a recreation room, and what might be described as a miniature hostel. As regards the handling of goods, every effort is being made to deal effectively with bulk loads as well as small lots, and an overnight accommodation for twenty lorries will be provided. It is the intention of the proprietors to use the station as a goods clearing house for Glasgow and the West of Scotland, receiving goods from all parts and redistributing them within a radius of 20 or 30 miles around Glasgow. The firm responsible for this innovation is Road Transports Co. (Glasgow), Ltd., 136-138, Broomielaw, Glasgow, and the firm have had considerable experience in goods clearance. During the past six years they have been engaged in goods distribution between Glasgow, Stirling, Leith, Ayrshire and the surrounding counties. At the present time they have a working arrangement with some thirty hauliers and contractors in the Scottish Midlands, and they are now extending these connections further afield. It is expected that the new station will be officially opened at the end of February and the whole scheme in full working order before the end of March.

**Obituary.**—The death of Mr. Wm. Forsyth, at Wilsonwells, Crimond, marks the passing of one of Scotlands pioneers of road passenger transport. Mr. Forsyth was intimately associated with the development of bus traffic in Buchan and other parts of Aberdeenshire. He was seventy-three years of age.

**Aberdeen Coachbuilding Industry.**—The coachbuilding industry in Aberdeen has been hard hit during the past year. It is a point of interest to note that orders for horse drawn vehicles are still being received fairly regularly, but the hope of the industry apparently lies in the demand for bus bodies and commercial motor bodies. Satisfaction is being expressed by the local coachbuilders now that the Town Council have placed the contract for a fleet of double deck buses with an Aberdeen firm.

**Glasgow General Omnibus Company.**—The report of the Glasgow General Omnibus and Motor Services for the year to September 30th, last, shows a loss of £5,606, to which falls to be added £34,000 as reserve for depreciation, making a total loss for the year of £39,606. In the previous year there was a net loss of £25,216, after providing £38,000 for depreciation. Compared with the preceding year traffic receipts declined by £28,000 and though economies have been effected, these have not been commensurate with the decrease in revenue. The report states that operations have suffered from the extreme industrial depression, while another factor was the granting of the Glasgow Corporation Transport Department "of what amounted to monopoly powers in regard to passenger traffic within the city." In terms of the offer recently made by the London, Midland and Scottish Railway Company to acquire the share capital at a price of 9s. per share, 90 per cent. of the capital has been transferred.

**New Public Bus Station, Falkirk.**—Messrs. W. Alexander & Sons, Ltd., an associate company of the S.M.T. Co., Ltd., Edinburgh, are to build a new public bus station at Callender Riggs, Falkirk. The site for the proposed building adjoins the main Falkirk-Edinburgh road, and the total floor space including an outdoor parking space will be between 3,000 and 4,000 square yards. When completed it is expected that the new station will be one of the finest in the North.

**£15,000,000 Railway Electrification Scheme?**—Railway electrification schemes for Glasgow and Ayrshire involving an expenditure of many millions, are now, it is understood, being considered by the London, Midland and Scottish Railway Company. Conversations have been going on between the Railway Company and a British firm of electrical equipment manufacturers, and it is stated that the proposals under consideration involve the electrification of the main line between Glasgow and Ayr, and the linking up of the Ayrshire Coast towns with electrical transport. It is anticipated that a scheme of this magnitude would probably be regarded by the State as being in the nature of a national development, and would almost certainly qualify for State assistance. Scotland it is pointed out is the only industrial Country in Europe without a yard of electric railway and it is believed that if the L.M.S. carry out the project for the electrification of the Glasgow-Ayrshire system that this will lead to similar developments taking place in the populous areas served by the L.M.S. and L.N.E.R. from Glasgow and Edinburgh. St. Enoch's station Glasgow has been marked out as a suitable terminus for the scheme.

**Glasgow Horse & Motor Contractors' Association.**—This association it is understood has made an offer to the men's Union to renew the present agreement for a period of three months to await the outcome of the present negotiations between the railway and their employees.

**Scottish Commercial Motor Users' Association.**—A meeting of the Association was held in Edinburgh on the 22nd December, Mr. E. Graham Guest presiding. The principal item on the agenda was the Road Traffic Act, and a number of interesting points relating to it were brought up and discussed. One in particular was the difficulties existing as to the correct delineation of a private and a commercial vehicle. Numerous examples were given showing the apparent dangers of a user of a purely private vehicle unwittingly making use of it for commercial purposes. It was finally agreed that the chairman, Mr. E. Graham Guest, should attend the next meeting of the Standing Joint Committee of Mechanical Road Transport Associations in London, and put forward views on the Road Traffic Act.

**Furniture Warehousemen and Removers' Association, West Scottish (Glasgow) Centre.**—A meeting of this centre was held on December 12th, in Glasgow. Railway matters were discussed and it was pointed out that the Executive Committee in London had been handling matters from the beginning and still had the matter in hand and it was felt that the Committee was working in the interests of all the members.

# Segrave Memorial.

THE Royal Automobile Club is asked to announce that the Segrave Memorial Fund has now been closed, the donations received, which were headed by H.R.H. The Prince of Wales, being adequate to secure the ends which the original Signatories to the Memorandum had in view.

It will be remembered that the idea behind this tribute to the memory of Sir Henry Segrave is to stimulate others to uphold British prestige before the world in like manner by demonstrating how the display of courage, initiative and skill—the spirit of adventure itself—can assist progress in mechanical development.

The constitution of the Trophy, which has been settled by the Segrave Memorial Fund Committee provides for the setting up of an Awarding Committee, consisting of representatives of the Royal Automobile Club, the Royal Aero Club, the Marine Motoring Association, the Newspaper Proprietors' Association, the Institution of Mechanical Engineers, the Royal Aeronautical Society and the Institution of Automobile Engineers. This Committee will sit each January to review the achievements of the previous year, and the Award will be made to the British subject of either sex who, in the judgment of the Awarding Committee, has accomplished the most outstanding demonstration of the possibilities of transport by land, air or water. In coming to their decision the Committee will be guided by the preceding paragraph which sets out the objects of the Trophy.

Consideration will also be given to the extent to which the apparatus used represents in design, workmanship and material, a product of the British Empire.

In the event of there being no achievement which, in the judgment of the Awarding Committee has sufficient merit to warrant an Award, the Trophy may continue to be held by the previous winner until such time as it is re-awarded.

A sum of £1,000 has been set aside to defray the cost of the Trophy.

The form which the Trophy will take has not yet been finally decided, but it is probable that it will be that of a triptych in gold, the design, being executed by Mr. Gilbert Bayes, the well-known sculptor. A replica of the Trophy will be given to the holder, to become his property, on each occasion that the Award is made.

In addition to the Trophy, medals up to a maximum of six may be given on each occasion that the Trophy is awarded, to those who assist the winner in his achievement.

The Royal Automobile Club has undertaken the duties of the Secretarial work in connection with the Memorial and any communications in connection with it should be addressed to the Secretary, Pall Mall, London, S.W.1.

# Railway Notes and News.

**G.W.R.'s Big 1931 Programme.**—The Directors of the Great Western Railway have authorised a big list of new works for this year. The list includes the sum of £126,600 for 219 new motor vehicles and tractors for use in connection with big rail—road cartage development, replacement of horses, extension of free collection and delivery areas, country lorry services, conveyance of live-stock by road, throughout road haulage services and renewals; rolling stock and locomotives — £1,199,000; garage accommodation — £31,000; engineering — 400 miles of the permanent way will be relayed, 100 miles of track re-sleepered; 8,000 tons of steel work will be used in the reconstruction programme for bridges and other structures; new steamers—new luxury tender for Plymouth ocean traffic, £40,000; new tug for Cardiff, £13,000; modernisation of Docks, etc.

**Great Western Railway. Contracts Placed.**—Amongst contracts recently placed by the G.W.R. are the following:—Supply and delivery of 108 1½-2 ton goods chassis, Dennis Bros., Ltd., Guildford; supply and delivery of 18 35-40 cwt. Morris vans, The Morris Garages, Ltd., Oxford; supply and delivery of one rigid six-wheel 10-12 ton chassis, John I. Thornycroft & Co., Ltd., London; supply and delivery of six petrol driven platform trucks of improved type for Bristol, Douglas Motors, Ltd., Bristol; one 4-5 ton goods chassis complete with cab, pneumatic tyres and power take off, John I. Thornycroft & Co., Ltd., London; supply and erection of one 6-ton hydraulic jib crane for Smithfield Market, Hollings & Guest, Ltd., Birmingham; supply and delivery of 5 complete Ford trucks, R. Pratt, Ltd., Sutton, Surrey.

**New Locomotive Depot for Cambridge.**—The L.N.E.R. announce that the locomotive depot at Cambridge has been entirely remodelled and extended. Among the improvements will be an automatic coaling plant and a hot water plant for washing out locomotives.

**Underground Railway for Montreal.**—The scheme to provide Montreal with a rapid underground transportation system at a cost of 65,000,000 dollars has now assumed the shape of a definite project and the immediate building of eight miles of subways is proposed. Five years will be required for the work.

**New French Railway.**—A new railway line from Lérouville to Novéant will be opened on May 12th. This line, by considerably reducing the time taken by express trains between Paris and Metz, which will now pass through Toul and Frouard, will greatly improve communication between the industrial region of Metz-Thionville and the rest of France. The large metallurgical basin of the Moselle will specially benefit. The new railway is 51 kilometres long.

**Southern Railway Magazine.**—The December issue of the Southern Railway Magazine contains another interesting contribution to the series of articles entitled "Road Transport Companies in Association with the S.R." The activities of the Maidstone and District Motor Services, Ltd., are dealt with and the route diagram gives an excellent idea of the ramifications of the Company. The next article in the series will describe the activities of the Southdown Motor Services, Limited. As usual, this issue of the S.R. magazine contains some excellent illustrations and the whole of the letterpress makes interesting reading.

**London & North Eastern Railway Magazine. January Issue.**—In the course of his New Year message to the staff of the L.N.E.R., Mr. William Whitelaw, the Chairman of the Company, says: "In writing a New Year Message to the staff of the London & North Eastern Company twelve months ago I said that the trade of the country had for years been passing through one crisis after another and that one was afraid to come to the conclusion that all was plain sailing for our national industries in the future. I had, however, no suspicion then that we were entering upon a year which would reveal such an extensive collapse of trade as we have experienced since the end of last March. During the eight months from the end of March until the end of November, the number of passengers originating on our own line and exclusive of season-ticket holders has decreased by nearly 8,500,000, and our freight traffic has fallen off by over 10,000,000 tons. Well, what are we to do? One thing we shall certainly not do, and that is to throw up the sponge. I think the lesson for us is just the lesson which the whole country has got to learn, and that is that we must reduce our costs and increase our efficiency. Our Nation has always been famous for its grit. It was grit which brought our Armies through in the awful Spring of 1918, and only by the same quality can any great crisis be successfully met."

**The Railway Barometer.**—The railway traffic receipts of the four Group Railway Companies have now been published for the 51 weeks of 1930 compared with the same period in 1929, and are as under:—

| | 1930 £ | 1929 £ |
|---|---|---|
| Passengers, Parcels, etc. | 72,570,000 | 75,784,000 |
| Merchandise, etc ... ... | 61,096,000 | 66,096,000 |
| Coal, Coke, etc. ... ... | 33,786,000 | 35,861,000 |
| | 167,452,000 | 177,741,000 |

**G.W.R. Magazine. January Issue.**—In his new Year message to the Staff, Mr. James Milne, General Manager of the G.W.R., says:—"The year which has just closed has proved to be one of exceptional difficulty. The prosperity of the railway companies is entirely dependent upon the general state of industry, and the present depression in the coal, iron and steel trades, from which the Great Western Company derives about 80 per cent. of its total freight tonnage, has seriously affected its revenues. Had it been foreseen, the companies, in all probability, would not have been asked to terminate the arrangement, under which the whole of the staff agreed to a voluntary reduction of 2½ per cent. on their salaries and wages. It is now evident that the decrease in traffic and dock receipts for 1930 will be in the neighbourhood of £1,750,000. In these circumstances, however unpleasant it may be, a reduction in wages costs, which represent the major portion of the Railway expenditure, is inevitable. The Companies' application for a reduction in wages of the staff will shortly come before the National Wages Board, and I am confident that with the realisation of the facts of the case, and good-will on both sides, an amicable settlement can be reached. I desire again to express my sincere thanks for the loyal support that has been given to me by the officers and staff of all grades, and to record my appreciation of the high standard of efficiency which has prevailed during a very difficult period."

**Swedish Railways.** — The reduced business in many branches of trade resulting from the universal depression has naturally affected the results of the working of the Swedish railways, although not as much as might have been expected. For October the State Railways report earnings of Kr. 16,400,000 compared with Kr. 18,100,000 for October, 1929, and a surplus of earnings over expenditure of Kr. 2,900,000 compared with Kr. 4,400,000 for the same month last year. The surplus was still large enough to cover interest on borrowed capital and yield a net profit of Kr. 300,000. For the period January-October earnings amounted to Kr. 172,900,000, compared with Kr. 178,400,000 for the same period of 1929, and expenditure (including Kr. 13,500,000 assigned to the renewal fund, compared with Kr. 13,900,000) to Kr. 131,700,000, against Kr. 133,900,000. There was accordingly a surplus of Kr. 41,200,000, only Kr. 3,300,000 lower than the surplus for the same period last year, and after the recent writing down by the Riksdag of the invested capital on which interest is to be calculated there was a real net surplus of Kr. 14,600,000 for the period. During the first ten months of the year passenger traffic was almost unchanged at 26,330,000 passengers compared with 25,560,000 for the same period of 1929, and the quantity of Lapland ore transported was also almost unchanged at 7,210,000 tons compared with 7,260,000, while ordinary goods only amounted to 8,530,000 tons compared with 9,360,000. The private railways have issued their report for September, which shows a similar state of things. Earnings amounted to Kr. 11,890,000 compared with Kr. 12,780,000 for September, 1929, and there was a surplus of Kr. 80,000 compared with Kr. 51,000. For the first three quarters of the year the slump is more accentuated, earnings having only totalled Kr. 106,120,000 compared with Kr. 113,710,000, and as expenditure Kr. 104,200,000 compared with Kr. 106,000,000, the surplus only amounted to Kr. 1,920,000 compared with Kr. 7,710,000 for the same nine months of the previous year. The quantity of goods transported was 17,510,000 tons compared with 19,060,000 and the number of passengers 29,410,000 compared with 29,640,000.

**Locomotive Contract Placed in America.** — The New York Central Railroad has placed a contract for forty of the fifty Hudson type locomotives, for which it was inquiring, with the American Locomotive Company. The contract for the remaining ten has been awarded to the Lima Locomotive Company. Altogether the locomotives will cost 5,000,000 dollars.

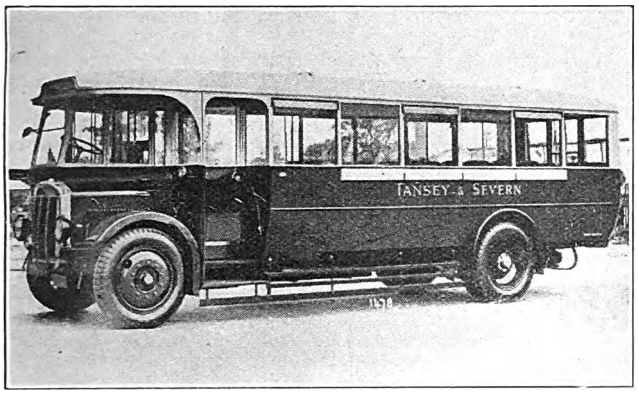
# Motor Coach and Bus Notes.

**The T.S. "Express" Chassis Continues in Favour.**—Our photograph shows the type of "Express" vehicle employed by Tansey & Severn, Ltd., who operate services between Alfreton and Nottingham, South Normanton and Nottingham, and Pye Bridge, Selston, Underwood, Brinsley and other places. The chassis carriers very roomy bodies giving accommodation for 30 passengers who enter by a door on the forward near side. The chassis itself is the forward drive type B.10.A.2. with Dunlop pneumatic tyres and C.A.V. "M" type electric



A T.S. "EXPRESS" 30-SEATER BUS IN THE SERVICE OF MESSRS. TANSEY & SEVERN, LTD.

lighting. The bodywork in this instance is by Strachans (Acton), Ltd.

**New Bus Station at Newcastle.**—The covered-in bus station erected by Newcastle Corporation at Marlborough Crescent (near the Central Railway Station) has now been opened. It includes lettered platforms, crush barriers, illuminated destination indicators, unloading platforms, inquiry, left luggage, and other offices. The vehicles using the station include a number of long-distance coaches, to and from London, etc.

**Motor Hirers' and Coach Services Association.**—In our December issue, in the course of a Report of a recent meeting of the Motor Hirers' and Coach Services Association, Mr. E. Monkman is stated to have referred to information having been received by the Association in regard to Section 19 of the Road Traffic Act and which information had required immediate attention. The matter was not in connection with the limitation of drivers' hours but had reference to the proposed restricted areas for coaches in London.

**Heavy Holiday Traffic.**—The five Manchester firms of motor coach owners working the daily Manchester-London service are:—Fingland's 9, St. Peter's Square; L.M.S.C., East Street; Majestic, 5, Oxford Road; Manchester Motorways, 41a, Piccadilly; and Roscoe's Services, 17, Oxford Road. During the recent holiday the services were exceptionally well patronised. Messrs. Roscoe stated that there were more bookings than on any previous holiday. Messrs. Fingland's also announced an extraordinary increase in bookings. The bookings from London to Manchester had been exceptionally good.

**Decentralisation Preferred.**—Mr. J. Richards, Manager of the Oldham Corporation Tramways Dept., has prepared a report in which he deals with the important question of creating a motor bus centre in Oldham. From an operator's point of view, he says, a bus centre had something in its favour, inasmuch as the town's termini would be fixed and the vexed question of "can we find a suitable terminal and loading point?" would not arise. The maintaining of schedules and the checking thereof would also be facilitated. From the passenger's point of view, he could not see that a bus centre would be of any great advantage unless it was that they would be able to make an easier interchange of vehicles (buses only) and would, in all probability, wait under cover. The disadvantages of a bus centre would be increased capital liability, cost of maintenance, increased (non-remunerative) mileage incurred, and increased fuel consumption. An estimate had been made which showed that if the six services used The Green as a centre, the additional non-earning mileage run would be 25,896 per annum. The additional cost of petrol consumed would be £263 per annum. The cost of these two items alone would amount to over £700 per annum and if eight services operated to that point, the figures would amount to 30,350 non-earning miles, £309 for cost of petrol and a total cost of over £830. If an alternative site were selected and used by eight bus services, the non-remunerative mileage would be 14,082 and the increased petrol consumption £143, the total cost per annum being £412. The number of vehicles entering the centre per hour (present services only) would be approximately 26½. Mr. Richards came to the conclusion that a bus centre would not remedy the ills which it is intended to cure, but would only aggravate matters. Rather than one central loading point, a number of decentralised loading areas adjacent to the routes were to be preferred.

**Manchester Transport Owners' Association.**—Work has already been put in by members of the motor coach section of the Manchester Transport Owners' Association to improve on the co-ordination scheme which was introduced for the first time last Easter. What weaknesses and shortcomings have been revealed will be suitably modified and every endeavour made to profit from the experiences of last season's working. The section has prepared a revised list of booking offices and this is to be submitted to the Watch Committee for their approval. Several offices have been deleted from last year's list but other addresses have been added, especially in districts where hitherto motor coach owners have not had representation. One successful result which has accrued to the Association from last year's successful effort at co-operative working is that all local motor coach owners with the exception of three, have joined the Association, so that it may be claimed that the Manchester owners are fairly completely organised. One problem, however, still confronts the passenger transport industry and that is how to maintain rates. There were several lapses from the standard schedule last year. If means can be discovered to prevent these, much worry will be saved those who abide by agreed rates and what is more, the solution will have an interest for organised vehicle owners in all parts of the country.

**A Crossley Gardner Delivery.**—Crossley Motors, Ltd., Gorton, Manchester, have sent us the accompanying photograph of a double-deck Crossley fitted with a Gardner

A 50-SEATER DOUBLE-DECKER CROSSLEY FITTED WITH "GARDNER" SIX CYLINDER OIL ENGINE FOR THE MANCHESTER CORPORATION.

heavy oil engine, which they have just supplied to the Manchester Corporation.

**Fleet of 313 Buses.**—Manchester Transport Committee is purchasing a further 50 covered-top buses at a total estimated cost of £82,000. Forty of the new buses will be required for the Altrincham-Sale route. As further accommodation will be required for the buses when delivered, the Committee is to extend Parrs Wood garage at an estimated cost of £50,000. Manchester now possesses 162 single-deck buses and 101 double-deck buses, a total of 263, so that when the new buses are delivered, there will be 313 buses available. In a report on garage accommodation, Mr. R. Stuart Pilcher states that the

Digitized by Google

cost of extension works out at £550 per bus which is lower than the cost incurred at other garages.

**Cutting Down Journey Time.**—Wigan Corporation has embarked on the policy of substituting motor buses for trams as a means of transport between Wigan and the various townships in the Wigan Union. The first service to be tackled is that between Wigan and Ashton-in-Makerfield. Twenty-six years ago the accepted means of transport between Wigan and Ashton-in-Makerfield was a horse-drawn waggonette, which took eightly-five minutes to complete the journey. Then came the trams which took forty minutes and now a fleet of double-deck buses cover the intervening four and a half miles comfortably in a quarter of an hour.

**Busmen's Holiday.**—The Mayor of Blyth was among the guests at the annual dinner of the staff of Messrs. T. Allen & Sons, that progressive local firm of bus owners. Mr. T. H. Allen complimented the staff on their excellent work; and Mr. W. W. Allen, his brother, mentioned that the Company's vehicles had covered 955,000 miles that year and had not been involved in a single fatality. Mr. Albert Allen, another partner; Miss A. Fawcett, secretary; Miss M. Walton, Mr. J. W. H. Ratcliffe, and Mr. W. Chamberlain, spoke on the good feeling which existed in the firm, and a sketch party composed of operators provided excellent entertainment. Mr. W. W. Allen stressed that in their firm they had no foreigners, no foreign-made machines, no foreign petrol, and no foreign oil!

THREE OF THE NORTHAMPTON CORPORATION'S THORNYCROFT BUSES: LEFT, AN "A1" TYPE SUPPLIED 1924, CENTRE, ONE OF THE FIRST "J" TYPE SUPPLIED 1923, RIGHT, ONE OF THE LATEST "B.C." TYPE RECENTLY SUPPLIED.

**Thornycroft Orders.** John I. Thornycroft & Co., Ltd., Smith Square, London, S.W.1, have sent us the accompanying photograph which shows one of the latest Thornycroft buses delivered to the Northampton Corporation, alongside two of the older type. The bus on the extreme left is one of the firm's "A.1." type supplied to the Corporation in 1924. The one in the centre is one of their first "J" type buses, supplied in 1923, and since modernised to run on pneumatic tyres. The bus on the right is one of Thornycroft's latest "B.C." vehicles supplied to the Corporation's fifth repeat order for Thornycroft buses.

**Omnibus "Passports."**—The United Automobile Services, Ltd., has introduced a new system of passes by which its employees will be enabled to travel, whether on or off duty, on any of the Company's stopping services. This came into effect on January 1st and costs 6d. weekly, deducted from the wages of all who apply. A photograph of the bearer is attached to each pass; and wives and children can also travel with a 50 per cent. reduction in fares.

**"For Sweet Charity's Sake."**—A whist drive and dance in connection with the Venture Bus Co., of Ebchester, was held at Low Spen, the proceeds being for the Richard Murray Hospital at Blackhill.

**New Road Service.**—A well-known northern bus owner, Mr. Joseph Tulip, of South Shields, has inaugurated a new scheme for quick and comfortable journeys between London and Newcastle. He uses 7-seater Buick limousines, which complete the trip in 7½ hours, so competing keenly with both motor coaches and railway services.

**The Biggest Bus in Calcutta—and British.**—The police authorities of Calcutta have passed a Commer double-deck "Avenger" chassis as being the largest in the district. This chassis, which has a gross carrying capacity of 5½ tons, will be used for native passenger work and is registered as a 70-seater.

**Licences Granted.**

The Licensing Committee of the Bournemouth Corporation has granted an application from Mr. I. A. Newman and from Bournemouth Coachways, Ltd., for the transfer of the six licences held by Mr. Newman to the Company.

The Licensing Committee of the Penrith U.D.C. has granted licences for a proposed service by International Express Service between Sheffield-Manchester-Glasgow.

The Licensing Committee of the Portland U.D.C. has considered a letter from the Southern National Omnibus Company applying for licences for the Hants. and Dorset Company to enable them to run a joint service from Portland to Bournemouth. The application was granted on the same conditions as the Victory Motors, Ltd., i.e., that only through passengers should be conveyed by this service.

The Watch Committee of the Carlisle Corporation has granted three bus licences to Kate Smith for services to Penrith and Wreay.

At the Watch Committee of the Bolton Corporation, a letter was received from the Ribble Motor Services, Ltd., intimating that the Company has purchased the assets of the concern locally known as Freeman's Service and making application for the transfer to them of licences in respect of the vehicles. The licences were granted.

**Wages of Bus Drivers and Conductors.**—The Transport Committee of the Glasgow Corporation has considered an application by the Transport and General Workers' Union for a new scale of wages for motor bus drivers and conductors and recommends the following new scales of wages—being an increase of 1s. per week on the maximum of the existing scales:—

Bus Drivers.

| | | |
|---|---|---|
| 1st six months— | 60s. | per week. |

**Inter-Municipal Agreement Proposed.**—Lancaster Corporation Omnibus Committee, after a consultation with the Morecambe and Heysham Corporation on the question of inter-running of buses, has decided "that, having in view the possibility of inter-running between Lancaster and Morecambe and Heysham at a future date, the respective Councils be recommended to make application to the Traffic Commissioners for the issue of licences to operate bus services between the two boroughs, such services to be subject to such conditions as may be mutually agreed upon between the respective Corporations."

## Correspondence.

*The Editor is not responsible for the views expressed in letters appearing under this heading. No letter will be inserted unless accompanied by the name and address of the writer, not necessarily for publication, but as evidence of good faith.*

### A PERTINENT QUESTION.

*To the Editor of* THE WORLD'S CARRIERS.

SIR,—May I beg the hospitality of your columns to put to all suppliers connected with the motor coach trade, e.g., Chassis and Accessory Manufacturers, Body Builders, Petrol and Oil Companies, etc., etc., this pertinent question:—

"What is likely to happen to your sales when operator after operator is crippled or driven out of business by

(a) Restriction of coaches in Central London,
(b) Unfair restriction of licences,
(c) Monopoly of Manufacture under the proposed new Bill,
(d) Oppressive, repressive and depressing regulations of all kinds."

I would frankly ask their financial support for the only Association energetically fighting the battle of the independent operators—and I would add here there is no conscientious objection to *anonymous* contributions!

Cheques should be sent to the Secretary, Motor Hirers' and Coach Services Association, 72, Great Portland Street, W.

I am, Yours faithfully,
For and on behalf of
THE MOTOR HIRERS' & COACH SERVICES ASSN.
ERIC MONKMAN,
9th January, 1931. Chairman, Executive Committee.

# National Advisory Council of Public Service Vehicle Owners' Associations.

## Organisation to Deal With National Problems of the Trade.

AN important meeting, as the result of which a new organisation was formed, was held in London on January 13th, convened by the Motor Hirers' and Coach Services Association.

Mr. D. Piercy, the Secretary of the Motor Hirers' Association, asked for nominations for the position of Chairman of the meeting, and on the proposition of Mr. F. A. Flin (M.T. Co.), seconded by Mr. F. Nightingale (Northampton Commercial Motors Association), Mr. M. Logette (G.B. Motor Tours) was elected to the Chair.

In his opening remarks, the chairman said it was the first time a meeting of this type had been convened, and the object of it was that they should mutually assist one another. With the advent of the Road Traffic Act, it was obvious that motor transport was a national and not a local matter. He did not think he could do better than to refer to an extract from a speech made by the Minister of Transport, Mr. Morrison, in which he made a similar remark, and he thought he was perfectly correct, however much they may criticise the Minister. The basis of the whole thing revolved round the question of co-ordination and national representations, and the culminating factor was when this proposition was made at the annual meeting of the Association. He did not think it was necessary to look far ahead to realise that with the coming of the Road Traffic Act, there would be three national interests in road transport, and they were municipal undertakings, railway backed road services, and last but not least, the poor independents. So far as the Motor Hirers' and Coach Services Association was concerned, their representation in some areas of the country was scanty, and their Committee had for some considerable time been considering how far the Association could widen its scope from a national point of view. During the past two years, they had had frequent applications for affiliation, but under the constitution of their body they could not do that as they were an incorporated body. There was, however, time to insert any clause in the Articles of Association which would cover any decision made in consequence of the meeting. He would ask those present to state their views on the proposition.

Mr. F. A. Flin said that he strongly supported the idea of a national body, and he supported the Chairman in his remarks. He contended that the best thing they could do would be to get down to work immediately.

Mr. B. R. Roberts (Brighton Motor Coach Owners' Association) said that he was glad to receive an invitation to be present, and one of the reasons for him attending was that he required assistance. He had carefully studied the Bill, and it appeared that there was no provision at all for his class of work—short tours at the seaside. It appeared to him that when they applied for their licences at Lewes for fitness, their reply would be that they would have to get off the road, and work from garages, and that meant ruination. In his area, the Southdown Company had large premises, and carried on business in a big way. There were 16 members of his Association, and he did not think they could do much in writing to the Ministry to complain, as they would probably get a letter in reply asking who they were. That was where a national organisation would be invaluable.

Mr. R. H. Kerslake (Mansfield & District Omnibus Owners' Association, Nottingham) supported the proposition, and also Mr. Healey, a member of the Motor Hirers' Association operating in Chesterfield.

Mr. A. N. Brown (Northern Road Transport Owners' Association, Ltd., Newcastle-upon-Tyne) said that it appeared to him that unity was strength, and he thought that in forming a national body, they would be able to overcome difficulties which at present seemed insurmountable.

Mr. C. B. Jenkins, of the Nuneaton & District Association, besides a number of others, said that small associations had been springing up all over the place, and he was associated with many. At present, he could speak definitely for 300 operators, and in the course of a fortnight he thought the number would be nearer 700. They had held meetings, and had all agreed on one point, and that was that in order to approach the Minister, it was necessary for them to come to some arrangement with a London organisation. They had been aware that the Motor Hirers' Association existed, and had been doing valuable work for the provincial bus owners, and they were consequently greatly obliged to the Association for the work they had been doing. The Association was working in the background, and the majority of the operators engaged in the class of business were reaping the benefit. The long distance coach owner was going to be confronted with serious difficulties when the Act got into full swing in April. The question, therefore, was whether the Association or national body could be of any assistance to the long distance operators, unless they changed their constitution. So far as the National Advisory Council was concerned, it was a separate matter from the Association, and was an admirable idea, and one which most provincial owners would seriously consider. They would be fools if they did not, but the things were separate to his mind. There would have to be a proper proportion of long distance operators as compared with the ordinary service coach runners, and provided that difficulty was overcome in a satisfactory way, he would seriously consider advising his friends to associate themselves very closely to this scheme.

Commander C. J. Pearse (Midland Area Bus Owners' Association) said that it was perfectly obvious that it was a necessity to have a national organisation. When the Midland Association was formed a short time ago, they anticipated the formation of a national body, and provided for affiliation thereto. There were bound to be a large number of test cases under the new Act which a national body could contest, whereas a local Association would not have the funds to do so.

Mr. C. Dobbs (Skylark Motor Coach Co.), Mr. A. Kelcey (Orange Coaches, Chatham), Messrs. Samms and E. W. Barge (Medway District Bus Owners' Association, Strood, Kent), Mr. Nightingale and Mr. A. W. Allchin (Northampton Commercial Motors' Association), Mr. A. E. Tapper (Mayfair Transport Co., Ltd.), Mr. J. H. Lowe (Grey Coaches, Ltd.), and Mr. B. Thomas (Avon Valley Motor Omnibus Proprietors' Association, Port Talbot) all spoke in favour of the proposition, and Com. Pearse then proposed, "That this meeting recommends the formation of a National Council under the auspices of the Motor Hirers' and Coach Services Association to represent the interests of Independent Public Service Vehicle Owners' Associations." This was seconded by Mr. Allchin and unanimously agreed.

The Chairman then proposed that the title of the Association should be the National Advisory Council of Public Service Vehicle Owners' Associations, which was seconded by Mr. Nightingale and agreed, and it was agreed that the primary object of the Council should be to promote and protect the interests of the members of the Association in all matters arising out of existing and future legislation.

It was further decided that the minimum membership of local Associations wishing to join the Council should be 20, with discretionary powers to accept a smaller number if the Council thought fit. It was also agreed that a local Association should appoint one delegate for 20 members, two for 45, three for 95, and one for every additional 50 members, with a maximum of six delegates. The amount of contributions was also fixed at £10 per delegate per annum, the Association to apportion how it was to be paid amongst its own members. During the period of emergency previous to the operation of the Road Traffic Act, it was further resolved to hold monthly meetings, and the next meeting was fixed for February 10th.

The meeting then terminated with a vote of thanks to the Chairman, proposed by Com. Pearse.

The offices of the Association have recently been moved from 17, Water Lane, London, E.C.3, to 72, Great Portland Street, London, W.1.

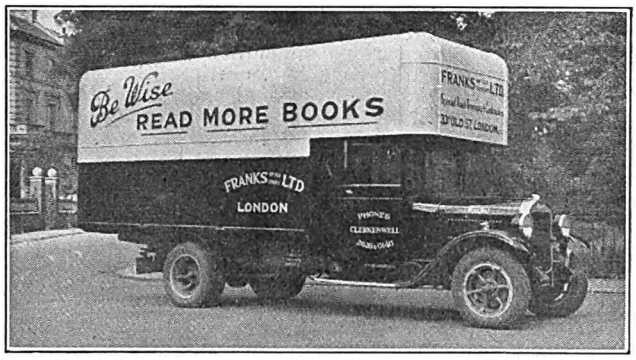
# News from all Parts.

**Northern Road Transport Owners' Association.**—This Association has been formed as the outcome of a meeting of bus operators in Newcastle-on-Tyne in order to combat the very serious difficulties with which this branch of the transport trade is faced. The offices of the Association are at 12a Northumberland Street, Newcastle-on-Tyne, and the Secretary is Mr. A. Norman Brown. The immediate plans of the Association, apart from local matters in connection with bus stations, are to look after the interests of its members through the early difficult stages of the Road Traffic Act. The Association fully realises the gravity and far-reaching effect of the Act in so far as public service vehicles are concerned and views with no small amount of concern the difficulties ahead when the final regulations, controlling public service vehicles, are put into force.



A "STEWART" 2-2½ TONNER FOR BOOK TRANSPORT.

**A "Stewart" for Book Transport.**—Our illustration shows a 2-2½ ton "Stewart" supplied last August by Morgan, Hastings, Ltd., 17, Berkeley Street, London, W.1, to Franks of Old Street, Ltd., 33a, Old Street, London, E.C.1. The Luton type body by A. L. Cole, New Southend Road, Laindon, Essex, is 14 ft. 6 ins. long, 7 ft. 3 ins. high and 6 ft. 6 ins. wide. This vehicle has already covered 19,000 miles and running repairs to date have only amounted to the sum of £4 3s. 6d.

**Good Agency Wanted.**—A gentleman, well known to us, who for twenty-five years has travelled London and district calling upon transport operators and introducing to them the leading makes of tyres and motor engineers sundries, informs us that he is now travelling in the same area on his own account introducing transport accessories. He is, moreover, open to represent the manufactures of one more reliable firm. Any of our readers who are interested can get into touch with this gentleman by addressing letters to "Agency," c/o THE WORLD'S CARRIERS, 68/69, Shoe Lane, London, E.C.4.

**International Motor Rally of Rome.**—We have now received an advanced copy of the Official Programme of the International Motor Rally to be held in Rome in April next. The event covers a week, starting on Thursday, April 23rd and finishing on Wednesday, April 19th. The business part of the Rally only takes up a portion of each day and the competitors will be hospitably entertained in Rome by the Royal Automobile Club of Italy and by the Automobile Club of Rome at an official dinner, at a ball at the Hotel Excelsior, at luncheon at Ostia and at luncheon in Rome, while on the night before the event comes to an end there will be an excursion to Roman Castles and a Garden Party, followed by a Gala night at the Opera.

**Three Towns Bus Agreement.**—Representatives of the Corporations of Burnley, Nelson and Colne at a conference decided to recommend each local authority represented (a) to consider the desirability of setting up a transport board to own and operate the passenger transport services of Burnley, Nelson and Colne; (b) to bear such proportion of the cost of the services of any expert who may be engaged; (c) to appoint a sub-committee consisting of three representatives from each of the three authorities further to investigate the matter, with power to engage experts and to report from time to time to a joint conference.

**Motor & Cycle Trades Benevolent Fund. Annual General Meeting.**—The Annual General Meeting of the Motor and Cycle Trades Benevolent Fund was held in London on December 10th. The Reports and Statement of Accounts were presented by Mr. A. J. Wilson, the General Hon. Secretary and Treasurer, for the twenty-fifth year in succession and, as he pointed out, for the last time, as owing to his removal to the country he had definitely decided not to seek re-election. The Report of the Wardens of the Children's Home was presented by Mr. G. H. Smith and they were all unanimously adopted by the meeting. At the meeting of the Council which immediately followed, Sir George Beharrell, D.S.O., Representative on the Council of the Dunlop Rubber Co., Ltd., was unanimously elected President for 1931. The formal resignations of Mr. and Mrs. A. J. Wilson as General Honorary and Honorary Assistant Secretary and Treasurer respectively were received with great regret. A resolution expressing the keen appreciation of the Council, proposed and seconded by Mr. Fred Brown and Mr. E. F. Johnson, the senior members of the Executive Committee, was passed unanimously and it was resolved that Mr. Wilson's name should be permanently associated with that of the Fund as Founder, that a permanent memorial recording their services should be displayed at Head Office, and that a memento should be presented to Mrs. Wilson. Mr. Instone presented a report on the Motor Ball and Carnival, as a result of which he had been able to forward a cheque for £725 to the President, making a total of over £3,000 contributed to the Fund as the result of the four Motor Balls held. He paid a special tribute to the work of Mr. A. H. Dawson as Secretary and Organiser. The meeting closed with a very hearty vote of thanks to Mr. Boultbee Brooks, President of the Council for 1930.

**Something New in Removals.**—We have received from W. Manning & Son, Ltd., 62 Compton Road, Birkdale, Southport, the photograph which we reproduce and which shows a Reo motor vehicle fitted with a special furniture van built by the firm themselves. It has a capacity of 1,400 cubic feet and, in addition, has accommodation to carrying up to 8 passengers, so that the entire job of removing a family from one home to another can be carried out by the same vehicle, thus ensuring that the household goods arrive at the same time as the occupiers of the new house, saving in many cases hotel expenses while waiting for the goods to arrive. Passengers and furniture will be fully insured. We are informed that just recently the firm have carried out a removal from

A "REO" FITTED WITH SPECIAL FURNITURE VAN.

a town in East Lancashire to Southport in one day, the family having breakfast in the former town and tea at Southport, travelling with their household goods. W. Manning & Son, Ltd., inform us that they will be pleased to give estimates for the building of similar vans for members of the trade.

**"On Guard."**—In the December issue of "On Guard," the little pocket magazine issued by the National Safety First Association, of 119, Victoria Street, London, S.W.1, as part of a specialised accident prevention service, which consists of an intensive campaign each month against one of the principal dangers of industry, the particular hazard

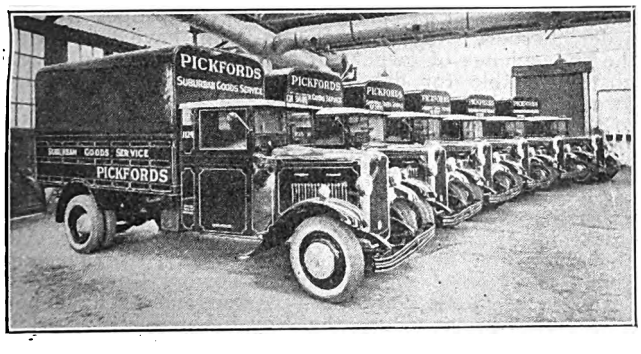
Digitized by Google

covered is "Internal Transport," in connection with which there are 2,281 accidents a year. The magazine deals with various aspects of Health, as well as Safety, at Work, in the Street and in the Home.

**Horses in London.**—At a recent meeting of the Council of the National Horse Association of Great Britain, consideration was given to the recent suggestion that horses might be debarred from proceeding along various London streets and the following resolution was adopted unanimously: "The Council of the National Horse Association of Great Britain on behalf of the 94 horse owning and breeding Societies associated with its work, protest most strongly against any proposal to restrict the use of Horse Traffic in certain streets in London. A very serious blow would be dealt to the horse breeding and farming industry generally consequent upon inability to dispose of young stock, while further such proposals would doubtless lead to the dismissal of many transport employees who have not the required knowledge to handle mechanical transport, and at the present time would doubtless have considerable difficulty in securing other employment, while it would mean that hundreds of small traders would be unable to use the horse, which is not only their best but only possible form of transport." The Council resolved that a Committee should be appointed to consider all Bills presented before Parliament which affected the horse owner and breeder in any way. The Annual General Meeting of Members will be held on Tuesday, March 31st next.

**F.W. & R.A. New Members.**—The following firm has been elected to membership of the Furniture Warehousemen & Removers' Association: Messrs. Lewis's, Ltd., Bull Street, Birmingham.

**"Commers" for Pickfords.**—We illustrate a fleet of Commers G.2 type (40/50 cwt.) with wheel base of 13 ft. 6 in., recently delivered by Commer Cars, Ltd., of Luton, to Pickfords, Ltd., the well known transport con-



A FLEET OF "COMMER" 2-2½ TONNERS FOR PICKFORDS, LTD.

tractors. The order for these was placed through Commer Cars' London Sales Organisation.

**Travel Association's 1,000,000 Calendars.** — Printed in red and black the Annual Calendar of Events in Great Britain and Ireland, with information for visitors, prepared by the Travel Association of Great Britain and Ireland, makes its second annual appearance. One million copies of this Calendar will again be printed, 600,000 in English and 400,000 in French, German, and Spanish, and distributed all over the world. The English edition, which is now ready, is being despatched at once to distributing agents in the British Dominions and the United States. It contains a full list of events taking place during each month of 1931 in all parts of the British Isles, with a special index of "old world customs" still celebrated and so popular with visitors to this country. In a foreword Lord Derby, President of the Travel Association, offers a welcome to all readers:—"In Great Britain and Ireland," writes Lord Derby, "you will find many things of unique interest, many of world-wide importance, great events which have a universal appeal, small events of a more intimate character, all combining to make the stay of a visitor, however long or short it may be, well worthy of the journey from his home, and still more worthy of recollection in times to come." Before the Prince of Wales reaches Buenos Aires to open the British Trade Exhibition on March 14th, 100,000 copies of the Calendar in Spanish will have reached the Exhibition for distribution to visitors and many thousands will be in circulation in the principal cities which the Prince will visit on his way to the Exhibition. The Spanish, the French, and the German editions of the Travel Association's Calendar have been specially edited to include facts of interest to the nations they represent. The offices of the Travel Association of Great Britain and Ireland are at Kinnaird House, 1, Pall Mall East, S.W.1.

**Britain's Petrol.** — The revolution in the oil industry brought about by motors and motoring was referred to by Mr. F. E. Powell, Chairman of the Anglo-American Oil Co., Ltd., at the sea trials off the Tyne of the Company's latest motor-driven tanker, "Appalachee." Mr. Powell, recalling the launch of a previous tanker of that name in 1894, said that whereas the world's production of petroleum then was only 12,000,000 tons, they now produced that quantity in America alone every month and the world's production had multiplied 16 to 17 times. Britain was one of the world's largest consumers of petroleum products to-day. The motor spirit trade of the country had increased from 476,000,000 in 1924 to 950,000,000 for 1930—and the end was not yet. The world no longer feared a shortage of oil and with a certainty of supply there was bound to be a further rapid increase in consumption.

**Dangerous Roadside Trees.**—The Automobile Association, in co-operation with the Roads Beautifying Association, has published an interesting illustrated booklet dealing with the care and treatment of roadside trees, from the points of view of safety to road users, as well as better preservation of trees for which this country is renowned throughout the world. A foreword by Lt.-Col. C. H. Bressey, C.B., C.B.E., F.S.I., Chief Engineer, Roads Department of the Ministry of Transport, draws an analogy between decay in teeth and trees, and points the moral. Copies of the booklet have been issued to all highway authorities in the country, and a strong appeal is made for the assistance of landowners.

**A "Thornycroft" for Bread Delivery.**—We illustrate a very attractive baker's 2-ton van on "Thornycroft" type

A "THORNYCROFT" 2-TONNER FOR BREAD DELIVERY.

"A2 forward" chassis. This vehicle was recently supplied by the Liverpool office of John I. Thornycroft & Co., Ltd., to the repeat order of Benjamin Sykes & Sons, Ltd., Mersey Bakery, Rose Place, Liverpool.

**Visit of the Commercial Secretary to His Majesty's Embassy at Rio de Janeiro.**—The Department of Overseas Trade announce that Mr. Stanley G. Irving, the Commercial Secretary to His Majesty's Embassy at Rio de Janeiro, is now in this country on an official visit. Mr. Irving will be available at the offices of the Department during the periods 2nd-6th and 23rd-27th February, to interview manufacturers and merchants interested in the export of British goods to Brazil. He will also visit a number of industrial centres in the Provinces. Firms desiring interviews with Mr. Irving in London, or information regarding his arrangements to visit provincial centres should apply to the Comptroller-General, Department of Overseas Trade, 35, Old Queen Street, London, S.W.1, quoting the reference 2111/1/30.

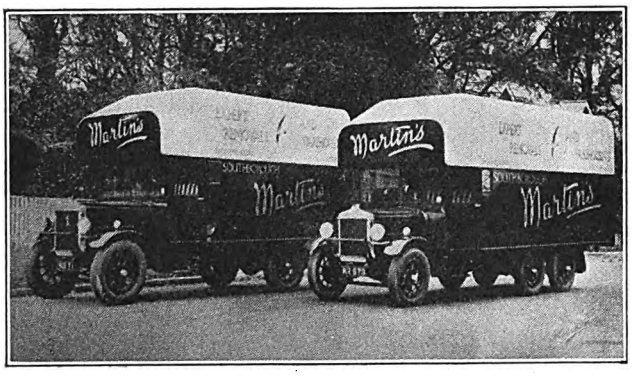
**Shire Horse Society.** — At a recent meeting of the Council of the Shire Horse Society, under the Chairmanship of the President, Mr. David Davies, final arrangements were made for the fifty-second Shire Horse Show to be held at the Royal Agricultural Hall on Tuesday, February 24th and the two following days. On the first two days the Show opens at 9 a.m. and judging commences at 10 a.m. The Stallion and Gelding classes will be judged on the first day, and the Mare classes and Produce Groups on the Wednesday, with the Judging of the Championships at about 2.30 on that afternoon. On Thursday the Show opens at 8.30 a.m. Stallions, Mares and Geldings entered for the Auction will parade at 9 a.m., and the Sale will commence at 10 a.m. The Commercial Classes will be judged at 2 p.m. on that day. The

Digitized by Google

Schedule, comprising twenty-three classes with prizes totalling £1,900, was approved. Sir Gomer Berry, Bart., has kindly presented a hundred guinea challenge cup for the best Stallion in the Show. A further cup, value £25, presented by Mr. David Davies, will also be awarded to the champion Stallion. The Annual General Meeting of Members has been fixed for 4.15 p.m. on Wednesday, February 25th, at the Royal Agricultural Hall, London.

**Our Overseas Trade.**—Commercial visitors to Portuguese East Africa, Tangier, Spanish and French Zones of Morocco, Syria and the Lebanon, Turkey, Algeria, Tunisia, Tripolitania and Cyrenaica would do well to apply to the Department of Overseas Trade, 35, Old Queen Street, London, S.W.1, for a booklet containing hints for their guidance. The information contained in these booklets will be of interest to firms who may be contemplating sending a representative to these markets and who are not familiar with local conditions.

**Ford Assembling Plant in Mexico.**—A Detroit message says that in announcing that negotiations for the purchase of a site for the new assembling plant at Mexico City had been concluded, the Ford Company states that the construction work will begin shortly and that the plant will have a capacity of 100 cars and trucks a day. The plant will be a modern one-storey building, 380 by 600 feet, and will include a department for the building of motor car bodies, now shipped to Mexico from the United States.



THE TWO "WILLYS MANCHESTER" LORRIES REFERRED TO IN TEXT.

**"Manchesters" for Well-known Removers.**—We illustrate a Manchester 30/35 cwt. van and one Manchester 2½ ton six-wheeler van in the service of J. Martin and Sons (Southborough), Ltd., removal and warehousing contractors, of Southborough, Tunbridge Wells. These vehicles form part of a fleet which we understand will eventually consist entirely of Manchester lorries. The chassis and bodies were supplied by Sussex Motors, Ltd., of 1a, Cromwell Road, Hove.

**Precautions During Frosty Weather. R.A.C. Advice to Car Owners.**—The Royal Automobile Club has issued the following suggestions to car owners concerning the most effective methods of preventing damage to car radiators, cylinder blocks, etc., during frosty weather. It is pointed out that the damage is done at the time of freezing, not during the thaw, and steps should therefore be taken to prevent the former, either by heating the motor house or by using an anti-freezing mixture. There are several effective proprietary preparations of this kind on the market, and the R.A.C. can also recommend the following:—(1) One pint of glycerine added to one gallon of water. This should be well shaken and thoroughly mixed before filling into the radiator. (2) Half-a-pound of calcium chloride to the gallon of water, to be mixed as above. This mixture will resist approximately 12° of frost. (3) Seventy-five parts by weight of carb. potassium in 100 parts by weight of water, to be well mixed, plus 50 parts by weight of glycerine. This mixture will remain liquid at 20° below zero. Alternatively, if it is desired to obtain protection whilst a car is left standing in an unheated garage, the water can be drained from the radiator. After all the water has apparently run off, the engine should be turned over a few revolutions in order to empty completely the pump and circulation system. Where plugs are fitted in the lower extremities of the cylinder water jackets, these should be unscrewed and any water still remaining allowed to drain off. Radiator muffs afford a certain amount of protection in the motor house, but too much reliance should not be placed in them, their primary function being to maintain the water at an equable temperature whilst on the road. It is the lower part of the radiator which requires protection, and the best type of muff is that which is unfastened from the top downwards. Cases have occurred in which the lower part of a radiator has frozen up with the engine running!

**Overladen Vehicles.**—Chorley Town Council has referred back for further consideration the resolution of the General Purposes Committee expressing the opinion that the excessive overloading of commercial vehicles is causing serious damage to the public highways necessitating the expenditure of large sums of public money for maintenance, and proposing that representations should be made to the Superintendent of Police that action should be taken in all cases in which an offence is committed. It was pointed out to the Council that light vehicles, if overloaded, did not do the damage caused by heavier traffic. Several motor lorry drivers were summoned at Chorley on December 30th for driving overloaded vehicles. In one case a lorry was carrying a load of 10 tons 19 cwts. on the back axle, the registered weight being eight tons. Fines varying from 20s. to 40s. were imposed.

**London Van Horse Parade.** — The Annual Parade of London Van Horses will be held in the Inner Circle, Regent's Park, on Easter Monday, April 6th. The Rt. Hon. Lord and Lady Mayoress of London will attend the Parade in State and present the prizes at 12 noon. All trotting single and pair horse vanners are eligible for entry. A special section has been opened for barge horses. As long as the horse is properly groomed, well looked after, and the van and harness is clean, it is possible for every driver to secure a First Class Award, entitling the driver to a Money Prize, the R.S.P.C.A.'s Merit Badge and Award Card. Entry forms are obtainable from Mr. R. A. Brown, 12, Hanover Square, London, W.1.

**Ferodo Brakes.**—With reference to that part of the New Road Traffic Act under which the Minister may regulate the number and use of brakes and secure that such brakes shall be efficient and kept in proper working order, Ferodo, Ltd., Chapel-en-le-Frith, have printed for the convenience of owners of transport vehicles a special poster suitable for exhibition on the premises of fleet owners for the purpose of calling the attention of drivers to the necessity for reporting immediately if their brakes are not functioning properly. Copies of the poster may be had on application.

## MERSEYSIDE.

**Obituary.**—Mr. T. Barrett Bicket, who died recently, was Joint Managing Director with his brother, Mr. Alex Bicket, of the Kyle Transport Company, of Liverpool, and a Director of the Alexandra Towing Company.

**Liverpool Horse Parades.** — Arrangements have been made by the Council of the Royal Lancashire Agricultural Society with the Committee of the Liverpool May Parade of Horses whereby, without interfering with the holding of the latter event, the customary adjudications of the city's light and heavy horses will be transferred to the Lancashire Society's show at Liverpool in August. At the latter event there will be a grand parade of Liverpool cart horses. The Society will present 5s. to each carter taking a horse into the ring.

**Transport Staff Dinner.**—Mr. G. B. Lissenden, Manager of the Traffic Department of Messrs. Lever Bros., Ltd., Port Sunlight, presided at the annual staff dinner of members of the Traffic Department. The proceedings, which were mainly social, were attended by Mr. C. W. Barnish, a Managing Director of the firm.

**More Co-ordination.**—A transport sub-committee has been appointed by the Liverpool Corporation Port Sanitary Committee to (a) have the management and control of all motor vehicles in connection with the various local hospitals and institutions; (b) to give the requisite directions regarding the use of such vehicles, upkeep, running repair replacements and the keeping of all necessary records and books; and (c) to have the control and direction of all drivers, mechanics and other employees wholly engaged in connection with the work of the transport department.

**One-Way Traffic for Bootle.** — Traffic from Bootle docks now has to proceed only by the main roads, Marsh Lane and Strand Road, instead of cutting through the section of Talbot Street from Marsh Lane to Brook Road. Talbot Street is now closed to mechanically-propelled vehicles having an unladen weight exceeding three tons or which have seating accommodation for more than twenty persons exclusive of the driver.

**More Trams Superseded.** — Wallasey Corporation on January 5th discontinued the Warren Drive tramway route. As soon as certain road repairs have been carried out, the route will be worked by motor buses.

Digitized by Google

## MANCHESTER.

**Manchester Road Users.** — Manchester Committee of Road Users, at their next meeting, will consider the proposal of the Manchester Traffic Congestion Committee, for the diversion of all traffic approaching Manchester from the south along Cavendish Street, Lower Ormond Street and Devonshire Street, behind All Saints' Church, an arrangement which will leave the stretch of Oxford Road, immediately fronting the church, free for the outward bound traffic. The proposal will not come before the City Council for ratification until the views of the road users associations have been obtained.

**No Trackless Trolley Vehicles for Manchester.**—Manchester Transport Committee has decided not to seek powers for the devolpment of trackless trolley vehicles in the city.

**To Scrap and Buy New Buses.**—Nine of the existing Bolton service buses are to be scrapped and tenders invited for the supply of 10 double-decker buses. Having decided to standardise its motor bus fleet, Oldham Tramways Committee will sell seven old buses and purchase four new ones.

**Diesel-engined Motor Bus for Manchester.**—Manchester Transport Department has obtained delivery of the first Diesel-engined double-decker omnibus for the local public service. It is the third such all-British passenger vehicle built in conjunction by Crossley Motors, Gorton, and Gardners of Patricroft, their first having gone to Leeds at the end of September and the second to Sheffield. It is a 48-seater saloon.

## NORTH-EAST COAST.

**Bridge or Tunnel?**—South Shields Town Council spent considerable time at a special meeting in discussing the question of a bridge or tunnel as a means of crossing the Tyne. It was finally resolved to ask the Ministry of Transport what grant they would be prepared to make in the event of the two Corporations concerned proceeding with a tunnel or bridge scheme.

**Social Functions.** — About 100 members of the Shell-Mex Social Club and guests dined at South Shields under the Chairmanship of Mr. H. F. Dowland (Manager of the Jarrow depot), who proposed the one toast of "The Visitors." This was responded to by Mr. H. F. Dowland, Divisional Manager of Shell-Mex, Ltd. (Newcastle headquarters).

**New Garage at Morpeth.**—Messrs. C. H. Mason & Co., Ltd., of Gateshead & Newcastle, are the new proprietors of the Castle Garage at Morpeth, which was opened formally on December 29th by Alderman W. S. Sanderson (ex-Mayor of Morpeth). Now under the management of Mr. F. J. Bell Atkinson, it was owned originally by Mr. R. Wood, an old motoring pioneer.

**Police Chief's "Safety First."**—The Chief Constable of Newcastle, Mr. F. J. Crawley, tackles the traffic problem with conspicuous ability in a booklet which he has issued to Newcastle "Safety First" Council. He has drawn upon an impressive array of experts for his material and makes many pointed suggestions. These include the need for additional automatic signals in the city; the formation of a police traffic control department in Newcastle; the adoption of the one-way system in four thoroughfares; the inauguration of a semi-gyratory system, and the provision of additional traffic islands. The unilateral method of parking motor cars in Newcastle is, claims Mr. Crawley, very satisfactory.

**One Vote Decides.**—A proposal to extend Sunderland tramways along the Whitburn Road at Seaburn to the borough boundary was negatived by a margin of one vote by Sunderland Town Council. Another proposal for a loop line to facilitate the handling of football crowd traffic was passed.

**More Trolley Buses.**—Darlington Council has decided to promote a Provisional Order authorising the Corporation to run trolley buses along additional routes.

## HULL.

**The Humber Bridge.**—A poll of the local government electors of Hull on the proposal to erect a bridge across the river Humber is on the point of being taken. At the town's meeting held in the City Hall the voting was almost unanimously in favour of the scheme, only 35 out of 3,000 people present holding up their hands in opposition. Within a few hours, however, a requisition, promoted chiefly by the shipping interests, and bearing 150 signatures, was handed in at the Guildhall demanding a poll. This step is possible because the Hull Corporation are the promoters of the bill to authorise the construction of the bridge, and no municipality can put forward a Parliamentary measure without first having obtained the sanction of the ratepayers. It is satisfactory to note that the engineering question, upon which the opponents base their case, is better understood and appreciated by the public than was the case earlier on. There is still an inclination in many quarters to make light of the probable danger to the deep water channel, but that is the point upon which the fight will take place assuming the poll is in favour of the bill and thus permits the proposal to come before the councillors at Westminster. As the Government are backing the scheme to the extent of providing 75 per cent. of the cost of £1,725,000 the bill is likely to be passed by the House of Commons Committee, but the House of Lords Committee may be influenced more strongly by the case the opposition will put forward.

## NORTHERN IRELAND.

**Mr. William Chamberlain.**—Mr. William Chamberlain, Chairman of the Traffic Commissioners for the north-western area of England, relinquished his position as manager of the Belfast municipal tramway undertaking on December 31st. The Belfast Corporation have accepted a recommendation by the Tramways Committee that Mr. Chamberlain should be appointed to act for them in an advisory capacity until his successor is appointed. On December 30th Mr. Chamberlain was the guest, at dinner in the Grand Central Hotel, Belfast, of the Route Bus Owners' Association of Northern Ireland, of which he was President. Mr. James M'Crea, M.Inst.T., manager of the Belfast Omnibus Co., presided, and Mr. Chamberlain was presented with a gold cigarette case. In his speech, Mr. Chamberlain said that the Road Traffic Act had been based on the actual working and experience of transport in Northern Ireland. He said there was a great future in store for Northern Ireland in the scheme of co-operation and unification of transport in the province. Before he left Belfast Mr. Chamberlain received a gift of silver plate from the employees of the tramways undertaking.

**Belfast Transport.**—In his last report to the Belfast Tramways Committee, Mr. William Chamberlain was able to announce that the traffic receipts of the undertaking had reached record figures. For the week ending December 26th the receipts from trams amounted to £12,641, and from buses, £1,482. The transport receipts for the corresponding week two years ago was only a little over £7,000. Two double-deck buses are now in use on one route in Belfast, and Mr. Chamberlain said their receipts per mile amounted roughly to 1/10d. and were never below 1/5d., whereas single-deckers averaged 12d. The new service had brought the receipts from both types of bus to 3¼d. per mile, as compared to 2¼d. per mile before the introduction of the double-deckers.

## IRISH FREE STATE.

**Forthcoming Legislation for the Regulation of Road Transport in the Irish Free State.**—In the Irish Free State Senate on December 18th, Senator O'Farrell drew attention to the delay in bringing in the Traffic Regulations Bill which had been promised by the Government. In 1929 passenger buses in the Free State covered 24,000,000 vehicle miles, carried as many as 48,000,000 passengers, and took £806,000 in receipts. For the first nine months of 1930 the mileage had increased by 1½ millions, and passengers by over two millions. In 1925 there were 29,000 motor vehicles of all kinds licensed in the Free State, and that number had now increased to 47,000. The present position was absurd. There was no control with regard to the issue of licences, and a boy of 17 years could drive a bus, and a boy a day over 14 years could get a licence to drive a motor cycle. A person could steal a motor car, and say in defence that it was "a joy ride." General Mulcahy, Minister for Local Government, said that he could promise the Senate that the Motor Car Act of 1903 would not again appear in the next Expiring Laws Bill. Mr. Comyn, K.C., asked was that a definite promise? General Mulcahy: It is an absolutely definite promise.

**The Motor Bodies Industry in the Irish Free State.**—From a return dealing with industries carried on in the Irish Free State, submitted to Dail Eireann by the Minister for Industry and Commerce, it appeared that on 1st September last the number of persons employed in the Free State in connection with the construction of motor bodies was 347, which compares with 249 persons so employed on 26th April, 1924, which was the date of the imposition of a tariff on the importation of such vehicles.

# The Crossley "Eagle" Chassis.

THE Crossley "Eagle" chassis is already a favourite with many large operators of passenger vehicles, including municipal authorities as well as large private undertakings, and amongst the patrons of Crossley Motors, Ltd., Gorton, Manchester, are included the War Office, the Air Ministry and British Colonial and Foreign Governments. With regard to Government patronage: it is well known that before these place orders the vehicles are subjected to most exacting tests which must be passed before acceptance, therefore, the high quality of Crossley products is assured.

The Crossley "Eagle" 32-34 seater chassis is built specially to meet the demand for a fast, economical and thoroughly trustworthy passenger vehicle. The following is a brief description of its main features:—

It is fitted with a 4-cylinder 30/70 h.p. engine, bore and stroke 4 5/16 in. and 5½ in. respectively. The cylinders are cast in pairs to facilitate removal and have detachable heads. Separate auxiliary drives are provided by silent chain (a) to the camshaft, water pump and magneto and (b) to the dynamo. Side valves on the near side are operated by adjustable tappets of the roller type. The tappet and valve springs are easily accessible, being placed under removable covers, and each tappet is easily withdrawn from the engine. The crankshaft has five bearings. The cylinder heads are of special aluminium alloy.

The dry sump lubrication system is adopted which retains the main body of oil in a separate closed reservoir under the crank chamber. This arrangement preserves the lubrication from petrol dilution. A double self-priming gear pump driven through spiral bevel gear from the camshaft circulates the oil under pressure from the reservoir through a filter and the drilled crank to the main bearings and big ends, gudgeon pins, pistons and camshaft and an oil way is provided to deal with the timing chains and sprockets. A patent self-cleaning oil filter is included in the circulation in an immediately accessible position and a pressure release valve is arranged to return all surplus oil direct to the separate reservoir, holding 2 gallons. A combined filler and dipper gauge is placed on the near side of the engine, test cocks are also provided and there is an oil pressure gauge on the dash.

The chassis lubrication is by oil throughout, there being special lubricators adapted to the oil gun system.

Ignition is by H. T. magneto, and the carburetter is a vertical type provided with air shutter for easy starting. Cooling is by centrifugal pump, fan and gilled tube type radiator mounted on a spring loaded spherical socket support. The petrol tank is on the nearside of the chassis, it has a capacity of 35½ gallons, Autovac feed, the petrol passing through a filter.

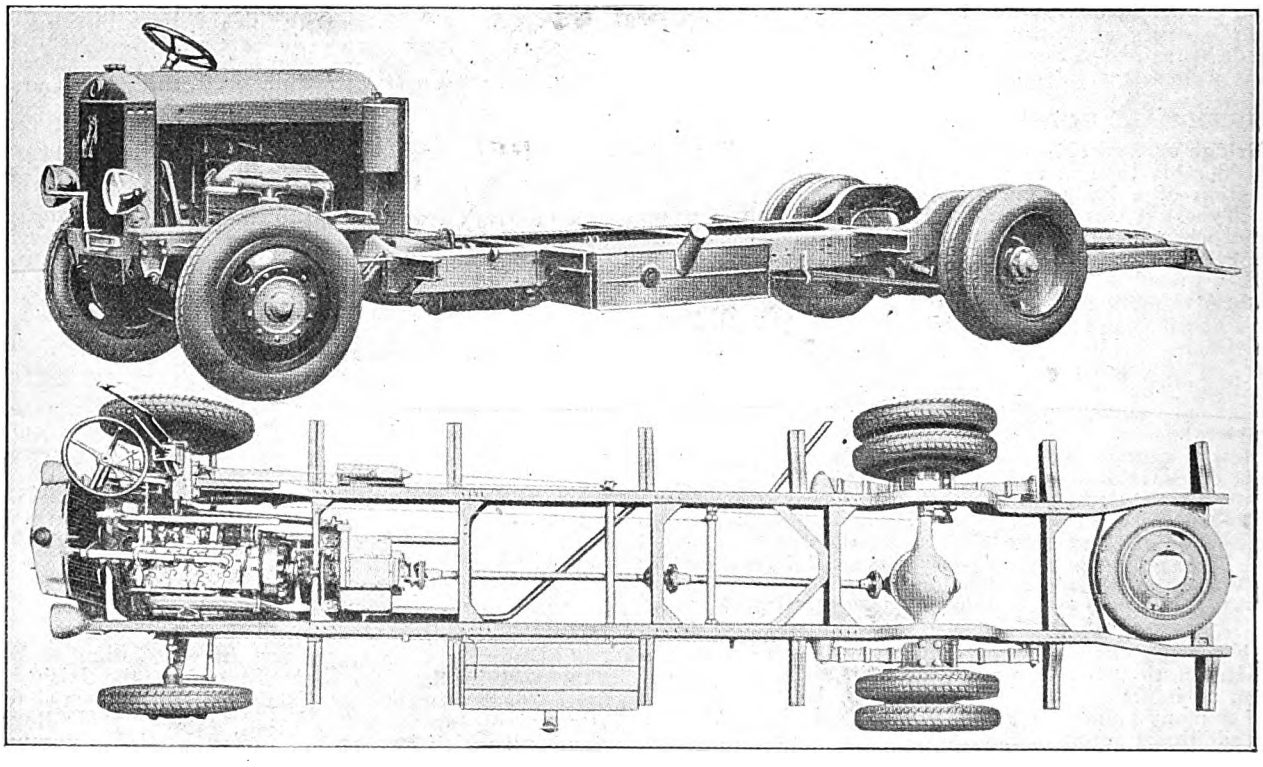
Power is transmitted through a single plate clutch to a four speed gearbox with the following ratios:—1st, 5.88 to 1; 2nd, 3.29 to 1; 3rd, 1.88 to 1; 4th, direct; reverse, 5.18 to 1. The controls are on the driver's right hand.

Transmission is by a two part tubular propeller shaft connected to the gearbox by a large universal coupling and on a cross member amidships, a hanger bracket forms the housing for a self-aligning ball bearing in which the rear end of the forward shaft is supported. An intermediate metal universal coupling connects the two parts of the shaft and the rear axle is bolted up by a further similar coupling.

The back axle is the full floating type with underdriven worm with 6.25 to 1 gear ratio.

Four wheel brakes are fitted foot operated and Dewandre servo attachment. The hand brake operates separate shoes in the rear wheel drums. Steering is by cam and lever. The steering column is mounted forward alongside the radiator. A solid forged steering connecting link is carried by spring loaded ball and socket joints which cannot get adrift or out of position. The throttle and ignition controls operate on a combined quadrant on the steering column. The frame is of high tensile steel with seven cross members and there are separate sub-frames for the engine and gearbox. There are 12 double channel section outrigger brackets of pressed steel provided for rigidly mounting the body on hard rubber pads. Semi-elliptic springs are provided front and rear. The underslung rear springs are 5 ft. in length. Disc wheels are fitted and 36 in. by 6 in. s.s. tyres single front, twin rear. The electric lighting set includes two head lamps and dash and tail lamps. An electric starter may be fitted at extra cost.

General measurements are as follows:—Wheelbase, 16 ft. 7½ in.; overall chassis length, 25 ft. 6⅜ in.; rear of driver's seat to rear of chassis (32-seater), 21 ft. 3 in.; track, front and rear, 5 ft. 11¼ in.; turning circle, 59 ft. 2 in. approximately. Overall width of chassis including wings and lamps, 7 ft. 6 in. Laden height of frame at rear of overhang (32-seater drop frame chassis), 1 ft. 3 in.; laden height of frame at rear of overhang (26 and 32-seater straight frame chassis), 1 ft. 11½ in. Price £970. Forward steering. Starter £15 extra.



TOP: SIDE VIEW OF THE 32-SEATER CROSSLEY "EAGLE" FORWARD STEERING PASSENGER CHASSIS. TWO TYPES OF FRAME CAN BE SUPPLIED—WITH DROP FRAME AT REAR AS SHOWN IN ILLUSTRATION, OR STRAIGHT LOAD LINE. BOTTOM: PLAN VIEW OF 32-SEATER CHASSIS SHOWING GENERAL LAY-OUT.

# London Shipping and Forwarding Agents' Conference.

## Annual Dinner.

THE Annual Dinner of the London Shipping and Forwarding Agents' Conference was held at the Holborn Restaurant, London, on January 13th.

**MR. M. E. DUFFETT,** the President of the Conference, presided over a large and distinguished company.

### OUR OVERSEAS TRADE.

**SIR ALEXANDER GIBB, G.B.E., K.B.E., C.B.,** Chairman of the Council of the London Chamber of Commerce, proposing the toast of "Our Overseas Trade," said that his own view was that there was a great deal too much talk nowadays, and far too little doing. He had travelled in most parts of the world and wherever he went he saw a great many foreign boats and he would like to see fewer, and if our goods cost less he believed we should see a smaller number. Generally speaking, in our Colonies and Dominions, in South America, and the Far East, there was a general inclination to buy British goods whenever the inhabitants could, but they would not pay more than a certain price. The general feeling was that they would pay a little more, say, five per cent., but if the figure was beyond that, then we need not ask them to buy. After all, that was very reasonable business. Men were out to make a living and if they paid too much for what they bought they all knew what would be the end of that.

It was a vital mistake for manufacturing firms in this country to try and do away with their shipping agencies because if shipping agencies were any good, and they were or they would not exist and would not have been prosperous and efficient, they could save money for the manufacturers in the long run, and it was a great mistake for the manufacturers to try to save the shipping agent's already too meagre fees. (Hear, hear.)

Another point was—he might be wrong—but he had a very distinct feeling that our authorities, possibly quite subconsciously, were rather apt to back up the foreigner rather than our own people. There was a tendency to give the foreigner rights and privileges which we ourselves were not given, but perhaps that was the outcome of the kind-heartedness of the Britisher who said that the foreigner was a poor fellow and must be helped. He did not quite hold that view. Charity began at home and we should help our own people first.

Personally, he did not think it was any good to put our trade and our trust in politicians. The modern politician—he personally had no politics (laughter)—to whatever party he belonged, reminded him very strongly of one of his fellow countrymen, a Scotsman, and a religious old gentleman, who went to kirk and was so moved by the sermon that he proceeded to empty his neighbour's pocket into the plate. (Laughter.) That seemed to be the policy of our politicians, but if we had to empty our pockets we would rather empty them ourselves. (Applause.)

**ALDERMAN SIR CHARLES BATHO, BART.,** ex-Lord Mayor of London, responding, said that all realised to the full the difficult times in which we were living and no one more so than those connected with the shipping and forwarding agents business and that of shipping generally. Speaking as Alderman of the Ward of the City of London, which was looked upon at the Guildhall as being the shipping Ward, and rightly so—Aldgate—he knew, to the cost of the shipping and forwarding agents and also to his own cost, the difficult state, not only of trade in general, but of our overseas trade.

In these days when commerce and industry were confronted with so many embarrassing problems it was not an easy task he had to perform that night.

Our country was weighed down by taxation and unparalleled unemployment; was paying its debts and itself receiving practically no payments, and, added to that, our import and export trade had declined by many millions of pounds.

He hoped he would not be looked upon as a dismal Jimmie, but our position to-day was truly sad. But there were two factors which, in his humble opinion, must not be lost sight of in the future. The first was the exploitation of our Imperial possibilities, and the second, to look after our own interests as a nation.

The Corporation of which he had the honour and privilege of being a member, knew no politics, and difficult though it was for him to speak on his subject without getting into range of party politics, the fact remained that our commerce and industry, in important matters, had been made too much a political question in the last few years.

But in this good old country of ours were we without hope—No. Possibly he was one of those misguided individuals who believed in the old saying that it is a long lane that has no turning. There was another very simple word in the English language—"Confidence." We must have confidence regarding our overseas trade, confidence not only in ourselves but in those who came so closely into touch with shipping including the shipping and forwarding agents.

He had no sympathy with those who said that the interests of the employers were not bound up with those of the employees. (Applause.) Those living in the City of London, the greatest city in the world, and he believed it would always be so, had no faith in such opinions as that. (Applause.)

There was the question of those who went out to represent this country overseas and in our Dominions, and in this connection his opinion was that a mistake was made by our manufacturers. They had excellent men, fully qualified to sell the articles placed at their disposal, and the price might be right, but the men were often sent forth and the ship spoilt for a pennyworth of paint by reason of the fact that they had not sufficient financial backing to carry on their good work.

**MR. P. R. TURNER,** President of the London Cartage and Haulage Contractors' Association, proposed the toast of the London Shipping and Forwarding Agents' Conference.

He said that he was very glad to be present for two reasons. The first was that he felt that the invitation from the Conference was a graceful compliment to the haulage contractors of London whom he had the honour to represent, and, secondly, because it gave him an opportunity of saying a few words to them. He would be brief as he could assure them that haulage contractors were nervous by nature. (Laughter.)

As a trade, the haulage contractors suffered from a plethora of political interference. They were subjected to laws, rules and regulations, and he could assure them that the regulations which were now in the boiling were far worse than anything which had gone before. At the present time over 100 regulations were just being hatched and many more were going to follow.

He had been reading the final report of the Royal Commission on Transport in which the Commissioners stated that they saw no reason why heavy lorries should not pay £120 a year in taxation. He could assure the Shipping Agents that if that was all the taxation heavy lorries had to pay to-day, the haulage contractors would be very happy. The average taxation of a heavy lorry in this country was in excess of £200 per annum.

The haulage contractors had realised the value of organisation and its benefits. They had been able to speak with one voice to Government departments, and with regard to the regulations about to be promulgated, some of the haulage contractors had spent about a fortnight in the last two months at the Ministry of Transport and had been able to obtain many alterations to the regulations and some deletions. (Loud applause.) So far as the London Shipping and Forwarding Agents' Conference was concerned he was sure they must have had the same experience of organisation and as a body they could discuss joint difficulties and speak with one voice to, he presumed, the Board of Trade and other public departments, and no doubt they found it to be of the utmost value.

He was glad to be able to testify to the happy relationship that existed between the Shipping and Forwarding Agents and the haulage contractors. The haulage contractors had only one fault to find, and that was they

Digitized by Google

sometimes felt that the Shipping and Forwarding Agents did not pay them quite enough for the services they rendered so magnificently. (Loud laughter.)

REPLY BY THE CHAIRMAN.

**MR. M. E. DUFFETT** (President of the Conference and Vice-Chairman of the British Association of Shipping and Forwarding Agents) was received with enthusiasm when he rose to reply to the toast.

He thanked Mr. Turner for the very kind way in which he had proposed the toast of the Conference and said that as President of a kindred Association Mr. Turner knew very well the difficulties and trials under which members of both organisations laboured and consequently was able to sympathise with the shipping agents to the full and he would like to say how much the London Shipping and Forwarding Agents' Conference appreciated Mr. Turner's presence with them that evening, representing as he did an Association with which members of the Conference were so closely in touch. (Applause.) During the past year they had in common with all other trades suffered from the extreme trade depression which had affected the whole world and although he had had the honour of acting as President of the Conference for the last ten years and had at times from that chair to refer to the question of bad trade he had never had to do so at a time when conditions were more difficult. He did think, however, and hoped, that we were now at the bottom, and there did appear to him to be an undercurrent indicating that in the near future there would be some reaction. He had no doubt that once the upward tendency developed we should have a slow but steady return to prosperity. At the same time there could be no doubt that all must recognise that economy must be the order of the day and although unfortunately that example was not set us by those in high places we should nevertheless on our side do our part to that end.

The trade of this country had to compete very severely with other nations, and no one knew better than the Forwarding and Shipping Agents that in many cases costs of transport played as important a part as the actual cost of the goods and in some instances an even more important part, and, well as all present knew it they would forgive him for pointing out how necessary it was that the costs of transport should be watched very carefully and reduced where possible to a minimum.

It was up to the Forwarding and Shipping Agent as the expert in transport, and as one whose business it was to combine the various sections of transport into one whole, to see that he so arranged matters that the various links in the chain, i.e., railway charges, cartage, dock charges, insurance and freight were so economically combined and interwoven that the merchant or shipper had the fullest advantage of the lowest rates, and thus might he learn how unwise he was to attempt to make his own individual arrangements for each separate service, and by so doing place himself at a disadvantage in comparison with his foreign rivals.

In close touch as were the Shipping and Forwarding Agents with such organisations as that of which Mr. Turner was President, the Shipping Agents should by collaboration, and without detriment to the interests of the individual trades, be able to assist development and secure more business for members of kindred associations as well as for themselves.

In previous years he had made a report on the year's working, but as it was now the custom of the Conference to issue an Annual Report upon their deliberations and this year's report would shortly be in print, he did not propose taking up time that evening by referring to what the Conference had done, except to say that during 1930 their activities had been very considerable and far reaching and in some cases international, and their accomplishments had been such that their existence had been more fully justified than ever before.

Might he take that opportunity, on behalf of the Conference, of congratulating their old and esteemed friend, if he might so refer to him, Sir D. J. Owen, on the honour which had been recently conferred upon him by H.M. The King (loud applause); it was particularly gratifying to members of the Conference and to himself personally. He thought he was right when he said that since Sir D. J. Owen came to London he had honoured the Conference with his presence each year at their Annual Dinner. Sir D. J. Owen was a gentleman from whom they got not perhaps all they wanted but always the greatest consideration and in cases where there was any hardship or, as sometimes happened, any injustice, or where they could point out to him any means whereby the trade of the Port of London could be developed they were always sure of receiving from him a kindly hearing and courteous assistance. (Applause.)

He would like to record again the friendly relations which existed between the Conference and H.M. Customs, railway companies, the Port Authority, steamship companies and their allied trade associations, all of whom were represented that evening. (Applause.)

Doubtless they all had in mind the difficulties they would have to face in the near future under the Road Traffic Act, but he had no doubt they would with patience overcome those difficulties and who could say that after all it might in the outcome enable them to make another honest penny whilst helping the needs of the community at large.

He thanked the Council and the several sections of the Conference for their zeal and untiring work in dealing with the various questions which arose from time to time. Without such effort the Conference could not continue to be the power it was. (Loud applause.)

**MR. J. B. TAYLOR** proposed the toast of "Our Guests," and in the course of his remarks said that the Shipping and Forwarding Agents were enabled, through the collaboration, inspiration and help which they received from their guests, to go forward, and, perhaps, to contribute something worth while to the great work they were all engaged in, namely, interchange of commodities.

**MR. FRANCIS E. POWELL**, President of the American Chamber of Commerce, responded in a witty and humorous speech which evoked much applause.

**MR. A. W. HEARD**, Chairman of the British Association of Shipping and Forwarding Agents, who also responded, said that he had observed that in each speech delivered that evening a kind word had been said for the London Shipping and Forwarding Agents' Conference, and he took it that those welcome remarks applied also to the British Association of Shipping and Forwarding Agents which he had the honour to represent that evening, because the London Conference and the national body worked together very closely, and only that afternoon he had had the opportunity of thanking the London Conference very cordially for all they had done during the past year to help the National body to go forward in its efforts on behalf of the Shipping and Forwarding Agents of the country.

Also he had observed that the speeches struck a distinct note with regard to politics, and generally speaking the tone was "We have no use for politics." Taxation and unemployment had been subjects touched upon; as well as the sad position of the public purse. They were told to go ahead with confidence. He never knew a Britisher who did not go ahead with confidence. (Hear, hear.) But at the present moment he really thought they were up against a brick wall, and the question was, what were they going to do about it.

We were in the hands of political jugglers, and the time had come when the organisations of this country already powerful bodies, must make themselves more powerful. The time had come when we must see to it that something happened to the political atmosphere which was dragging business down until shortly they would come to the bottomless pit. As to the economic position —it seemed to be like a huge water cistern full of holes and with the water pouring out. Their Chairman had referred to the question of bringing down the costs of transport—how could they do that when transport employees worked three days a week and earned Five Pounds, and then went home for the remainder of the week and drew the dole for themselves and their families.

It seemed to him that on one fine day they would have to consider what was going to happen with regard to our political institutions. If they were going to remain in the hands of political jugglers then Heaven help them. One day we should want a Mussolini to clean up things.

---

**New J.P.**—The name of Mr. Thomas Cameron, Superintendent at the L.N.E.R. Co.'s dock at Tyne Dock, has been added to the Commission of the Peace for South Shields.

**New Tug Boats for the L.N.E.R.** — The London and North Eastern Railway Company has placed an order with Messrs. Richard Dunston, Ltd., of Thorne, near Doncaster, for three new steel screw tug boats, each 60 feet long by 14 feet broad, for service at Grimsby Docks.

**Widening the Clyde.**—At a recent meeting of the Clyde Trustees it was announced that work is to be commenced shortly on the widening of portions of the river in readiness for the launch of the giant Cunard liner, the construction of which has already been started at the shipyard of Messrs. J. Brown & Co., Clydebank. The work is estimated to cost the Trust about £79,000, apart from the dredging of the river which will be necessary to float the liner.

# News from the Ports.

**Shipbuilding in 1930.**—The statistics of Tyne shipbuilding for 1930, at first sight, bear a cheerful aspect. The output exceeded that of 1929 by 71,800 tons, and the total tonnage was larger than since 1920. The present condition of the industry is, however, anything but satisfactory. Messrs. Swan, Hunter, and Wigham Richardson, Ltd., are again easily at the head of the Tyne yards for quantity of output and had a record output for all their yards, there and elsewhere. As compared with last year, the output of new tonnage on the Tees and at Hartlepool in 1930 shows a considerable falling off, and there was also an appreciably reduced output on the Wear.

**Liverpool Shipping and Forwarding Agents' Association.**—Mr. G. C. Horton, of Messrs. E. H. Mundy and Co. (Liverpool), Ltd., Royal Liver Buildings, Liverpool, has been re-elected Chairman of the Liverpool Shipping and Forwarding Agents' Association. Mr. W. R. Lloyd will also continue in office as Vice-Chairman. Liverpool agents are reminded that the annual dinner of the Association will be held on Saturday, 17th January. As the price of tickets has been reduced to 12s. 6d., it is hoped there will be a record attendance. The principal guests will be Mr. Howard G. Gillett, Parliamentary Secretary of the Board of Trade; Mr. P. Holland, American Consul and President of the Liverpool Consular Corps, and the Lord Mayor of Liverpool.

**Great Western Ports.** (Produced and published by H. N. Appleby, by arrangement with the Great Western Railway Company.) The 1931 issue of the "Great Western Ports" will prove as useful and popular as preceding issues. The Company have continued their progressive policy of providing new works and additional equipment at their Docks and ever since the amalgamation in 1922 of the South Wales dock-owning railway companies with the Great Western Company, that Company have spared no expense or effort in order to raise the efficiency of the docks to a high standard. This publication describes fully the activities at G.W.R. Ports. As usual there are some excellent illustrations and maps. The Company are at all times glad to assist manufacturers, exporters, etc., with information relative to charges for services rendered at the respective ports or any other particulars which would be of assistance in connection with the importation or exportation of oversea traffic. The headquarters of the Chief Docks Manager's Department are at Bute Docks, Cardiff.

**New Tyne Commissioner.** — Mr. Alfred Raynes, of Messrs. Steel and Raynes, Ltd., shipbrokers and coal exporters, Exchange Buildings, Quayside, Newcastle, has been elected without opposition a traders' representative on the Tyne Improvement Commission, a vacancy having been caused by Lord Kirkley's appointment as a life member.

THE ARRIVAL AT HAY'S WHARF, LONDON, OF DECORATED TUG AND BARGES BRINGING REPRESENTATIVE CARGOES OF EMPIRE BUTTER.

**Opening of the Empire Butter Season.**—On Tuesday, December 16th last, the Lord Mayor of London (Sir Phené Neal) accompanied by the Sheriffs, paid a State visit to Hay's Wharf, Tooley Street, to greet the arrival of consignments of Empire butter from various ships, unloading lower down the river. The visit was arranged by a committee of Empire butter producers and importers to mark the opening of the new Empire butter season. The season will be a remarkable one, inasmuch as the output of the chief butter-producing Dominions, New Zealand and Australia, will undoubtedly reach record figures, largely due to the coming into full production of the lands upon which thousands of ex-Service men of the Home and Empire Forces were settled after the War. A fleet of ships conveying the early cargoes is now on its way to this country, and between now and the end of February—the peak months of the season—the arrivals will average 4,500 tons a week. By the end of the season the total imports are expected to reach the remarkable figure of 140,000 tons—a truly magnificent feat on the part of the Dominions.

**New Resident Engineer.**—Mr. F. McMillan, A.M.I.C.E., has been appointed by the River Wear Commissioners to be Resident Engineer at the South Docks, Sunderland, in place of Mr. C. M. Marsh, appointed Deputy Engineer and General Manager of the Weaver Navigation Authority, Cheshire. Mr. McMillan is a Sunderland man and was formerly on the Engineers' Staff of the Wear Commission; he recently returned to England from India.

**Looking Backwards—and Forward.**—Major J. A. Eckes, of Messrs. Langstaff, Erembert and Co., shipping and forwarding agents, who is Chairman of Liverpool Chamber of Commerce, speaking at Liverpool on December 30th, said 1930 had been a calamitous year—a year of monotonous depression in trade unprecedented in the memory of anyone. He viewed 1931 with the profound anxiety which comes of uncertainty. It would be equally foolish to assume the role of optimist as that of pessimist. The true attitude is one of reason between the two extremes. The position should be faced fearlessly and with that determination which discounts emotional alarm and defeatism. It had become clear that the trade position would not right itself but would require the maximum determination and application to work on the part of everyone. The ruthless exercise of economy in the management of the affairs of the nation is the master key to the capability of the country to win back its proper share of world trade and prosperity.

**Imports and Exports at Cork.** — According to the annual report of the Cork Chamber of Commerce, the trade passing through the port of Cork had increased considerably during the year. For the year ended 31st July, 1930, there were substantial increases in both exports and imports at Cork compared with those of the previous year. Exports of merchandise had increased during 1929-30 from 86,000 tons to 121,000 tons, and imports of merchandise had increased from 815,000 tons to 906,000 tons. Imports of loads of timber had increased from 28,000 to 34,000, and imports of goods not classified by weight went up from 5,000 to 7,000.

Digitized by Google

**Shipowner Chairman of Dock Board.**—Mr. Richard D. Holt, Chairman of Messrs. Richard Holt and Co., steamship owners, has been elected Chairman of the Mersey Docks and Harbour Board for the ensuing year.

**Southampton Docks.** — Shipping trade at the docks during the past year was affected, in common with other great ports of the United Kingdom, by the severe depression in trade generally. In spite of these extremely adverse conditions, however, the tonnage of shipping using the docks again reached the record figure of 34,000,000 tons attained in the previous year. Whilst the general import trade was well maintained an appreciable diminution of export freight, amounting to 20 per cent. was noticeable. A shrinkage of approximately 6 per cent. in the ocean passenger traffic was due almost entirely to the slump in North Atlantic passenger movements. On the other hand a record number of cross-Channel passengers were dealt with so that in the aggregate the passenger totals were the highest ever reached, setting up a new record for the Port in this respect. The placing of the contract for the construction of the gigantic new 73,000 tons Cunarder has been followed with great interest in local circles for the Southern Railway Company as dock owners at the Port have given an undertaking to provide a new graving dock of vast proportions at Southampton in readiness for the reception of the new liner when she is placed in commission towards the end of 1933. The dimensions of this new dry dock, which will be the largest of its type in the world, are to be: 1,200 feet long, 135 feet wide at entrance and 45 feet in depth. Work on the immense task of excavation, etc., will be commenced very shortly so that the dock may be completed in 1933. The second of the two new 20,000 ton motor-ships recently built for the Union-Castle Mail Company's mail service between Southampton and South Africa, the "Warwick Castle," is scheduled to make her maiden voyage from these docks on Friday, 30th January, thus following three months after the "Winchester Castle," the first of the two sister ships which was placed in service in October, 1930.

**Record Loading at a Scottish Port.**—The Port of Methil has long been noted for the quick turn round given to vessels, and another excellent performance of this nature falls to be recorded. On December 20th last, the s.s. "Porchester" commenced loading coal at 6 a.m., and finished at 1.20 p.m. having taken on board 3,354 tons of cargo and 75 tons of bunkers in 6 hours 20 minutes actual working time, representing an average of 542 tons per hour. For hoist loading this must surely be a record.

**Dundee Yards Record Output.**—The Caledon Shipbuilding and Engineering Co., Ltd., Dundee, have had a record tonnage output during 1930. Seven vessels with a gross tonnage of 41,037 were constructed in their Stannergate Yard. The next highest output by the company was in 1928, when eleven vessels were launched with a gross tonnage of 32,370. Four of the seven vessels launched during 1930 were for Swedish and Dutch owners, their tonnage being 35,501.

**Clyde Navigation Trust.**—Trade on the Clyde has been very quiet during the past two months which only reflects the depressed state of industry all over the country. This has been particularly felt in the export trade to Australia, cargoes having reached very small quantities, but this is mainly due to the restrictions by the Australian Government which have taken the form of tariffs on imports. It is confidently expected, however, that these restrictions will only prevail for a temporary period and eighteen months or two years will see them removed. In regard to imports the harbour has been very busy with grain cargoes and fruit cargoes. Although trade at the harbour is in a depressed state, those responsible for the administration of the port are keeping an eye to the future in pursuance of their trade development policy of the harbour. During the recent visit of Mr. G. W. Forbes, New Zealand, to the harbour, when he was the guest of the Clyde Trust, he paid a visit to the markets and met and conferred with traders interested in various commodities exported from New Zealand. On all hands it was impressed upon Mr. Forbes the enormous possibilities New Zealand has for developing trade in Scotland, and he undertook to follow up the matter on his return to New Zealand with a view to business being opened up with Scottish traders who have a long association with the requirements and possibilities of the various markets. It is anticipated that as a result of this conference more direct shipments between the two countries will take place during the ensuing year. Mr. Forbes was accompanied by Sir Thos. Wilford, High Commissioner for New Zealand. Mr. Scullen, Prime Minister of Australia, also spent a short time in Glasgow and visited various sections of the markets.

**Belfast Port.**—The Belfast port returns for 1930 are not yet complete, but up to 13th December the net register tonnage cleared had reached the figure of 3,562,408 tons, an increase of 280,608 tons over the corresponding period of the previous year. Goods traffic, however, shows a decline, the figure for eleven months of 1930 being 2,972,416 tons as compared with 3,103,138 tons in the same period of 1930, a decrease of 130,722 tons. This decrease is principally accounted for by a shortage of the imports of coal and a decline in the exports of potatoes. Over 500 men are employed on the construction of the new dock and the erection of the flour mill for Joseph Rank, Ltd., Hull.

**Manchester Ship Canal Traffic.**—From the Manchester Ship Canal Company, we have received the monthly approximate traffic return for November. This shows that the receipts were £100,484 compared with £111,761 in November, 1929—a decrease of £11,277. In summarising the total for the eleven months ending November 30th, we find the receipts were £1,176,573 compared with £1,302,441 for the corresponding period of 1929. It is pointed out by the company that the gross receipts to November 30th, 1930, have been affected by reductions in the Company's tolls arising out of the Derating Act; against the reduction in receipts, the Company have savings in local rates and from decreases in other expenditure to 30th November, which amount approximately to £40,000.

# Port of London Authority.

### Large Audiences in Canada Hear About the Port of London.

Reports from Canada show that Mr. A. E. Wildey, who has been touring the Dominion since the end of the summer as Public Relations Officer for the Port of London Authority, had a very warm welcome and successful trip. A leading article in "The Calgary Herald," after commenting upon Mr. Wildey's address on the development and trade of the Port of London, continues:—

> "In this as in many other enterprises, John Bull is proving that he is very wide awake in matters of trade. Proof of this fact may convince many Canadians that they have been labouring under a false impression concerning the Mother Country. This has been created largely through the steady circulation of the very misleading statement that the Englishman somehow manages to "muddle through." Mr. Wildey convinced his Calgary audience at any rate that the largest port in the world is a going concern, and fully abreast of the times in the installation of modern shipping facilities.
>
> "The men who control its destinies are displaying commendable enterprise in conveying this information to the British Dominions."

In Moose Jaw, Saskatchewan, Mr. Wildey had an audience of about 700, some of whom travelled a distance of 50 miles to hear his address and see a film of the Port's activities.

### Message From Canada to British Manufacturers and Merchants.

On his return to this country on December 20th from a three months' tour of the principal cities of Canada, Mr. A. E. Wildey, Public Relations Officer of the Port of London Authority, said that although all Canada's aspirations at the Imperial Conference had not been realised it was very apparent from his contact with some of the leading business men of Canada that there was not the least sign of ill-will. In fact, there remains a most marked desire on the part of Canada to increase trade relations with the Old Country. The Imperial spirit was never keener and he had been urged to take back a message to Britain that Canada would welcome more British goods if our manufacturers would adapt themselves more to the special requirements of the Canadian Markets. Mr. Wildey was also repeatedly requested to tell the Old Country that Canada wanted more branches of British firms and more British capital to develop her resources.

* * * °

### The Port of London Commences the New Year Well With 1,100,000 Tons of Shipping.

During the week ended January 2nd, 1,223 vessels, representing 1,100,679 net register tons, used the Port of London. This total has only once been exceeded, viz., during the week ended 11th August, 1930, when 1,124,404 net register tons of shipping entered and left the Port.

# Co-ordination and Development of Transport.

## Final Report of Royal Commission.

(*Continued from page* 140.)

Although we have no doubt that there are many firms to whom this criticism is not applicable, we cannot but feel that there are others whose profits, if there be any, represent to a considerable extent the difference, expressed in terms of money, between the wages paid and the conditions obtaining, and the wages which should be paid and the conditions which should obtain, if proper standards were maintained. Improvements in these directions will go far to weed out the less desirable operators and to place the industry on a sounder basis by removing the element of uneconomic operation which undoubtedly exists. Section 93 of the Road Traffic Act provides for the application of the "Fair Wages Clause" to persons employed in connection with the operation of public service vehicles. We recommend that the application of this Section should be extended to include persons employed in connection with the licensed vehicles of road hauliers.

### Fees for Licences.

The Commissioners suggest that the fees for licences issued to road hauliers should be £1 per vehicle.

### Identification Marks.

Each vehicle so licensed should have fixed to it a plate (similar to that carried by hackney carriages) or some other sign or device whereby it can be readily identified as a licensed vehicle.

### Clearing Houses.

The general feeling of the Commissioners is that when once the industry has been placed on a more stable footing, it should itself organise its own Clearing Houses and not, as at present, leave this part of its business to the activities of others.

## TRAMWAYS AND TRACKLESS TROLLEYS.

The Commissioners' considered view is that tramways, if not an obsolete form of transport, are at all events in a state of obsolescence, and cause much unnecessary congestion and considerable unnecessary danger to the public. They recommend (*a*) that no additional tramways should be constructed, and (*b*) that, though no definite time limit can be laid down, they should gradually disappear and give place to other forms of transport. The substitution of trackless trolley vehicles may ultimately prove to be the best solution in certain cases (or at all events it may form an economical transition from the tramcar to the motor omnibus).

## CANALS AND INLAND WATERWAYS.

The Commissioners are of the opinion that certain canals still possess considerable value as a means of transport, and that, properly rationalised and developed, they can be made to render much useful service to the community in the future. They understand that the Grand Union Canal Company contemplate a large programme of reconstruction involving an early expenditure approaching one million pounds. The Commissioners think that work of this nature will, in certain cases, provide suitable work for the unemployed and, at the same time, will be of national benefit.

## HARBOURS, Ddocks AND COASTWISE SHIPPING.

With minor exceptions, the harbours of Great Britain are in the hands of (*a*) local commissions or trusts, not working for profit, established under statutory authority, or (*b*) municipal authorities, or (*c*) railway companies, or (*d*) harbour companies or individuals. The principal commercial harbours are under trusts or railway companies. The efficiency of many of the undertakings controlled by Public Trusts cannot be denied. The same remark applies in no less degree to many of the municipally-owned and railway-owned undertakings. On the other hand, a number of the smaller ports have been allowed to fall into a state of decay. The decline of these ports appears to be due in a large measure to economic factors over which the individual undertakers had no control.

The fact that, as nearly half the population of Great Britain is concentrated near the large ports, a considerable proportion of the traffic has to be hauled for short distances only and can often be more conveniently and economically conveyed by road than by rail, renders the question of adequate road access to the ports of constantly increasing importance. We recommend that special attention should be given to the matter by the Ministry of Transport, and that in future road construction programmes the requirements of harbour areas should receive a prominent place.

The Commissioners have devoted no little attention to the subject of the ownership of harbours—particularly by railway companies. They have very carefully considered the evidence, and are definitely of opinion that, in principle, it is undesirable that one form of transport should own docks and harbours to which access is essential by other means of transport. They are further of opinion that the best kind of authority to own docks and harbours is a Public Trust. Moreover, it would appear to be greatly to the public interest that such Trusts should not be confined to single ports, but should control all the harbours in a particular district. When, however, they consider the character of the great majority of the railway-owned docks and harbours, they are not at all certain that it would be to the advantage of the public that they should be transferred from their present ownership, which in some cases only dates from the passing of the Railways Act. The only two important ports doing a general business which are railway-owned are Southampton and Hull, and with regard to the former the Commissioners believe its wonderful development in recent years has been largely due to the enterprise of the London and South Western (now Southern) Railway.

### Coastwise Shipping.

The Commissioners state that from the point of view of transport it is impossible to dissociate coastwise shipping and ports, since the latter form the link between transport by sea and transport by land. The evidence which they received regarding ports shows that in many cases the ports most used by and most useful to coastwise are in a state of decay. On these facts the Commissioners can reach but one conclusion, namely, that the first step to be taken to assist coastwise is that of improvement of the ports used by coasting vessels. They realise only too well the effect of the present trade depression on transport of all kinds, but are confident that this state is temporary only. To make ready, therefore, for the increased trade which they anticipate, the Commissioners feel that attention should be given to the ports so as to prepare and fit them for the part they will have to play.

## THE CO-ORDINATION OF TRANSPORT.

Coming to the question of co-ordination, the Commissioners say that here they find themselves confronted with very great difficulties. Co-ordination of the traffic of a particular form of transport is comparatively easy.

No doubt if a state of affairs could be reached whereby every passenger travelled, and every ounce of goods was consigned by the most economical route and form of transport, many of our present transport difficulties would disappear. But, as things are to-day, is such a state of affairs or even any approach to it practicable? Who is to decide what rail services are desirable and what amount of coastwise shipping, or what goods should in the national interest be sent by rail, road, canal or ship? To propound the question is sufficient to bring home the immense difficulty which it involves. The Commissioners have set out fully the extreme difficulty of devising measures for the co-ordination of goods services on the roads alone.

The Commissioners state they have given the most serious and anxious thought to the whole question, taking into account not merely the roads but all the other means of transport, and confess that for the present they can see no positive solution.

Under existing circumstances, any attempt at compulsion or coercion would, they believe, be a great mistake and would be strongly objected to, not only by the transport agencies but also by the traders, and any such attempt would probably prove to be quite ineffective in practice.

The Commissioners think, however, that the measures they have already recommended for the improvement of the various forms of transport will go far to make their co-ordinated working more easy to accomplish in the future.

## AN ADVISORY COUNCIL ON TRANSPORT.

The Commissioners consider that the Ministry of Transport should keep under constant observation the general trend of development in transport so that progress may be guided and assisted on lines calculated to produce the greatest benefit to the community as a whole.

Because of the continually changing nature of conditions and in order that the Minister may have at his disposal the best advice available, the Commissioners recommend the appointment of a permanent Advisory Council on Transport.

The principal duty of this Advisory Council should be to study transport problems—and to advise the Minister as to the action which he might usefully take to promote the co-ordination, improvement and development of transport

Digitized by Google

generally, and the Council should be in the closest touch with the Area Traffic Commissioners.

The Commissioners feel that it would be wise to limit the members of the Advisory Council to a small number, say, not more than twelve and the individual members need not necessarily be identified with any particular form of transport.

Looking to the future, the Commissioners say that the nationalization of the railways has been advocated by several Witnesses; but the nationalization of the railways alone—leaving other forms of transport in other hands—would certainly not produce any real co-ordination of transport. It appears to the Commissioners that without unification—however it may be accomplished—no attempt to bring about complete co-ordination would be successful.

The Commissioners then proceed to deal with the question of how unification of the various forms of transport (excluding private motor cars and goods vehicles owned and operated by business firms for their own purposes) could be accomplished and what form it should take. They refer to four different methods which suggest themselves, viz., (i) nationalization, (ii) rationalization, (iii) a combination of both of these, and (iv) the formation of a Public Trust.

After discussing these methods the Commissioners state it is impossible for them to express any definite preference, since they have no experience on a large enough scale to guide them, though they cannot help observing that where anything of the kind has been attempted in this country within recent years, the Public Trust system appears usually to have been adopted. The sole exception is the Railways Act of 1921, which left the railways in private ownership.

The Commissioners do not feel that it is possible for them as a Commission to make any definite recommendations on the subject for two reasons. In the first place, the changes necessary would be of such magnitude, involving financial operations on a very great scale, that they do not consider that they could in any case be carried out immediately. In the second place, although they were able to reach unanimous decisions on all the points dealt with in their First and Second Reports, and with regard to all but two of the recommendations they have made so far in this their Final Report, they find it impossible to come to any unanimous decision on the far larger questions referred to above.

### RESERVATIONS.

There is a reservation to the report by Sir William G. Lobjoit, O.B.E., who finds himself unable to concur in the recommendation for the licensing of road hauliers. He believes that lack of organisation in the industry is much exaggerated, and that if it exists, the proposal for licensing is not calculated to remedy it. There is no reason specially to licence vehicles owned by road hauliers in order to secure that their degree of mechanical fitness will conform to a certain standard as goods vehicles will be sufficiently regulated under the provisions of the Road Traffic Act, and the Regulations to be made thereunder so far as mechanical fitness is concerned. He feels certain that no responsible operators in the road motor transport industry would wish to put any obstacle in the way of wages and conditions of labour being put upon a humane and satisfactory basis, but it has been found practically impossible to impose conditions upon small firms and owner drivers, and unless these can be brought within the proposed regulation well-organised firms who carry out the conditions are placed at a disadvantage.

There is a further reservation by Sir William Lobjoit and Major H. E. Crawfurd, A.F.C., who are unable to agree with the conclusions of the other members of the Commission regarding the undesirability of capitalising the Road Fund. They believe the proposal should not be dismissed from all consideration.

There is also an interesting memorandum by Major Crawfurd on "The Progressive Reconstruction of Built-up Areas."

There are "additional recommendations" by Sir Robert Donald, G.B.E., Mr. F. W. Galton and Mr. William Leach, M.P., regarding the co-ordination and unification of transport. They are in agreement with the recommendations which the Report contains but desire to explore further the main problem. They recommend "a real policy of rationalisation through the purchase of the properties of the railway companies, of the motor transport services and of such canals as may be deemed to be essential parts of a national scheme, and the creation of a National Transport Trust to which should be delegated by the State the duty of managing on commercial lines the unified undertakings, and that from now onwards the policy of the State should be directed towards that objective." Under the plan which they recommend Great Britain would be the first to rationalise completely all its transport facilities and by the economical utilisation of these facilities would be able to convey passengers and goods for short and long distances at lower rates than any country in the world, without loss to the State and with incalculable benefit to industry and commerce.

# Hull Traffic Association.

## The Technique of Shipping and Forwarding.

IN his address to the Hull Traffic Association, Mr. S. Leslie Jude, secretary of the Liverpool Shipping and Forwarding Agents' Association whose subject was "Shipping and Forwarding at Liverpool" suggested the consideration of two points with regard to shipping agency work:—

(1) Should steamship companies and railway companies carry out shipping and forwarding agents' work, and if so, under what terms?

(2) Should steamship companies have forwarding Departments?

"It may be argued that both steamship companies and railway companies should confine themselves to the actual carriage of the goods, leaving the other incidentals such as passing of customs entry, paying dues, consular work, etc., to shipping and forwarding agents.

"But even assuming both shipping companies and railway companies are perfectly justified in doing this work, then the departments concerned should be run on an economic basis, and their charges fixed on an economic scale. It is manifestly unfair for shipping and railway companies to run their forwarding departments purely as an adjunct to the freight department without any concern to make it pay its way."

After explaining the function and activities of the shipping and forwarding agent, Mr. Jude said that as the representative of the exporter and of the importer, the agent was usually on far more intimate terms with merchants and manufacturers than steamship companies and carriers. There might be people who still question his necessity, but the close and unprejudiced interest taken by the agent in his client's welfare, his knowledge of the constant and inevitable changes in the conditions of the port and port services and consular regulations, the necessity of freedom of choice of routes and lines, and the economy effected by means of grouping consignments, all demonstrate the need of the shipping and forwarding agent.

The Council of the Liverpool Shipping and Forwarding Agents' Association met monthly at least, and a summarised report of its labours is sent each month to every member of the Association. This has been very warmly welcomed by the members as is evidenced by the keen interest shown in these monthly circulars and the numerous inquiries made regarding the matter contained therein. The Association not only acts on behalf of its members with outside companies or bodies, but as mediator between members on points of dispute.

A description was given of the procedure followed at the port of Liverpool in connection with the handling of cargo discharged from or loaded into vessels under the following heads:—1. Goods discharged from a vessel from a foreign or colonial port. 2. Goods discharged from coasting steamers. 3. Rail haulage or cartage and motor haulage. 4. Goods shipped outwards. 5. Charges payable. At Liverpool the shipper is responsible for the freightage of the bills of lading and the forwarding agent is particularly useful in seeing that the freight charged is the lowest rightly obtainable.

Interesting information was also given on the handling and transit of railway traffic at the Liverpool docks. "As a rule C.I.F. Liverpool," said Mr. Jude, "infers that the consignee is responsible for all charges at Liverpool, master porterage, port dues, etc. Ex quay means that the shipper or his agent is responsible for all charges incurred prior to 72 hours after landing, unless otherwise specially arranged. F.A.S. (Free alongside ship) includes all charges to steamers' quay and landing on the quay. F.O.B. is defined similar to F.A.S. with the addition of payment of dock and town dues and responsibility for the passing of customs entry. Concerning the question of responsibility whilst goods are on quay or in lighter awaiting shipment, the S.S. Cos. by the terms of their respective shipping note, disclaim all responsibility and it is difficult to always allocate responsibility between suppliers delivering F.O.B. and actual shippers.

# Air Transport Notes.

**Handley Page Bulletin.**—Very interesting details concerning the Handley Page type 42 machine have been published in the last two issues of *Handley Page Bulletin*, published by Handley Page, Ltd., Cricklewood, London, N.W.2. A fleet of eight of these four engined machines have been ordered by Imperial Airways and the first of these, the "Hannibal," has, in flying trials, fulfilled the highest hopes that were placed in the design. Two forms of the 42 have been ordered, the Eastern and the Western. The aeroplanes themselves are the same in both instances but the interior arrangements are different. The Eastern model is intended for use on the long mail routes in semi-tropical conditions and in it the passenger accommodation has been cut down to make room for a greater load of mails and freight. The Western model, which is intended for use on the London-Continental routes, carries forty passengers in a cabin designed with the greatest care to ensure that there shall be plenty of room and that as little as possible of the noise of the engines shall reach the occupants.

**Opening of North Africa Section of London-Cape Town Airway.**—The 2,670 miles North-Africa section of the Imperial Airways London-Cape Town air route will be opened for traffic on Thursday, March 5th, when an inaugural flight will be made from Cairo to Mwanza, Tanganyika Territory, the machine arriving at Mwanza on Monday, March 9th. The route from Cairo to Mwanza will be via Assiut, Luxor, Assouan, Wadi Haifa, Khartoum, Kosti, Malakal, Shambe, Juba, Butiaba, Port Bell, and Kisumu. The service will be operated weekly in each direction. The flight through from London to Mwanza will be accomplished in 9 days, as compared with 24 days by surface transport. A return flight from Mwanza will start on Tuesday, March 10th, arriving at Cairo on Saturday, March 14th, and reaching London on Wednesday, March 18th. The departure from London to establish the first connection at Cairo with this North-Africa section, will be on Saturday, February 28th. The total distance from London to Mwanza is 5,114 miles. Mails and freight will be carried through from London to Mwanza, but at first passengers will not be carried south of Khartoum. Prior to the putting on service of the new 38-passenger Handley Page air-liners, the European section of the route will be operated by machines of the Armstrong Siddeley "Argosy" type, while Short "Calcutta" flying boats will be used on the Mediterranean section. The North-Africa section between Cairo and Khartoum will be flown by "Argosies," and then "Calcutta" flying boats will carry on the route to Kisumu and Mwanza, along the Nile and African lakes. The aeroplanes required on the North-Africa section are to leave London on January 17th and 24th to take up their positions on the route. It is hoped that by May or June, 1931, the full 8,000 miles route from London to Cape Town will be in operation, bringing London within 11 days of Cape Town as compared with 17 days by surface transport. The main halting points on the route southward from Kisumu will be at Nairobi, Broken Hill, Salisbury, Bulawayo, Johannesburg, Kimberley, and Victoria West. Intermediate halts will also be made at other points. Colonel Sir Pierre van Ryneveld, Director of Air Services in South Africa, who, by courtesy of the Union Government, has been in England recently placing his knowledge of flying in Africa at the disposal of Imperial Airways in connection with the air-line from England to South Africa, summarising his impressions as to the scope for this trans-African air line, said that the first question was: "Could the 5,700 miles route be operated with a sufficient commercial reliability with such pilots, machines and organisation as Imperial Airways could draw upon?" He was convinced, from his knowledge of flying in Africa, that it could. The dependability and reserve of power of large multi-engined aircraft, such as Imperial Airways would employ, was one very important factor. Others were wireless direction and position finding, meteorological reports, and the aids to navigation which science could now give the airman. Special weather problems existed on various sections across Africa, but with the experience Imperial Airways could call upon to-day, as a result of 11 years' flying on the European and Indian routes, there should be no difficulty in overcoming them. He believed, too, that an African airway organised with the attention to every detail which Imperial Airways were bestowing on the task, should not only be far more comfortable for the traveller, but also definitely safer, than surface journeys across such virgin territories as lie along the route.

**Canadian Railways and Aviation.**—A Press Bulletin issued from the Office of the High Commissioner of Canada, The Canadian Building, Trafalgar Square, London, S.W.1, states that both of the Canadian transcontinental railways have now been authorised to participate with Western Canada Airways, Ltd., and the Aviation Corporation of Canada in the formation of a new organisation to be known as Canadian Airways, Ltd. The total authorised capital of Canadian Airways, Ltd., is to be 200,000 shares. The Canadian National Railway will purchase 10,000 shares in the new company, representing a total investment of about £50,000, and a similar interest is to be acquired by the Canadian Pacific Railway Company. The contribution of the railways thus amounts to £100,000, a relatively small initial investment indicating the interest of the large transportation concerns in the future of air navigation, and an intention to co-ordinate this development with the existing railway services. The President of Canadian Airways, Ltd., Mr. James A. Richardson, has been prominently identified with aviation development during the past three or four years, being the proprietor of Western Canada Airways, Ltd., an important organisation engaged in air transport throughout Western and Northern Canada. The Aviation Corporation of Canada, with which Mr. Richardson is believed to be also interested, operates in Eastern Canada. Sir Henry W. Thornton, President of the Canadian National Railways, and Mr. E. W. Beatty, K.C., President of the Canadian Pacific Railway Company, will become Vice-Presidents in the new commercial air enterprise, and there will be 13 Directors representative of the leading commercial and financial interests in Canada. The air services of the new organisation are to be operated in two sections, known as Eastern Canada Lines and Western Canada Lines. The airway companies included in the new merger carried 79 per cent. of the mail matter and 49 per cent. of the total freight transported by aeroplane in Canada last year. They have a paid-up capital of over £600,000.

**The Royal Aëronautical Society. Lecture Programme, 2nd Half of Session, 1931.**—January 8th, "Some Aspects of the Design and Construction of Sea-going Aircraft," Mr. A. Gouge, B.Sc., A.F.R.Ae.S. January 22nd, "Deck Flying," Sqdn. Ldr. W. R. D. Acland, D.F.C., A.F.C. January 29th, "Development and Construction of Sailplanes and Gliders," Herr A. Lippisch. February 12th, "Air Navigation," Captain N. Macmillan, M.C., A.F.C., A.F.R.Ae.S. (Joint Meeting with the Guild of Air Pilots and Air Navigators). February 26th, "Meteorological Aspects of Gliding and Soaring," Capt. F. Entwistle, B.Sc. (Joint Meeting with the British Gliding Association). March 19th, "Research in the Berlin Technische Hochschule," Dr. W. Hoff. April 16th, "Aircraft Noise," Dr. A. H. Davis. April 30th, "Aerodynamics of Sails," Dr. Manfred Curry. May 14th, "The Metal-Clad Airship," Mr. Carl Fritsche. All meetings will take place at the Royal Society of Arts, 18, John Street, Adelphi, W.C.2, at 6.30 p.m. The offices of the Society are at 7, Albemarle Street, Piccadilly, London, W.1.

**Booking Air Specials by Wireless from Mid-Atlantic.**—In order that Atlantic passengers approaching Europe from the United States should be able to book seats in air expresses outward bound from London, or charter special aeroplanes for urgent journeys, arrangements have just been completed between Imperial Airways and the White Star Line whereby the pursers on the ocean liners of this Company will be authorised to act as regular booking agents for Imperial Airways. This will mean that, at the request of any passenger on a liner bound for Europe, the purser will send a wireless message to the London Office of Imperial Airways, reserving accommodation for the passenger in an air express leaving on any specified date for some Continental city or along the airway to India; while the same facilities will apply to the airway between England and South Africa. A wireless reply confirming a reservation will be sent at once by Imperial Airways to the purser concerned, whereupon the latter will hand the passenger a voucher enabling him to obtain his air ticket when he arrives, say, at the London air station ready to embark for his aerial journey.

# Law Cases.

## COURT OF APPEAL.

### Motor Car Insurance Policy: Third Party Claims.

### ROGERSON v. SCOTTISH AUTOMOBILE AND GENERAL INSURANCE COMPANY, LIMITED.

(Before LORD JUSTICE SCRUTTON, LORD JUSTICE GREER, and LORD JUSTICE SLESSER.)

THE Court allowed this appeal by the defendants, the Scottish Automobile and General Insurance Company, Limited, from the judgment of Mr. Justice Roche, in an action brought against them by the plaintiff claiming a declaration that they were liable to indemnify him against any sums which he might have to pay in an action brought against him by a third party for damages in respect of a motor car accident. The judgment of Mr. Justice Roche was reported in *The Times* on July 17th, and 46 *The Times* L.R., 573.

The plaintiff, Mr. Rogerson, had been sued for damages in consequence of a motor car accident. He had insured with the defendants, Scottish Automobile and General Insurance Company, Limited, and he referred the claim to them. The defendants repudiated liability, and the plaintiff brought an action against them for damages for alleged breach of contract and for a declaration that they were liable to indemnify him for any sums which he might have to pay in the action which had been brought against him. By a policy dated May 23rd, 1928, renewed from time to time, the defendants contracted to indemnify the plaintiff against, *inter alia,*

> all sums which the assured (the plaintiff) shall become legally liable to pay as compensation for . . . . bodily injury . . . . caused to any person or persons by a motor car described in the schedule hereto . . . .

The car was thereinafter referred to as "the insured car." The policy further provided that

> this insurance shall cover the legal liability as aforesaid of the assured in respect of the use by the assured of any motor car (other than a hired car) provided that such car is at the time of the accident being used instead of the insured car.

On July 28th, 1929, while the plaintiff was using a Lancia car, an accident occurred which caused personal injuries to a third person. At the time of the accident the plaintiff was using a car which was not "the insured car" originally covered by the policy, but he contended that the car which he was using was one covered by the words in the policy "any car . . . . being used instead of the insured car."

Mr. Justice Roche held that, the two motor cars being of similar type, the plaintiff in fact used the new car "instead of" the old car, and that in those circumstances no term was to be implied in the policy that continued ownership of the car originally insured was necessary for the continuance of the defendants' liability and, therefore, the plaintiff was entitled to the declaration claimed.

The defendants appealed.

Mr. Rayner Goddard, K.C., and Mr. G. O. Slade appeared for the appellants; and Mr. Schiller, K.C., and Mr. N. R. Fox-Andrews for the respondent.

JUDGMENT.

Lord Justice Scrutton, in giving judgment, said that the point to be decided was a short one, but not an easy one. The respondent had sold the insured car and had bought a new one, and a collision happened while he was driving the new car at a time when he had ceased to have an interest in the insured car.

If an insured person had sold the insured car he could not expect that he could recover for loss or damage to it if at the time of the loss or damage he had ceased to have any insurable interest in it. Was there anything in the clause already referred to which departed from that general principle? He (the Lord Justice) had come to the conclusion, after carefully considering the matter, that the clause should be read as if, after the words "instead of the insured car," there should be a proviso that the insured person should at the time of the loss have an insurable interest in the insured car. He could not see how it could be said that a substituted car could be used in place of a car in which the insured person no longer had any insurable interest.

The parties in this case could not be said to have intended to depart from the cardinal principle of insurance law that a person cannot recover for a loss in respect of a subject matter in which he no longer had any insurable interest.

It was a difficult point, but Mr. Justice Roche had come to a wrong conclusion and the appeal would be allowed and judgment entered for the defendants, with costs.

Solicitors.—Messrs. Stanley Evans and Co.; Mr. William Charles Crocker. *The Times* Law Reports.

## ALLEGED DAMAGE TO FURNITURE.

AN interesting decision was given by Mr. Registrar Wickham, in the Shoreditch County Court, in a case in which Mr. Marks Griver, of Emma Street, Hackney Road, E., cabinet manufacturer, was the plaintiff, and the defendant Mr. A. J. Sully, of Dinmont Street, Hackney Road, E., a cartage contractor, the claim being for £2 damage alleged to have been done to goods collected from the plaintiff's factory by the defendant on June 17th. There was a counterclaim for 35s. for lorry hire.

Mr. Samuels, who appeared on behalf of the plaintiff, said that he was relying upon negligence, inasmuch as the goods were handed to the defendant in a perfect condition, and were returned damaged, which was *primas facie* evidence, he contended, that the defendant had been negligent in the handling of them.

Mr. Boyer, manager to the plaintiff, said they 'phoned for a lorry which arrived, and the carman was given oak bedroom furniture to be delivered all round London, including Walham Green, Wealdstone and Watford. One consignment was refused for some reason, and on it being handed back to the plaintiff, it was found to be damaged to the extent of the claim. One of their lads was sent to accompany the carman with the goods. Most of the furniture was put in canvas wrappings before it was sent away.

In cross examination, he said the work given out was quite simple for an ordinary cartage contractor to do in a day, and therefore he considered the charge excessive.

Albert Charles Barnard said he went with the van as the boy. When they arrived at Watford they ran out of petrol and were unable to get more, so they had to 'phone to the defendants who sent out another lorry with petrol. They eventually got back at 11.20 at night.

This was the case for the plaintiff, and Mr. Saville, for the defendant, submitted there was no case to answer.

Mr. Samuels however, said clearly there was a case to answer. Certain goods were given to the defendant to carry for the plaintiff, and as a carman and contractor he had got to take reasonable care of them. If any of the goods were returned damaged it was *prima facie* evidence of negligence, and it was for the defendant to prove that he took reasonable care. The plaintiff had proved that the goods had been returned in a damaged state, and that therefore reasonable care had not been taken. He submitted it was not for him to prove how the furniture got damaged; in fact he said, he did not see how he was going to prove it. He argued that the same liability was upon all cartage contractors who were not common carriers. If goods were handed to a servant of the defendant he had to take reasonable care, and he had not.

The Registrar in giving his decision said no case had been proved. No evidence, or he would rather say the absence of evidence compelled him to enter a non-suit and he would enter judgment for the defendant on the counterclaim for 34s.

## USING COMMERCIAL LORRIES FOR THE CONVEYANCE OF PASSENGERS.

IN a case heard in the District Court at Lisdoonvarna, County Clare, brought by a Civic Guard against John McInerney, of Aughnish, for having used for hackney purposes a motor lorry which had been licensed for commercial purposes only, the District Justice delivered an interesting and important decision.

In giving judgment, dismissing the case on the merits, the District Justice said that on the evidence he found that the defendant had put a number of seats into his lorry, and had carried passengers on an excursion in it. Defendant had sworn that none of the parties so carried as passengers had paid him. There were some points about the licensing of motor vehicles, which did not seem to be generally appreciated. When a person went to the offices of a County Council for a licence, he had to fill up a declaration giving full particulars of the vehicle for which the licence was required, and the purposes for which the vehicle was to be used. There were regulations affecting the position thus created. One provided that if a person having had a vehicle licensed for one purpose, and used it for another purpose, the vehicle there and then shall be deemed to be unlicensed. In such a case the proper charge against a defendant would be one of using a vehicle for which no licence is in force. In the present instance, however, the charge against defendant was for using for hackney purposes a vehicle with a commercial licence. According to the definition in the Act, a hackney vehicle was one used for hire or for payment. He found that no payment was made to the defendant, McInerney, by his passengers, and that, therefore, he could not hold that the lorry in question had been used as a hackney

Digitized by Google

vehicle within that definition. There was no offence disclosed on the summons against the defendant, and he dismissed the case on the merits.

The District Justice added that he realised the difficulty of proving payment in connection with charges of this kind, but there was a regulation which appeared to be very apposite. It provided that if a person altered a vehicle in such a way as to render inaccurate the particulars given by him in the declaration completed for the County Council at the time of the issue of the licence for the vehicle, and if he failed to notify the County Council of the alterations so made in the vehicle, he was guilty of an offence. That was what actually happened in the present case.

The District Justice concluded his observations by suggesting the advisability of having the regulations made in 1921, dealing with the registration of motor vehicles, distributed to the Civic Guards.

## ALLEGED SHORT DELIVERY OF ORANGES.

AN interesting action was decided by Judge Cluer, in the Shoreditch County Court, recently, the plaintiff being Edward Percival Crane, of 2, Churchill Road, Homerton, E., a motor driver, and he sued Messrs. De Groot Bros., Ltd., of 13, James Street, Covent Garden, W.C., fruit cartage contractors, to recover £7 10s., being one week's wages to October 4th, at £3 15s. a week, and a week in lieu of notice. There was a counterclaim for £6, being the value of six cases of oranges which it was alleged the plaintiff collected as the agent of the defendants, on September 27th, and did not deliver to the consignee.

Mr. Whitton appeared on behalf of the plaintiff, and Mr. Harwood, barrister, for the defendants.

Judge Cluer said he would like very much to know whether the defendants in their counterclaim were alleging that the oranges were stolen or lost, because if they were alleging it was stealing, they could not sue for them.

Mr. Harwood said that they were not alleging other than that they were lost.

The plaintiff then gave evidence, and said he had been eight to ten weeks in the defendants' employ, until September 30th, when defendants put him off for the Wednesday, Thursday and Friday. On the Friday he went to see the managing director, who said, he did not want him.

The plaintiff was cross-examined, and a notice was produced to him, but he said he had never seen it on the desk where he went to get his orders. He was simply told the wages a week, and nothing about the terms, and Judge Cluer pointed out to Mr. Harwood that they would have to tell the people they engaged, as they might not be able to see it or read it. The plaintiff added that Mr. De Groot never told him that he was engaged by the day, and liable to a day's notice at any time. His pay was really at the rate of 12s. 6d. per day, and sometimes he was stood off. On Saturday, September 27th, he was told to go to Victoria Docks, and pick up a load of 113 cases of oranges which he signed for. He took them to Spitalfields Market, where they were checked and tallied, and he was then told there were only 107, but he refused to take a receipt for that number.

In re-examination, he said he did not have a van boy with him, and he did not take the cases off the van, but six casual workers tucked then into the sale rooms.

Judge Cluer: Then it was very wrong, as they ought to have been checked in your presence.

For the defence, Mr. De Groot, managing director, gave evidence and said that at the end of the first week, plaintiff asked for a regular job, and he said to him, "You know the terms of the business. If the work is there you shall have it."

Mr. Harwood: It is a common custom, day to day?

Judge Cluer: Nothing of the kind. It is so long as there is work. The only trouble that I can see in this case is that these cases were not checked in at Spitalfields Market in front of the plaintiff.

Mr. Banfill, employed by the London Fruit Brokers Association, said it was up to him to check the number of these cases. He produced his tally-book, and said that 107 was all he saw taken off the van.

In cross-examination, he said that while the checking was going on, the carman was on the van, but he was not helping in the count. He agreed that he was liable to make mistakes like anyone else. The motor driver protested against the count, and they went in and counted them in bulk, and he, witness, decided there were only 107.

Judge Cluer, said that clearly the plaintiff was entitled to have the cases re-checked in his presence when there was a doubt. Also, he was entitled to be at work while there was work, and there was no evidence that there was no work on the Wednesday, Thursday and Friday. As there were days when he did not work, he thought he would reduce his claim to £3 3s. a week, so that with his week in lieu of notice, he would enter judgment for him for £6 6s. and costs. As to the counterclaim, that must fail, as if somebody counted them in, and said 107, whereas the motor driver said there should be 113, it should have been strictly proved there were only 107, and it certainly did not justify dismissal.

## CLAIM FOR HAULAGE.

IN the Shoreditch County Court before Judge Cluer, Jacob Questle, of 57, Gossett Street, Bethnal Green, E., a haulage contractor, sued A. C. Clark, of 21 and 36, Gibralter Walk, Bethnal Green, E., to recover £2 4s. for cartage work done. The defence was that Mr. Clark did not order the work to be carried out, and the person who did used his name.

The plaintiff gave evidence as to the order for the work to be carried out.

The defendant however said that the man who signed for having the work done was a Mr. Greenberg. The plaintiff sent him the receipts signed by Greenberg with the account and holding him liable, but he was not responsible, Greenberg had nothing to do with him, and was not his servant. He did polishing work for Greenberg, and on the Saturday that Greenberg had this lorry Greenberg should have come and paid him for polishing work, but he disappeared, and it took him three weeks to trace him. He agreed that he had ordered lorries from the plaintiff when he sent his boy with a written order, but he had nothing to do with the present order.

Judge Cluer said that under the circumstances he must find for the defendant, with costs, and added to the plaintiff "You will have to go to Greenberg for your money."

## A HINT TO FERRY AUTHORITIES.

A MOTOR lorry driver was summoned at Birkenhead on December 30th, for travelling on the Liverpool-Birkenhead ferry without a ticket.

It was alleged by the deputy town clerk of Birkenhead that on December 8th, defendant crossed over the goods ferry with a motor wagon. When challenged for his ticket he handed in a ticket which had three bars stamped on it, indicating that it was really issued on December 2nd, on which date also defendant had crossed the ferry, but had not handed in his ticket. The tickets that were issued on December 8th, bore only one bar.

Defendant said the ticket he bought at the ferry on December 8th, for 1s. 6d. for his empty vehicle was the ticket he gave to the collector. He had no other ticket in his pocket. He got to the top of the bridge before he was called back.

The chairman of the bench announced that the magistrates thought there was some element of doubt in this case and they should give defendant the benefit. This case, however, would not have taken so much time and trouble and would have been much clearer if these tickets had been properly dated by the ferries authorities.

# Motor Notes.

**Vacuum Servo Braking.**—We have received from the Westinghouse Brake & Saxby Signal Co., Ltd., 82 York Road, King's Cross, London, N.1, a most interesting brochure fully describing and illustrating the latest developments in vacuum braking. These brakes are so much in evidence on motor vehicles of practically all types, that it would certainly be advantageous for all users to write for a copy of the publication.

**Advertising Australia.**—Our photograph shows a 3-ton Guy lorry owned by Moyle & Adams, Ltd., of Smethwick. In this case it is being used by the firm for advertising

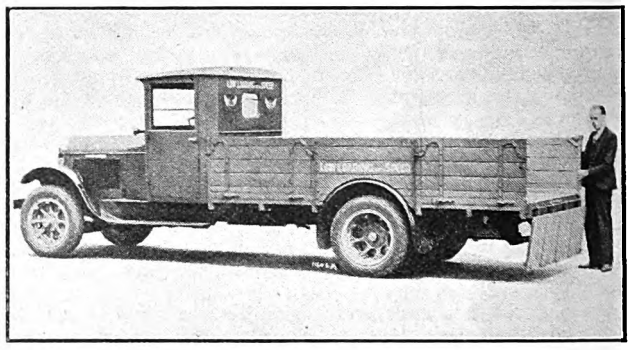
THE GUY 3-TONNER EQUIPPED TO DISPLAY AUSTRALIAN PRODUCTS.

Australian products as sold by them. Thus equipped, it has taken part in four hospital carnival processions taking first prize in each case.

**Vulcans for Furniture and Piano Transport.**—The two accompanying illustrations show 30 cwt. forward control chassis, one fitted with a van body intended for the transport of pianos, recently delivered to Boyd, Ltd., Holborn, by Fitch, McGillivray & Co., Ltd., London distributors for the Vulcan Motor & Engineering Co., Ltd., South-

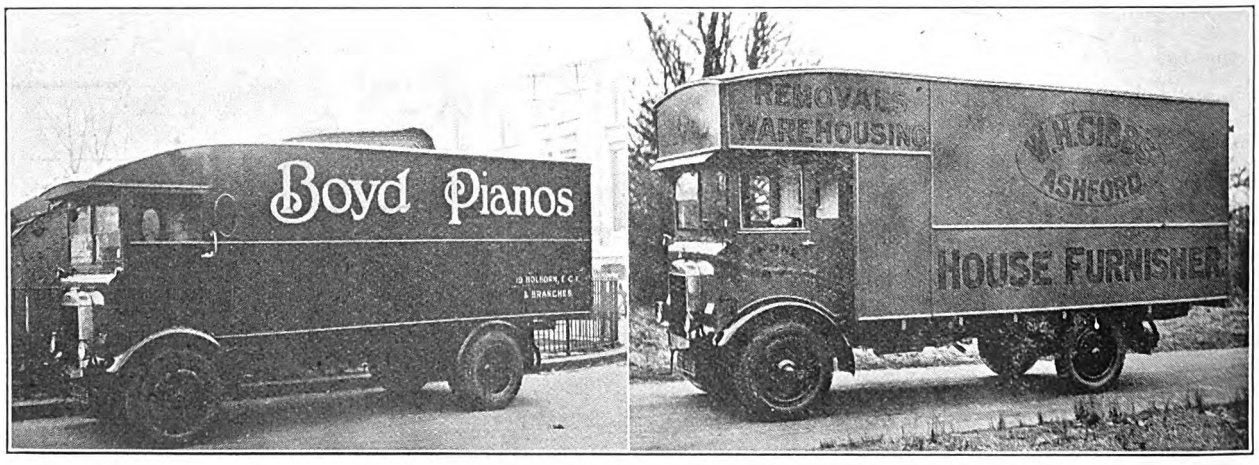
Messrs. Botten and Stewart have both been connected with De Dion Bouton in this country, respectively as Works Manager and Assistant Manager, for over 20 years and they are, therefore, closely acquainted with these well-known vehicles and have special knowledge of repairs and spare parts.

**The Reo Model FF Chassis.**—We are informed by Reo Motors (Britain), Ltd., Beavor Lane, King Street, Hammersmith, London, W.6, that this model has been made considerably heavier in construction and is now rated at 50 cwt. capacity. The wheels are shod with 32 in. by 6 in. 10 ply tyres with twin rears in place of the old 8 ply tyres. The price of the chassis is now £475. It is fitted with a Gold Crown Reo six-cylinder seven-bearing crank-



THE REO 2½-TON UTILITY LOW-LOADER.

shaft engine, with forced feed lubrication. The cylinder block is of chrome nickel and provided with the new type LO-EX (low expansion) piston. The chassis is upswept for low loading, the loading height being only 28 in. It has a four-speed gear box and three-quarter floating rear axle with heavy double Timken bearings. It has Meyers magazine oilers which oil the spring shackles as well as the spring leaves, also it has hydraulic four-wheel brakes.



TWO INTERESTING VULCAN VANS.

port. The other chassis is fitted with a furniture removing body and is the property of Mr. W. H. Gibbs, furniture remover, Ashford, Kent.

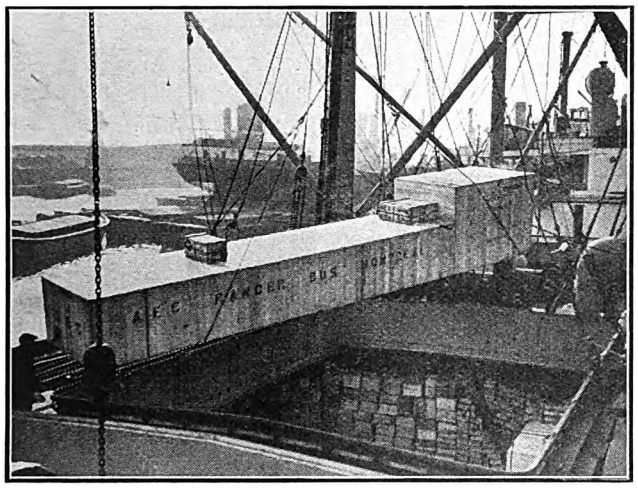
**De Dion Bouton's British Concessions.**—We are officially informed that Botten & Stewart, Ltd., High Road, East Finchley, London, have been appointed sole British Agents for Great Britain and the British Colonies for De Dion Bouton automobiles and commercial motor vehicles. An exclusive licence has also been granted to the same firm to manufacture De Dion chassis in England.

**An Interesting Commer Order.**—The Watford Corporation has recently ordered from Commer Cars, Ltd., Luton, through the firm's Dealer Organisation, a G2 40/50 cwt. chassis with hand operated end tipping body.

**A.E.C.'s for Montreal.**—In order to meet the requirements for motor vehicles the A.E.C. chief engineer visited the Dominion of Canada where he investigated the operating conditions in that country and ascertained the essential requirements of Canadian operators. Upon his return the Company set to work to produce a chassis incor-

Digitized by Google

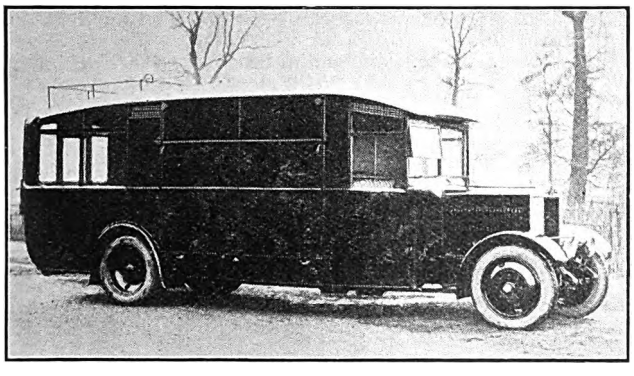
porating all the features investigations had shown as being necessary, and these were recently shipped to the Montreal Tramways Company by whom they are shortly to be placed in service. The model chosen is the A.E.C. driver-behind-engine "Ranger" fitted with 110 h.p. engine. In the case of the Canadian chassis, the normal wheelbase of 17 ft. has been increased to 19 ft. and the frame extended to give an overall length of 30 ft. The frame side members have been made of thicker material and reinforced over the wheel arches to allow for the heavier body construction of the country, and special road springs and 30 in. by 9 in. low pressure tyres fitted to take the bigger loads carried. To conform to the difficult rule of the road the steering, pedals and hand-brake have been mounted on the left side of the chassis. A new type front braking system embodying a separate compensated



AN A.E.C. "RANGER" CHASSIS FOR THE MONTREAL TRAMWAYS CO., EN ROUTE TO CANADA.

vacuum cylinder for each front wheel, has been incorporated together with the automatic coil ignition. Other important features are the fitting of extra large petrol tanks, front bumper bars, special wheels and studs in accordance with modern American standards, chromium plated radiator guards of the latest A.E.C. design and a new type facia board.

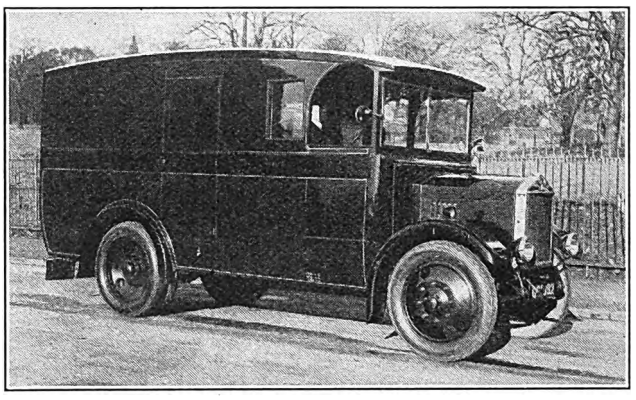
**W. & G. Horse Transport.**—The accompanying photograph shows a specially designed vehicle by W. & G. du Cros, Ltd., Acton, London, W.3, for the transport of horses. It is mounted on the firm's "M" type low-loader passenger chassis. This chassis has a loading line of 2 ft. 1 in., a wheelbase of 17 ft. or alternative 15 ft. 8½ in. The front wheel track is 5 ft. 8½ in. and the rear track 5 ft. 8 in. The overall length of the long wheel-



W. & G. VEHICLE FOR HORSE TRANSPORT.

base is 24 ft. 8¾ in. and of the short wheelbase model 23 ft. 5¼ in. The lengths from dash to end of frame for each model respectively are 19 ft. 8½ in. and 18 ft. 5 in. and from driver's seat to end of frame 16 ft. and 14 ft. 9 in. The chassis is fitted with a six-cylinder en bloc engine giving 40 b.h.p. at 1,000 r.p.m. and 76 b.h.p. at 2,600 r.p.m. Power is transmitted through a multiple disc clutch to a four-speed gear box and from thence by a two-piece cardan shaft to the worm driven rear axle. The wheels are detachable disc fitted with 36 by 6 tyres. Four-wheel brakes assisted by Dewandre servo are fitted as standard. The chassis price is £795 short wheelbase, or £810 long wheelbase.

**Recent Albion Deliveries.**—The Albion Motor Car Co., Ltd., Scotstoun, Glasgow, have sent us a number of photographs of vehicles they have recently delivered to customers, one being a 3-tonner supplied to T. Stevens, Ltd., builders, of London. The vehicle is fitted with a gantry for carrying long timber. Another is a 30 cwt. vehicle supplied to Lord Hothfield. Another has been shipped to H. Larcher & Son, Ltd., 45 Moor Street, Fitzroy, Victoria, Australia, for the transport of pasturized milk and cream. The fourth vehicle, which we illustrate, is a 30-cwt. bullion van supplied to the Union Bank of Scotland, Ltd. The machine is fitted with shelves on each side of the centre passage with two seats for attendants. Inside the van there is a door on either side so that the van need not be turned in the street in order to have the door next to the pavement when delivering to a bank. The walls of the van are lined with steel



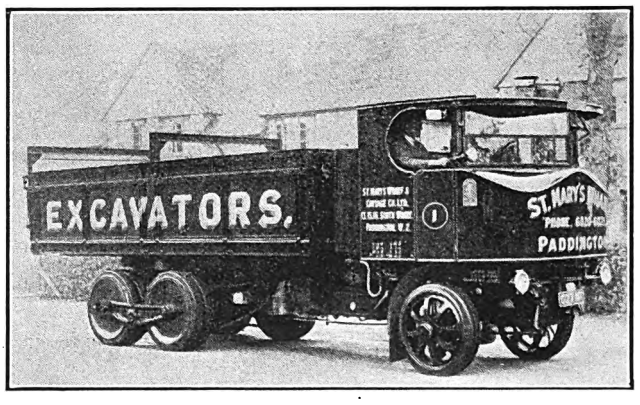
THE 20/36 H.P. 30-CWT. "ALBION" BULLION VAN FOR THE UNION BANK OF SCOTLAND, LTD.

and there are no running boards which might help to facilitate an attack.

**The Marquis of Bath Buys a Morris Commercial.**—Amongst recent orders received by Morris Commercial Cars, Ltd., Soho, Birmingham, is one from the Marquis of Bath, K.G., Longleat, Warminster, who has purchased a 30 cwt. Morris Commercial shooting lorry through Mr. Willcox of the Warminster Motor Co., Ltd., Warminster.

**A D.G.6 Sentinel for St. Mary's Wharf.**—Our photograph shows a Sentinel D.G.6 wagon recently supplied by the Sentinel Waggon Works, Ltd., Shrewsbury, to St. Mary's Wharf & Cartage Co., Ltd.

**A.E.C. Overseas Orders.**—The Associated Equipment Co., Ltd., Windmill Lane, Southall, Middlesex, state that the general trade depression has not so far affected them



A SENTINEL D.G.6 WAGON FOR ST. MARY'S WHARF & CARTAGE CO., LTD.

in the sale of their A.E.C. chassis abroad. They state that no doubt due to their progressive policy in designing models which conform to the special needs of overseas users, they have received orders from Denmark, Sweden, India, South America, Spain, Australia, Canada and South Africa. As the result of the recent demonstration of overseas type "Ranger" chassis in South Africa, several orders have been placed and the first of this type of chassis is now in service for the Bloemfontein Corporation. The chassis has been mounted with locally built front entrance bodies, accommodating 35/40 passengers.

# County Court Judgments.

THE following returns from the Registry of County Courts' Judgments, Whitehall, have been received relating to judgments entered up in the respective County Courts of England and Wales. Publication does not imply inability to pay. Many judgments may have been settled between the parties or paid. Judgments settled otherwise than through the Court may appear unless "satisfaction" is entered up within twenty-one days from judgment or allocatur. Registered judgments are not necessarily for debts. They may be for damages or otherwise, they may relate to actions *bona fide* contested between the parties, or they may be against defendants, liable in a representative capacity, and not personally; but no distinction is made on the register. Judgments are not returned to registry if satisfied in Court books within twenty-one days.

Objects: To acquire the business of a motor coach proprietor and dealer carried on by W. W. Manning at 62 Compton Road, Birkdale, as "W. Manning & Sons." The permanent directors are: W. W. Manning, T. N. Jefferson. Registered office: 62a Compton Road, Birkdale, Lancs.

**Ajax River Transport Company, Ltd.** (252,778).—Private company. Registered December 16th. Capital £1,000 in £1 shares. Objects: To acquire and hold ships and vessels, to employ the same for the conveyance of passengers, mails, livestock, meat, corn and other products and to carry on the business of shipowners and brokers, managers of shipping property, etc. The permanent governing directors are: P. J. Dawkins, F. E. Walker.

**Springfield Carriers, Ltd.** (252,788).—Private company. Registered December 16th. Capital £4,000 in £1 shares. Objects: To acquire the business of road transport contractors formerly carried on by the late R. H. Booker at 2 Great Marlborough Street, Whitworth Street West, Manchester, and at 12 Union Street, Liverpool, as the Springfield Motor Haulage Co. The directors are: Mrs. Isabel Booker (chairman), R. H. Booker, Hezekiah Meadowcroft. The two first named are permanent. Registered office: 2, Great Marlborough Street, Whitworth Street West, Manchester.

**S. Bayley & Son, Ltd.** (252,785).—Private company. Registered December 16th. Capital £2,000 in £1 shares. Objects: To carry on the business of haulage and removal contractors, general carriers, forwarding agents, omnibus, char-a-banc and taxi proprietors, etc. The first directors (to number not less than 2 nor more than 5) are: S. Bayley (permanent managing director and chairman), F. Bayley. Registered office: 127 Cemetery Road, Sheffield.

**City Coaches, Ltd.** (252,800). — Private company. Registered December 17th. Capital £100 in £1 shares. Objects: To carry on the business of proprietors, hirers and letters on hire of motor omnibuses, coaches, chars-a-banc, lorries, vans, etc. The permanent directors are: W. Beckett, J. E. Hemsley. Secretary: J. E. Hemsley.

**Alex. Matthew & Co. (Liverpool), Ltd.** (252,831).—Private company. Registered December 18th. Capital £1,500 in £1 shares. Objects: To acquire the business carried on at 15 to 19 Berry Street, Liverpool, as Alex. Matthew & Co., and to adopt an agreement between A. A. Matthew and G. Sawyer, and to carry on the business of garage, taxicab, omnibus, cab, fly and other conveyance proprietors, etc. The directors are: A. A. Matthew, G. Sawyer. Registered office: 15-19 Berry Street, Liverpool.

**S. N. Hadley & Co., Ltd.** (252,891).—Private company. Registered December 19th. Capital £1,000 in £1 shares. Objects: To acquire the business of a shipping and forwarding agent heretofore carried on at 149 Fenchurch Street, E.C.3, by S. N. Hadley as "S. N. Hadley & Co." The directors are: S. N. Hadley, W. Vine. The said S. N. Hadley shall be permanent director and chairman so long as he holds 500 ordinary shares. Secretary: B. C. Barber. Registered office: 149 Fenchurch Street, E.C.3.

**Llanelly and District (Carmarthenshire) Transport Company, Ltd.** (252,880).—Private company. Registered December 19th. Capital £2,000 in £1 shares. Objects: To acquire the business of motor omnibus and char-a-banc proprietors and repairers carried on by Wm. Jones, Willie Jones and Trevor Jones, at Brynteg, Upper Tumble, near Llanelly, and Thomas Taylor at The Central Garage, Cross Hands, near Llanelly, and by John Jones, bus proprietor, Pontyberem; John Jones, bus proprietor, Gorseinon; D. M. Phillips and W. A. Phillips, of Llandebie. The permanent directors are: Wm. Jones, E. Howell, T. Taylor, J. Jones, C. Isaacs, J. Jones, W. A. Phillips. Secretary: E. Howell. Registered office: "Brynteg," Upper Tumble, near Llanelly.

**London, Manchester, Scottish Coachways, Ltd.** (252,915).—Private company. Registered December 20th. Capital £3,000 in £1 shares. Objects: To acquire the business of motor station, garage and motor omnibus proprietors, carried on by H. H. Horton and E. H. Leese at East Street, Lower Moseley Street, and Chepstowe Street, Manchester, under the style of "London, Manchester, Scottish Coachways." The first directors are: E. H. Leese, H. H. Horton, H. Potts, A. Meadows.

**Roadways and Airways, Ltd.** (252,969).—Private company. Registered December 22nd. Capital £10,000 in

Digitized by Google

8,000 10 per cent. cumulative participating preference shares of £1 and 40,000 ordinary shares of 1/- each. Objects: To carry on the business of transporters of persons, goods or otherwise by land, sea or air, etc. H. W. Sale is the first director. Registered office: Holborn Viaduct House, 12, Holborn Viaduct, E.C.1.

**W. Fisher and Sons, Ltd.** (253,023).—Private company. Registered December 24th. Capital £250 in £1 shares. Objects: To carry on the business of haulage, cartage and removal contractors, motor and mechanical engineers, garage, motor bus, char-a-banc and taxicab proprietors, etc. The directors are: W. A. Fisher, W. S. Fisher, H. Fisher. The said W. A. Fisher shall be permanent so long as he holds 25 shares. Secretary: N. Fisher.

**Frederick Lloyd & Son, Ltd.** (253,051).—Private company. Registered December 29th. Capital £500 in £1 shares. Objects: To acquire the business of a coal merchant and general carrier carried on by F. Lloyd at Clegg Street Station, Oldham. The permanent directors are: F. Lloyd, Mrs. E. Lloyd.

**Robert Armstrong & Sons, Ltd.** (253,115).—Private company. Registered December 31st. Capital £2,000 in £1 shares. Objects: To carry on the business of furniture removers and storers, haulage contractors, carpet cleaners, upholsterers and cabinet makers, etc. The permanent directors are: R. Armstrong, J. J. Armstrong. Secretary: R. Armstrong. Registered office: 112 Bridge Road, Litherland, near Liverpool.

**Welsh Airways, Ltd.** (253,131). — Private company. Registered December 31st. Capital £100 in 1/- shares. Objects: To carry on and make arrangements for air transport services of all kinds, etc. The permanent joint managing directors are: P. Carpenter, T. Jenkins, with power to appoint 3 additional permanent directors.

# Co-ordination or Subordination?

FURTHER consideration of the Final Report of the Royal Commission on Transport strengthens the view that the primary consideration which the Commissioners had in mind was that our railways must be safeguarded at all costs. At a first reading of the report one is struck by the impartial way in which the Commissioners hand out criticism and advice on all sides, not excluding the railway companies, but a second perusal makes it evident that the matters on which the railways are criticised deal with points of detail and are fairly easily explained away or refuted. Running through the report is the steady refrain that the railway companies are so important and so essential to the trade and industry of the country that no system of transport must be allowed to compete on equal terms and that such competition must be carried on under severe handicaps and burdens which will ensure that the alternative mode of transport can only fill a very subordinate position. The letters which we publish in this issue from representative leaders of different branches of road transport, while acknowledging the good points of the report, are at one in emphasising this aspect of the question. The recommendations of the Commission as to the taxation of heavy motor vehicles perhaps show the bias in favour of the railways more clearly than any other feature. The members of the Royal Commission seem to be basing their recommendation on the ground that such vehicles were not adequately taxed, but in reality the object seems clearly to be to prevent their being used economically on the roads. As is pointed out in a table in the letter from Mr. E. C. Marston, the actual tax on such vehicles amounts to £60 a year but this does not take into account the very heavy burden inflicted by the petrol tax, which may easily run into figures of £100 a year or over. In fact Mr. P. R. Turner, the President of the London Cartage & Haulage Contractors' Association, in a speech at the recent dinner of the London Shipping & Forwarding Agents' Conference, stated that the total tax on heavy lorries such as a Scammell six-wheeler amounted to upwards of £200 per annum. If the original tax is to be doubled, as is recommended by the Commissioners, it must be with the intention of making it impossible for such vehicles to be run successfully.

It is quite evident from a careful study of the report that the Commissioners, while desiring to safeguard the interests of the railway companies, have found it exceedingly difficult to maintain a straight course in this respect and various clauses in the report can only be said to contradict each other completely. This point is emphasised in the letters which we publish. For instance it is stated that while the Commissioners do not consider that road transport is taxed too highly, neither do they consider the taxation is too little, and yet they recommend a tremendous increase in the taxation on vehicles which are performing useful work and which have been evolved by the motor manufacturers on lines which enable them to carry out their services with the minimum amount of damage to the roads.

We have never considered it our duty to instruct the various branches of road transport, which it has been our privilege to represent for so many years, as to the best way of carrying on their business and as both the representatives of the cartage and haulage contractors and of the long distance hauliers, in their evidence before the Royal Commission, recommended the licensing of those engaged as road transport contractors, they are naturally pleased that the report recommends that this step should be taken. There is a good deal to be said for any step which will improve the organisation and the status of the industry and it is a matter for regret that since the War a large number of firms have sprung up who have carried on a haulage business without proper financial means or experience and by cutting rates have secured business for the time being, to the detriment of the well-established and well-organised concerns. The elimination of such unfair competition has always been the policy of those at the head of the trade associations and the proposal to licence all those engaged in the business of road

Digitized by Google

haulage is a natural consequence of this desire. So, too, the regulating of wages and hours of labour is a necessary corollary to this move and will be to the advantage of those who at present are paying trade union wages and working their employees reasonable hours We have always held, however, that the less Government interfered in the industry of the country the better it was for those engaged in it and that any form of Government control was to be deprecated as leading to still further restrictions and to the placing of heavier obstacles in the way of carrying on one's business. This is the danger which we foresee in the proposals for licensing the road transport industry and this is borne out by the final recommendation of the Commissioners that an Advisory Council should be formed to advise the Minister of Transport as to future steps which he should take to regulate transport in all its branches.

We cannot avoid the feeling that the whole trend of legislation, whether by Act of Parliament or by departmental regulations, is to place fresh difficulties in the way of development and to try to restrict road transport into narrow channels strongly protected by high walls from which it will be impossible for it to escape.

## The New Motor Regulations.

On another page we have published a *precis* of the Motor Vehicles (Construction and Use) Regulations and, whilst we admit it may be due to our present unfamiliarity with the new regulations, we must say we are of the opinion that they are more confused than those which they are supposed to simplify and replace. The Minister has too much power under the Road Traffic Act and he does not appear to be quite clear himself as to what power he has and that which he has not. The new regulations have obviously been compiled in consultation with various interested bodies, each giving way a little here and a little there in order to get as near as possible regulations which will suit themselves, with the result that there is singular disconnection in the regulations laid down. Some of these regulations do not come into force until as late as 1940 and other regulations are not to apply to vehicles registered under the Road Traffic Act on or before 1st January, 1933. This may be unavoidable, in fact it probably is, but certainly the result is that there are thousands upon thousands of vehicles now on the roads which do not know what acts or regulations they come under and it is doubtful if anyone could decide at any time. As an instance of vagueness in the regulations we may take those relating to locomotives. Section 21 says that the weight of locomotives shall not exceed 15½ tons, but if fitted with a jib crane, dynamo or extra winding drum or any one or more of such fittings, the maximum unladen weight shall be increased by 1½ tons and if all its wheels are fitted with tyres of soft or elastic material the maximum unladen weight shall be increased by 2 tons, such increases to be cumulative where both conditions are satisfied. Section 56 states that the maximum total weight of a locomotive shall not exceed the unladen weight permitted by these regulations by more than 3 tons. What we should like to know is what is the actual maximum legal weight of a locomotive? Furthermore, whilst it is stated in Section 28 that the overall width of a locomotive shall not exceed 9 ft., the only regulation we can find with regard to the width of trailers, without which locomotives are useless for haulage purposes, is contained in Section 52 which refers to the width of a trailer drawn by a motor vehicle and lays it down that the width must not exceed 7 ft. 6 in. with a proviso that trailers used by travelling showmen in connection with their business may use trailers not exceeding 8 ft. 9 in. in width, if such trailers were being used by the showmen before the 15th January, 1931. Why should showmen have preference over other users of locomotives; and is it really intended that trailers drawn by locomotives should be narrower by 1 ft. 6 in. than the engine hauling them? Even the regulations have their touch of humour, for certainly it was a brain wave on someone's part to make it law that road wheels must be circular! Our own dull brains had never considered a wheel as being anything else, but probably our legislators had some secret information concerning some enterprising manufacturer who proposed placing a vehicle on the road with square wheels. Then the legislation concerning track laying vehicles seems curious. The purpose of a track laying vehicle is to travel over soft ground where wheeled vehicles would become bogged. It follows that the weight of the track laying vehicles is distributed over a larger area of ground surface than the wheel type and therefore it does less damage to the road than the wheel type; but by paragraph "b" of Section 9 of the regulations a track laying tractor shall not draw a trailer other than a land implement. Why? What is the use of a track laying tractor if it is not permitted to draw a trailer and what is a track laying tractor? There is nothing in the regulations which makes it illegal for a locomotive to be equipped with tracks instead of wheels. Perhaps, however, it is too early to criticise these regulations as they are still far from complete.

## Section 19 of the Road Traffic Act.

JUST as we go to press we have received notice of a joint application from the Transport and General Workers' Union on the one hand and the Commercial Motor Users' Association, the Motor Hirers' Association, the Municipal Tramways and Transport Association, the Omnibus Owners' Association and the Tramways and Light Railways and Transport Association on the other, being organisations representative of employers and workpeople in the section of the road transport industry concerned with the conveyance of passengers in public service vehicles, for a variation, in certain circumstances, of the periods of time laid down in Section 19 of the Road Traffic Act, 1930, for the employment of drivers on road vehicles of certain types. The Minister has referred the matter to the Industrial Court for advice as is provided for in the Act and the meeting was to be held on Friday, February 13th. We are drawing attention in this issue to the announcement made by the Minister of Transport postponing the date provisionally fixed for Section 19 to come into force, until April 1st next. This is the result of representations made to the Minister by organised bodies of employers and workpeople in the transport industry and is in order that time may be allowed for completing negotiations at present proceeding between the parties with a view to the making of joint application to the Minister for a regulation varying the provisions of the Section in order to meet special cases. Our readers will therefore make a special note that Section 19 of the Road Traffic Act did not come into force on February 1st last and that the date has been altered to April 1st by the Minister of Transport.

## Motor Coaches in London.

The Motor Hirers' & Coach Services Association are to be congratulated upon the steps which they have taken in connection with the proposed ban on motor coaches in the central area of London. There comes a time when it is no longer any use relying on representations to the Minister of Transport and unless you are prepared to see your interests and your business suffer the organisation which looks after the branch of transport concerned must take strong action to safeguard the rights of its members. The rule which was obtained in the High Court calling upon the Minister of Transport to show cause why he

Digitized by Google

should not be stopped from issuing the regulation banning motor coaches in the way suggested has focused attention on this proposed hardship which will ensure the full consideration of the proposal before anything so drastic can be carried into operation. There is a tendency to see in every proposed restriction or increased burden of taxation the sinister hand of railway influence behind such proposals, and this is suggested in the letter appearing in this issue from Mr. Eric Monkman, of Orange Luxury Coaches. It is quite clear that if motor coaches are prevented from stopping within a certain area to unload and pick up passengers the result will be to help existing forms of transport while making the position very much more difficult for those who use these convenient vehicles for travelling. It is a matter for grave concern that the Minister of Transport has secured, or is taking, very wide powers to legislate by means of regulation in a way which would not have been dreamed of a few years ago. As was mentioned by counsel in the action taken by the motor coach proprietors the Minister appears to have the power even to override Acts of Parliament, and it is a good thing that steps should be taken to show where we are moving in this direction. In fact it is impossible at the present time to say what powers the Minister has to make conditions affecting transport or to restrict its development in any way which seems good to him. Cases are now coming into the Courts where counsel is arguing that the law relating to road transport is so confused that the motorist or vehicle owner does not know where he stands and therefore should not be penalised for not understanding the position. This is a very serious aspect of the case and one which is unfair, not only to the road user but to those who have to administer the law and it is a good thing that action has been taken which, in the instance of motor coaches, has pulled the Minister of Transport up sharp and will make us realise how far we have drifted in the direction of bureaucratic control which may become almost independent of legislation.

## British Industries Fair.

The British Industries Fair which opens to-day, February 16th, both at London and Birmingham, shows a further marked advance on any exhibition previously held. Our readers are mainly interested in the Birmingham section held at Castle Bromwich where the 12th annual display of the newest engineering machinery and hardware products will be found ready for the inspection of visitors from February 16th to 27th inclusive. The number of groups included in this section covers the whole range of industry from great engineering or electrical plant to give driving power to works at home and abroad; transport and building machinery and all kinds of machinery in connection with roadmaking. The catalogue, of which we have received an advanced copy, is planned as in past years in a form which makes it particularly useful as a guide to the exhibits, and invitations have been sent to and accepted by buyers from all parts of the world. It may safely be said that this Exhibition is of the greatest value and importance to British trade and ought to be visited by all who are interested in the varied range of machinery and goods which will be shown. As in past years there will be a series of important professional and industrial and trade conferences during the period of the Fair, bringing to the Exhibition representatives of the leading firms from all parts of the country.

---

**Birmingham Co-operative Society. Chief Traffic Manager.**—The Committee of the Birmingham Co-operative Society have appointed Mr. Horace Woolley, assistant traffic manager, to the position of chief traffic manager in succession to Mr. J. H. Stirk, J.P., M.Inst.T., who has been appointed Chairman of the East Midland Traffic Commissioners under the Road Traffic Act.

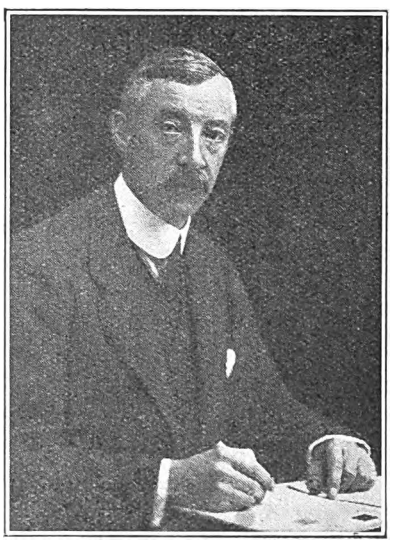
# Personal Notes.

**Mr. J. Shearman of the L.M.S.**—Mr. J. Shearman, the Road Engineer of the London, Midland & Scottish Railway, has been a good deal in the forefront of the Transport World recently, first in connection with the Karrier "Colt," an ingenious three-wheel vehicle, specially designed for operating in confined spaces such as railway goods yards, and now through the "Ro-Railer," a motor coach fitted with two sets of wheels so that it can be run either on rail or on the road by a slight adjustment. Congratulations are not only due to Mr. Shearman but also to Karrier Motors, Ltd., Huddersfield, who have designed and made both these vehicles at their works.

MR. J. SHEARMAN.

**Motor Trade President.**—For the second year in succession Mr. H. L. Kenward, Sales Director of the Dunlop Rubber Company has been elected President of the Institute of the Motor Trade for the current year. It is also announced that Lord Wakefield has again presented the Institute with a gold medal to be awarded to the winner of the best paper on the subject of "The Six Essentials of a Successful Motor Business."

**New Dunlop Director.**—Mr. C. A. Proctor, who has recently returned from a business tour to Canada, America and the Far East to take up his duties as Overseas Director of the Dunlop Rubber Company, Limited, has been elected to a seat on the Board of the Company. Mr. Proctor was a member of the Board from March 10th, 1919, to 29th April, 1927, when he relinquished his Directorship in order to undertake important work with the Associated Dunlop Companies on the Continent of Europe.



MR. C. A. PROCTOR.

**L.G.O.C. Appointment.**—Mr. G. J. Shave, chief engineer and operating manager of the London General Omnibus Co., Ltd., having asked to be relieved of some of his responsibilities, the directors have appointed Lt.-Col. A. W. C. Richardson, D.S.O., to be operating manager of the company from March 1st, 1931. Mr. Shave will continue as chief engineer. Lt.-Col. Richardson is at present a member of the Mechanical Warfare Board, and has done much work in connection with the mechanising of the Army. He was educated at Denstone College, and received a commission in the 4th Batt. West Yorkshire Regiment in 1907. He served in the European War from 1915 to 1918, and has been Officer in Command of the Mechanical Warfare Experimental Establishment since 1928.

# Traffic Commissioners under the Road Traffic Act.

THE Minister of Transport has now completed the appointments of Traffic Commissioners under the Road Traffic Act, 1930, including the appointments of Commissioners drawn from the panels of persons nominated by the Councils of Counties, County Boroughs, Boroughs and Urban Districts entitled to nomination. The Commissioners for each Traffic Area are as follows:—

| Traffic Areas in England and Wales. | Commissioners. | Clerk to the Commissioners. | Address. | Telephone Number. | Telegraphic Address. |
|---|---|---|---|---|---|
| Northern | H. Riches, Esq., O.B.E. (Chairman).<br>Alderman A. Pattison (Boroughs and Districts).<br>Councillor J. Wallace (Counties). | P. Barker. | 41-45, Grey Street, Newcastle-on-Tyne. | Newcastle, Central 5365. (Early in 1931 number will be Newcastle 20353 on an automatic exchange.) | "Transco," Newcastle-upon-Tyne. |
| Yorkshire | J. Farndale, Esq., C.B.E. (Chairman).<br>Alderman J. Law, J.P. (Boroughs and Districts).<br>County Alderman J. S. Quarmby, J.P. (Counties). | J. R. Williams. | 5, Swinegate, Leeds. | Leeds 29734 | "Transco," Leeds. |
| North Western | W. Chamberlain, Esq., M.Inst.T. (Chairman).<br>R. T. Jones, Esq. (Counties).<br>Alderman M. H. Maxwell, C.B.E. Boroughs and Districts). | J. E. Woodford. | 9, Gore St., Piccadilly, Manchester. | Manchester, Central 8466. | "Transco," Manchester. |
| West Midland | Colonel A. S. Redman, C.B., M.Inst.T., R.E.(Retired) (Chairman).<br>C. C. Brinton, Esq. (Counties).<br>Alderman A. H. James, J.P. (Boroughs and Districts). | S. W. Nelson. | 142, Great Charles St., Birmingham. | Birmingham, Central 4238 | "Transcomid," Birmingham. |
| East Midland | J. H. Stirk, Esq., J. P., M.Inst.T. (Chairman).<br>Capt. F. E. Fitzherbert Wright, J.P. (Counties).<br>Councillor A. W. Lyne, J.P. (Boroughs and Districts). | E. J. Shopland. | Vernon House, Friar Lane, Nottingham. | Nottingham 43971. | "Transco," Nottingham. |
| Eastern | Sir E. Haviland Hiley, K.B.E. (Chairman)<br>Alderman S. G. Howard, C. B. E., D.L., J. P. (Counties).<br>Alderman F. C. Jex, J.P. (Boroughs and Districts). | C. S. Goad. | 75, Regent Street, Cambridge. | Cambridge 3211. | "Transco," Cambridge. |
| South Wales | A. T. James, Esq., K.C., J.P. (Chairman).<br>Alderman H. S. Holmes (Boroughs and Districts).<br>County Alderman H. Jenkins, J.P. (Counties). | R. C. Evans. | Graham Buildings, Newport Rd., Cardiff. | Cardiff 3073. | "Transco," Cardiff. |
| Western | A. F. Nicholson, Esq., O.B.E. (Chairman).<br>J. Baker, Esq. (Boroughs and Districts).<br>Comdr. R. J. B. Hippisley, R.N.V.R., O.B.E., M.I.E.E., J.P., D.L., (Counties). | E. F. Packer. | Beacon House, Queens Rd., Bristol. | Bristol 8500. | "Transco," Bristol. |
| Southern | Major General Sir R. Ford, K.C.M.G., C.B., D.S.O., (Chairman).<br>The Earl of Macclesfield (Counties).<br>Councillor F. J. Privett, J.P. (Boroughs and Districts). | C. T. Smith. | Somerset House, Belgrave Street, Reading. | Reading 1621. | "Transco," Reading. |
| South Eastern | Rowand Harker, Esq., K.C. (Chairman).<br>Alderman H. Milner Black, J.P. (Boroughs and Districts).<br>Lt.-Col. H. Bonham Carter, R.E. (Counties). | E. W. Phillips. | Sanctuary Buildings, 20, Gt. Smith St., S.W.1. | Victoria 8740. | "Transcosea," Parl, London. |
| Metropolitan | G. F. Robinson, Esq., M.C., LL.D. | T. L. C. Whitlock | Sanctuary Buildings, 20, Gt. Smith St., S.W.1. | Victoria 8740. | "Transcolon," Parl, London. |
| Traffic Areas in Scotland. | | | | | |
| Northern | Sir John Maxwell, C.M.G. (Chairman).<br>William Henderson, Esq. (Counties).<br>Councillor A. Fraser Macintosh Large Burghs). | C. M. Campbell. | 17, Broad St., Aberdeen. | Aberdeen 4918. | "Transco," Aberdeen. |
| Southern | Archibald Henderson, Esq. (Chairman)<br>Councillor P. J. Dollan (Large Burghs)<br>T. W. H. McDougal, Esq., C.B.E. (Counties). | A. Robertson. | 44, Palmerston Place, Edinburgh. | Edinburgh 22184. | "Transco," Edinburgh. |

# The Sale of Passenger Transport*

**By H. H. Gordon.**

TRANSPORT is a service which has to be sold like any other commodity and in its salesmanship the same principles apply as in any other commercial undertaking. It is not without significance that those undertakings are the most successful which do most to advertise their wares and offer the most ready facilities for easily obtaining them.

The necessity of bringing their wares to the public has been recognised for some time by the railways, which in all larger centres have established town receiving offices away from stations. At first the mistake was made of trying to conduct all classes of railway business, goods as well as passenger, at these offices. This policy has proved none too successful. The requirements for the sale of passenger transport differ materially from those relating to the sale of goods transport. The staffing of the office if intended for passenger work will be characteristically different from that which would be required for other traffic. The railway companies have lately established booking offices catering primarily for passenger transport. Here again the difficulty exists that each company deals merely with its own services. It is true that, in a few instances, tickets for another group may be purchased at one of these offices but the amount of publicity given by the actual owning company to that group is not very conspicuous.

The newer forms of transport, civil aviation and modern road transport have endeavoured to popularise these means of travel by establishing booking facilities on practically an unlimited scale. Thus every hotel porter, or theatre booking agency could sell tickets for travel by air. Every tobacconist, newsagent, or sweetstuff vendor could and does book for road coaches. It must be admitted that with new forms of transport this facility for booking is of great service. It may be doubted however whether in the long run the policy is in the public interest. The transport knowledge possessed by people of the character referred to, estimable as they may be in their own line, is obviously limited. The sale of transport is too important to be made a side-issue.

All forms of transport have felt the need of popularising their wares by providing facilities for publicity and sale. It is claimed however that these local "transport stores" will best serve public needs if they inspire public confidence, if independent of all individual undertakings they yet serve all the means of transport. The enormous development of travel in recent years can with a considerable claim to justice be placed to the credit of the operation of such independent agencies.

Thus the excursion traffic in this country owes its origin to the founder of Messrs. Thomas Cook & Son, Ltd., while firms like John Frame, Ltd., Dean & Dawson, Ltd., Pickfords and others, have done much to develop it. Oversea travel is greatly indebted to firms like Raymond and Whitcomb, the American Express, and others. The Author's own firm (M. K. Kendall, Ltd.) nearly fifty years ago organised the first conducted round trip from London to Niagara Falls and back, and the somewhat quaint announcement of the trip forms an interesting document. While obviously the desire to travel and see new sights is inherent in human character, the popularisation of travel for pleasure is largely the work of outside agents who by means of their own, such as conducted and inclusive tours, etc., have developed it to a degree it could not have otherwise attained.

The friendliest relationship should exist between the independent transport salesman and the public on the one hand, and the transport undertakings on the other. Only by cultivating both can he hope to achieve success. In so far as the public is concerned, a high standard of education and a wide knowledge of the transport industry is essential. His ideal should be *service*, unbiased, ungrudging service.

Equally important is it that complete cordiality should prevail between him and the actual producers of transport. After all he is their accredited salesman and 95 per cent. of his success goes to enhance their own.

Collectively the railway companies could facilitate to a greater extent than they do the work of their traffic salesmen.

Next to the actual cost of transport there is nothing of greater importance in its influence on the quantity of travel, than the amenities with which it is accomplished.

We are living in an organised community, the interests of all the component parts act and react on each other so as to make them inseparable from one another. Where there is general industrial depression the true question before industrial organisations is not so much how to make a profit, but how to mimimise the general loss and to utilise the best methods for restoring trade and commerce to a better level. And in connection with such restoration, nothing can play a more potent part than transport on which the whole of modern industry is based. Dearer fares tend to accentuate the diminution in the quantity of transport required in times of industrial depression; cheaper fares tend to lessen this diminution. Dearer fares discourage the travelling habit and when the tide turns the public has again to be educated into its desirability. Cheaper fares have precisely the reverse effect.

At the present time there is far too much unrestricted competition between the railway groups which sacrifices not merely revenue but also public convenience. However much the companies may pride themselves on the large amount of co-ordination which has been achieved on each system since the passing of the Railway Act, internal co-ordination is not the same as external co-operation. There is little sign that the intense competition previously existing between the groups has sensibly diminished. True, the companies have come to certain agreed decisions. These relate however to the rules of the competition not on its diminution by co-operation.

The primary end of transport is to serve public convenience and if that is ignored, however great the achievement may be from the technical point of view, the transport undertaking is bound to suffer.

The necessity for further co-operation between railway groups which has been emphasised should not be limited merely to such groups, but should find its counter part in closer working between road and rail. Something in this direction is being done already as return coach tickets issued by certain companies are now valid for return by rail on payment of a small supplement. But this co-operation should go further than it does now. The railways have taken a large financial interest in road transport. There is, therefore, no reason why some of the advantages available to the ordinary rail passenger should not be extended to the traveller by road.

One of the great difficulties confronting the large centralised coaching companies is the fact that under existing circumstances it is possible for the owner of one or two "char-a-bancs" to run a service from a suburban centre to a popular resort. Such service can scarcely hope to be efficient and yet in the aggregate these small services may undermine the financial stability of the larger companies.

To overcome this difficulty the larger road car companies run additional "char-a-bancs" to convey passengers from these popular booking points to centralised departure stations. Is there not here a further opportunity for co-operation between the approved companies and the railways? Why not start the coaches in the outer suburban rings with advantage to all concerned? London traffic would enormously be relieved; passengers would be saved the miles and miles of dreary congested London streets; coach capacity could better be utilised; the speed of all transport would be improved; finally both railway and road companies would derive financial benefit.

All this presupposes a far closer relationship than perhaps now exists in transport undertakings and it may be urged that the cry of monopoly will be raised. There is no task however of greater importance facing transport undertakings than that of educating public opinion, and of making the community realise that if transport is not only to be efficient but also cheap it must be monopolised and that the present system is needlessly wasteful and extravagant.

It may be asked what has the enunciation of these views, even if correct, to do with transport salesmanship? The Author would reply that the bearing is very close indeed. The salesman can only sell the goods he is supplied with and everything which improves the quality of those goods facilitates his work. Moreover every office selling transport is an educational centre and could and should be utilised for the dissipation of the large amount of ignorance and prejudice which, unfortunately too frequently characterises public opinion on transport matters.

It seems a little remarkable that the Institute of Transport which offers its Associate Membership as the result of examination in transport engineering, transport accountancy, transport law, does not seem to recognise specifically transport salesmanship. And yet the "consumption" and sale of transport is the end which the provision of travel facilities, entailing, transport operation, engineering, accountancy and law is wholly designed to serve. It may be worth while therefore, suggesting for the consideration of the Council of this Institute whether this omission should not be rectified and whether corporate membership should not be open to those who can pass a sufficient test of competency in this vital branch of the industry.

* Extracts from an address given by Mr. H. H. Gordon, a former Vice-President of the Institute of Transport, at a meeting of the Institute held in London, on 9th February.

# "Safety First" Dinner to Royal Commission on Transport.

A FUNCTION which will long be remembered for the unique features which formed part of it was a dinner given by the National "Safety First" Association, in Vintners' Hall, London, at the invitation of Viscount Brentford, the President; Mr. Gordon Stewart, the Vice-Patron and their colleagues on the Council of the National "Safety First" Association to the members of the Royal Commission on Transport. Among the guests was Mr. Herbert Morrison, Minister of Transport.

The guests on arrival received a blue "Summons" to enter and take part in the banquet, this on investigation proving to be the table giving seating of guests. Those present, to the number of 200, each found at his place a Policy assuring welcome to guests, this being set out in proper insurance policy form, but including in it the menu and the list of speakers and other useful information about the guests. Another interesting feature was a reproduction of a letter from the Duke of York, Patron of the Association, to Lord Brentford expressing regret at his inability to be present and emphasising the need for increased support for the work of the Association.

Another special feature, which attracted attention and afforded a good deal of entertainment was a full size traffic signal which was operated by the Secretary and which, starting with the green light signalling "go," then, as the speaker reached the limit of his time, turned to yellow for "caution," and finally altered to the red warning signal instructing the speaker to stop.

The Dinner was held in Vintners' Hall, which had been granted for the occasion by the courtesy of the Master and Wardens of the Worshipful Company. During the evening the Chairman expressed the thanks of the Association for this privilege in proposing the health of the Acting Master, Mr. Leicester M. Reed, J.P., who in replying gave some interesting particulars concerning the history of the Vintner's Company.

Lord Brentford proposed the principal toast—the health of the Chairman and Members of the Royal Commission on Transport, and Sir Arthur Griffith-Boscawen in replying gave a very interesting address on the work of the Royal Commission, in the course of which he paid a special tribute to Lt.-Col. J. A. A. Pickard, D.S.O., The Secretary of the Association.

### ROAD SAFETY.

This toast was proposed by Mr. Herbert Morrison, the Minister of Transport, who said, there was wide recognition of the splendid work done by the National Safety First Association. This had been recognised by successive Governments by the association of Ministers of the Crown with the Association. The National Safety First Association had rendered conspicuous voluntary service in the direction of encouraging better conduct and greater sense of responsibility among all users of the highway.

Referring to the Road Traffic Act, Mr. Morrison said, in the work which led up to the Road Traffic Act, the Royal Commission on Transport, presided over with such ability by Sir Arthur Griffith-Boscawen, had rendered enormous service. The first two Reports of the Royal Commission were of such an effective character that they had the satisfaction of knowing that even before the Third and Final Report was published, Parliament by legislation, and the Ministry of Transport by administration, had carried out with one or two minor exceptions mainly relating to procedure practically the whole of the Commission's recommendations.

"The Final Report of the Royal Commission had now been presented and the Commissioners could be sure that it would receive the careful consideration of His Majesty's Government.

### MOTOR COACHES IN CENTRAL LONDON.

On the question of Metropolitan motor coach traffic, particularly in the Central London Area. Mr. Morrison said, that on the recommendation of the London and Home Counties Traffic Advisory Committee, he had indicated his intention to make regulations barring motor coach traffic from the congested area of Central London. He would not come to final conclusions until he had considered with every care the representations made to him, but agitation was proceeding against the proposals and he would like to call attention to some facts indicating the magnitude of the problem and the *prima facie* case for considering the proposed restriction on grounds of public interest.

There were some people who maintained in the name of individual liberty and free competition that they should recognise the right and freedom of everybody to run as many vehicles on the streets as they like, and that they should deal with the resulting difficulties by making streets wider and wider from generation to generation, so that the streets would fit the unrestricted traffic, instead of traffic restrictions having some regard to the actual or financially practicable widths of streets.

He had assumed until he had read certain of the articles in connection with the agitation by the motor coach interests that this policy was finally discredited and that the London Traffic Act, 1924, had sealed its doom. Certainly, unless Parliament forced him, he would be unwilling to go back to the unrestricted use of the streets of London. That being the position, any Minister of Transport, whilst encouraging a progressive policy of highway improvements by the local authorities, must in the public interest deliberately pursue a policy of securing the most effective use of all forms of metropolitan transport, excluding none.

The motor coach might be a rapid vehicle, but the fact remains that it occupied a lot of valuable road space. He had said before that a motor coach in the City of London could occupy, when standing still, a road space which involved £36,000 of public expenditure.

The statistics as to the increase in motor coaches are serious. Between December 31st, 1924, that is to say, the half-year ending after the passing of the London Traffic Act, there were 249 motor coaches possessing metropolitan police licences. By November 30th, 1929, which was two days after the Road Traffic Bill had been introduced into the House of Lords, the figure had advanced to 768. Within eight months, i.e., by July 31st, 1930, the figure had nearly doubled, being 1,434. Despite the warnings which he had issued on more than one occasion the interests concerned appeared to take little notice but went rapidly forward, relying possibly on their confidence that they could stampede him with accomplished facts. Notwithstanding his warnings, during the last five months of 1930 there was an increase from the 1,434 of July 31st, 1930, to 1,762 on December 31st, 1930.

These figures relate to the vehicles licenced by the Metropolitan Police. Some idea of the numbers of vehicles actually operated in the Metropolitan Police Area might be obtained from the fact that on Wednesday, 10th September, last, 2,562 coaches were observed to pass twenty census points in outer London on their way to London. This constant increase presents a prospect which obviously calls for action.

In any case, the services would be regulated and controlled under the Road Traffic Act, 1930, but even so he had in the meantime to consider very carefully whether the congested area of Central London is appropriate for the use of large numbers of these huge coaches. Except upon the basis that everybody was entitled to go from everywhere to everywhere door to door, were they saying too much when they said to a motor coach that it could come quite near to the central area—he was not sure that the proposed line was not too near—and then that the journey must be finished by the existing tube, tram or omnibus services. Clearly that could not hurt the week-end pleasure traffic; the people who use the motor coach for that purpose do not live in Central London. If the ratepayers of London and the London County Council were willing to spend the millions—and possibly the hundreds of millions—that would be required under existing legislation to re-model London streets out of recognition, they might be faced with a different set of circumstances, but he could not assume that that was going to happen. In the meantime he had got to do the best he could with a difficult situation which would get out of hand if they lacked courage in dealing with it.

This toast was responded to by Mr. J. A. Wilson, Chief Constable of Cardiff, who is President of the Chief Constables' Association.

The toast of the President, Lord Brentford, was proposed by Mr. Gordon Stewart.

It may be mentioned that Mr. Gordon Stewart, who is Governing Director of Stewart & Ardern, Ltd., well known as the London agents for Morris motor cars and commercial vehicles, is the Chairman of a special Appeals Committee which is asking for increased financial support for the splendid work being carried on by the Association, and any contributions should be sent to him at the offices of the Association: 119, Victoria Street, London, S.W.1.

# The Motor Vehicles (Construction and Use) Regulations.

THE Minister of Transport under and by virtue of the powers conferred on him by the Road Traffic Act, 1930, hereby makes the following Regulations.

**Commencement of Regulations.** These Regulations may be cited as "The Motor Vehicles (Construction and Use) Regulations, 1931," and shall come into force on the fifteenth day of January, 1931.

**Definitions.** (1) In these Regulations unless the context otherwise requires, the following expressions have the meanings hereby respectively assigned to them:—

**Overall length.** "*Overall length*" means the overall length of a vehicle exclusive of the starting handle (if any) and of the hood (if any) when down.

**Overall width.** "*Overall width*" means the width measured between parallel planes passing through the extreme projecting points of the vehicle exclusive of any driving mirror.

**Overhang.** "*Overhang*" means the distance measured horizontally and parallel to the longitudinal axis of the vehicle between two vertical planes at right angles to such axis the one passing through that point of the vehicle (exclusive of any hood when down) which projects furthest to the rear and the other passing:—

(*a*) in the case of a motor vehicle having two axles, one of which is not a steering axle, through the centre point of that axle, and

(*b*) in the case of a motor vehicle having three axles,

(i) where the front axle is the only steering axle, through a point 4 inches in rear of the centre of a straight line joining the centre points of the rear and middle axles, and

(ii) where the rear axle is the only steering axle, through the centre point of the middle axle, and

(iii) where all the axles but one are steering axles, through the centre point of the rearmost axle which is not a steering axle, and

(*c*) in the case of a motor vehicle (whether having two axles or three axles) where all the axles are steering axles and in the case of a motor vehicle having four or more axles, through a point situated on the logitudinal axis of the vehicle and such that a line drawn from it at right angles to that axis will pass through the centre of the minimum turning circle of the vehicle.

**Pneumatic tyre.** "*Pneumatic tyre*" means a tyre which complies in all respects with the following requirements:—

(*a*) it shall be provided with a continuous closed chamber containing air at a pressure substantially exceeding atmospheric pressure when a tyre is in the condition in which it is normally used, but is not subjected to any load;

(*b*) it shall be capable of being inflated and deflated without removal from the wheel or vehicle;

(*c*) it shall be such, that when it is deflated and is subjected to a normal load, the sides of the tyre collapse.

**Tyre of soft or elastic material.** "*Tyre of soft or elastic material*" means a tyre the soft or elastic material of which is either:—

(*a*) continuous round the circumference of the wheel or,

(*b*) in segments so fitted that so far as reasonably practicable no space is left between the ends thereof,

and of such thickness as to minimise, so far as reasonably possible, vibration when the vehicle is in motion, and so constructed as to be free from any defect which might in any way cause damage to the surface of a road.

**Safety glass.** "*Safety glass*" means glass so constructed or treated that if fractured it does not fly into fragments capable of causing severe cuts.

**Locomotives.** "*Locomotives*" means heavy locomotives and light locomotives.

**Land locomotive.** "*Land locomotive*" means a locomotive designed and used primarily for work on the land in connection with agriculture, forestry, land levelling, dredging and similar operations, which is driven on a road only when proceeding to and from the site of such work, and which when so driven hauls nothing other than land implements.

**Land tractor.** "*Land tractor*" means a motor tractor designed and used primarily for work on the land in connection with agriculture, forestry, land levelling, dredging and similar operations, which is driven on a road only when proceeding to and from the site of such work and which when so driven hauls nothing other than land implements and agricultural trailers.

**Land implement.** "*Land implement*" means any implement or machinery used with a land locomotive or a land tractor in connection with agriculture, forestry, land levelling, dredging or similar operations and includes a living van and the necessary gear and equipment of the land locomotive or land tractor which draws it.

**Agricultural trailer.** "*Agricultural trailer*" means a trailer the property of a person engaged in agriculture which is used on a road only for the conveyance of the produce of or of articles required for the purposes of agriculture.

**Articulated vehicle.** "*Articulated vehicle*" means a heavy motor car or a motor car with a trailer drawn thereby which is so constructed and by partial superimposition attached to the motor vehicle that a substantial part of the weight of the trailer is borne by the motor vehicle.

**Road.** "*Road*" means any highway and any other road to which the public has access and includes bridges over which a road passes.

**Brake drums.** (2) For the purpose of these Regulations a brake drum shall be deemed to form part of the wheel and not of the braking system.

**Calculation of number of wheels.** (3) For the purpose of these Regulations any two wheels of a motor vehicle or trailer shall be regarded as one wheel if the distance between the centres of the wheel tracks at ground level is less than 18 inches.

**The following is a precis of the Regulations.**

## Heavy Locomotives.

**Weight.** Over 11½ tons and not exceeding 15½ tons, but if carrying a jib crane, dynamo or winding drum extra, or one or more of such fittings, an additional 1½ tons allowed. If all wheels are shod with soft or elastic material an additional 2 tons are allowed. Maximum weight permissible 19 tons. (Section 21.)

**Weight distribution.** Not more than 3/4ths of total weight on any two wheels. (Section 22.)

**Width.** Not to exceed 9 feet. (Section 20.)

**Tyres.** After 1st January, 1933, must be of soft or elastic material.

Land locomotives, i.e., locomotives designed primarily for use on the land, are exempt but they must have (a) smooth tyred steering wheels not less than 5 in. wide, and (b) driving wheels not less

Digitized by Google

than 12 inches wide, smooth tyres or with diagonal cross bars not less than 3 in. wide not more than ¾ in. thick spaced not more than 3 in. (Section 23.)

**Brakes.** Brakes are required acting on wheels other than steering wheels. Locomotives exempted registered under Roads Act, 1920, until 1st January, 1933, provided engine is capable of being reversed. (Section 24.)

**Markings.** The unladen weight to be conspicuously marked on the right or offside of the vehicle. (Section 25.)

## Light Locomotives.

The regulations with regard to light locomotives are the same as for heavy locomotives; but the definition of a light locomotive is one which does not exceed 11½ tons in weight but does exceed 7¼ tons in weight.

## Motor Vehicles and Trailers.

**Overall length.** A four wheeled vehicle, not more than 27 ft. 6 in.
A vehicle with more than four wheels, not more than 30 ft.
An articulated vehicle, not more than 33 ft.
An eight wheeled vehicle registered under the Roads Act, 1920, 36 ft.
(Section 5.)

**Weight distribution.** If any wheel of an articulated vehicle with more than 4 wheels is lifted 6 in. above the level road surface, the increase in weight on any other wheel shall not be increased by more than 10 per cent. (Section 6.)

**Springs.** Every motor vehicle, with the exception of a motor cycle, and every trailer must now be fitted with springs between the wheel and the frame.
The regulation does not apply to (a) vehicles registered under the Roads Act, 1920, on or before 1st January, 1932; (b) to trailers constructed before 1st June, 1931, until 1st January, 1935; (c) to pneumatic tyred tractors up to 4 tons in weight; (d) to land locomotives, tractors and trailers; (e) to tractors weighing not more than 4 tons used for railway shunting. (Section 7.)

**Brakes.** Excepting motor cycles and motor cycles with side cars, and invalid carriages all motor vehicles must be fitted with brakes, to hold two wheels in the case of four wheeled vehicles or one wheel in the case of three wheeled vehicles.
This regulation does not apply to land locomotives registered under the Roads Act, 1920, on or before 1st January, 1932, or until 1st January, 1937, in the case of land tractors. (Section 8.)

**Wheels.** Whilst generally wheels must be circular, it is lawful to use on a road a track-laying land locomotive or tractor, the track of which shall have a minimum width of ½ in. and the total area of each track in contact with the road shall not be less than 36 sq. ins. for each ton of the unladen weight of the locomotive or tractor. A track laying tractor shall not draw a trailer. (Section 9.)

**Diameter of wheels.** Wheels not fitted with pneumatic tyres must have a rim diameter of not less than 670 mm. But this regulation shall not apply to any motor vehicle registered under the Roads Act, 1920, on or before the 1st January, 1933, and to any trailer constructed before 1st January, 1933. Nor shall it apply to any vehicle or trailer not exceeding 30 cwt. unladen used in works or private premises, used on a road only when passing from one part of the works to another or to works in the immediate neighbourhood. Nor to vehicles used by or on behalf of local authorities for street cleaning, etc. Nor to a mobile crane, nor to a land implement. (Section 10.)

**Reverse gear.** Every motor vehicle of more than 8 cwt. unladen must be fitted with a reverse gear. (Section 11.)

**View.** The driver of every motor vehicle must have a full view of the road and traffic ahead. (Section 12.)

**Reflecting mirrors.** After 1st January, 1932, all motor vehicles must be fitted with traffic mirrors, excepting motor cycles and vehicles drawing trailers provided a person is carried on the trailer provided with means of communicating to the driver. (Section 13.)

**Safety glass.** All windscreens and windows of all motor vehicles, except upper-decks of double-decked vehicles, shall be safety glass; but this regulation shall not apply till 1st January, 1937, to motor vehicles registered under the Roads Act, 1920, on or before 1st January, 1932.

**Warning instrument.** Every motor vehicle excepting heavy locomotives must carry a warning instrument, but the regulation does not apply to light locomotives until 1st June, 1931. (Section 15.)

**Silencers.** All motor vehicles must be fitted with silencers. (Section 16.)

**Smoke, sparks and cinders.** All motor vehicles must be so constructed that they emit no avoidable smoke or visible vapour, nor sparks or grit and vehicles using solid fuel shall be provided with trays to prevent ashes and cinders falling on the road. (Sections 17 and 18.)

**Closets, etc.** Closets and urinals shall empty into a tank carried in the vehicle which shall be properly ventilated and containing suitable deodorising and germ destroying chemicals. Lavatory basins must not empty into the closet or urinal tank. (Section 19.)

## Motor Tractors.

**Overall width.** Not more than 7 ft. 6 in. (Section 26.)

**Overhang.** Not more than 6 ft. (Section 27.)

**Brakes.** Motor tractors must be equipped with two independent brakes acting on all the wheels other than the steering wheels.
In the case of a steam tractor, the engine shall be deemed to be one braking system.
In the case of a road roller or land tractor not propelled by steam, only one braking system is required.
In the case of a motor tractor, other than a land tractor, registered for the first time under the Roads Act, 1920, on or after the 15th January, 1931, the brakes of at least one of the braking systems shall act directly on all the wheels other than the steering wheels and not through the transmission.
In the case of a motor tractor with more than four wheels, one of the braking systems may act on only two of the driving wheels on opposite sides of the vehicle and the other braking system on all the other driving wheels.
Braking systems constructed so that the failure of one system adversely effects the other system, shall not be deemed as independent. (Section 28.)

**Tyres.** All motor tractors shall be shod with tyres of soft or elastic material but this regulation shall not apply until 1st January, 1933, to motor tractors registered under the Roads Act, 1920, on or before 1st January, 1932.
The regulation does not apply to land tractors provided the tyre of each steering wheel is smooth, not less than 2½ inches in width and the tyre of each driving wheel not less than 6 inches in width or shod with diagonal cross bars not less than 3 inches in width, not more than ¾ in. thick and not more than 3 inches apart. (Section 29.)

**Markings.** As from 1st April, 1931, the weight unladen and the maximum speed shall be marked on the right or offside of the vehicle conspicuously. (Section 30.)

Digitized by Google

## Heavy Motor Cars.

**Overall width.** Not to exceed 7 ft. 6 in.
Provided that a vehicle registered under the Roads Act, 1920, on or before the 1st January, 1932, this width may be exceeded by 6 in. for the purpose of conversion from solid to pneumatic tyres. (Section 31.)

**Overhang.** Not more than 7/24ths of the overall length. (Section 32.)

**Unladen weight.** With four wheels, not more than 7¼ tons.
With six wheels, not more than 10 tons.
More than 6 wheels, not more than 11 tons.
In the case of vehicles as above but fitted with crane, dynamo, welding plant or other special appliances or apparatus being permanent fixtures and which raise the unladen weights to above the regulation weights set out above, nevertheless they shall be deemed not to exceed such specified weights provided that the weight on any one wheel of a four wheel vehicle does not exceed 4 tons, or on any two wheels transversely 8 tons, and in the case of a vehicle with more than four wheels, 7½ tons, and the sum of the weights transmitted to the road by all the wheels of a four wheel vehicle shall not exceed 12 tons and in the case of a vehicle with six wheels, 19 tons, and in the case of a vehicle with more than six wheels, 2½ tons. Furthermore, the total weight of a laden heavy motor car shall be so distributed that the weight transmitted to any strip of road surface between two parallel lines 2 ft. apart drawn at right angles to the longitudinal axis of the vehicle, shall not exceed 10 tons. (Sections 33, 59 and 61.)

**Brakes.** There must be two independent and efficient braking systems acting on all wheels excepting the steering wheels.
In the case of a heavy motor car propelled by steam and not used as a public service passenger vehicle, the engine is regarded as one braking system. In the case of a heavy motor car registered under the Road Act, 1920, on or after the 1st January, 1927, is incapable of being disconnected from all the road wheels other than the steering wheels except by the sustained effort of the driver.
In the case of a heavy motor car registered for the first time under the Roads Act, 1920, on or after the 15th January, 1931, the brakes of at least one of the systems shall act on all the wheels other than the steering wheels and not through the transmission gear.
In the case of a heavy motor car with more than four wheels and the drive is transmitted to all wheels other than the steering wheels, it is sufficient if one braking system acts on two driving wheels on opposite sides of the vehicle and the other braking system on all the other driving wheels (Section 34.)

**Tyres.** Every heavy motor car shall be equipped with pneumatic tyres except in cases where the heavy motor cars have been registered under the Roads Act, 1920, on or before 1st January, 1933, if the vehicle is equipped with tyres of a soft or elastic material.
Provided the regulation shall not apply to vehicles exceeding 4 tons unladen weight mainly used on rough ground or unmade roads, or vehicles used by or on behalf of local authorities for street cleaning, refuse collecting or as fire escapes or tower wagons. (Section 35.)

**Guard rails.** As from 1st January, 1933, if the wheels on either side of a heavy motor car have a clear space between them of more than 2 ft. between them, a guard rail or running board shall be provided to protect such space to within 1 ft. 3 in. of the ground. (Section 36.)

**Wings.** A heavy motor car must be provided with mud guards or wings unless the body of the vehicle serves the same purpose. (Section 37.)

**Markings on heavy motor cars.** As from 1st April, 1931, the unladen weight and maximum speed at which it may be driven when not drawing a trailer, must be marked conspicuously on the right or offside of the vehicle. (Section 38.)

## Motor Cars.

**Definitions.** A motor car is a vehicle weighing unladen, not more than 2½ tons if constructed for the carriage of goods but in the case of vehicles constructed for the carriage of passengers, not more than seven exclusive of the driver—the maximum legal weight is 3 tons. (Road Traffic Act, 1930. Part I.)

**Overall width.** Not to exceed 7 ft. 2 in. (Section 39.)

**Overhang.** Not more than 7/24ths of overall length. (Section 40.)

**Brakes.** There must be two independent and efficient braking systems or one with two independent means of operation. (Section 41.)

**Tyres.** Every motor car exceeding one-ton in weight must be equipped with pneumatic tyres; but this regulation shall not apply until 1st January, 1940, to any motor cars registered under the Roads Act, 1920, on or before 1st January, 1933, if this vehicle is equipped with tyres of soft or elastic material.
Provided also that this regulation shall not apply to motor cars not exceeding 30 cwt. in weight unladen if used in works or on private premises, only travelling on roads between one part of the works to another or to another works or premises in the immediate neighbourhood and also to motor cars used on behalf of local authorities for street cleansing purposes, etc. (Section 42.)

**Guard Rails.** The regulation as to guard rails, which comes into force 1st January, 1933, apply to motor cars designed to carry 7 passengers exclusive of the driver is the same as that set out in Section 36 above. (Section 43.)

**Wings.** Similar to Section 37 above. (Section 44.)

## Invalid Carriages.

**Overall Width.** Not to exceed 7 ft. 2 in. (Section 48.)

**Brakes.** One efficient braking system acting on two wheels. (Section 49.)

**Wings.** Must have mud guards or wings. (Section 50.)

## Trailers.

**Overall Length.** Not to exceed 22 ft. exclusive of drawbar:
Provided that the regulations shall not apply to trailers constructed for indivisible loads of exceptional length, to a land implement or to an articulated vehicle. (Section 51.)

**Overall Width.** Not to exceed 7 ft. 6 in. provided the overall width of a trailer which was in use before 15th January, 1931, by a travelling showman in connection with his business may equal but not exceed 8 ft. 9 in. (Section 52.)

**Brakes.** A trailer having four wheels must have a braking system which acts at least upon two of them and upon four wheels if the trailer has more than four wheels.
This regulation shall not apply to any vehicle drawn by a locomotive until 1st January, 1932, or to trailers designed for use by or on behalf of local authorities. (Section 53.)

**Tyres.** As from 1st January, 1933, all wheels of a trailer shall be equipped with pneumatic tyres or tyres of soft or elastic material with the following exceptions:—(a) land implement or agricultural trailer. (b) a trailer constructed before 15th January, 1931, specially designed for the transport of live stock or for some other purpose connected with agriculture. (c) to a trailer constructed before 15th January, 1931, used for the transport of furniture or other household effects. (Section 54.)

Digitized by Google

All trailers constructed after 1st January, 1933, and as from 1st January, 1940, drawn either by a motor car or heavy motor car shall be equipped with pneumatic tyres excepting trailers designed for use in works, etc., and by or on behalf of local authorities. (Section 55.)

## Regulations Governing the Use of Motor Vehicles and Trailers.

**Laden Weight of Locomotive.** Maximum total weight not to exceed unladen weight by more than 3 tons. (Section 56.)

**Laden Weight of Trailers Drawn by Locomotive.** The maximum total weight of all trailers drawn by a locomotive shall not exceed 40 tons. (Section 57.)

**Laden Weight of Motor Tractor or Heavy Motor Car and Trailer.** Maximum total weight not to exceed 22 tons. (Section 58.)

**Laden Weight of Heavy Motor.** (See Sections 33, 59 and 61 above.)

**Laden Weight of Trailer.** The total weight carried by any two wheels of a trailer in line transversely shall not exceed 6½ tons:

Provided in the case of a two wheel trailer forming part of an articulated vehicle the weight may be equal to but shall not exceed 8 tons, if all wheels are equipped with pneumatic tyres and if the total weight transmitted to the road surface by all the wheels of the articulated vehicle does not exceed 19 tons. (Section 60.)

**Maintenance of Vehicle and Distribution of Load.** The condition of every motor vehicle and trailer, weight distribution and packing of the load must at all times be such that no danger is caused or likly to be caused to any person on the vehicle, or trailer or on the road. (Section 62.)

**Maintenance of Brakes.** These must at all times be in good and efficient order. (Section 63.)

**Maintenance of Tyres.** Must at all times be in such condition as to be free from defect which might cause damage to the road or danger to persons in the vehicle or on the vehicle. (Section 64.)

**Maintenance of Guard Rails.** Must be efficiently maintained. (Section 65.)

**Maintenance of Glass.** Maintained so that it does not obscure the vision of the driver. (Section 66.)

**Maintenance of Vehicle so as not to Emit Smoke.** The means provided for the prevention of the emission of smoke, vapour, grit, spark, ashes, cinders, etc., shall be efficiently maintained. (Section 67.)

**Contents of Lavatories not to be Discharged on Roads.** All fittings efficiently maintained so that they shall not be discharged or permit leakage on to a road. (Section 68.)

**Excessive Noise.** No person shall use a motor vehicle or trailer on the road which causes excessive noise either directly or indirectly caused by any defect in design or construction, lack of repair, faulty adjustment, faulty packing or adjustment of the load, etc.

Provided it shall be a good defense to prove that the noise was due to some temporary or accidental cause or in the case of proceedings taken against the driver or person in charge who is not its owner, to prove that the noise arose owing to a defect in design or construction or through the negligence or fault of some other person whose duty it was to keep the motor vehicle or trailer in proper condition or properly to pack or adjust the load of such a motor vehicle or trailer. (Sections 69 and 70.)

**Stopping of Engine when Stationary.** When the vehicle is stationary, except in the case of traffic stoppages, the engine must be stopped:

Provided this regulation shall not apply when it is necessary to run the engine for the purpose of examining the working of the machinery. (Section 71.)

**Use of Horn.** To be used when necessary. (Section 72 and 73.)

**Duties of Driver.** Not to drive vehicle backwards for a greater distance than necessary and not to allow a motor vehicle or trailer to stand on the road so as to cause unnecessary obstruction. Not to be in such a position on a motor vehicle that he cannot have control over it and retain a full view of the road and traffic ahead. Not to leave the motor vehicle without having stopped the engine and having set the brake. The driver for a steam vehicle, unless two persons are carried, shall stop the vehicle when it is necessary to attend to the furnace. (Sections 74 and 75.)

**Application of Brakes of Trailers.** Unless the driver is in a position readily to operate the brakes of the trailer as well as brakes of the motor vehicle, another person must be carried to apply the trailer brakes.

Where a trailer is drawn by a locomotive one of the persons employed in driving shall be in a position to operate the brakes of the trailer unless another person is attending the trailer and in a position to apply the brakes:

Provided that in a trailer not exceeding one-ton in weight it shall be sufficient if the brakes of the trailer automatically come into operation on the over run of the trailer. (Section 76.)

**Attendants on Trailers.** By Section 17 of the Road Traffic Act, 1930, when a heavy locomotive or a light locomotive is drawing a trailer or trailers, one person, in addition to the driver of the vehicle shall be carried either on the vehicle or on the trailer for the purpose of attending to the trailer or trailers. A vehicle used solely for carrying water for the purposes of the touring vehicle or any agricultural vehicle not constructed to carry a load, is not defined as a trailer.

This regulation does not apply in the following cases:—(a) Articulated vehicles. (b) When a trailer with not more than two wheels is drawn by a motor car or motor cycle. (c) Where a motor tractor is drawing a closed trailer specially constructed and used for the conveyance of meat between docks and railway stations, etc., and any machine or implement used for the purpose of maintenance, repair or cleansing of roads. (Section 77.)

**Length of Tow Rope.** The nearest points between the two vehicles not to exceed 15 ft. and the tow rope or chain to be easily distinguishable by other road users. (Section 78.)

**Restriction on the use of Vehicles to draw Trailers and all Trailers drawn.** A vehicle exceeding 26 ft. in length shall not draw a trailer.

A sidecar fitted to a motor cycle shall be so attached that the centre of the wheel thereof is not in front or in rear of lines at right angles to the longitudinal axis of the motor cycle drawn through the centres of the front and rear wheels thereof.

As from 1st January, 1940, a motor cycle with not more than two wheels and without a side-car shall not draw a trailer. As from 1st January, 1935, no motor cycle shall draw a trailer exceeding 5 ft. in overall width.

No invalid carriage shall draw a trailer.

No trailer shall be used for the conveyance of passengers for hire or reward. (Sections 79, 80, 81, 82, 83 and 84.)

Digitized by Google

# The Motor Vehicles (Authorisation of Special Types) Order.

WHEREAS by Section 3 of the Road Traffic Act 1930, (a) the Minister of Transport (hereinafter referred to as "the Minister") may by order authorise subject to such restrictions and conditions as may be specified in the Order the use on roads of special motor vehicles or trailers, or special types of motor vehicles or trailers which are constructed either for special purposes or for tests or trials:

Now therefore the Minister in exercise of the powers so conferred upon him and of all other powers thereto him enabling hereby orders as follows:

1. This order may be cited as "The Motor Vehicles (Authorisation of Special types) Order (No. 1) 1931," and shall come into operation on the 15th January, 1931.

2. In this Order the following expressions have the meanings hereby respectively assigned to them, that is to say:—

"*Abnormal indivisible load.*" means a load which:—

(*a*) cannot without undue expense or risk of damage be divided into two or more loads for the purpose of coveyance on a road, and

(*b*) cannot, owing to its dimensions or weight, be carried by a motor vehicle or trailer complying in all respects with the requirements of the Motor Vehicles (Construction and Use) Regulations, 1931, hereinafter referred to as "the 1931 Regulations."

"*Engineering plant*" means moveable plant or equipment which does not comply in all respects with the 1931 Regulations, and which is either:—

(*a*) a motor vehicle or trailer specially designed and constructed for use in connection with engineering operations and which is only used on a road in proceeding to and from the site of such operations or when actually engaged in such operations and carry no load other than is own necessary gear or equipment, or

(*b*) a trailer (other than a trailer used for the carriage of road material or similar burden), used for the purposes of the construction, maintenance and repair of roads, or a living van drawn by a road roller.

3. The Minister authorises the use on roads of motor vehicles and trailers specially designed and constructed, and used only, save as provided in paragraph 5 hereof, for the conveyance of abnormal indivisible loads notwithstanding that such vehicles do not comply in all respects with the 1931 Regulations, subject to the conditions and restrictions contained in paragraphs 5, 6, 8, 9 and 10 hereof and also to the conditions and restrictions following, that is to say:—

(*a*) in the case of a motor vehicle all regulations other than regulations 7, 31, 33, 35, 36, 58, 59 and 61 of the 1931 Regulations, shall apply;

(*b*) in the case of a trailer all regulations other than 5, 6, 7, 10, 52, 54, 55, 57, 58, 60 and 61 of the 1931 Regulations, shall apply;

(*c*) the overall width of any such motor vehicle shall not exceed 9 ft. and the overall width of any such trailer shall not exceed 9 ft. except where a greater width is necessary for the safe conveyance of the particular loads carried by that trailer;

(*d*) (i) every such motor vehicle shall be equipped with pneumatic tyres or tyres of soft or elastic material;

(ii) all wheels of any such trailer not equipped with pneumatic tyres or tyres of soft or elastic material shall have a smooth tread of not less than 10 ins. in width in contact with the road surface and shall have the edges of such tread rounded to a radius of not less than ½ inch and not more than 1 inch:

Provided that all wheels of any such trailer constructed after 15th January, 1931, and as from 1st January, 1940, all wheels of every such trailer shall be fitted with pneumatic tyres or tyres of soft or elastic material;

(*e*) the total weight transmitted to the road surface by any wheels of any such motor vehicle or trailer in line transversely shall be such that the average weight per inch width of tyre in contact with the road surface shall not exceed 15 cwt.;

(*f*) every such trailer constructed after 15th January, 1931, which has more than four wheels in contact with the road surface shall be so constructed that under any condition of loading when it is at rest upon a level surface all wheels shall be in contact with the road surface, and if any wheel is lifted and supported at a distance of 3 ins. above such surface the weight transmitted to the road surface by any wheel shall not be increased by more than 10 per cent.;

(*g*) every such vehicle shall be equipped with an efficient braking system the brakes of which act upon not less than half the total number of wheels of the vehicle.

4. The Minister authorises the use on roads of engineering plant notwithstanding that such vehicles do not comply in all respects with the 1931 Regulations, subject to the conditions and restrictions contained in paragraphs 6, 7, 8, 9 and 10 hereof and also to the conditions and restrictions following, that is to say:—

(*a*) in the case of a motor vehicle regulations 6, 11, 12, 15, 16, 17, 18, 62, 63, 64, 67, 69, 70, 71, 72, 73, 74, 75 and 77 of the 1931 Regulations, shall apply;

(*b*) in the case of a trailer regulations 6, 62, 63, 64, 69 and 74 of the 1931 Regulations, shall apply;

(*c*) all wheels of any such vehicle (if it is equipped with wheels) which are not fitted with pneumatic tyres or tyres of soft or elastic material shall be smooth and have the edges rounded to a radius of not less than ½ inch and not more than 1 inch;

(*d*) if any such vehicle is not equipped with wheels it shall be a track laying vehicle so constructed that:—

(i) the parts of the track which come into contact with the road surface are flat and have a minimum width of ½ inch, and

(ii) except in the case of a tracklaying road roller the total area of each track actually in contact with the road surface at any one time is not less than 36 square inches in respect of each ton of the total weight of the vehicle;

(*e*) in the case of a motor vehicle which is not propelled by a reversible steam engine, an efficient brake shall be fitted.

(*f*) in the case of a trailer which is not drawn by a locomotive, suitable scotches or other similar devices shall be provided so designed and constructed as to hold the vehicle stationary when necessary, unless an efficient brake is fitted.

5. No motor vehicle or motor vehicle and trailer or trailers shall carry more than one abnormal indivisible load at any one time:

Provided that if the weight transmitted to the road surface by the motor vehicle or the motor vehicle and trailer or trailers does not exceed the weights prescribed in the 1931 Regulations it shall be permissible to carry more than one abnormal indivisible load of the same character or other articles of a similar character in addition to the abnormal indivisible load or loads.

6. No motor vehicle or trailer carrying an abnormal indivisible load and no engineering plant shall be allowed to travel on any road at a speed exceeding that laid down in the First Schedule to the Road Traffic Act, 1930, for heavy locomotives.

7. No engineering plant shall draw a trailer.

8. Where any vehicle the use of which upon roads is authorised by this Order or the load carried thereby exceeds 8 ft. in overall width at least 4 persons inclusive of the driver or drivers shall be in attendance to attend the vehicle and load:

Provided that where any such vehicle is stationary on a road or is actually engaged in engineering operations and moves on a road only to the extent necessary for the efficient performance of such operations it shall be sufficient compliance with this paragraph if one person in addition to the driver or drivers is in attendance.

9. Where any vehicle the use of which upon roads is authorised by this Order or the load carried thereby exceeds 8 ft. in overall width the owner shall give four clear days' notice to the chief officer of police of every district through which it is proposed that the vehicle shall pass. Such notice shall specify the type of vehicle or vehicles to be used, the

Digitized by Google

nature, dimensions and weight of the load to be carried, the route proposed to be followed and the date and time of the journey unless in special cases or circumstances the chief officer of police dispenses with any requirements as to the length of the notice or the particulars to be given. The owner shall carry out the journey in accordance with the particulars given by him in the notice subject to any variations which he may be directed to make by the chief officer of police.

10. The owner of every vehicle the use of which upon roads is authorised by this Order and the weight of which unladen exceeds 2 tons shall before using any such vehicle upon a road give four clears days' notice to every Highway Authority and to every Bridge Authority responsible for the maintenance and repair of any road or bridge over which it is proposed that the vehicle shall pass.

Such notice shall specify the type of vehicle or vehicles to be used, the nature dimensions and weight of the load to be carried, the route proposed to be followed and the date and time of the journey; unless in special cases or circumstances the Highway Authority or Bridge Authority dispense with any requirements as to the length of the notice or the particulars to be given. Every such notice shall contain an indemnity to the Highway Authority or Bridge Authority in respect of any damage caused to any such road or bridge by reason of the construction of the vehicle or the weight transmitted to the road surface not being in accordance with the requirements of the 1931 Regulations:

Provided that no such indemnity shall be enforced after a period of twelve months from the date when the vehicle was last so used under the notice aforesaid.

# Road Traffic Act, 1930, Part IV.

## Public Service Vehicles. Transitory Provisions.

THE Minister of Transport desires to inform all concerned that it is his intention to bring the requirements of the Road Traffic Act, 1930, as to public service vehicle licences, road service licences and drivers' and conductors' licences into operation on the 1st April, 1931, and to repeal as from that date the provisions of the Town Police Clauses Acts and other Acts dealing with hackney and stage carriages so far as they relate to public service vehicles. It should be noted, however, that vehicles adapted to carry less than eight passengers and hired as a whole (that is, vehicles of the taxi-cab type) are not public service vehicles and will remain under the control of the local licensing authority.

Until the 1st April the provisions of the Town Police Clauses Acts and other Acts dealing with hackney and stage carriages will remain in force, and local licensing authorities should therefore continue to deal with applications for licences to ply for hire with, and to drive or act as conductor of, omnibuses and motor coaches as heretofore. It is not necessary that licences so granted should be expressed to terminate at the 31st March, 1931, but they may be issued for such periods as the authority has been accustomed to issue them in the past.

In order to effect the change-over from the present system to that provided for under the Road Traffic Act, the Minister on 9th February, made the Public Service Vehicles (Transitory Provisions) Order, 1931, under the powers conferred on him by Section 96 of the Act. Copies of the Order will be obtainable from His Majesty's Stationery Office.

Under the provisions of the Order, existing licence holders will, subject to certain conditions, be able to carry on after the 1st April, until such time as the Traffic Commissioners are able to deal with their applications for licences under the new Act. The following action should be taken without delay by persons requiring to obtain licences from the Commissioners.

### DRIVERS AND CONDUCTORS.

*Provinces* Any person who is now acting as driver or conductor of a public service vehicle, but who does not hold a licence to act as driver or conductor, should apply as soon as possible to the Traffic Commissioners for the area in which he resides for a licence to become effective on the 1st April.

A person who is at present licensed by one of the existing licensing authorities to act as driver or conductor of a public service vehicle must take steps to ensure that his licence (by renewal if necessary) covers the period up to the 31st March, next. He must also apply before the 31st March, to the Traffic Commissioners for the area in which he resides for a licence under the new Act. He will then be able to continue to act as driver or conductor until the Commissioners have dealt with his application. This provision only applies in the case of a driver who is over 21 years of age on the 31st March, 1931, or a conductor who is over 18 years of age on that date. Any person who wishes to take advantage of the relaxation as to age provided in the Act for those who were regularly employed on these duties during the last six months of 1929 must obtain a licence from the Commissioners.

*London* (i.e., Metropolitan Police District and City of London). A person who is licensed to act as driver or conductor of a public service vehicle under the Metropolitan Public Carriage Act, 1869, will not during the currency of that licence require to obtain a licence under the Road Traffic Act.

Any other person resident in this area who wishes to act as driver or conductor of a public service vehicle must apply at once to the Commissioner of Police of the Metropolis for a temporary permit to do so. If this application is made before the 1st March, he may drive or act as conductor until his application is dealt with. If the application is made after the 1st March, he will not be able to do so until he actually receives the permit.

### OWNERS OF PUBLIC SERVICE VEHICLES.

*Provinces.* The owner of a vehicle which is not now licensed to ply for hire should apply as soon as possible to the appropriate Traffic Commissioners for a public service vehicle licence (with the necessary preliminary certificate of fitness) to become effective on the 1st April. The owner of a vehicle which is at present licensed to ply for hire must take steps to ensure that the licence (by renewal if necessary) covers the period up to the 31st March, next. He must also apply before the 15th March, to the appropriate Traffic Commissioners for a public service vehicle licence under the new Act. He will then be able to continue to use the vehicle until the application has been dealt with.

*London* (i.e., Metropolitan Police District and City of London). Vehicles licensed under the Metropolitan Public Carriage Act, 1869, may be used during the currency of that licence without a public service vehicle licence. The owner of any vehicle not so licensed, which is intended to be ordinarily operated within or from this area, must apply at once to the Commissioner of Police of the Metropolis for a temporary consent for its use as a public service vehicle. If this application is made before the 1st March, he may use the vehicle until his application is dealt with. If the application is made after the 1st March, he will not be able to use the vehicle until he actually receives the consent.

### OPERATORS OF ROAD PASSENGER SERVICES.

Applications for the grant or backing of road service licences to continue an existing service, with or without modifications, must be made to the Commissioners before the 15th March. In this case the operator may continue the service as it existed at the date of the making of the Order, i.e., the 9th February, 1931 (with seasonal variations corresponding to those which obtained in 1930), until his application has been dealt with.

In the same way, if application is made before the 15th March, 1931, for the grant or backing of a road service licence for a seasonal service similar to one operated during any part of the year ended the 31st March, 1931, then a service identical with that operated in the year 1930-31 may be run until the application has been dealt with.

Existing services which are continued, and seasonal services which are carried on, under these provisions must be operated in accordance with the same conditions and restrictions as heretofore. Road service licences must be obtained from the Commissioners before any new service can be inaugurated or modifications or extensions made in existing services.

The Minister wishes it to be clearly understood that the permission given under the Order to continue existing services does not carry with it any rights, and that the Commissioners will be placed under no obligation whatever thereby when they come to consider the grant of the actual road service licence in respect of such a service.

In order to take advantage of the terms of the Order, applications must be made before the dates indicated. If applications are not made by the specified dates the provisions of the Order cannot operate and it will probably then be too late for the Commissioners to deal with such an application in time to reach a decision on it by the 1st April. The need for applications to be made at the earliest possible moment is therefore apparent.

Application forms for public service vehicle licences, certificates of fitness, road service licences and backings are now available at the offices of the Traffic Commissioners, and those for drivers' and conductors' licences will be available shortly.

Special attention is drawn to the permits and consents for drivers, conductors and vehicles in the London area. It is essential that applications for these should be made at once. In these cases no forms are required, but the particulars to be given are set out in the Order.

* * * *

Attention is drawn to the Public Service Vehicles (Conditions of Fitness) Regulations, 1931. These Regulations, copies of which are obtainable from H.M. Stationery Office, Adastral House, Kingsway, W.C.2, or through any bookseller, prescribe the conditions which a public service vehicle must fulfil before a certificate of fitness under section 68 of the Road Traffic Act, 1930, can be issued in respect of the vehicle.

# British Industries Fair, London and Birmingham.

**February 16th to 27th.**

BELOW we give brief particulars of some of the exhibits at the Birmingham Section of the British Industries Fair, in which our readers are more particularly interested. Our stand No. at this Fair is 16E/5, Eng. Section, where our representatives will be in attendance. We shall be pleased to see our friends and afford them such assistance as may be in our power.

**Accles & Pollock, Ltd., Oldbury, Birmingham.** Stand No. 16G/4. There will be a comprehensive exhibit of steel tubes and their many applications.

**Anglo-American Oil Co., Ltd.,** 36, Queen Anne's Gate, London, S.W.1. Stand No. C/7 Block 14. The exhibits of this firm will include Pratts high test petrol, commercial petrol and super benzol mixture, also standard bitumen, Pratts fuel oil, standard safety lines, Valor heaters and oil storage cabinets and drums.

**Sir W. G. Armstrong Whitworth & Co. (Engineers), Ltd.,** Scotswood Works, Newcastle-upon-Tyne. Stand No. 15F/2 Engineering Section. Exhibited on this stand will be the "AAW" axle box bearing machine shown under working conditions. This should prove of interest to all classes of railway and tramway plant and internal combustion engine manufacturers. "AW" furnaces of various types. "AW" non-crucible semi-rotary type furnace designed for oil or gas firing. "AW" iron crucible tilting furnace. A comprehensive range of Spencer-Hopwood boilers now being manufactured at Scotswood Works will also be on view. A varied selection of "Britimp" metallic packings will be shown suitable for almost every type of duty including those for locomotives, reciprocating engines, turbines, diesel engines, pumps, compressors, valves, etc.

**British Oxygen Co., Ltd.,** Victoria Station House, Westminster, London, S.W.1. Stand No. 1. Block 17/M. The exhibits will include Oxygen cutting machines, oxy-acetylene welding and cutting apparatus, flarelights and air-acetylene.

**Chloride Electrical Storage Co., Ltd.,** Clifton Junction, near Manchester. Stand No. 3. Block 20M. Storage batteries for a great variety of electrical purposes will be exhibited on this stand, in four main categories, namely:—(1) Chloride batteries for stationary installations. (2) Exide batteries for high tension and low tension wireless purposes. (3) Exide-Ironclad batteries for marine work and (4) Lux batteries for lighting railway trains. Also the Keepalite system of automatic emergency lighting for hospitals, cinemas, etc.

**Clear Hooters, Ltd.,** 79-81, Lombard Street, Birmingham. Stand No. 17E/7. This exhibit will consist mainly of Clarion Dome front high frequency horns.

**Coventry Chain Co., Ltd., Coventry and Hans Renold, Ltd., Manchester.** Stand No. 16L/2 and 3. These two firms will be exhibiting in conjunction, their central exhibit being a steel skeleton on which will be mounted various types of standard and stock chain drives, with roller and inverted tooth type chains, various types of conveying and elevating chains, various types of chain cases, and an application of the counter-weight chain system. Some of these drives will be motor-driven. There will be in addition several large chain drives, illustrating the adaptability of chain-gearing. One exhibit will feature the advantages of the Renold remote control system. There will be a complete range of chain couplings, with and without covers; specimens of the Renold clutch, dismantled and complete; specimens of the Coventry speed reduction gear boxes. A Renold loom drive with slipping device; automatic chain tensioners; a complete range of all patterns of Renold and Coventry chains, for all purposes.

**Crossley Brothers, Ltd.,** Openshaw, Manchester. Stand No. 16M/3. This exhibit will include examples of vertical and horizontal type heavy (crude) oil engines, all shown in working operation. Type OVD3. is a three-cylinder vertical compressorless diesel engine direct coupled to a 50 KW. 220 volts, D.C. dynamo at 450 r.p.m. by the General Electric Co. Type FOE4. is a four-cylinder horizontal enclosed crude oil engine, having a normal rating of 88 b.h.p. at 375 r.p.m., complete with compressed air starting equipment. Type FOE2. two-cylinder, normal rating of 48 b.h.p. at 375 r.p.m. Type OII3. represents a new Crossley production comprising an industrial single-cylinder oil engine, cold starting and rated at 15 b.h.p. at 400 r.p.m. Type PHC1040 is a combination engine driven compressed air starting set for charging the M.S. storage reservoir up to 350 lbs. per square inch.

**Dennis Bros., Ltd.,** Guildford. Stand No. 13K/4. The exhibit will consist of Dennis motor lawn mowers.

**Edison Accumulators, Ltd.,** 15, Upper George Street, Edgware Road, London, W.1. Stand No. 22N/1-3. A full range of well known Edison batteries for all purposes.

**F. Gilman (B.S.T.), Ltd.,** 221, High Street, Smethwick, Staffs. Stand No. 15F/6. The exhibits will include boiler and economiser scaling tools for use on steam raising plant and a range of flexible drive tools to compete with every foreign made tool of this description.

**Alfred Herbert, Ltd.,** Coventry. Stand No. 16F/3. The exhibit will consist of one of the firm's small Atritor coal pulverising machines having a capacity of 500 lbs. of pulverised coal per hour, actually in operation for firing a typical forge furnace suitable for heating forgings up to about 12 in. square. There will also be exhibited a wide range of engineer's small tools and workshop accessories.

**Hollings & Guest, Ltd.,** Thimble Mill Lane, Birmingham. Stand No. 3. Block No. 18L. There will be exhibited an hydraulic four column press fitted with three steel hot plates, giving two daylights, specially designed for the manufacture of artificial horn, fibre, safety glass and insulating materials of all kinds. A hot plate press. An hydraulic scrap metal bundling press. Hydraulic propeller starter. Hydraulic pumps. Hydraulic accumulator. Guest's V.R. positive action pump. Valve and fittings and Guest's "All-Metal" hand bundling press.

**Lang Wheels Company,** Hillingdon Heath, Uxbridge, Middlesex. Stand No. 18E/2. The exhibit will consist of trailer wheels, dual-purpose tractor wheels, 18-pounder artillery gun wheel, farmcart and aeroplane wheels.

**R. A. Lister & Co., Ltd.,** Dursley. Stand No. 17G/1. The most interesting exhibit on this stand will be the new 18 b.h.p. "Diesel" engine, fitted with a specially designed circular radiator. The outstanding feature of the engine is that it can be operated on diesel fuel oil at 4½d. per gallon, thus reducing fuel bills by over 70 per cent. A 6½ h.p. hopper cooled petrol engine will also be exhibited. Lister "Diesel" engine-powered plants. Lister "Autotrucks," and a special truck designed for milk delivery.

**M.C.L. and Repetition, Ltd.,** Pool Lane, Langley, Birmingham. Stand No. 17N/2. The exhibit will include automatic screw machine products, bright bolts, nuts, screws, etc., Repetition work of every description for the electrical and engineering trades.

**National Accumulator Co., Ltd.,** 35a, Bessborough Place, London, S.W.1. Stand No. 19M/3. This firm will be showing the products of its subsidiary companies, namely, the D.P. Battery Co. and the Tudor Accumulator Company. The Tudor Accumulator Company's exhibits will consist of accumulators for all purposes and will include a large cell with a capacity of 16.416 ampere hours at the ten hour rate of discharge. The D.P. battery exhibit will consist of D.P. and Kathanode batteries for every purpose including electric trucks and electric locomotives.

**Nobel Chemical Finishes, Ltd.,** Slough, Bucks. Stand No. 13F/2. The exhibit will comprise Nobel Low Bake enamels, Nobel air-drying, acid-resisting enamels. Nobel "Dulux" finishes and Nobel One Bake Undercoats.

**W. & C. Pantin, Ltd.,** 147, Upper Thames Street, London, E.C.4. Stand No. 4. Block 15M. The exhibit will consist of an installation of conveyors including one inclined drag type elevator, a gravity roller conveyor and a patent belt lowerer for raising, conveying and lowering boxes.

**Parker, Winder & Achurch, Ltd.,** Broad Street, Birmingham. Stand No. 5B/1. The "Parwinac" industrial oil burner will be shown in conjunction with Hartley and Sugden, National radiator and Beeston boilers. The three boilers will be fired by three burners, the atomising air for which will be derived from one motor and fan.

**G. D. Peters & Co., Ltd.,** Windsor Works, Slough. Stand No. 16K/2. The firm will be exhibiting all the latest models of "Wilson" Plastic-Arc welders including a portable single arc plant with a Dorman engine drive and also a special 100-AMP welder designed for the use of garages of small engineering works. General welding accessories will also be exhibited.

Digitized by Google

**Port of Bristol Authority,** Queen Square, Bristol. Stand No. 2C. Specimens of a number of classes of goods which pass through the Port are to be shown and interesting dock operations will be illustrated by a daylight cinema and additional pictorial demonstration by coloured transparencies forming panels in the walls of two lighthouses.

**Pyrene Co., Ltd.,** Great West Road, Brentford, Middlesex. Stand Nos. 20E/2, 3 and 4. The feature of this exhibit will be a process known as "Parkerizing" for rust proofing iron and steel by means of a chemical bath made up of boiling water and Parco powder. Another process known as the "Bonderising" will be shown consisting of a chemical primer used as a base for paint, enamel, etc. Ranges of Pyrene, Conquest and Phomene fire extinguishers will be shown.

A RANGE OF PYRENE FIRE EXTINGUISHERS.

**Ransomes, Sims & Jefferies, Ltd.,** Orwell Works, Ipswich. Stand No. 7K/1. The exhibit will consist of lawn mowers, motor and otherwise.

**Spiral Tube & Components Co.,** 12, Pembroke Street, King's Cross, London, N.1. Stand No. 15E/1. Included in the exhibit will be radiators for diesel engined locomotives and garage heaters.

**H. C. Slingsby,** Kingsway, London, W.C.2. Stand No. 14H/3. This firm will show industrial trucks, ladders, barrows, stackers, handcarts, etc.

**Sternol, Ltd.,** Royal London House, Finsbury Square, London, E.C.2. Stand No. 15F/3. A comprehensive exhibit of special cutting mediums for tapping and screwing steel, brass and aluminium; both soluble and straight cutting oil for automatics, quenching oil for heat treatment and oils for other purposes. There will also be a range of lubricating oils.

**Stewarts and Lloyds, Ltd.,** 41, Oswald Street, Glasgow. Stand No. 14E/2. A range of tubular framework, tube coils, circular rectangular steel plates, cylinders, steam fittings, boiler tubes, etc.

**Tangyes, Ltd.,** Cornwall Works, Birmingham. Stand No. 16J. Ranges of fuel oil engines, pumps and hydraulic presses will be on view and there will be a working model hydraulic garage car lift and turntable.

**Tecalemit, Ltd.,** Mitre House, Scrubbs Lane, Willesden, London, N.W.10. Stand No. 15F/2. This firm of lubricating specialists will show positive feed pumps, automatic pumps, central lubricating fittings, gun filler attachments, lubricants, lubricating nipples, grouped nipple fittings, hose clips, reservoir plugs, lubricating guns and compressors.

**Herbert Terry & Sons, Ltd.,** Redditch. Stand No. 13/K5. A full range of spring and presswork suitable for practically every trade. The Terry agricultural seat made of high grade springs made to replace the hard metal unyielding pan usually fitted to agricultural implements, will be of interest.

**Tungstone Die Casting Co.,** Market Harborough. Stand No. 19M/4. A range of Tungstone patent air pressure pumps of capacities ranging from 375 gallons per hour to 10,000 gallons per hour, also a range of non-ferrous batterium metal supplied in the form of rods, bars, sheets, castings, seamless drawn tubes, stampings and forgings.

**Vickers-Armstrongs, Ltd.,** Elswick Works, Newcastle-upon-Tyne. Stand No. 15F/5. The exhibits on this firm's stand comprise a large variety of extruded rods, sections and tubes, the alloys extruded being high speed turning and screwing quality brass, hot stamping brass, forging quality yellow metal, naval brass, high tensile manganese bronzes, aluminium bronze, high copper content (brazing metal), and P.M.G. metal. Special sections for the electrical engineering and the general engineering trade. On the stand will also be found examples of this firm's manufactures in manganese bronze, phosphor bronze and nickel silver sheets, strips, etc., chill cast bars in gunmetal, phosphor bronze and P.M.G., and an assortment of gunmetal, phosphor bronze and aluminium castings with ingots in manganese bronze and phosphor bronze, etc. The foregoing are manufactured at Elswick Works, Newcastle-upon-Tyne. A special section of the exhibit of this Company is devoted to the production of P.M.G. metal ingots, castings and forgings as produced by their Barrow-in-Furness works.

**C. C. Wakefield & Co., Ltd.,** Wakefield House, 30 & 32, Cheapside, London, E.C.2. Stand No. 14D/4. A range of lubricants for every type of prime mover, including Mystol soluble cutting oils and quenching oils. Wakefield mechanical lubricators for stationary plant, locomotives, etc., and a special type of lubricator for machine and pneumatic tools. The prominent feature will be the firm's system of grease gun lubrication for installation on machine tools.

**Xetal Safety Glass, Ltd.,** Nottingham Road, Stapleford, Notts. Stand No. 5/A/5. The stand itself will be fitted entirely with the firm's safety glass.

## London Traffic.

### Collection of Refuse.

THE London Traffic (Collection of Refuse) Regulations, 1931, came into force on February 2nd, last.

The Regulations restrict the use of any vehicle collecting refuse in the more important traffic streets in London. The effect of the Regulations is to prohibit the collection of refuse between.

(i) the hours of 9 a.m. and 7 p.m. in certain streets and between

(ii) the hours of 10 a.m. and 7 p.m. in certain other streets.

These Regulations, which supersede the London Traffic (Collection of Refuse) Regulations, 1927, will apply to the collection of trade refuse by private agencies as well as to house refuse collected by municipal authorities, but not to the collection of street refuse arising from the cleaning of any scheduled street.

Any person acting in contravention of the provisions of the Regulations will be liable to a penalty not exceeding 40 shillings.

Copies of the Regulations are obtainable from H.M. Stationery Office, Adastral House, Kingsway, W.C.2, either directly or through any bookseller at a cost of 3d. a copy.

## Obituary.

### Sir Alfred Mays-Smith.

WE record with great regret the death of Sir Alfred Mays-Smith, which occurred on February 11th. The passing of Sir Alfred is a great loss to the Society of Motor Manufacturers and Traders and to the industry at large, to which he gave such magnificent service.

Having acted as President of the S.M.M. & T. for the years 1920 and 1921, Sir Alfred has been a Member of the Council and Management Committee of the Society since 1910, and of the Finance Committee since 1914. In addition he has acted as a Trustee of the Edward Manville and S.M.M. & T. Trust Funds, and of the Importers' Section for several years, and also as Chairman of the Car Section Committee and the Joint Negotiating Committee of Car Manufacturers and Agents. Sir Alfred was also a Member of the Olympia Negotiating Committee, and a delegate of the Society on the Motor Legislation Committee, The Conference of Motor Organisations, The National "Safety First" Association, The Panel of Judges for Coachwork Prize Designs, and the Exhibition Committee of the Scottish Motor Trade Association.

The funeral service took place at All Souls, Langham Place, on February 14th and the interment thereafter at St. Marylebone, Finchley.

# Co-ordination or Subordination ?

**Views of representative Road Transport men on the Final Report of the Royal Commission on Transport.**

**From Mr. W. Edwards, M.Inst.T., President, The National Road Transport Employers' Federation.**

*To the Editor of* THE WORLD'S CARRIERS.

SIR,—One cannot fail to be impressed by the final Report of the Royal Commission on Transport as a whole, but to the road haulier and manufacturer of commercial vehicles the views and recommendations in respect of taxation must give rise to the greatest concern.

Gratifying as is the recognition by the Commission of the need for the licensing and registration of road hauliers and the conclusions and recommendation as to the urgency and treatment of bridges, the taxation proposals are calculated to arrest and confuse the road-carrying industry at a stage of its development when, in fact, stabilisation is most desired.

Whilst disclaiming any intention of "actually prohibiting" the use of vehicles over 4 tons in weight unladen, the recommendation of increased licence duties on vehicles in excess of this weight is avowedly made with the object of discouraging their use, and unquestionably, if effect is given to the recommendations of the Commission, it will go far towards actual prohibition.

The Road Transport industry has now reached an advanced stage in its development, and the heavier vehicles operating on the road to-day have been designed to meet the needs and requirements of manufacturers and traders, and it may be said are utilised by those undertakings which have given the greatest thought and consideration to their services.

These vehicles, by their design and tyring—in most cases with low pressure, pneumatics tyres—contribute less to wear and tear of the roads, minimise vibration and are better controlled than the older types.

The regulations under the Road Traffic Act with regard to speeds, weights and tyres, it must surely be agreed, provide sufficient safeguard for the safety of the Public, and the desirability of penalising the most advanced and efficient form of commercial transport with the avowed object of discouraging the diversion of traffic to the road is open to the greatest question.

Industry to-day is in such a sensitive condition that it cannot afford to be called upon to adapt itself from time to time to changing views, and the vicissitudes of varying legislation with the immense cost and dislocation that it entails.

Yours faithfully,
W. EDWARDS.
President.

The National Road Transport Employers' Federation (Inc.),

6th February, 1931.

* * * *

**From Mr. C. le M. Gosselin, M.I.A.E., M.Inst.T., President, Commercial Motor Users' Association (Inc.).**

*To the Editor of* THE WORLD'S CARRIERS.

SIR,—The Final Report of the Royal Commission on Transport centres round the vexed question of railway and road competition, and the most significant recommendation of the report is the statement by the Commissioners that for the main business of transport the railways are indispensable, and that the Nation, therefore, cannot afford to place capital invested in railways on the scrap heap, or even to render it partially unremunerative. It is for the public to decide whether they propose to adopt this recommendation or to reject it, and in doing so the Final Report appears to provide more material for its rejection than for its adoption.

In the first place the Commissioners have arrived at the decision that the existing capital in the Railway Companies is worthy of protection, without apparently examining how much of it is really live capital and how much dead capital, and it is left to three of the Commissioners in a minority report to call attention to the fact that a considerable proportion of railway capital that exists to-day is dead, and does not represent real assets. On the other hand the Commissioners themselves have decided on the evidence they have heard that the Railway Companies in the past have neglected the requirements of the public, and any improvement which has been evident in recent years has been largely due to the presence of road transport competition.

A further finding of the Commissioners is that in considering the present difficulties of the Railways, the consideration of the long depression in trade is more important than that of road competition, and they suggest that a return of prosperity of trade and industry would again bring greatly increased traffics to the Railway Companies. The Traffic Commissioners further point out, on more than one occasion, that the railways appear to have done very little to respond to this new form of competition on the roads, except by endeavouring to "get on the road" themselves—a policy which they view with some disfavour.

Having regard to the above considerations it is difficult to understand how the Commissioners, as reasonable business men, can seriously suggest that the time has arrived that the only solution for protecting the Railways position is to curtail the activities of road transport competition.

When one turns to the Commissioners' Report on road transport itself, the principle of placing the Railways financial position in a preferential position to that of road transport development, becomes even less easily understood, and is well expressed by the Commissioners in paragraph 131 on page 36 of the Report:—

> 131. It has been suggested to us that when road competition first began to be serious from a railway point of view—that is, immediately after the War—the railways were caught napping and failed to take sufficient steps to meet the new situation. We have already referred to the exhausted condition of the companies after the War and the serious nature of the problems which engaged the attention of their staffs in connection with the amalgamations effected under the Railways Act. It is only fair to make due allowances for these matters. But it cannot be denied that in the days of their monopoly the railways had in some ways insufficiently studied the needs of the public, and that their policy had become unduly conservative. Although between the most important centres of population there were excellent services of trains—more particularly at points where competition existed between two or more companies—the passenger train services generally were unnecessarily slow and often inconveniently timed. In too many cases the general attitude of the companies seems to have been that as a passenger had to use a particular line he must travel at times and at a speed convenient to the company. The truth of the doctrine that facilities create traffic appears to have been forgotten. In recent years there has certainly been some improvement, no doubt mainly due to road competition, but in our opinion much remains to be done.

and again in paragraph 470 on page 131:—

> 470. The fact that, as nearly half the population of Great Britain is concentrated near the large ports, a considerable proportion of traffic has to be hauled for short distances only and can often be more conveniently and economically conveyed by road than by rail, renders the question of adequate road access to the ports of constantly increasing importance. . . . .

The only serious complaints that the Commissioners can find to make against road transport, as compared with its competitors, are that it works too hard, and is content to accept too low a remuneration for its services, and they therefore suggest that road hauliers should be licensed and be compelled to adopt the Fair Wages Clause—whatever that may be—and that an arbitrary limit should be set to the size of the unit that road transport may operate, namely, a vehicle with a tare weight not exceeding 4 tons. The Commissioners apparently feel a certain amount of misgiving in making this recommendation, for they suggest that larger units should not be actually prohibited, but should be taxed so steeply as to discourage their use. This recommendation is in keeping with the policy now being carried out by many local authorities who prohibit the use of gas in Council houses, because they desire to increase the use of electricity, in which they often have a financial interest.

It is only possible to reflect with sorrow that such foolish policies can be advocated at a time when the community depends for its existence upon making use of every facility that science can supply to enable it to

Digitized by Google

overcome the difficulties that surround us, in the hope of finding our way back to some degree of prosperity as a Nation.

Yours faithfully,
C. LE M. GOSSELIN,
President.

The Commercial Motor Users' Association (Inc.),

9th February, 1931.

* * * *

**From Mr. A. C. Osborn, President, The Furniture Warehousemen and Removers' Association.**

*To the Editor of* THE WORLD'S CARRIERS.

SIR,—The Final Report of the Royal Commission on Transport is, amongst other things, a very fascinating and interesting record of the evolution of transport, by road, river, canal and railway. The latter monopolised nearly all transport until the War, at the conclusion of which road transport made rapid strides owing to the enormous number of road vehicles thrown upon the market by the Government, their cheapness, and the slowness of the Railway Companies in their lack of efforts to deal with the competition by tightening up their organisation and adjusting their rates. The Railway Companies having secured limited rights to use their resources for road transport are competing with established road organisations and are also becoming, as the Commissioners point out, competitors with themselves. It is a question whether it would not have been better for the railways to direct their energies to improving their splendid tracks and wonderful system covering all the main channels of traffic enabling them to deal effectively with the competition which threatened them.

The Road Traffic Act which is the outcome of the earlier reports will bear very heavily on our Industry which is a specialised one, involving no hardships to our drivers and packers, the former having considerable periods of inactivity whilst their vehicles are being loaded and the latter considerable periods of inactivity during the journey. It is hoped that the Minister of Transport will make the modifications and variations we are suggesting.

It is noted with interest that the Commissioners suggest the reconstruction of bridges and the improvements of existing roads rather than the extensive building of new roads.

Their recommendation that the Road Fund should not be raided for general relief of taxation is to be commended.

It is interesting to note that the Commission recommends the more general use of Containers. These have been used by removal contractors for the last fifty years and exclusively by them until quite recently.

I would suggest that the taxation of road vehicles such as are used in our Industry is sufficiently heavy, especially as the majority of them already have pneumatic tyres and in due course will all be so equipped, pedestrians, cyclists, and horse drawn vehicles still use the roads.

One is glad to see the recommendation that all roads should be public and that tolls should be abolished.

The recommendation regarding the licensing of road vehicles on the lines indicated by the Commission would probably be advantageous.

I would suggest that now notice of the expiration of driving licences is to be discontinued that they should all expire on December 31st.

Yours faithfully,
ALFRED C. OSBORN,
President.

The Furniture Warehousemen and Removers' Association.
6th February, 1931.

**From Mr. P. R. Turner, M.Inst.T., President, London Cartage and Haulage Contractors' Association.**

*To the Editor of* THE WORLD'S CARRIERS.

SIR,—Much has already been written either by way of approval or criticism of the Final Report of the Royal Commission on Transport and I have already expressed an opinion thereon, but these views have in the main been directed to those parts of the Report which deal with Road competition with the Railways, and the Commission's recommendation to impose such taxation upon the heavier types of vehicles as to discourage their use.

There are other references in this voluminous document which may have an important bearing upon the future conduct of our industry. They are to be found in Chapter IV, which is devoted entirely to Road Transport problems and contains the recommendations of the Commissioners.

The views of the Commissioners as expressed in Section 332 that—"First, we believe it would be greatly to the advantage of the Road Haulage Industry itself, if it were placed on an organised basis; secondly, in our opinion the organisation of the Industry is an essential precedent to any attempt at general co-ordination with other forms of transport" would, I believe, in the first premise be universally endorsed and as the second is a contingency upon the first, one need not be unduly alarmed at the prospect which this visualises.

There is no Industry upon which the lack of organisation has had such disastrous results as that of Road Transport. We have in the past been referred to—and with some measure of truth—as a mere rabble. The introduction of mechanical traction and other circumstances, have, however, compelled the application of a more scientific system of operation and to-day a much higher standard obtains in the Industry, but there is still much room for improvement. I therefore welcome as a means to that end the first recommendation that a system of licensing should be introduced for all road hauliers.

There are many who think that the Industry is already suffering too much from governmental interference and I am heartily in agreement with them, but here is a proposal which must lead to the ultimate benefit of all engaged in the Industry and on those grounds our support is justified.

In one way it will give us a charter and establish the goodwill of our business. On the lines recommended by the Commission only those actually engaged in the business as Road Hauliers will be licensed as such. Ancillary users will continue to function in the distribution of their own goods but they would not be permitted—as many of them are doing to-day—to carrying the goods of others.

Before issuing a road haulage lincence to an applicant regard will be given to two conditions:—

(1) The fitness of the vehicle.
(2) The wages and conditions of service of persons employed in connection therewith.

With regard to the first point, the introduction of compulsory third party Insurance will of itself have a tendency to improve the types of vehicles on the road, and there would be few regrets at the disappearance of some vehicles which are operating to-day.

If we approve and welcome the introduction of a system of licensing, we can offer little objection to the requirement of the fitness of the vehicle. I cannot imagine that this requirement will be arbitrarily imposed, especially having regard to the nature of the work on which some vehicles are engaged—operations which absolutely preclude vehicles from being maintained at a Rolls-Royce standard—but, nevertheless, there are some vehicles for which a licence should never be issued.

On the second requirement, the wages and conditions of service of the persons employed, we can afford a full measure of support. There is no other phase in the operation of road transport which has been more conductive to the lowering of its status than the absence of a recognised standard of wages and conditions of service of our employees. The Commissioners' views on this point are worth reading:—

*SECTION 342.*

"The second point, however, is of even greater importance. Much of the competition between road hauliers and between the road haulage industry, and railways, and other forms of transport is unquestionably open to severe criticism on the ground that the wages and general conditions of service in the industry leave much to be desired. Although we have no doubt that there are many firms to whom this criticism is not applicable, we cannot but feel that there are others whose profits, if there be any, represent to a considerable extent the difference, expressed in terms of money, between the wages paid and the conditions obtaining, and the wages which should be paid and the conditions which should obtain, if proper standards were maintained. Improvements in these directions will go far to weed out the less desirable operators, and to place the industry on a sounder basis by removing the element of uneconomic operation which undoubtedly exists. Section 93 of the Road Traffic Act, provides for the application of the 'Fair Wages Clause' to persons employed in connection with the operation of public service vehicles. We recommend that the application of this Section should be extended to include persons employed in connection with the licensed vehicles of road hauliers."

This is a scathing indictment and it will redound to the credit of the Industry if the recommendation of the Commission can be speedily adopted. We have striven for years to get some legislation on this question and now that the principle has been introduced and adopted for the passenger carrying section there is reasonable hope that its extension to the goods carrying section will not be long delayed.

The report is silent on the application of the "Fair Wages Clause" to ancillary users, but there is every reason for it to be applied throughout road transport, and no doubt representations to this effect will have to be made.

One other point of interest to which the Commissioners

Digitized by Google

make reference is the question of Clearing Houses. "The unsatisfactory conditions regarding these"—the Report states—"are due in the main to the equally unsatisfactory conditions of the Industry and if the latter are removed the former will disappear. Our general feeling is that when once the Industry has been placed on a more stable footing it should organise its own Clearing Houses and not, as at present, leave this part of the business to others, some of whom, we are informed, are not always particularly scrupulous."

These are the principal points which the Commission have put forward as remedial measures for the organisation and improvement of the Road Transport Industry. They are so much in accord with the evidence which I had the honour to submit on behalf of the Industry, that I can do no other than give them complete endorsement with the full knowledge and conviction that by the adoption of such methods the status of the industry will be raised and great benefit accrue to all engaged in it.

Having thus given a benediction to the licensing proposals, one hesitates to strike a discordant note, but I cannot let this occasion pass without registering again our strongest protest against those sections of the Report which suggest the imposition of heavier taxation, and which urge the discouragement of the use of vehicles of an unladen weight in excess of 4 tons. Upon these points the Association is taking the earliest opportunity of making representations in the proper quarters as to the injustice of the proposals and the disastrous effects they will have upon the Industry.

Yours faithfully,
P. R. TURNER.
President.

London Cartage and Haulage Contractors' Association.
February 5th, 1931.

* * * *

**From Sir Maxwell Hicks, C.B.E., Chairman, McNamara & Co. (1921), Ltd.**

*To the Editor of* THE WORLD'S CARRIERS.

SIR,—As operators of mechanically propelled goods vehicles, both large and small, since the earliest days of motor development, may we through your columns voice our protest against the increased taxation on heavier vehicles suggested in the final report of the Royal Commission on Transport—the more so in that the severe increase suggested is advanced as "the only means of effectively discouraging their use," and is admitted to be prominently influenced by "the question of competition between road and rail."

The Report of the Commission embodies so much that is diametrically opposed to such a suggestion that it is more than difficult to reconcile with the balance of its observations and recommendations.

Thus in Section 239, the Commission states that the "owners and users of mechanically propelled vehicles . . . . should not, because they happen to employ a particular form of transport, be subjected to anything in the nature of a sumptuary tax." In Section 248 it is stated that the Commission is "satisfied that the users of mechanically propelled vehicles are not as a class paying too much in taxation, nor do we think that in a general way they are paying too little," and Section 241 states that "the motorists, qua motorist, is paying £40,000,000 a year, equivalent to two-thirds of the annual cost of the highway system"—and in face of these statements comes the suggestion for a heavy increase in the licence duty of vehicles over four tons unladen weight.

It may reasonably be contended that the existing scale of taxation is open to criticism in that while the law allows of vehicles up to 11 tons unladen weight, the tax provides for a flat rate on all vehicles exceeding 5 tons, and that the scale should be revised to re-adjust the existing total of taxation as between the different classes of vehicle, but only provided that if taxation upon one class of vehicle were increased, a corresponding decrease should be made on other classes.

But the Commission, having shown (in Section 513) that it is awake to the danger of restricting the normal development of one form of transport for the benefit of another, yet forgets the wisdom of its conclusion and deliberately recommends such restriction with its object clearly stated.

Let it be realised that an increase in the taxation of the heavier vehicles penalises unfairly not only hauliers like ourselves, but the numerous ancillary users and the British motor manufacturer, whose vehicles are pre-eminent, more particularly in the classes which would be hit.

Further, any increased taxation upon transport must finally become a charge upon trade in general, and surely the present is not a time suitable for this.

Apart from this outstanding lapse, all thinking persons must appreciate the sound commonsense of the Report on the subject of competitive transport.

During the past few years so much propaganda has been released with the object of conveying that the shortcomings of one branch of transport were due to the sins of another, that it is refreshing when such a well-informed and authoritative body as the Royal Commission bids the various forms of transport look to their own shortcomings rather than spend their time talking of the advantages—real or imaginary—of their competitors.

If road transport has in the immediate past appeared to possess advantages as compared with the railways, let it be recognised how much such advantages have been due to the failure of the railways to put their own house in order, and offer to the trader and traveller that increasing efficiency which is expected from any great industry operating under modern conditions.

An industry in which costs are allowed to mount and progress to be retarded to the degree observable in recent years in the Railways, must necessarily be vulnerable to any efficient competition, and in the common interest it is certainly not desirable that such efficient competition should be artificially restricted, provided always that it is not made possible by the exploitation of some section of the community.

Had the great motor manufacturing industry been content to progress during the last ten years upon lines similar to the Railways, it would have been the exception to meet a British manufactured vehicle on our roads by now.

The Road Transport industry asks no favours, but equally it should protest with the utmost vigour against regulation or taxation which cannot be justified upon its own merits as directly affecting the industry—but has as its admitted object the harassing of road transport for the benefit of a competitive form of transport.

Surely the time has come for our Railways to realise that for industries as for individuals, the only real improvement lies in self-improvement.

Yours faithfully,
MAXWELL HICKS,
Chairman,
McNamara & Company (1921), Ltd.

3, Hill Street,
London, E.C.2.

* * * *

**From Mr. E. C. Marston, Chairman and Director of M.R.S., Limited. (Formerly Marstons Road Services.)**

*To the Editor of* THE WORLD'S CARRIERS.

SIR,—I am of opinion that generally the report of the Royal Commission is helpful to the long distance road haulier. It recognises his place in the whole scheme of transport, and proposes legislation in the form of licensing, which I feel will be beneficial to the Long Distance Haulage trade in the long run.

I am also pleased to see the recommendation for a large bridge strengthening programme which I think is helpful towards Road Transport and most opportune at the present time as a means towards alleviating unemployment.

Under existing conditions, Railway Companies and similar bridge Authorities are able to restrict the use of the King's Highway, and generally, such bridge Authorities are averse to road transport. It is, therefore, gratifying to note the Royal Commission suggest private ownership of such bridges be abolished.

The only serious criticism I have to make on the report, is the suggestion to increase taxation on the heavier type of vehicles. I do not agree that any case can be made out for such an increase from a point of view of road use or damage, and the suggestion of the Commission that the use of the heavier type machine should be discouraged for the purpose of influencing traffic back to the Railways, is in my opinion, an argument which every right thinking business man will contest.

My friend Mr. E. B. Hutchinson, recently asked in an article "Is it better in the national interests to have cheap efficient transport, or to artificially bolster up the Railways?" I think that admirably sums up the whole question.

The general conclusions of the Commission in regard to taxation and road costs are clearly stated as follows:—

> "*Section* 248. We are satisfied that the users of mechanically propelled vehicles are not as a class paying too much in taxation nor do we think in a general way they are paying too little."
>
> "*Section* 239. We wish to enunciate the general principle for in relation to highway expenditure the owners and users of mechanically propelled road vehicles should have no preferential treatment on the one hand, and on the other, they should not, because they happen to employ a particular form of transport, be subjected to anything in the nature of a sumptuary tax."

Digitized by Google

The Commission clearly state they are not solely influenced by the question of road damage in making this recommendation, but make it as a means of diverting traffic from road to rail, although in Section 267, while referring to the heavier type vehicle they comment on the convenience and facilities offered by the road vehicle for collection and delivery from door to door.

The action to increase taxation recommended by the Commission is in effect a sumptuary tax, and freely stated so. How then can they reconcile it to their other views expressed in Section 239, mentioned above, condemning anything in the nature of a sumptuary tax.

If we overlook the amazing suggestion that cheap and efficient transport be sacrificed to bolster up the railways, I can only think that this conclusion of the Commission, suggested increased taxation, has crept into an otherwise excellent report, from an entire omission to take into account the larger petrol consumption and consequent high tax under this head, which the heavier type vehicle pays at present.

The following table which I have taken out, shows clearly the excessive grading in taxation paid at the present time, and I do not think the Commission can have had this information before them in their deliberations:—

| Unladen weight on solid tyres. | Approx. mileages run per annum. | Estimated miles per gallon. | Petrol tax at 4d. per gallon. Shillings and pence omitted. | Licence all on solid tyres. | Total. | Taxation in pence per mile. |
|---|---|---|---|---|---|---|
| 3 tons | 30,000 | 8 | £62 | £48 | £110 | 0.88 |
| 4 tons | 30,000 | 7½ | £66 | £54 | £120 | 0.96 |
| 5 tons | 30,000 | 7 | £71 | £60 | £131 | 1.04 |
| 6 tons | 26,000 | 6 | £72 | £60 | £132 | 1.22 |
| 7 tons | 26,000 | 4½ | £96 | £60 | £156 | 1.44 |
| 8 tons | 20,000 | 4 | £83 | £60 | £143 | 1.71 |
| 9 tons | 20,000 | 3½ | £95 | £60 | £155 | 1.86 |
| 40/48 seater Bus on pneumatic tyres | 50,000 | 8 | £104 | £76 | £180 | 0.86 |

My firm in addition to general transport is engaged in the movement by road of heavy and abnormal loads which call for particularly heavy rolling stock specially designed to prevent road damage.

That excellent journal "The Locomotive" whose interests are exclusively Railway, stated in its last issue that my firm "has opened up a new era for the Locomotive Manufacturers in this country, by carrying Locomotives complete by road for export which are out of gauge for English Railways."

For heavy and abnormal traffic the Engineering trades are dependent on road transport, and the suggestion of the Commission for increased taxation to drive off the heavier machine, if carried into law, will be a serious handicap to the trade of the country.

It is true the Railway Companies have only themselves to blame for their present troubles and the Royal Commission said so in no uncertain language. I think we can leave that argument and endeavour to move the whole question on to its proper ground, namely, is it in the interests of the country's trade, to stifle cheap and efficient transport of any kind? There can only be one answer from all disinterested business people.

Yours faithfully,
E. C. MARSTON.

* * * *

**From Mr. Eric Monkman, of Orange Luxury Coaches, London.**

*To the Editor of* THE WORLD'S CARRIERS.

SIR,—It seems obvious to me, both from my dealings with the Ministry of Transport on Part IV of the Road Traffic Act, 1930, and my perusal of the recent report of the Royal Commission on Transport, that the tendency, if not the object, of this legislation is to drive the traffic back to the railways.

One must of course endeavour to put oneself in the place of the statesmen, or rather politicians, responsible for the governing of this country, and one must appreciate that they could not, with a due sense of responsibility to the country, allow to become bankrupt the means of transport which is essential to the well-being of the heavy industries of the United Kingdom and is absolutely vital in times of war. On the other hand, there is no doubt that a great deal of traffic is more economically carried by road, quite apart from the question of convenience, and it seems to me therefore that instead of endeavouring to apply compulsion to traders as to the form of transport which they should use, greater efforts should be made by the railway companies to put themselves on a competitive basis with their rivals.

I have, from the first publication of the proposed regulations restricting Motor Coaches in London, regarded them more as a move to assist the railways than as an actual attempt to solve the problem of congestion. It must, I think, be admitted by every reasonable man that congestion in London is caused only to a very minor degree by Motor Coaches, and then only by a particular form of traffic, which is generally known in the trade as "short distance express."

This class of traffic has undoubtedly caused a certain amount of congestion at a few points, but from the volume of traffic carried is obviously catering for a definite need, i.e., the desire of people in the outlying suburbs to find a quick and easy means of conveyance to business and shopping centres, and the desire of inhabitants of a northern suburb to cross to a southern suburb without a change. These last three words seem to me to epitomise the superiority of coach travel over rail and bus.

When as a representative of the Motor Hirers' and Coach Services Association I gave evidence before the London Traffic Advisory Committee, it was suggested by the Chairman that passengers in North London desiring to go to the South Coast should cross London by bus, tube or taxi to a station on the southern fringe and vice versa for passengers in the south desiring to go North. Such a suggestion shows a complete ignorance, in my opinion, of the psychology of the public. I am personally convinced that passengers would rather spend another twenty minutes on a journey than have to make a change, and I think this is amply borne out by the enormous progress made by direct Motor Coach Services.

The problem of congestion, however limited in extent, caused by Motor Coaches is extremely difficult of solution. There are many companies which practically exist on seasonal and touring traffic—real pleasure traffic—and it cannot be contended that these companies with their limited number of departures per day, and the fact that their peak loads are at week-ends largely, are a factor of any importance in London's problem of congestion.

If, however, one observes Regent Street practically at any time of the day, one cannot but admit that coaches there on the short distance services have added to the difficulties. If, however, an attempt is made to give concessions to services with infrequent departures, one is placed in the rather ridiculous position of assisting pleasure services at the expense of business services.

To solve this problem with due fairness to the interests involved seems to me almost impossible, and I cannot help but think from my 12 years' experience of London traffic that the Minister of Transport has got hold of the wrong end of the stick, and that he would be much better occupied, if he must take some drastic step, in barring from Central London, Motor Cars occupying from 80 to 120 square feet of road space, or on the average say 40 square feet per passenger, than Motor Coaches occupying less than seven square feet per passenger.

Yours faithfully,
ERIC MONKMAN.

P.S.—This letter is, of course, from me as an individual and is not necessarily an expression of views of my Company.
Orange Luxury Coaches,
30, Harleyford Road,
London, S.E.11.
2nd February, 1931.

## Preparing for £1,000,000 Canal Scheme.

WORK has begun on the Grand Union Canal, in preparation for the £1,000,000 developments which will make this London-to-Birmingham waterway one of the most efficient in the country.

A Bill formally authorising the actual development scheme is awaiting the approval of Parliament, but long stretches of the canal are being deepened by new bucket dredgers which are worked by crude oil engines and can go anywhere on the system. They are capable of doing three times the work of the type of dredger formerly in use.

After many experiments in the construction of walls to strengthen weak places along the canal banks, the company's engineers have evolved a structure which they believe will withstand the strain resulting from the great increase of fast motor-driven boats.

Most of this walling work is being done in the Midlands, where erosion due to the wash of fast boats has done a good deal of damage, but other parts of the company's 240-mile system are to be similarly strengthened.

# British Empire Trade Exhibition, Buenos Aires.

**March 14th to April 27th, 1931.**

REALISING the great importance of the British Empire Trade Exhibition, Buenos Aires, to our readers and particularly to those whose enterprise has led them to take part in the Exhibition, we give brief particulars of such exhibits as are connected directly or indirectly with the transport industry.

**Agricultural & General Engineers, Ltd.,** Aldwych House, Aldwych, London, W.C.2. On this stand the following associated firms will be showing their products:—Blackstone & Co., Davey Paxman & Co., J. & F. Howard, Ltd., E. H. Bentall & Co., Ltd., and H. V. McKay (Propty.), Ltd. The local representative for A.G.E. is Mr. W. H. Cullington, 475, Calle Peru, 487, Buenos Aires. A large percentage of the exhibits will consist of agricultural machinery, but the following are of interest from the transport point of view:—Two agricultural tractors fitted with four-cylinder, cold starting, high speed diesel engines. One of their greatest advantages is their extremely low cost of running and another their simplicity. The engine for one of the machines will be by Blackstone & Co., Ltd., and for the other, an Aveling & Porter engine. Both engines are cold starting, the Blackstone being by a small petrol engine and the Aveling by an electric starter. The range of Blackstone spring injection engines from 6 to 1,200 b.h.p. will be represented by a 55 b.h.p. single-cylinder engine and 9 b.h.p. engine coupled to a Bull generator. Another type of Blackstone spring injection engine to be shown is a hopper cooled unit made in powers from 5-14 b.h.p. which run on the lighter grades of fuel oil. There will be a range of small petrol and petrol starting Kerosene engines made by Blackstone, which range in power from 1½ to 7 b.h.p. Paxman engines will be represented by a vertical spring injection heavy fuel oil engine which type ranges in powers from 35-1,500 b.h.p. Blackstones will also show a 4 in. unchokeable pump which represents a comprehensive range. Roadmaking machinery will be represented by two different types of diesel engined rollers, one being an Aveling type DX weighing 6 tons representing a range of weights from 3-17 tons. The second will be a Barford & Perkins new SD series diesel rollers made in sizes from 9-16 tons which will be represented by the SD.9 weighing about 10 tons in full working order. Other Barford & Perkins rollers will be a Q.8 type being an 8-ton tandem roller, an A.4.Q being a light tandem roller of 2¼ to 2½ tons in weight. Also a BK type roller of the three-wheel type, weighing 4 tons driven by a four-cylinder petrol engine. In addition there will be an Aveling & Porter 15-ton steam roller type AH. Concrete mixers will also be shown.

**Ailsa Craig Motor Co., Ltd.,** Strand-on-the-Green, Chiswick, London, W.4. Examples of this firm's range of petrol engines will be shown consisting of the new 12/20 h.p. and 20/35 h.p. four-cylinder marine motors. These will be shown on the stand of Agar Cross & Co., Ltd. There will also be shown the Acro-Diesel marine oil engine.

**Alldays & Onions, Ltd.,** Small Heath, Birmingham. Various fans will be shown including forced and induced draught fans for boilers, ventilating, heating, drying, dust collecting, etc., furnaces will be shown including crude and oil fired rivet heating furnace fitted with a patent oil burner and an oil fired crucible tilting furnace for melting non-ferrous metals. A hammer to be shown will represent a range of pneumatic self-contained planishing hammers. This model will have a weight of head of 10 lbs. and is suitable for panel beating.

**Amalgamated Carburetters, Ltd.,** Holford Works, Perry Barr, Birmingham. The exhibits of this firm will be found on the stand of Imperial Chemical Industries, Ltd., and will consist of carburetters, fuel pumps, petrol filters, controls, etc.

**Armstrong Siddeley Motors, Ltd.,** Coventry. The firm will demonstrate a complete Atlas Army Co-operation aircraft at El Palomar aerodrome and will exhibit, in an uncovered form, the front of the fuselage, the lower main plane and an aileron. There will be a complete range of Armstrong Siddeley air cooled radial aero engines. Of particular engines the most important are the Jaguar Major or "Panther" and the Double Mongoose and seven-cylinder Genet Major engines.

**Sir W. G. Armstrong Whitworth & Co. (Engineers), Ltd.,** Scotswood Works, Newcastle-upon-Tyne. By permission of the Central Argentine Railway Co., Ltd., there will be exhibited an Armstrong Whitworth three-cylinder 4-6-2 type steam locomotive, being one of twenty ordered by that company. Spencer-Hopwood boilers will be shown, also pneumatic tools and packings, die-cast machines, furnaces, etc.

**Associated Equipment Co., Ltd.,** Windmill Lane, Southall, Middlesex. This firm will exhibit in conjunction with their South American agents, Agar Cross & Co., Ltd., and the exhibits will be as follows:—(1) Aclo "Ranger" 110 h.p. six-cylinder single-deck bus 19 ft. wheelbase with vacuum servo brakes foot operated. (2) An Aclo "Mercury" 3½ ton, 65 h.p. four-cylinder goods chassis. (3) An Aclo "Majestic" 6-ton 110 h.p. six-cylinder goods chassis. (4) An Aclo 4-ton four-wheel drive lorry chassis. All the above vehicles are specially constructed to suit Argentine conditions. (5) A 95 h.p. six-cylinder 100 mm. bore and 130 mm. stroke overhead valve engine, a full sized working sectionised model and (6) a 90 h.p. six-cylinder heavy oil engine.

**Austin Motor Co., Ltd.,** Longbridge Works, Birmingham. There are to be four Austin Seven chassis with various bodies, a 16 h.p. Burnham saloon, a 20 h.p. Ranelagh limousine and a 20 h.p. Whitehall saloon. In addition there will be a 7 h.p. and a 16 h.p. demonstration models.

**Babcock & Wilcox, Ltd.,** Babcock House, Farringdon Street, London, E.C.4. A range of this well-known firm's boilers, boiler fittings and boiler house equipment.

**Blue Star Line, Ltd.,** 40, St. Mary Axe, London, E.C.3. A model of the "Arandora Star" liner.

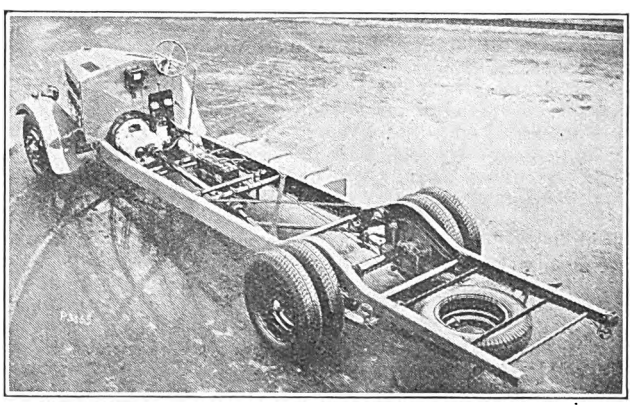
**Bristol Aeroplane Co., Ltd.,** Filton House, Bristol. This firm will show its famous Bristol Jupiter aircraft engines also the Bristol Bulldog type.

**British Dardelet Threadlock, Ltd.,** Chase Road, London, N.W.10. The exhibit will consist of the firm's self-locking screw thread bolts and nuts in various finishes, also railway fishbolts and other railway fittings.

**British Oxygen Co., Ltd.,** Angel Road, Upper Edmonton, London, N.18. Oxygen cutting machines for cutting steel plate and forgings, structural sections, rails and bars. Various types of hand and power driven machines. Various types of welding and cutting blowpipes and lead-burning equipment.

**Crossley Brothers, Ltd.,** Openshaw, Manchester. This firm will show numerous examples of their oil engines in motion arranged for industrial driving and also coupled direct to generators for electric purposes.

**De Havilland Aircraft Co., Ltd.,** Stag Lane Aerodrome, Edgware, Middlesex. There will be four machines comprising two Puss Moths and two Gipsy Moths, also a Puss Moth for flying demonstration.



THE DENNIS NORMAL CONTROL "ARROW" CHASSIS.

**Dennis Bros., Ltd., Guildford.** There will be many interesting exhibits amongst which will be a new type of Dennis passenger chassis; this will be a modification of the firm's six-cylinder "Arrow." A forward control

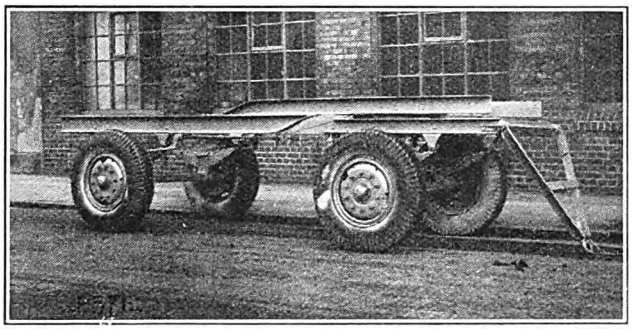
Digitized by Google

model to meet local requirements has been so designed as to allow the driver to occupy a normal position behind the dash. There will be three other models as follows:—A 2-ton chassis, a 7-ton six-wheel chassis and an FS type chassis fitted with a bus body of local construction. The stand will be in the hands of Messrs. Hampton, Watson & Co., 126B, Perez Galdos, 142, Buenos Aires, who are Dennis agents for South America.

**W. H. Dorman & Co., Ltd.,** Stafford. The exhibit will consist of one 4.M.R.M. engine and one 4.M.R.W.M. engine both being marine units.

**Dunlop Rubber Co, Ltd.,** Fort Dunlop, Birmingham. This famous Company will show a general range of Dunlop tyres, sports goods and accessories. The new "trakgrip" commercial vehicle tyres and giant pneumatics will be the chief features of interest. A complete range of everything the Company makes including heavy jacks and other accessories will be shown.

**Eagle Engineering Export Co.,** 45, Pall Mall, London, S.W.1. There will be three examples of Eagle trailers for use with motor lorries or tractors. Conspicuous will be the Eagle "B.A. Empire" model specially built for Argentine conditions similar to many in use on the South



"EAGLE-EMPIRE" 4-WHEEL TRAILER OF 8-TONS CAPACITY FITTED WITH GIANT SINGLE LOW PRESSURE PNEUMATIC TYRES 42 BY 10.50.

American Railways. This trailer has ball bearing spigotted king pin turntable steering and has a carrying capacity of 8 tons. It is designed for use with the Thornycroft "QC" 12-ton six-wheel motor truck making a 20-ton carrying unit. The trailer and truck have the same track and are fitted with interchangeable wheels with giant single low pressure tyres 42 in. by 10.50 in. The second trailer will be very similar to the above but only of 5-ton capacity. The third is a two-wheel trailer of 2-tons capacity with single balloon pneumatics 40 in. by 9 in. The firm's Argentine representative is Mr. Vivian N. Bell, Centenera 2950, Buenos Aires.

**Ferodo, Ltd.,** Sovereign Mills, Chapel-en-le-Frith. This firm will be exhibiting through their agents, Anderson, Levanti & Co., 471, Alsina 485, Buenos Aires, their well known brake and clutch linings in general use on motor cars and heavy transport vehicles as well as many other branches of engineering. The actual exhibits will be as follows:—Bonded asbestos brake lining supplied in a large variety of widths and thicknesses, in rolls and strips; similar lining in sheet form from which brake linings may be cut; bonded asbestos die-pressed brake linings supplied from stock for well known makes of cars; M.R. asbestos brake lining supplied in rolls or strips; Ferobestos brake linings suitable for working against low carbon steel drums. Bonded asbestos die-made discs for plate clutches in a variety of sizes and various other linings for cone clutches, "bonrests" and clutch stops.

**Fodens, Ltd.,** Sandbach, Cheshire. The following Foden steam wagons will be exhibited:—(1) A "Speed-Six" standard type fitted with pneumatic tyred wheels and having a carrying capacity of 6-tons or 10/12-tons with the addition of a trailer. This model enjoys great popularity in the road carrying industry. It conforms, generally, to present day petrol engined lorry design and embodies all the best features of both steam and internal combustion engineering as applied to road transport vehicles. (2) A Foden "Speed-Twelve" rigid frame six-wheel wagon fitted with pneumatic tyred wheels and having a carrying capacity of 12-tons. This vehicle is designed on the lines of the "Speed-Six" with highly successful working results, and is finding a ready market amongst firms handling 12-ton loads. (3) A Foden "Sun" agricultural and general purpose steam tractor which can be used either for ploughing or for ordinary road haulage handling 10-12 ton loads. It can be used for a variety of other purposes such as driving fixed machinery and is indeed a general purpose machine.

**John Fowler & Co. (Leeds), Ltd.,** Leeds. The exhibit will consist of an 8-ton diesel road roller of the three-wheel type. The rolls are of large diameter with wide overlap. The diesel engine designed for heavy work operates on the atomisation principle in which the fuel is injected straight into the cylinder in an atomised condition and is ignited at once without the aid of any preheating by electrical devices or ignition cartridges. The injection nozzles are simple and can be removed and replaced as easily as the sparking plugs in a motor car. The roller is fitted with immediate reverse gear and power steerage. Other exhibits will be a 10/7 concrete mixer and a 24 in. gauge "Little Samson" rail tractor.

**General Electric Co., Ltd.,** Magnet House, Kingsway, London, W.C.2. The exhibit will include (1) Standard D.C. & A.C. motors with their necessary control gear. (2) A 200 amp. D.C. high speed circuit breaker and a 200 amp. line contact circuit breaker. (3) A traction motor and controller complete and (4) a range of transformers.

**General Motors, Ltd.,** Edgware Road, The Hyde, Hendon, London, N.W.9. In addition to a range of Vauxhall private cars, commercial chassis will be represented by the Bedford, being a low priced chassis though strongly built and powered by a six-cylinder engine. The range consists of ½-ton, 1½-ton and 2-ton short wheelbase and 2-ton long wheelbase. The two latter have full floating rear axles and are also available as bus type chassis. The range will be represented at the Buenos Aires Exhibition by a 2-ton long wheelbase goods chassis.

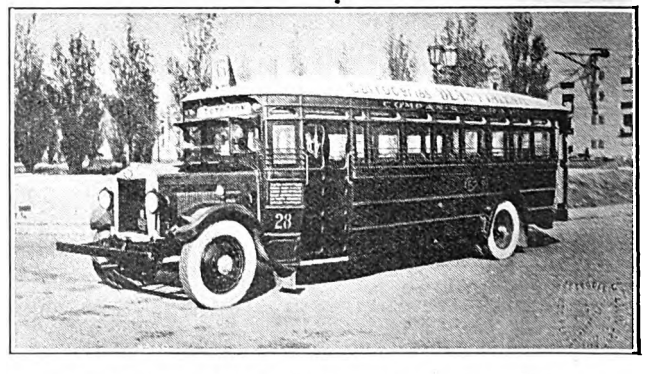
**Greenwood & Batley, Ltd.,** Albion Works, Leeds. The exhibits will be as follows:—(1) A 2-ton "Greenbat" automatic elevating platform industrial electric truck. (2) A driving axle as used on the above. (3) A No. 11 size valve reseating tool. (4) A No. 2 size cold heading machine for making rivets, tyre studs, plain studs, etc. (5) A No. 2 size self-contained "Imperial" Anglo Oil Mill and (6) a 15 h.p. steam turbine dynamo.

**W. T. Henley's Telegraph Works Co., Ltd.,** Holborn Viaduct, London, E.C.1. The exhibit will consist of a range of electric cables.

**Imperial Chemical Industries, Ltd.,** Millbank, London, S.W.1. This exhibit will be extensive and interesting as it will demonstrate exactly how the firm's commercial products serve the needs of local industries.

**A. A. Jones & Shipman, Ltd.,** Leicester. A very comprehensive range of machine tools will be shown as well as "J. & S." small tools.

**Leyland Motors, Ltd.,** Leyland, Lancs. The following items will be shown:—(1) A Buffalo 6-ton chassis. (2) A Lioness six-cylinder omnibus chassis fitted with a locally built body. (3) A Hippo 10-ton tipping lorry and (4) a sectionalised six-cylinder engine similar to those fitted to the firm's Tiger and Titan passenger chassis.



A LEYLAND "LIONESS" OMNIBUS OPERATED BY AN ARGENTINE COMPANY.

**Lodge Plugs, Ltd.,** Rugby. Various models of Lodge plugs for all types of motor engines. Particular attention will be drawn to the special heavy commercial vehicle plug.

**Marshall Sons & Co., Ltd.,** Gainsborough, and **Clayton and Shuttleworth, Ltd.,** Lincoln. The products of both companies will be staged by the two firms' mutual agents Messrs. J. & J. Drysdale & Co., 440, Calle Peru, Buenos Aires. Marshalls will be exhibiting a concrete mixer of the tilting drum type; a Manumit motor roller 12 cwt. size; a diesel cold start oil engine, electric lighting type and a diesel engined road roller, 10-ton model, the latest addition to the Marshall road roller series.

Clayton & Shuttleworth will show a diesel engined tractor of 15/30 h.p. agricultural type. In addition there will be various agricultural machinery.

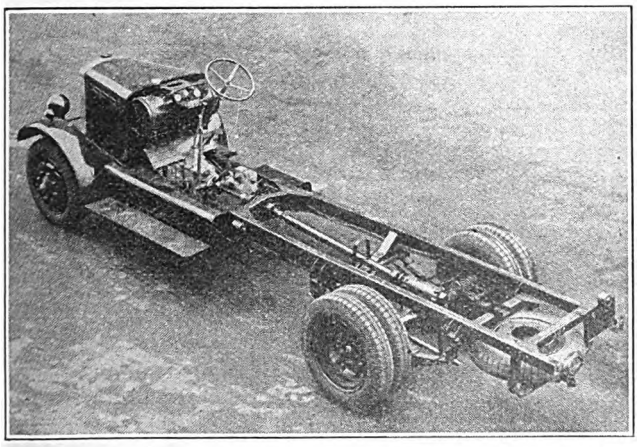
Digitized by Google

**Mercury Truck & Tractor Co.,** Grosvenor Mansions, 82, Victoria Street, London, S.W.1. This exhibit will be included on the stand of Alfred Herbert, Ltd., and will consist of photos and full particulars of the firm's various models of industrial trucks and tractors designed solely for industrial purposes.

**Merryweather & Sons, Ltd.,** Greenwich Road, London, S.E.10. The exhibition authorities have entrusted the fire protection of the exhibition to Merryweather & Sons, the world famous fire engineers of Greenwich, who have had unique experience in the protection of the largest Shows in the United Kingdom for many years past and have also undertaken similar duties at many pre-war exhibitions such as those held at Turin and Paris. At Buenos Aires there will be a special exhibition fire station and the equipment will include a powerful Merryweather "Hatfield" motor fire engine having a four-cylinder engine of 40 h.p. and a patent "Hatfield" fire pump with two speed gear, enabling it to deliver 390 gallons per minute at a pressure of 98 lbs. per square inch or 210 gallons at 165 lbs. pressure. The machine will also carry a 35 ft. "Telescala" ladder and first aid apparatus. This motor fire engine will be of the same type as that recently supplied to H.M. the King of England. There will also be a "Hatfield" trailer fire pump capable of delivering 165 gallons per minute. There will be also various other fire appliances.

**Metropolitan-Cammell Carriage Wagon & Finance Co., Ltd.,** Metropolitan Road, Saltley, Birmingham. A first class steel saloon car recently constructed for the Central Argentine Railway will be shown, also a motor bogie as fitted to railway carriages recently supplied to the Ferro-carril Central Terminal de Buenos Aires, for the inauguration of the underground service in that city. Also a model of the Sentinel-Cammell rail car being the joint product of the Metropolitan-Cammell Company and the Sentinel Waggon Works, Shrewsbury. The office on the stand will consist of a section of the Grand Luxe Sleeping cars as built by the Company for the Cie. Internationale des Wagons-Lits Company.

**Minimax, Ltd.,** Broadway Buildings, Westminster, London, S.W.1. The following "Ignex" fire appliances will be shown:—(1) The soda acid type, in 1 and 2 gallon sizes. (2) The petrol type. (3) The froth or foam type, and (4) a chain ladder fire escape. Mr. Ernest D. Kiley will be in charge of the exhibit.



THE MORRIS-COMMERCIAL 50-CWT. LEADER CHASSIS.

Morris-Commercial Cars, Ltd., Soho, Birmingham. We understand that the Morris organisation has arranged to erect the largest stand in the motor section of the Fair where the following exhibits will be seen:—(1) A 50 cwt. "RD" chassis. (2) A 30 cwt. "RE" chassis. (3) A 50 cwt. "Leader" P type chassis. (4) A 2-ton six-wheeled winch gear chassis. (5) A six-cylinder H type "Dictator" forward control passenger chassis. (6) A six-cylinder "Dictator" H type passenger chassis with normal control. (7) A special "RE" St. John type ambulance. (8) A standard four-wheel 250/400 gallon fire engine.

**Morris Motors, Ltd.,** Cowley, Oxford. There will be a range of 11 Morris cars and chassis of various types and two marine engines.

**Muir-Hill (Engineers), Ltd.,** Elsinore Road, Old Trafford, Manchester. This exhibit will be found on the stand of Societe Hector A. Rugeroni, Administraccion-y-Talleres, Herrera 527, Buenos Aires, and will consist of the Muir-Hill 60 c/m. gauge locomotive, the power unit of which can be supplied to operate on either petrol or paraffin fuel.

**G. D. Peters & Co., Ltd.,** 3, Central Buildings, Westminster, London, S.W.1. This firm, suppliers of equipment for railway rolling stock, in association with the Consolidated Brake & Engineering Co., Ltd., and the British Power Railway Signal Co., Ltd., will be exhibiting the C.B.E. vacuum brake equipment and B.P. power signalling apparatus as used extensively on the South American Railway Administrations. Also the pneumatic door operating and control apparatus as used on the London underground railways and which has been adopted by the Ferro-carril Terminal Central de Buenos Aires, for their subway cars. Also seats, seatings, fittings and furnishings of all descriptions required for railway rolling stock.

**Port of London Authority,** London, E.C.3. This Authority are having an attractive Pavilion specially built in the shipping and engineering section where the dioramas illustrating typical scenes and activities in the Port of London will be erected.

**Ransomes & Marles Bearing Co., Ltd.,** Newark-on-Trent. This exhibit will be found on the stand of Agar Cross & Co., Ltd., and will consist of a comprehensive selection of 3,000 sizes of bearings, the firm being capable of meeting every demand for anti-friction bearings of ball or roller design.

**Ransomes, Sims & Jefferies, Ltd.,** Orwell Works, Ipswich. The only product of this firm of interest to our readers will be found on Agar Cross & Co.'s stand and it will consist of one of their Universal electric trucks for use in factories, warehouses, docks, etc.

**A. V. Roe & Co., Ltd.,** Newton Heath, Manchester. This firm will carry out demonstration flying at the El Palomar aerodrome on one of their new Avro advanced training aeroplanes, and there will be various other exhibits in connection with aviation.

**Rootes, Ltd.,** Devonshire House, Piccadilly, London, W.1. The firm will be showing Humber-Hillman-Commer motor vehicles as follows:—Four Hillman cars, one being a four door saloon fitted with a four-speed and reverse gear box. Two Humber "Snipes" one being saloon finished and the other a drop-head coupe. Also a Humber pullman limousine and a 16/50 Humber tourer. Commercial vehicles will be represented by (1) Commer 2/2½-ton six-cylinder drop side lorry. (2) A 6/7-ton lorry with open platform body. (3) A 32-seater six-cylinder "Avenger" passenger chassis and (4) a 20-seater "Invader" coach which latter will be used for demonstration purposes. Mr. R. W. H. Cook, who recently took up the Rootes' Argentine representation, will be in attendance.

**Royal Mail Steam Packet Co.,** Royal Mail House, Leadenhall Street, London, E.C.3. The exhibit will take the form of an open stand on which will be exhibited scale models of the company's vessels since 1839 to the latest model liners.

**Scammell Lorries, Ltd.,** High Holborn House, 52-54, High Holborn, London, W.C.1. This firm. which has already done an appreciable amount of business in the Argentine, chiefly with the Argentine State Railways and the Public Works Department, will be showing the following:—(1) A pioneer type cross-country rigid six-wheeler fitted with a special body and cab for oilfields service. Wheelbase 15 ft. 1 in., track 6 ft. 9 in. Ground clearance 16¼ in., engine, four cylinders, bore and stroke 5 in. by 5½ in., 80 b.h.p. Detachable cylinder heads. Push rod operated over-head valves. Specialloid pistons. Duralumin connecting rods. Nickel chrome three bearing crankshaft. Forced feed lubrication. Simms magneto. Claudel carburetter with atomiser. Front axle special rocking type allowing 2 ft. articulation, mounted on centrally pivoted transverse springs. Five speed gear box, mechanical tyre pump. Shaft transmission to overhead worm. Final drive—Scammell patent, from pinion on differential shafts through idler wheels meshing with gears on road wheel shafts. The whole being enclosed in steel balanced beams oscillating on axle casing, 2 ft. articulation for each rear wheel. Transmission and four rear wheel brakes. Tyres 12.75 by 20 in. low pressure pneumatic. (2) A standard 6-ton four wheeler on pneumatic tyres 40 in. by 8 in., without body, wheelbase 17 ft. Track 6 ft. 2 in. Body space 17 ft. Engine, as above. Cone clutch. Four speed gear box. A mechanical tyre pump. Shaft transmission to overhead worm. Four wheel and transmission brakes. (3) A 5 ton trailer with Ackermann steering on 40 in. by 8 in. pneumatic tyres.

**Sentinel Waggon Works, Ltd.,** Iddesleigh House, Caxton Street, London, S.W.1. There will be only one exhibit, namely, the Sentinel-Cammell six-cylinder engined gear driven rail car referred to elsewhere.

Digitized by Google

**Sheffield Steel Products, Ltd.,** Templeborough Works, Sheffield. This firm will be showing motor tools and a self-tipping trailer.

**Simms Motor Units, Ltd.,** Percy Buildings, Gresse Street, Rathbone Place, London, W.1. This firm of ignition specialists will show ranges of magnetos, batteries, and general ignition accessories.

**Singer & Co., Ltd.,** Coventry. A range of Singer cars including the Junior delivery van.

**Small & Parkes, Ltd.,** Hendham Vale Works, Manchester. Don brake and clutch linings, motor packings, transmission belting and other similar accessories.

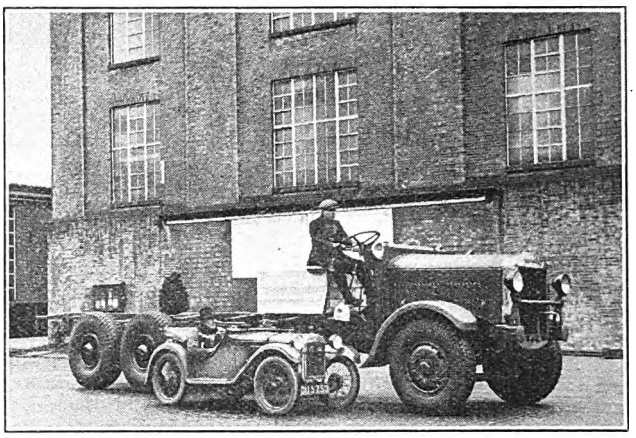
**S. Smith & Sons (Motor Accessories), Ltd.,** Cricklewood Works, London, N.W.2. Motor accessories such as clocks, jacks, hand lamps and motor accessories generally.

**George Spencer Moulton & Co., Ltd.,** 2, Central Building, Westminster, London, S.W.1. The exhibit will deal solely with india rubber applications to railway vehicles including flooring and models of their patent double buffer as fitted to wagons with side buffers and largely used in South America, and a centre buffing and draw gear for sleeping coaches as used in Chile.

**A. J. Stevens & Co. (1914), Ltd.,** Wolverhampton. The exhibit will consist of A.J.S. motor cycles and fittings and will be found on Agar Cross & Company's stand.

**Tangyes, Ltd.,** Cornwall Works, Birmingham. A 60 b.h.p. heavy fuel oil engine coupled to an electric generator, also a range of various types of pumps, lifting tackle, etc.

**John I. Thornycroft & Co., Ltd.,** Thornycroft House, Smith Square, London, S.W.1. The firm will be exhibiting in conjunction with Thornycroft (Argentina) Limitada Sociedad Anonima Comercial e Industrial of Calle Defensa 683, Buenos Aires. Six types of chassis have been shipped for exhibition as follows:—(1) A type QC rigid six-wheeled freight chassis for 12-ton loads, equipped with 102 h.p. six-cylinder engine specially designed to give good pulling at medium and low engine speeds. Power is transmitted to a single plate clutch to a four speed gear box mounted behind the engine and also an auxiliary four speed gear box. Grouped chassis lubrication, mechanical tyre pump, 42 by 10.5 front and 13.5 rear single pneumatic tyres, wheelbase 14 ft. 6 in. and 4 ft. 6 in., equipped with drawbar gear, suitable for 8-ton trailer, 12 volt lighting and starting set. (2) A type FC rigid six-wheeled omnibus chassis with 77.5 h.p. six-cylinder engine, single plate clutch and four speed gear box. (3) A type EC rigid six-wheel freight chassis for 5-ton loads. Engine as above. 40 in. by 9.75 single pneumatic tyres. Drawbar gear for 5-ton trailer. (4) A type A5 rigid six-wheel freight chassis for 3½ ton loads. 70 h.p. six-cylinder engine but otherwise as vehicle No. 2 with auxiliary gear box, 40 by 9 single pneumatic tyres, suitable for a 3-ton trailer. (5) A type JJ Long freight chassis for 6-ton loads. 57 h.p. four-cylinder engine. Wheelbase 15 ft. 6 in., 40 by 9 pneumatic tyres, single front twin rear. (6) A type A10 freight chassis for 2-ton loads, 37 h.p. four-cylinder engine. There will also be exhibited a range of Thornycroft marine engines.



A THORNYCROFT TYPE QC RIGID SIX-WHEELED FREIGHT CHASSIS FOR 12-TON LOADS ALONGSIDE AN AUSTIN SEVEN.

**Vickers (Aviation), Ltd.,** Vickers House, Broadway, Westminster, London, S.W.1. The exhibit will consist of a comprehensive range of aircraft for freight and passenger transport.

**Vulcan Motor and Engineering Co.** (1906), **Ltd.,** Crossens, Southport. This exhibit will consist of (1) a Prince 32-seater six-cylinder low loading omnibus. (2) A patent refuse collector and (3) a medium rigid six-wheeler chassis.

**C. C. Wakefield & Co., Ltd.,** Wakefield House, 30/32, Cheapside, London, E.C.2. The exhibit will be contained on the stand of Messrs. Evans, Thornton & Co., Calle Defensa 465, Buenos Aires, and will consist of a full range of the firm's famous Castrol motor oils and greases.

**Westinghouse Brake & Saxby Signal Co., Ltd.,** 82, York Road, King's Cross, London, N.1. The exhibit will consist of railway signalling and safety appliances, also vacuum brake apparatus.

## Institute of Transport.

THE following gentlemen have been elected to Membership of the Institute of Transport.

MEMBERS.

| | |
|---|---|
| Coventry, Fulwar Cecil Ashton, O.B.E. | Superintendent of Road Transport, Great Western Railway. |
| Hartley, Sir Harold, C.B.E., F.R.S. | Vice-President and Director of Research, London, Midland and Scottish Railway. |
| Trye, Henry Norwood | Traffic Auditor, London Underground Railways, and L.G.O.C. Group, etc. |

ASSOCIATE MEMBERS.

| | |
|---|---|
| Bond, Alfred Joseph | London, Midland and Scottish Railway (Liverpool). |
| Hunt, Samuel Albert | Cartage Operation Section, Great Western Railway. |
| Robinson, Alan James | District Superintendent (Cornwall), Western National Omnibus Co., Ltd. |
| Smith, Wilfred Harry | Assistant Traffic Superintendent, Birmingham Corporation Tramway and Omnibus Department. |
| Steele, Findlay | South African Railways and Harbours (Durban). |
| Vernieux, Louis Eugene | Acting Assistant Traffic Manager, Calcutta Tramways Co., Ltd. |

ASSOCIATE.

| | |
|---|---|
| Fraser, Laurence Gordon Hamilton | Traffic Manager, The Goodyear Tyre & Rubber Co. (Gt. Britain), Ltd. (Wolverhampton). |

## Institute of Transport.

### Metropolitan Graduate and Student Society.

THE Eighth Annual Reunion of the Metropolitan Graduate and Student Society of the Institute of Transport was held in London on January 15th, last. The company numbered about 80, and included many Ladies.

Among those present were:—Sir Henry Maybury, K.C.M.G. (Honorary Treasurer and Past President of the Institute), Mr. Roger T. Smith (Past President), Mr. R. J. Howley, C.B.E. (Vice-President), Mr. A. L. Castleman, Major Gen. S. S. Long, C.B. and Mr. A. W. Arthurton (members of the Council), and other prominent members of the Institute.

The Chair was taken (in the absence of the Chairman and Vice-Chairman of the Society, the holders of these Offices having recently been promoted to positions in other parts of the country) by Captain A. G. Course.

The Toast of the Society was proposed by Sir Henry Maybury, K.C.M.G., in an admirable speech. Mr. R. M. Wheatley submitted the Toast of the Visitors, which was replied to by Mr. R. J. Howley, C.B.E.

# In Parliament.

**Air Services to India and Australia.** Asked what steps had been taken to carry out the resolution passed by the Imperial Conference for an extension of the regular weekly air service between England and India as far as Australia at an early date? **The Under-Secretary of State for Air** (Mr. Montague) said that proposals had been submitted by Imperial Airways, Ltd., for the extension of their England-India air service to Australia. After examination these proposals had been forwarded to His Majesty's Government in the Commonwealth of Australia, the Government of India, and the Government of the Straits Settlements for consideration.

**London Traffic. Mr. Oswald Lewis** asked the Minister of Transport when he proposed to introduce a Bill for the co-ordination of the tube railways, omnibus, and tramways services of London. **Mr. Herbert Morrison** said that discussions were still proceeding with the various authorities and bodies concerned but he was not yet in a position to announce a date for the introduction of the Bill.

**Washington Hours Convention. Mr. White** asked the Prime Minister if it was the intention of the Government to proceed with the Bill to ratify the Washington Hours Convention? **Mr. Philip Snowden,** who replied, said that the Government wished to proceed with the Hours of Industrial Employment Bill, but his right hon. Friend could not say when the further stages of the Bill would be taken.

**Single-Deck Omnibuses in London.** Asked whether in view of the proposed exclusion of motor coaches from certain London streets, he proposed still to allow single-decker omnibuses to use these streets? **Mr. Herbert Morrison** said that the proposed draft regulations would not affect stage carriages plying for hire by short stages as defined in the Road Traffic Act, 1930, that is, they would not affect ordinary omnibus services. If, therefore, single-deck omnibuses were used on such services, they would not fall within the scope of the regulations.

**Motor Coaches in London.** Answering a series of questions regarding the proposed regulations for restricting motor coaches in Central London, **Mr. Herbert Morrison** (Minister of Transport) said (*inter alia*) that specific complaints as to the congestion caused by motor coaches had been received from the Commissioner of Police of the Metropolis as well as from private individuals. No distinction was made in the draft regulations between companies which had been in existence since a certain date and other companies. The Draft Regulations applied generally to public service vehicles other than contract carriages or stage carriages plying for hire by short stages as defined in the Road Traffic Act, 1930. **Mr. Mills:** does not the remedy lie in the erection of proper coaching stations, in the same way as railway companies have to provide railway stations? **Mr. Morrison:** Partly, that is the case, and I have no doubt the policy which we are pursuing will encourage that to be done.

**Road Service Licences. Vice-Admiral Taylor** asked the Minister of Transport whether he had yet issued his directions to the area traffic commissioners recently appointed under the Road Traffic Act, 1930, with special regard to those motor coach services which had been licensed by existing licensing authorities; and to what extent the repeated warnings as to licensing new services which he issued subsequent to the passing of the Road Traffic Act, 1930, had been violated? **Mr. Herbert Morrison** said he had not issued directions to the area traffic commissioners on this subject. They were bound under the Road Traffic Act, when considering an application for a road service licence, to have regard to the extent to which the service proposed was necessary or desirable in the public interest. He had no means of ascertaining the extent to which the warnings referred to had been disregarded, but he saw no reason to doubt that this was a matter which the traffic commissioners would take into consideration in deciding on applications for road service licences.

**Heavy Loads on Highways.** Asked if his attention had been called to the conveyance by road, recently, of a large ship's boiler from Liverpool to London; if he was aware that this vehicle not only caused damage to the public highway but also dislocation of traffic along the Watling Street; and what steps he would take to prevent such a vehicle loaded in this way travelling on the roads in future? **Mr. Herbert Morrison** (Minister of Transport) said he had seen references in the Press to the conveyance of a large boiler by road. The movement of such articles by road must, in the interests of trade, be permitted on occasion, particularly when the articles in question were outside railway gauge. Highway authorities had their legal remedy in respect of damage occasioned by extraordinary traffic and further, in the Motor Vehicles (Authorisation of Special Types) Order, 1931, which had been recently made, it was provided that anyone using a special vehicle for the conveyance by road of an exceptional load should give notice to the highway authority and that such notice should contain an indemnity in respect of any damage caused to any road or bridge by reason of the construction of the vehicle or the weight transmitted to the road surface not being in accordance with the general Regulations as to the construction and use of motor vehicles.

**Motor Head Lights. Mr. Freeman** asked the Minister of Transport whether he was able to state when he would introduce regulations for controlling dazzle from motor head-lamps and whether, when framing such regulations, he would leave the way open for any approved permanent lighting system which would be free from dazzle and yet give an effective driving light so as not to perpetuate exclusively the system of dipping? **Mr. Herbert Morrison** replied that he was about to circulate to the motoring organisations and to other bodies interested in the matter a draft of regulations which he proposed to make on this subject. Any regulations which might be made could be varied at any time in accordance with the progress made in invention and design.

**Horse-Drawn Vehicles in London. Lieut.-Commander Kenworthy** asked the Minister of Transport whether he had any recent statistics showing the number of horse-drawn vehicles for the carriage of goods in regular use in the London area under his jurisdiction; and if he had reason to believe that the number of these horse-drawn vehicles was increasing? **Mr. Herbert Morrison** said that no information was available relative to the number of horse-drawn vehicles in regular use in London, but during a census taken one day in 1930 for a period of 12 hours at a number of important points in the London area, the number of horse-drawn vehicles registered as passing those points was about 30 per cent. less than the number recorded in 1927. **Lieut.-Commander Kenworthy:** What steps is the Minister of Transport taking to deal with this matter? **Mr. Morrison:** There are suggestions that horse-drawn vehicles should be prohibited in certain areas in London, but there is very strong opposition to that also. I think the figures indicate that the problem is in a fair way to solve itself. **Colonel Ashley:** Are not horse-drawn vehicles, especially in the City of London, very useful indeed for the purposes of trade? **Mr. Morrison:** There can be no question that as a matter of sheer transport economics, for short distance journeys, with frequent stoppages, the horse is still the more economical.

---

**Tyneside-made Traffic Robots.**—The automatic street traffic control apparatus made on Tyneside by Messrs. J. H. Holmes & Co., Ltd., of Newcastle and Hebburn, is being shown at the Birmingham section of the forthcoming British Industries Fair. The company is now associated with Messrs. Reyrolle & Co., Ltd., of Hebburn.

**Damage by Overloading.**—The General Purposes Committee of the Chorley Corporation has considered the question of the serious damage which is caused by the excessive overloading of commercial vehicles necessitating the expenditure of large sums of public money for maintenance and has decided to make representations to the superintendent of police that action be taken in all cases in which an offence is committed.

**Controlographs.**—At the Licensing Committee of the Bournemouth Corporation, a letter was received from Mechanical and General Inventions Co., Ltd., with respect to the use of the controlograph on public service vehicles. The town clerk was instructed to inform the superintendent and the firm concerned that the Council considers this a matter for the Ministry of Transport to deal with.

**Newcastle's New Transport Era.**—A vision of the time when Newcastle may become the hub of a new industry which will revolutionise road transport is conjured up by the news that Messrs. Sir W. G. Armstrong, Whitworth & Co. (Engineers), Ltd., have entered into an agreement with the Saurer Co., of Switzerland, to manufacture in this country Diesel-engined motor lorries.

# Road Transport in Scotland.

**Aberdeen Purchases Buses from Glasgow.**—At a recent meeting of the Aberdeen Town Council, the suggestion of the Transport Committee to purchase eight single-deck buses from Glasgow was agreed upon. The vehicles are all of the Albion type, and are now being overhauled and repainted. They should be fit for service again in April ready for the summer services.

**Transport Inquiry in Glasgow.**—A Ministry of Transport inquiry was held last month into the proposed extensions of Glasgow Corporation bus services to Clarkston and Newton Mearns, both places being outwith the city boundaries. Objections were lodged by several private bus companies, who were already catering for passengers between Glasgow and the two places in question. Similarly the L.M. & S. Railway Company which has two stations on the new route entered objection. The solicitor in Scotland for the L.M.S. Railway stated that since August, 1928, the Company had had power to run their own buses on the Mearns road, and that they had never done so was in keeping with their general policy. If they had exercised that right there would probably have been a condition of affairs in the matter of competition similar to that existing among and between the railway companies down to the beginning of the present century—a kind of competition which was regarded as having been insane, and which was universally condemned. That the Company did not exercise their right was, he thought, a wise policy, not only in the interests of the Company but also of the general public. The Minister of Transport's decision is awaited.

**Opening of Glasgow's Extension to Municipal Bus Garage.**—During his visit to Glasgow last month Mr. Herbert Morrison, M.P., Minister of Transport, performed the opening ceremony at the extension of the Larkfield Garage which will accommodate 160 municipal buses. The new portion of the garage contains many striking features, the main bay being 140 feet in width with a single span and no intervening pillars. A smaller span of 40 feet is equipped with 14 inspection pits, each of which is adequately illuminated. Interconnecting passages provide safety exits for the mechanics in case of fire or gas in any pit. Special attention has been paid to heating and ventillation, and ejectors specifically designed are employed for drawing off carbon monoxide gas from the engine exhausts, while warmed air is forced up through gratings in the floor below the engines. The cleaning and washing bays are equipped with water "guns" and brushes, the liquid being supplied under 300 lbs. pressure to ensure effective and quick removal of mud and dirt. The whole garage is regarded as being one of the most up-to-date in Europe and probably one of the largest municipal bus garages in the world. The Corporation are contemplating the erection of a new bus garage at Knightswood with accommodation for 200 buses. The necessity has arisen owing to the tremendous growth of the population in this area during the past five years. Other parts of the city have been surveyed with the object of establishing depots at convenient points.

**Dundee Council to Buy Transport Undertaking.**—At a special meeting of the Dundee Town Council last month it was decided to negotiate for the purchase of the Dundee, Broughty Ferry and District Tramways Co., Ltd., at a price not exceeding £25,000. In moving for the proposed negotiations, Mr. R. A. Scrimageour, convener of the Transport Committee, said that their cars had been running at a loss on the route, and since the buses had been put on as a supplementary service they had been running at a loss also. Neither the Transport Department nor the city could consider for a moment running a service incurring losses which ran into thousands of pounds in a year. Dual control was impossible. Their part of the tramway track was in need of repair—a job which would cost £50,000 if the tramway system was perpetuated. Should the motion be adopted they would certainly abandon the tramway system.

**Traffic Commissioners' Inaugural Meeting.**—The procedure for carrying out the new traffic regulations under the Road Traffic Act were arranged by the Transport Commissioners for Southern Scotland at an inaugural meeting in Edinburgh on January 30th. A census has been taken of all the road transport vehicles in service throughout the area. It is believed that the Commissioners are likely to agree that inquiries should be decentralised, and it is practically certain that all inquiries dealing with applications for new bus services affecting Glasgow and the West of Scotland will be held in Glasgow.

# Institute of Transport.

## Revised Institute Examination Regulations and Syllabuses.

THE revised Institute of Transport examination regulations and syllabuses which will come into force on October 1st, next, have now been published, and copies may be obtained upon application to the Institute.

Both the regulations and syllabuses show important alterations to those at present in force.

NEW ARRANGEMENTS.

### Graduateship Examination.

The Graduateship examination is divided into two parts. Either part may be taken first or both parts may be taken together. Candidates entering for both parts, and passing in one part only, may, upon the recommendation of the examiners, be credited with that part.

Part I. 1. General Economics. 2. Elements of statistics. 3. Elements of transport. Part II. 4. *One* of the following: (*a*) Modern foreign language. (*b*) Economic geography. (*c*) Mathematics. 5. Elements of the law of inland carriage, *or* Elements of the law of ocean carriage. 6. Essay.

Candidates for admission to either part or both parts of the Graduateship examination must be Students of the Institute of Transport. Candidates for both parts, or for a second part (*i.e.*, part II. or part I. after having previously passed part I. or part II.) must be at least 18 years of age and must be engaged and have had not less than one year's approved service with one or more of the principal transport undertakings or other organisations recognised as such by the Council.

Subject to compliance with the regulations in all other respects, candidates may apply for exemption from the Graduateship examination as follow:—Total exemption on the grounds of having passed the final examination of a British University recognised by the Institute, for a degree in commerce or economics with transport as the main subject. Total exemption on the grounds of having passed in a class satisfactory to the Institute during the preceding 3 years, an examination co-extensive with the Institute Graduateship examination, and conducted by a recognised British University or transport undertaking. Exemption from groups 4 *and/or* 6 on the grounds of being graduates of British Universities recognised by the Institute. Exemption from any of the groups 1, 2, 4 *and/or* 6 on the grounds of having passed with corresponding subjects therein, an intermediate or final degree examination of a British University recognised by the Institute.

Conditions are laid down under which total exemption from the Graduateship examination might in special cases be granted on the grounds of age and experience.

### Associate Membership Examination.

The Associate membership examination is divided into two parts. Both parts may be taken together or separately, but part II. may not be taken before part I. Candidates entering for both parts together and passing in part I. only may be credited with that part; a pass in part II. only will not be so credited. Part I. 1. Rights and duties of transport undertakings. 2. Transport finance *or* Advanced statistics. Part II. 3. *One* of the following:—(*a*) Economics of railway transport. (*b*) Economics of road transport. (*c*) Economics of port administration and inland water transport. (*d*) Economics of air transport. 4. *One* of the following:—(*a*) Railway transport operation. (*b*) Road transport operation. (*c*) Port and inland water transport operation. (*d*) Air transport operation. Candidates for admission to either part or both parts of the Associate Membership examination must be Graduates of the Institute of Transport. Candidates for both parts or part II. must be at least 21 years of age and must be engaged and have had not less than three years approved service with one or more of the principal transport undertakings or other organisations recognised as such by the Council.

Subject to compliance with the regulations in all other respects, candidates may apply for exemption from the Associate Membership examination as follow:—Exemption from groups 1, 2, 3 *and/or* 4, on the grounds of having passed in a class satisfactory to the Institute during the preceding 3 years an examination co-extensive with the subject or subjects from which exemption is desired, and conducted by a recognised British University or transport undertaking.

Further information may be obtained from the Secretary, Institute of Transport, 15, Savoy Street, London, W.C.2.

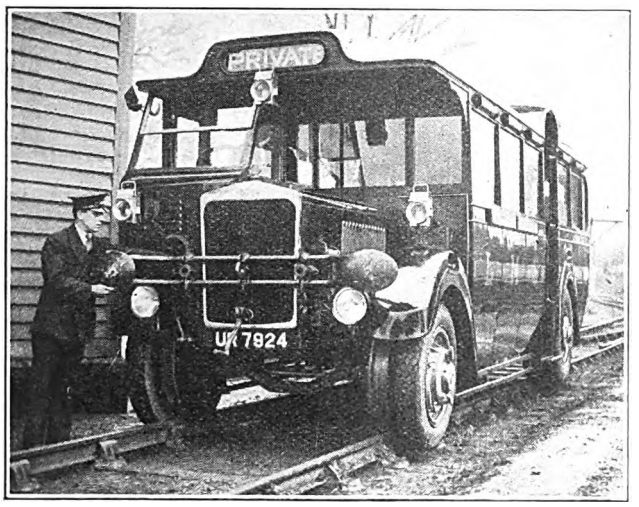
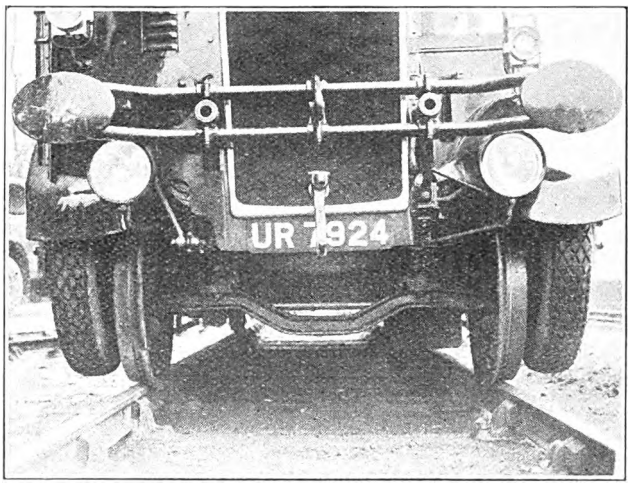
# The Karrier "Ro-Railer" Vehicle.

A NEW type of vehicle under the name of "Ro-Railer" has been adopted by the London, Midland and Scottish Railway having been designed and built by Karrier Motors, Ltd., of Huddersfield, in co-operation with the railway company's road motor engineer, Mr. J. Shearman. Trials took place on 22nd January at Redbourn, Herts., and proved highly satisfactory as indeed there is no reason why they should not.

We noticed it is claimed that this vehicle is the first yet constructed that can travel either on rail or road. There are many of us, however, who have been connected with the road transport industry long enough to know that this is not the case. There was the "Jonesway" road rail steam lorry designed in 1905 in the days before rubber tyres were fitted to heavy motor lorries. (An article describing the "Jonesway" wheel appeared in our issue of November, 1905.—Editor). The "Jonesway" vehicle, therefore, did not require two sets of wheels but merely a modification of its steel tyres to enable it to run on either road or rail. We believe, too, more recently, road rail equipments have been tried on one or more of our African Colony Railways, though we have not heard that their use was continued.





TWO VIEWS OF THE KARRIER "RO-RAILER" AS SUPPLIED TO THE L.M.S. RAILWAY.

The reason that this type of vehicle has not developed sooner is simply that there has been no opportunity to apply it practically until our home railways obtained road transport powers, that is to say, there has been no co-operation between road and rail transport.

As the vehicle's name suggests and as can be seen from the accompanying photographs, it is simply a vehicle built, on motor coach lines, which can run on either road or rail and the system can be applied to any road vehicle and should be particularly useful to the railway companies in certain districts. It can run on rail either under its own power or it can be attached to goods or passenger trains.

The advantages of this type of vehicle to the railways are obvious. It is doubtful whether the railways will extend, by arrangement, facilities to ordinary road transport concerns and, therefore, for the time being it must be regarded only as a new type of railway rolling stock.

The wheel adjustment for adaption from road to rail or *vice versa*, occupies a matter of 2½ to 3 minutes only.

The road wheels are concentric with the rail wheels when the vehicle is running on the road, but when it is to be transferred to the rail, the former assume an eccentric position in relation to the rail wheels. Two eccentrics per wheel are employed in this particular design which enables as much lift to be obtained as is allowable by the wheel rim diameter. The mechanical arrangement, for making the change over, provides for light manual effort. Furthermore, when the road wheel is in a lifted position there is only one bearing in the mechanism which possesses any relative velocity to the main hut; in other words all the road wheel mechanism remains stationary whilst the road wheel is out of action.

In the case of the rear wheels, a direct drive from the axle shaft is achieved from the medium of the hub directly to the rail wheel, in a similar manner to the orthodox method of driving a road wheel on an ordinary vehicle and the drive is cut off from the road wheel by disconnecting two pins which are utilised to secure the road wheels in an eccentric position to the slipper block structure. This structure, one for each wheel, is a device which provides support for the road wheels in their raised position whilst permitting vertical relative movement between the axle and the frame when the vehicle is on the rail.

There is no load on either the slipper block structure or the pins, except that immediately required to overcome the static friction between the inner bearing of the inner eccentric and the driving hub when commencing to move on the rail. The pins are, however, of robust dimensions for they are the medium through which the road wheel drive is taken when the vehicle is running on the road. It is of fool-proof design, that is to say, the pins cannot be inserted into the wrong holes. Moreover the slipper block is so designed that it has in its body an automatic lock which prevents the pins from becoming loose by vibration. When the road wheels are driving, the rail wheels are also revolving, the connection being made through the outer portion of the hub end which is keyed on a tapper to form a connection between the hub and the driving wheel. An important feature for eliminating the noise due to vibration of the flanged wheel on the rails is the adoption of the Lang laminated wood wheel which provides both resiliency and strength.

As for the chassis, it differs little from the orthodox Karrier road type and it is pointed out that the addition of a rail wheel in no way interferes with the steering. There is an additional gear box for gearing up purposes when travelling on rail.

The engine is a six cylinder unit having a bore of 100 mm. and a stroke of 140 mm. of 65/110 h.p. (37.2 R.A.C. rating).

The bodywork for this particular coach was built by Cravens, Ltd., of Sheffield.

The principal dimensions are as follows:—Wheelbase 17 ft. 1 in.; road wheel track 6 ft. 3½ in.; rail gauge 4 ft. 8½ in.; maximum road speed 60 m.p.h.; maximum rail speed 75 m.p.h. Petrol consumption, road 8 m.p.g., rail 16 m.p.g. Load capacity 26 passengers or 3 tons net. Overall length 26 ft.; overall width 7 ft. 5½ in. Unladen weight complete 7 tons, 2 cwt., 2 qrs.

---

**Idle Shipping in Tyne.**—It was stated at the January meeting of the Tyne Commission that there were no more berths available for laid-up tonnage in the River, and that this congestion was preventing work coming to the Tyne.

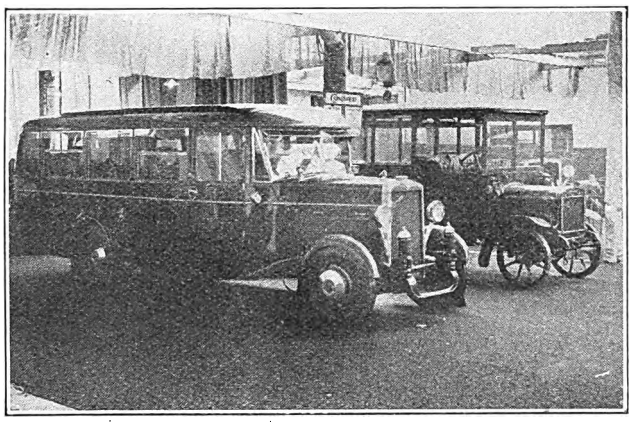
**Signs of the Times.**—The Jersey Railways & Tramways Ltd., is seeking authority to close its railway between St. Helier and St. Aubin from October 1st to April 30th. The Company has an active motor coach service.

Digitized by Google

# Commer Cars, Luton.

AN interesting event took place on January 14th, when a large party of transport vehicles owners and commercial vehicle dealers, numbering, with members of the press, some 400 in all, visited Luton at the invitation of the Directors of Commer Cars, Ltd.

Proceeding by special train from St. Pancras, the party were met by a fleet of Commer Car passenger vehicles and taken straight to the Works where a comprehensive



"MISS MODERN" A 14-SEATER COMMER LUXURY COACH WITH A COMMER STATION BUS BUILT IN 1911.

exhibit of Commer Car Vehicles had been prepared for the inspection of the visitors. Some 40 models in all were on view, showing a comprehensive range both of goods and passenger carrying vehicles ranging from a 40/50 truck and 6/7 tonners and 14/32 seaters. Particular interest was taken in the 40/50 cwt. commercial lorry which H.R.H. The Prince of Wales was taking out for use on his South American Tour. The Directors are to be congratulated upon this achievement, particularly as the private cars which are being used by the Prince are Humber cars, made by Humber, Ltd., Coventry, the senior partner of the Humber-Hillman-Commer combine.

Another interesting exhibit which attracted a great deal of attention and interest comprised two vehicles side by side, of which we give an illustration. The first is a Commer town bus, built 20 years ago, but still in every-day use, whilst in close proximity was the most modern type of motor coach, with every luxury for comfort and ease in travelling.

Following the inspection the visitors were entertained to lunch, Lt.-Col. J. A. Cole, O.B.E., J.P., presiding, supported by Messrs. W. E. and R. C. Rootes, the Directors of the export organisation which has done so much to enhance the reputation and extend the business of the combine throughout the world. Amongst the guests were Sir Harry Brittain, Sir George May, Bart., of the Prudential Assurance Co., Sir George Beharrell, of the Dunlop Rubber Co., and Mr. C. H. Osborne, the Mayor of Luton.

After luncheon Col. Cole gave a brief outline of the progress of the company and read an imposing list of foreign and dominion countries from which orders had recently been obtained. Other speakers were Sir Henry Brittain, the Mayor of Luton, and Sir George Beharrell.

Immediately at the conclusion of the luncheon the guests were conducted to a large open space at the side of the works, some three acres in extent, where they witnessed the felling of a chimney nearly 150 ft. high. This was part of a disused factory now being pulled down to make way for the erection of further extensions of the works.

The party was then divided up into groups and made a tour of the works, each under the guidance of a member of the staff and they were in this way able to see the up-to-date machinery and the splendid organisation of the works which produce the well known Commer Car commercial vehicles.

# Aviation in Scotland.

FROM all accounts there is little prospect of any real development of commercial flying services taking place during the present year, and many business people are at a loss to understand why Scotland is content to lag behind in this important matter. In the past four or five years various schemes for the inauguration of flying services between the chief centres of Scotland and other parts of Britain have been talked about, but nothing tangible materialised. One particular proposal was the formation of a regular service between Glasgow and Belfast, and at the time there was every reason to feel assured of good patronage. But after months of negotiating with the civic authorities concerned the scheme had to be abandoned owing to the difficulties which loomed up in the arrangements for aerodrome facilities. Similarly, the proposed Glasgow, Edinburgh, and Aberdeen service was dropped for the same reasons.

The feeling of many people in Scotland is that the development of air services north of the border will only materialise when concerns such as Imperial Airways take the matter in hand.

Speaking at the Glasgow Rotary Club on January 27th, Mr. Grierson Macara said: "The problems of vertical flying will have to be solved before Glasgow business men can fully take advantage of air services." He held out no immediate hope of flying services for Scotland, and he read a message from Sir Eric Geddes, Chairman of Imperial Airways, Ltd., which confirmed this view. The message was as follows:—

"It has been a great regret to me and to Imperial Airways that it has not so far been found possible to operate a satisfactory air service within Great Britain. The country is so well provided with excellent railways with terminii in the centres of towns that air services, which have to operate as they do now, from aerodromes well outside the main towns, do not in the circumstances realise the saving of time that is desired.

"In addition, the weather conditions, particularly in the North, are unfavourable for the operation of air services all the year round, and it is doubtful whether summer services, with their inevitably greater cost than all-the-year-round services, could be offered in the present state of development of aviation at a price attractive to the traveller.

"At the same time, I feel that we are perhaps serving the interests of Scotsmen even more than of Englishmen, Irishmen or Welshmen in the development of our air routes. Wherever one goes abroad, the preponderating representatives of our race are Scotsmen.

"Scotland has not been forgotten in the development of air services by Imperial Airways, and the Company has always in mind the development of internal services in Great Britain as and when suitable and advantageous opportunities arise."

**Increased Cargo Shipping Trade at Cork During 1930.**—At a meeting of the Cork Harbour Board last month, some interesting details of the trade done at the port of Cork during 1930, were given by the Chairman, Mr. R. Wallace, who said he was pleased to observe that the cargo shipping trade of the port was 367,776 tons for the past year as compared with 283,959 tons in 1929, which was practically an increased tonnage of 84,000 for cargo shipping. Cross-Channel tonnage was up by 79,000 tons.

**Wheelbarrow a "Vehicle." French Court's Decision.**—A wheelbarrow is as much a vehicle as a motor lorry and should be properly lighted after dark, was the opinion given by the Court of Saint-Brieuc, Brittany, in acquitting a motorist who was charged with running over a 50-year-old peasant. The latter, says Reuter's Paris Correspondent, might have been taking a walk at the time, but as he happened to be trundling his barrow, he became technically in charge of an unlighted vehicle, so the motorist was not to blame.

# Motor Coach and Bus Notes.

**40 More Buses for Manchester.**—Another Manchester tram track is to be superseded by motor buses—the Middleton route. The municipal transport committee proposes to approach the Middleton and Prestwich authorities, who are also interested in the operation of these services, to consider the terms of abandonment and to consult with the Salford Corporation about any necessary changes in the existing routes. Mr. R. Stuart Pilcher has reported to his committee that people who lived at such distances from the city preferred to travel by motor bus. He understood that Prestwich and Middleton will welcome tramway abandonment on reasonable terms. The Transport Committee has decided that the order for the 40 additional buses which they have been authorised to purchase, should be placed with Messrs. Crossley Motors, Ltd.

**60 Year Old Service.**—Pearsons, the motor coach proprietors of Shaw Street and Old Haymarket, Liverpool, make a public announcement in which they refer to their 60 years standing in the city and pioneers in the motor coach business. Having been refused sanction to their licences in Bangor and Caernarvon on the Liverpool-Caernarvon service, even though no regular road service had been operated direct from Liverpool, they invite the signatures of the Liverpool public to a petition, also residents of Connah's Quay, Flint, Bagillt, Prestatyn, Rhyl and all Welsh coastal towns, including Bangor and Caernarvon, who would be prepared to support their efforts with this service. They offer to remit all postages and intimate to the public where the petitions may be signed.

**More Rationalisation.**—An important conference, which took place at Blackpool last month, gives promise of the co-ordination of the passenger transport services of the Fylde area. The parties to the conference were:—Major Hickmott, of Ribble Motor Services, Ltd.; Mr. Ashton Davies, general superintendent (Passenger and Commercial) of the L.M.S. Railway Company, and representatives of the Blackpool Corporation Transport Committee. An endeavour is being made to see if an arrangement of time tables can be made so as to avoid wasteful mileage and to give the public a more stabilised service. If co-ordination comes about, there will possibly be created a joint board consisting of representatives of the Corporation, the Railway Company and the Ribble Motor Services.

**Recreative.**—The United Automobile Services staff are holding a carnival ball at the Oxford Galleries, Newcastle, this month. Their Durham colleagues made merry at the Princess Ballroom recently.

**Bus Application Rejected.**—South Shields Watch Committee has rejected an application by National Coachways, Ltd., London, for sanction to run a service of motor coaches between London, South Shields, Edinburgh and Glasgow. National Coachways opened an office in Newcastle recently, and have modern-type coaches on the London-Scottish route.

**New Offices for the United Automobile Services, Ltd.**—New main offices for the United Automobile Services, Ltd. (Northumberland district), have been opened at 4, Portland Terrace, Jesmond, Newcastle. The district offices have been at Blyth since the company started operating in Northumberland 10 years ago. The change is to centralise the control of the firm's numerous long and short distance services from Newcastle, and the new offices are close to the Company's great garage in Jesmond Road on which work proceeds busily.

**Sunderland's Transport Revenue.**—An increased revenue on the buses and a falling off in the receipts from the trams are revealed in the Sunderland Tramways Committee's estimate. It is calculated that the working of the department, despite the depression in trade, will show a profit of £23,075, which is only £1,617 less than that earned in the previous year. The cost of running the service for the ensuing year will be £110,906, an increase of £5,034 on last year's actual cost. The income from the trams was £128,819, and the estimated income for the coming year is £124,540. The bus service income last year was £15,591, and that for the ensuing year, consequent upon the services having been increased, is estimated at £35,000.

**Belfast Transport.**—The Belfast Omnibus Company is now building its own bus bodies in Belfast, and the first completed coach has just been put into service. These bodies will be mounted on A.E.C. "Regal" chassis, twenty of which were recently ordered. The new coaches embody all the latest improvements in bus construction, with good visibility and headroom for passengers, accommodation for personal luggage, and a ventilating system which ensures fresh air without a draught. The company also have under construction several de luxe sun saloon coaches, which will be used for long distance tours throughout Ireland in the coming summer. Mr. J. Courtney is the chief engineer of the company.

**Lower Fares.**—At the Watch Committee of the Brighton Corporation, a letter was received from the Southdown Motor Services, Ltd., requesting that, in view of the fact that the tram fare to the Dyke Road terminus has now been reduced to 2d., the Council will agree to the Company reducing the minimum fare on its buses from 4d. to 3d. The Committee agreed.

**Vehicle Inspection Fees.**—The Watch Committee of the Bradford Corporation has re-appointed Mr. R. Melhuish, A.M.I.A.E., for the ensuing year to make expert examination of motor vehicles in respect of which application is made to the Committee for licences to ply for hire within the city at fees of 5s. in respect of each vehicle inspected in connection with the annual inspection of vehicles, and 10s. 6d. in respect of each vehicle inspected otherwise than in connection with such annual inspections.

**Road Traffic Act.**—At the Watch Committee of the Tynemouth Corporation, the town clerk reported that he had received a letter from the Minister of Transport stating that the requirements that bus and motor coach services shall not be operated except under a road service licence, granted by the Traffic Commissioners would not become operative before 1st April, at the earliest, and asking that local authorities should continue to grant the necessary bus, bus drivers' and bus conductors' licences in the meantime.

**Chairman of Joint Omnibus Committee.**—Alderman Bailey has been appointed Chairman of the Sheffield Corporation, L.M.S. and L.N.E. Railways Joint Omnibus Committee for the year 1931.

**Licences granted and recommended.**

The Watch Committee of the Carlisle Corporation has granted a licence to Messrs. Percival, Ltd., for a service to Blackwell.

At the Licensing Committee of the Dorchester Corporation, a letter was received from the Victory Motors (Weymouth), Ltd., asking for permission to operate an omnibus service in Dorchester. The circuit suggested is in the formation of the figure 8, and it is proposed to charge a fare of one penny for any distance and to improve the service as it is found necessary for the public requirements. The Committee recommends granting permission for this service to be operated.

The Watch Committee of the Chorley Corporation has received a letter from Mr. Oliver Hart, of Coppull, applying for hackney carriage licences to ply for hire in the borough in connection with a direct service between Southport and Chorley, via Welch Whittle and Coppull, and stating that he is at present running a service from Southport to Croston and has been granted licences to extend this service to Coppull via Eccleston and Heskin, which he desires to extend to Chorley. The Committee granted the application subject to satisfactory time-tables.

Southwold Corporation has granted an application by the Hillman Saloon Coach Co., of Romford Road, Stratford, for three licences for coaches to run a Southwold-London service during the year.

The Licensing Committee of the Otley U.D.C. recommends granting the application of the West Yorkshire Road Car Company for permission to run a bus service between Otley, Fewston and Timble.

Coalville U.D.C. has licensed motor buses which are to be run by the Birmingham & Midland Omnibus Co., in place of the passenger trains between Loughborough and Nuneaton.

The Licensing Committee of the Newbury Corporation has granted bus licences to Mr. J. Prothero, of Beedon; Mr. C. R. Tibble, of St. Mary Bourne, and Mr. A. E. Blake, of Baughurst.

The Watch Committee of the Manchester Corporation has granted permission to the Corporation Transport Committee to run a service of buses along Oldham Road and Butler Street for a period of three months and to run top-deck buses on the Manchester-Altrincham route.

The Watch Committee of the Manchester Corporation has granted permission to Mr. John Bennett to run a motor omnibus service from the city.

The Watch Committee of the Chorley Corporation has granted four bus licences to the London, Midland and Scottish Railway Company and the London and North Eastern Railway Co.

# Birmingham Horse and Motor Vehicle Owners' Association.

## Annual Meeting and Dinner.

THE Annual General Meeting of the Birmingham Horse and Motor Vehicle Owners' Association was held at The Exchange Restaurant, Birmingham, on January 29th last. In the absence of the President, Mr. Lawrence C. Tipper, **MR. O. CECIL POWER** presided, and the Meeting was well attended.

The report of the Executive Committee for the past year was read by the Secretary, Mr. Thomas Hawkins, J.P.

Reference was made to the continued progress of the Association and its very satisfactory financial position.

The Committee regrets to record the death of Alderman Sir David Brooks, G.B.E., who was a loyal supporter and friend of the Association for over twenty years.

The Committee is pleased to record the appointment of Mr. J. H. Stirk, J.P., for several years Vice-Chairman of the Association, as Traffic Commissioner for the East Midlands Area under the Road Traffic Act, and, whilst regretting the loss of his services, hopes that his office will be congenial and satisfactory to him and that he will be happy in his new sphere.

During the year many important developments have arisen affecting Road Transport, particularly the placing of the Road Traffic Act on the Statute Book. This Act makes many vital changes in both Goods and Passenger Transport and undoubtedly will cause anxiety and will necessitate a good deal of thought in effectively carrying out the provisions enumerated. Through the agency of representative Employers' Organisations, with whom the Association is directly and indirectly affiliated, concessions have already been obtained and it is anticipated that further assistance to the Industry will be forthcoming as a result of negotiations still pending.

The prohibition of Heavy Transport from crossing over Bridges owned and controlled by Railway and Canal Companies, due to their alleged insufficient strength, has caused a great deal of irritation and trouble during the past year. It is pleasing to note that the Royal Commission on Transport's recent report recommends that such Bridges should be modernised and made suitable for present day traffic forthwith, and it is hoped that this work will be carried out expeditiously.

A Bill entitled "Hours of Industrial Employment Bill" is now before Parliament suggesting an 8-hours day, which, if passed, would be a very serious handicap to the Transport Industry, and it would be very difficult indeed to carry on transport work efficiently under such limitations. Every effort will be made to oppose the measure in due course if need be, but it is hoped that our Legislators will not proceed with a proposal which is likely to seriously handicap the Industry, particularly during the present state of trade depression.

The Committee has endeavoured to advance the interests of the Members and the Transport Industry as a whole. A proposal has been put forward that a reduction in the number of buses traversing the Central Streets would materially assist in relieving the congestion in the City Centre and thereby dispose of proposals to inflict unnecessary stated hours for the delivery of coal and goods and other heavy merchandise. Whilst the Members of the Association are willing and desirous of making co-operative efforts and sacrifices, they are not inclined to do so unless the Municipal Departments and other Trading Organisations are willing to act on the same lines.

It is satisfactory to report that the relationship between the Association and the Municipal Authorities continues to be most friendly and general matters arising from time to time have been satisfactorily dealt with.

The various Sections of the Association have been actively engaged. Regular Meetings have been held and well attended and good progressive results have accrued.

The Co-operative Society which is allied to the Association has had a very successful year. The Management Committee invite the Members of the Association to take advantage of the benefits to be obtained from Membership.

The Meetings of the Executive Committee have been well attended and every effort has been made to maintain and advance the general interests of the Members and the Transport Industry in general, and it is hoped that the Members will appreciate and approve the work accomplished.

The Auditor's Balance Sheet was presented by the Hon. Treasurer, Mr. G. Bayley. In moving the adoption of the Report and Balance Sheet, the Chairman referred to the difficulties that must necessarily be experienced in carrying out the conditions laid down in the Road Traffic Act and stated that whilst improvements were necessary for Road Transport he was firmly convinced that many of the innovations were unreasonable and would inflict great hardships on both the Goods and Passenger Transport Industry. He (the Chairman) welcomed the recent report of The Royal Commission on Transport that the Bridges through the Country should be re-built or re-constructed and made suitable for present day traffic.

The Report and Balance Sheet were approved and adopted.

Mr. Lawrence C. Tipper was re-elected President and Mr. O. C. Power and Mr. G. M. Wood were elected Trustees for the current year. Mr. G. Bayley was re-elected Hon. Treasurer, Messrs. Cohen, Slater and Tompkins were re-elected Solicitors, and Mr. Byner, F.R.C.V.S., was re-elected Veterinary Surgeon for the present year.

The following were elected as the Executive Committee for the current year:—Messrs. Albrigt, Badland, Edwards, Element, Gazey, Jones, Mason, Councillor Painter, Messrs. Shotton, Strong, Wheatley, and Woolley, together with the Officers as ex-officio members.

Mr. Thomas Hawkins, J.P., was re-elected Secretary and heartily thanked for his services to the Association extending over a period of 23 years.

A vote of thanks to the Chairman was accorded with acclamation and the Meeting terminated.

## Annual Dinner.

THE Annual Dinner of the Association was held at the White Horse Hotel on February 4th, Mr. O. Cecil Power, M.Inst,T., being in the Chair. Nearly one hundred members were present.

The Toast of "The Association" was proposed by Alderman Sir Percival Bower, M.B.E., J.P., who congratulated the Association upon its continued success. He said it was important that the good relations existing between the Association and the Municipality should continue, because of the problems that would probably arise in the near future from the administration of the Road Traffic Act. The Association, in the past, had adapted with the solution of various problems affecting members, but it was questionable whether they had ever been called upon to deal with a greater problem than the Road Traffic Act. Undoubtedly the Act was a progressive measure, and it might easily be advantageous or disadvantageous according to the manner in which it was administered. He hoped everybody would try to work the provisions of the Act with a single desire to serve the good of all. Undoubtedly the Act conferred far-reaching powers, but the value of many of the purposes it was hoped to achieve by it would be determined only by their experience of its working. It was certain many of its provisions were obscure, and threw a heavy responsibility upon those who would have to carry them out. The worst feature of the Act, he thought, was its ambiguity in many important phases. He hoped nobody would have cause to regret the introduction of a measure designed to deal with a great problem.

In reply, Mr. Power said that if the Road Traffic Act was administered properly and with common sense it would prove of great assistance to the whole of the transport industry. The Minister of Transport had stated that the Act gave the great industry of transport by road an elastic code of law in keeping with modern requirements. If, said Mr. Power, the law was a little elastic it would be an advantage to all engaged in the industry, but if it was drawn too tight, so as to strangle them, then it would be a deterrent.

Discussing the final report of the Royal Commission on Transport, Mr. Power said the report dealt with the co-ordination and development of transport, and contained some important and sound recommendations. There was the question of strengthening weak bridges, it being recommended that a thousand a year should be strengthened. That was an important matter. The report also recommended the

Digitized by Google

abolition of tolls, the elimination of level-crossings, and the replacement of such crossings by bridges and tunnels; that the building of arterial roads should be stopped, and that, instead, they should concentrate upon widening and improving existing roads. Those recommendations were of great importance, and it would be recalled that he had upon many occasions urged the improvement of roads.

Members of the Association, Mr. Power added, were prepared to do what they could to reduce the congestion of traffic in the centre of the city of Birmingham, but those who were dealing with that matter should not forget that roads and streets were made for traffic. While they wanted to control traffic in the streets, they did not necessarily want to stop it.

On behalf of the Association, Sir Percival Bower congratulated Mr. J. H. Stirk, J.P., M.Inst.T. (Ex-Vice-Chairman of the Association), on his appointment as Traffic Commissioner for the East Midlands and presented him with a silver tea and coffee set. Mr Stirk, he said, had a wide and full knowledge of traffic matters, and he would take to his new duties not only great ability, but the good wishes of every member of the Association.

Replying and thanking Sir Percival and the Members of the Association, Mr. Stirk emphasised the need for Associations such as the Birmingham Horse and Motor Vehicle Owners. It gave a status to its members and it considerably facilitated negotiations between them and Municipal and other Authorities. He looked back with great pleasure to the time during which he was Vice-Chairman, and the experience he then gained would be valuable to him in his new appointment. He hoped the Association would continue to prosper.

The Toast to "The Visitors" was proposed by Mr. Thomas Hawkins, J.P. (Secretary). In the course of his remarks he referred to the very friendly relations which had existed between the Birmingham Horse and Motor Vehicle Owners' Association and other Organisations in the Transport Industry. He said that by combined efforts many good results had been achieved in the past, but now that we had the Traffic Act it was more necessary than ever that co-operation should be close and friendly.

Mr. A. C. Baker, General Manager of the Birmingham Corporation Tramway and Omnibus Department, replying referred to the congestion of the central streets of Birmingham. He thought that probably a solution might be arrived at if one-way traffic was introduced. He referred to the friendly relationship existing between the various Transport Organisations in the City, which he hoped would continue.

In proposing the Toast to "The Chairman" Mr. Geo. Wood remarked upon the lengthy services of Mr. Power. He had given nineteen consecutive years work to the Association, and it was hoped he would continue to lead the Association for many years to come.

The Chairman suitably replied and thanked the Members for their vote of confidence.

The Toasts were interspersed with a musical programme and humorous items and the singing of the National Anthem concluded an enjoyable evening.

# City and Suburban Carriers, Ltd.

## Annual Staff Dinner.

THE spirit of optimism, wherever it may manifest itself, is sure of a hearty welcome these days. When that optimism is founded on work well and truly done in the past and the reward for which is every prospect of more and still more work in the future, then even the pessimist must admit that the optimist may have grounds for his jubilation.

Records broken once again—this was the cheerful message to the staff of the City and Suburban Carriers, Ltd., the well-known London carriers of Stepney Green, London, E., and it was given by **Mr. Llewellyn Barter,** the very popular Managing Director of the Company, when he and his Board entertained the staff of the Company to dinner at the London Tavern, London, E.C., on January 24th last.

**Mr. Llewellyn Barter presided.**

**Mr. A. W. Sunderland** proposed the toast of "The City and Suburban Carriers, Ltd." He said he was filled with admiration at the way in which the Company had grown from a quite small beginning. Due to good business foresight, courage and energy, the business had developed into a huge concern and he was sure it had been accomplished by close co-operation between the Board of Directors and the staff. He was convinced that the firm's employees fully appreciated what good employers they had. (Loud applause.) He was sure that the staff gave to the business every ounce of their energy and enthusiasm, and it was only by their help that the Directors could be successful and continue to go forward as they had during the past twelve years. The history of the firm was a record of wonderful achievement. It was one of the few businesses he knew that had kept up its good record during this time of world-wide depression.

**Mr. Llewellyn Barter** (Managing Director of the City and Suburban Carriers, Ltd.) was enthusiastically received on rising to respond to the toast.

He thanked Mr. Sunderland for the kind way in which he had proposed the health of the firm, and he then raised the enthusiasm of the staff to a high pitch by saying "Without you, gentlemen, I could not run the City and Suburban Carriers. You each form an important cog in the machinery." They flattered themselves, and he thought rightly so, that they were one of the most up-to-date firms of carriers in the world. He had travelled in many parts on the look-out for new ideas connected with the sorting and carrying of parcels. It took him some time to find a solution to the problem he had set himself to solve, viz., the most up-to-date way of sorting parcels. He had found the answer—it was by the use of conveyors. Many influential men told him it was impossible to sort parcels by such a method and his reply was that he was going to try. He had tried the conveyor system—result, a great speed-up in the firm's delivery services. (Applause.)

Many of the firm's clients were present that evening and if they would honour the firm by visiting the Company's Stepney Green depot he was sure they would marvel at the speed with which parcels were sorted.

We were living in times of world-wide depression and it was up to every trade to keep its machinery up-to-date; by so doing not only would they help themselves but the trade of the Empire.

During the past year the business of the City and Suburban Carriers had gone still further ahead and he thought that was traceable to the efficient service they gave the public. (Applause.) He knew he had one of the finest teams in London and the number of parcels delivered last year was up a quarter of a million on the previous year. That was no mean achievement when it was remembered how bad trade generally had been. (Applause.)

**Mr. J. V. Hatch** (Director) proposed the health of "The Visitors." He said the firm were honoured with the presence of representatives from many branches of the commercial and industrial world. To all their visitors the Directors extended a most hearty welcome and wished them prosperity throughout the year.

**Mr. F. A. H. Camps,** Chairman and Managing Director of Robt. Owtram & Co., Ltd., responding to the toast of "The Visitors," said that he had always found the Directors of the City and Suburban Carriers to be gentlemen of ability and integrity, and small wonder was it that the firm held such a pre-eminent position in the carrying trade. He understood that the business was started twelve years ago with six vans and had made such enterprising progress that to-day the Company's vans were counted in hundreds.

Robt. Owtram & Co., Ltd., had not been a small customer of the City and Suburban Carriers and they might yet be much bigger customers, but that would depend upon prices. (Laughter.) Each worker should be judged solely on his merits and every man was entitled to a fair day's pay for a fair day's work. What constituted a fair day's pay must depend entirely upon a man's ability. He was struck by the way all those connected with the City and Suburban Carriers co-operated one with the other; they were a genial and homely lot of men combined in one company. They had the right man at their head with his heart in the right place. (Applause.)

**Mr. James E. Thompson,** the Hon. Secretary of the Association of Railway and Forwarding Agents, who also responded, referred to the rapid growth of the City and Suburban Carriers and said it proved there were brains in the Directorate and co-operation from the staff.

**Mr. Llewellyn Barter,** proposing the health of the staff, said his workers were his great friends.

Mr. Partridge (City Representative), Mr. Redburn (Assistant Traffic Manager), and Mr. Buckley (Senior Driver) responded.

**Mr. F. Gerner** (Herd & Gerner, Ltd.), proposing the health of the Chairman, said that the key to the success of the City and Suburban Carriers had been service, and their Chairman seemed somehow to ensure service.

The Chairman's reply brought a very happy evening to a close.

# Liverpool Cart and Motor Owners' Association.

## Annual Meeting.

"IT is hardly necessary for me to comment upon the unpleasant fact that trade during the whole year (1930) was woefully bad. I will not venture to prophesy that conditions will be better in 1931, but I sincerely hope they will be, and that you will derive therefrom that happiness and prosperity which better times would greatly assist to bring." This is an extract from the report which Mr. Thomas Taylor, President of the Liverpool Cart and Motor Owners' Association, submitted to the annual meeting held at the Common Hall, Hackins Hey, Liverpool, on January 21st.

The Committee have had in hand during the past year many matters of importance, both to the horse and mechanical interests. On the mechanical side undoubtedly the most vital thing has been the Road Traffic Act, one Section of which—that dealing with the hours of work—has still to come into operation. During the framing of the Act itself, and subsequently in connection with the drafting of a series of regulations, the Association have made known their views through the National Road Transport Employers' Federation. For the time and thought which he has spent upon this work, the Committee and Members are under a heavy debt of gratitude to Mr. W. Edwards.

For the greater part of the year the Association, through the Liverpool and District Road Transport Employers' Conference, have been in negotiation with the Union regarding the working conditions of motormen engaged on up-country work, and in consequence of a deadlock which was reached upon the question, the Conference terminated their Agreement with the Union in August. Contact with the Union has, however, since been resumed and new arrangements arrived at. Particulars of these will be in the hands of Members shortly, along with an intimation as to the position respecting the suspended Agreement.

The Hours of Industrial Employment Bill, commented upon in last year's report, is shortly to be the subject of further debate in Parliament. Its progress is receiving the attention of your Committee, who have already submitted in writing to the Minister of Labour their case for the total exemption of road transport from its scope.

The President, referring to the Road Traffic Act, said the regulations which operated from 15th January last re-enacted the Orders and Regulations made under the Heavy Motor Car Act of 1903. In addition there are a number of new ones. For example, it is laid down that all Heavy Motor Cars (motor vehicles exceeding 2½ tons unladen weight), Motor Cars (less than 2½ tons unladen weight) and Trailers must be equipped with pneumatic tyres. There is a proviso attached to this Regulation by which it will not apply until 1st January, 1940, to a vehicle licensed on or before 1st January, 1933, if that vehicle is already equipped with soft tyres. In other words the regulation means that vehicles put into use between now and 1st January, 1933, must change over to pneumatics on 1st January, 1940, but that vehicles bought *after* 1st January, 1933, must be on pneumatics at the time of purchase. The regulations also make some amendments in the maximum weights allowed.

It should be noted by the members that there is no increase in the maximum weight allowed for an ordinary four-wheeled motor vehicle. The maximum laden weight for these vehicles remains at 12 tons, with a maximum for any one axle of 8 tons. Very strong pressure was brought to bear on the Ministry to increase this weight to 14 or 15 tons in order to bring precept into line with practice, but the Minister was adamant and refused the concession. The total weight for a motor and trailer or tractor and trailer is 22 tons, with a maximum axle weight for the trailer of 6½ tons. Maximum weights are also laid down for 6-wheelers, and for vehicles of more than 6 wheels, and also for articulated vehicles. Another new provision is that relating to guard rails, which must be fitted to all motor vehicles as from 1st January, 1933.

Section 19 of the Act, which limits the number of hours a driver may continuously drive a vehicle, is not yet in force. A copy of the Section, with explanatory notes, will be issued by the Secretary shortly, along with particulars of the accumulative week system of working which it has been agreed with the men's Union shall come into force to assist in the carrying out of the Section so far as up-country working is concerned.

As regards the question of the local wages and working agreement, this was terminated in August last owing to a deadlock which was reached with the Union upon this question of the accumulative week. The agreement with the men's Union is a composite one, made by the Employers' Conference on behalf of all sections of road transport in the district. The Conference have held further negotiations with the Union and an intimation is expected from the Hon. Secretary of the Conference to the affiliated associations as to their intentions respecting the agreement and this information will be passed on to the members in due course.

The Hours of Industrial Employment Bill is again in the Parliamentary programme. The seriousness of these proposals is illustrated by the one relative to the rate of payment for overtime. The Bill stipulates that all overtime, over the 48 hours, must be paid for at not less than time-and-a-quarter. As members were aware, the present agreement allows 13 hours overtime at ordinary rates before coming on to time-and-a-quarter hours.

The following members were elected to the Committee:—Messrs. J. Benson, A. Hughes, Geo. Stephenson, G. Johnson, Edward Roberts, J. F. Supplies, Thos. Taylor and John Watson.

# Long Distance Road Haulage Committee.

THE Long Distance Road Haulage Committee has now given very careful consideration to the question of the formation of an Association, and has decided that such a step is desirable in the interests of this section of the industry.

A General Meeting of those engaged or concerned in the long distance haulage of goods by road including vehicle owners, large and small, and freight exchanges and clearing houses will be held at 2.30 p.m. on Wednesday, February 18th, at Winchester House, Old Broad Street, London, E.C., at which the Committee appointed at the General Meeting held in December, last, will submit detailed proposals including draft Memorandum and Articles of Association, for the formation of a Long Distance Road Haulage Association.

The Committee is unanimous in considering the urgent necessity for this section of the road transport industry.

1. To organize itself and possess a representative body which can voice the requirements of the industry.
2. To resist attacks from any quarter.
3. To undertake necessary propaganda and counter-propaganda.
4. To form a link and friendly meeting place for the many scattered units.

A central representative Council is proposed with Regional Committees in the principal areas of the Country. The subscription will be quite small.

These proposals very intimately concern all engaged in this section of the industry, and their presence at the meeting referred to is particularly desired.

Any details will be supplied, and application forms for membership may be obtained from the Hon. Secretary, Mr. E. B. Hutchinson, Lloyds Bank Chambers, Vicar Lane, Leeds.

# Limitation of Time for which Drivers of Certain Vehicles May Remain Continuously on Duty.

## Operation of Section 19 of the Road Traffic Act, 1930, Postponed.

THE Secretary to the Ministry of Transport makes the following announcement:—

It has been represented strongly to the Minister of Transport by organised bodies of employers and workpeople in the transport industry that the operation of the provisions of Section 19 of the Road Traffic Act, 1930, which limit the time for which drivers of certain vehicles may remain continuously on duty, should be postponed from the date provisionally fixed for the Section to come into force, viz., the 1st February, in order that time may be allowed for completing negotiations at present proceeding between the parties, with a view to the making of a joint application to the Minister for a Regulation varying the provisions of the Section in order to meet special cases.

In all the circumstances, the Minister has decided to meet this request, and has fixed the 1st April next as the date on which the Section will be brought into operation.

# The British Association of Shipping and Forwarding Agents (Inc.).

## Annual General Meeting.

THE Annual General Meeting of members of the British Association of Shipping and Forwarding Agents (Inc.) was held at the offices of the Association, 97, Cannon Street, London, E.C.4, on January 13th last.

**MR. A. W. HEARD** (Jones, Heard & Co., Ltd., Newport, Mon.), the Chairman of the Association, presided, and was supported by two of the Vice-Chairmen, viz:—**Mr. M. E. Duffett** (J. D. Hewett & Co., Ltd., London), and **Mr. Norman N. Bird** (Herbert Watson & Co., Ltd., Manchester).

There was a good attendance of members, those present including:—Mr. F. H. S. Rouse (American Express Co. Inc., London) (Hon. Secretary and Treasurer); Mr. E. N. Westfield (Chas. Atkins & Nisbet, Ltd., London); Mr. A. Goddard (Carter, Paterson & Co., Ltd., London); Mr. L. T. Olley and Mr. H. T. Baldwin (General Transport Co., Ltd.); Mr. J. B. Taylor (Immediate Transportation Co., Ltd., London); Mr. C. H. Burke (Van Oppen & Co., Ltd., London); Mr. E. W. Turvey (Nunzi & Co., Ltd., London); Mr. G. Perry (British Commercial Transport Co., Ltd., London); Mr. Wm. O'Brien (G. W. Sheldon & Co., Ltd., Liverpool); Mr. H. Gilbert (G. W. Sheldon & Co., Ltd., London); Mr. F. J. Gerson (Rosenberg Loewe & Co., Succrs., Ltd., London); Mr. W. Beckmann (World Transport Agency, Ltd., London); Mr. L. G. Stockwell (Stockwell & Co., Ltd., London); Mr. G. W. Robertson (Robertson, Buckley & Co., Ltd., Liverpool); Mr. John B. Bower (F. Bower & Co., Liverpool), and Miss K. Foley (Acting Secretary).

Apologies for absence were reported from:—Mr. J. B. Ballantyne (J. B. Ballantyne & Co., London); Messrs. James Fisher & Sons, Ltd. (Barrow-in-Furness); Mr. A. MacCulloch (MacCulloch, McLellan & Pollok, Glasgow); Mr. J. O. Wood (T. F. Wood & Co., York); Mr. T. Heyman (Morison, Pollexfen & Blair, Ltd., B'ham); and Mr. A. Faulkner (Crowe & Co. (London), Ltd., Manchester).

The Minutes of the last Annual General Meeting, held at Leeds on January 17th, 1930, were adopted.

**Discrimination in Steamship Companies handling charges.**

**The Chairman** said that the question of discrimination in Steamship Companies handling charges had been discussed by the Council, and the whole matter referred to the Chamber of Shipping. The Chamber, however, was of opinion that it was not a subject upon which they could take any specific action being more of the nature of a domestic problem and one suitable for individual negotiation between the forwarding agents and the steamship companies.

It was now open to the meeting to consider whether to approach the Institute of Chartered Shipbrokers or the London Chamber of Commerce or to decide upon such other action as might be deemed advisable.

The question arose owing to the fact that certain steamship companies at Hull and other Ports were dealing with goods in a way that almost amounted to usurpation of the rights of Forwarding Agents. The Steamship Companies were quoting rates which put the forwarding agents out of Court and were, in fact, discriminating as against the forwarding agent.

It was suggested that, as the Board of Trade was interested in any question relating to freights, differentials or anything tending to handicap trade, the matter might be referred to that department.

After discussion it was decided to leave the matter in the hands of the Chairman and Vice-Chairmen of the Association with a view, if thought desirable, to bringing the matter to the notice of the Board of Trade and, possibly, the Institute of Chartered Shipbrokers as well as the London Chamber of Commerce.

**Customs Clearance of Goods ex Certain Steamers.** The Chairman reminded the meeting that a firm complained to the Association that certain steamship owners were demanding that shipping and forwarding agents should give a bond indemnifying the Steamship Company against all claims made upon the vessel in respect of goods cleared through Customs. The view of the Association on this point was that a Shipping and Forwarding Agent was under no obligation to sign such a Bond, and shipowners had no right to demand such a bond. Members of the Association would be well advised not to enter into such an arrangement.

In the course of discussion it was mentioned that at Hull a shipowner without waiting for instructions, had bonded certain goods himself and had then saddled the forwarding agent with the charges of so doing.

It was decided to record in the Minutes that this action on the part of shipowners could not be recognised.

**Sailings from Hull to the Continent. The Chairman** reported the receipt of a letter from a firm, members of the Association, with an office at Hull, calling attention to the fact that there are two steamers weekly from Hamburg to Hull controlled by two different steamship companies. Both these ships sail over the week-end, so that to all intents and purposes there is only one sailing weekly. This could not be to the advantage of either of the steamship companies or the shippers as the tendency in consequence of this action was for traffic to pass through Grimsby and Goole. The firm in question contended that if the two shipowning companies got together and arranged for steamers to sail at such times as would constitute a bi-weekly service, all interested in traffic from Hull would benefit.

The firm had written to the Hull Chamber of Commerce on the matter and had pointed out that Continental firms stated that there was one sailing per week from Hamburg to Hull and when it was contended that there were two sailings, one was met with the reply: "Well, there may be two steamers, but they drift across the North Sea hand in hand over the week-end." The letter suggested that the Hull Chamber of Commerce might take the matter up with the shipowners concerned with a view to obtaining a bi-weekly service which would result in much more traffic going to Hull which was now being discharged at other Ports.

The Chamber replied that a copy of the letter addressed to it had been sent to the two shipping companies serving the Hull and Hamburg trade for their attention.

The Chairman further stated that the question had been referred by the British Association of Shipping and Forwarding Agents to the Humber Forwarding Agents' Association for any action they could take. The matter, continued the Chairman, was of local rather than national interest and in the first instance should be dealt with by the Humber Association.

It was pointed out that some members of the British Association of Shipping and Forwarding Agents were equally interested in Humber Ports other than Hull, and it was thought that the National body should not take action which might have the effect of diverting traffic from other Humber Ports. The question should be dealt with by the Humber Association. The National body must work in the interests of the whole of the Ports of the country.

After further discussion it was decided to leave the matter in the hands of the Humber Forwarding Agents' Association.

**Protecting the Industry. The Chairman** said that the attention of the Association had been called to an article which appeared recently in a leading French newspaper which certainly could not be termed complimentary to the Shipping and Forwarding Agents.

The Association had felt it to be its duty to approach the Editor concerned with a view to having the aspersions which the article cast upon forwarding agents withdrawn, and he was invited to publish another article withdrawing the false statements and an apology was also asked for.

The Editor of the paper in question explained that the remarks to which exception was taken were not intended to be addressed to British Shipping and Forwarding Agents to the same extent as they were to certain Forwarding Agents on the Continent.

Continuing, the Chairman said, that in the letter written by the Association to the journal in question it was pointed out that the British Association of Shipping and Forwarding Agents comprised the leading men in the industry in this country and membership was sufficient guarantee that a member firm was beyond reproach. Further, French commercial houses could safeguard their interests by refusing to employ a Forwarding Agent who was not a member of a recognised association.

Subsequently, the Association received a copy of the journal in question in which the derogatory impressions previously given were withdrawn.

The correspondence in the matter would be passed to the International Federation of Forwarding Organisations.

Digitized by Google

for their information and the International Federation could, in turn, refer the matter to the French Association should it be thought necessary to do so.

**Shipments to River Plate.** A member raised a question concerning shipments to the River Plate which he asked the meeting to consider and if possible take such steps as might lead to some amelioration.

The Chairman said that the matter raised was important. If the kind of thing complained of went on, soon it would be impossible for a legitimate agent to exist. He presumed that the Liverpool Shipping and Forwarding Agents' Association and the Manchester Shipping and Forwarding Agents' Conference were the two bodies which suffered most from the practices complained of.

A desire was expressed to know what were the views of members of the Liverpool Shipping and Forwarding Agents' Association on the matter.

It was agreed that the question should be referred to the London, Liverpool and Manchester Conferences with a request that they would be good enough to consider the matter and report to the National body in due course with any suggestions as to action that might be taken by the British Association of Shipping and Forwarding Agents.

### The Industrial Outlook.

**MR. A. W. HEARD**, the Chairman of the Association, was received with applause on rising to move the adoption of the Annual Report and Accounts.

He said that twelve months ago when they met in annual meeting at Leeds they rather flattered themselves at the progress made by the Association in a short time, and they then looked forward to further progress and the general strengthening of their position.

Since that time the Association had done a lot of spade work. They were now Incorporated and duly registered. Their membership had been largely increased and there was no doubt but that the Association had done a lot of useful work and, although looking ahead, the present year seemed hardly likely to be as good as the year 1930, which in all conscience was bad indeed, yet he believed that the Association would not only maintain its strength and position but would increase it.

Having to face what they could see was coming in the very near future it was imperative for all to join forces. Every shipping and forwarding agent in the country should consider it to be his duty to join immediately some Forwarding Association, either the local, district or the National Association, and every forwarding agent who had any thought for the future should see the necessity for this and thus unite himself to some Association which carried weight and had power behind it.

#### THE TREND TO-DAY.

What did they find to-day? The formation of huge combines and mergers of every description. Rationalisation, a blessed word but no-one knew quite what it meant. Did it not mean the swamping of the small man and the growth of an octopus, and was not unity the only way of combatting such a state of affairs? Unity was strength, and the more they increased their membership the greater would be the influence they could exert and the more chance would the shipping and forwarding agent have of maintaining his existence. To-day they had to fight for every penny they made. They were up against a time of enormous difficulty.

Members could see how essential it was for each one to endeavour to add to the membership of the Association. "Draw the attention of your friends and your competitors to the value of membership." It did not matter who the applicant was. If he was a respectable and decent man he ought to join the Association. They did not want people without standing to join, but men of integrity and there were plenty about. Increased membership would be followed by greater financial strength which would enable the Association to talk louder.

#### MEMBERS MUST CO-OPERATE.

It was of the greatest importance that members should co-operate closely one with the other. There was nothing to equal co-operation. If a member had business outside his Home Port then why not give it to a fellow member in the Port concerned? Why give it to an outsider? They would find members of the Association in most Ports and in many places. The mere fact that a man was a member of the British Association of Shipping and Forwarding Agents should entitle him to preference when a fellow member was looking for an agent or representative.

He strongly advocated the most complete unity and loyalty and co-operation amongst members.

During the past year the Association had received most valuable help from the London Shipping and Forwarding Agents' Conference. (Applause.) They had also been most loyally supported by the Manchester Shipping and Forwarding Agents' Conference who, he might mention, had forwarded a report of their activities which was most interesting, and showed conclusively that that body had done much valuable work.

The Humber Shipping and Forwarding Agents' Association was in rather a difficult position. There were circumstances militating just at present against the Hull Agents taking that position in the National body which it was hoped they would take soon. It was hoped that the Humber Association would shortly be in a position to become affiliated and would follow this move up by strengthening their membership and going ahead.

The Liverpool Shipping and Forwarding Agents' Association was not yet affiliated to the British Association of Shipping and Forwarding Agents. He was very pleased to observe that the activities of the Liverpool Association were of a wide and comprehensive nature. Their relationship with the British Association of Shipping and Forwarding Agents was and always had been extremely friendly in every way. He was quite confident that if there was anything the British Association of Shipping and Forwarding Agents wanted done in Liverpool they could count upon the assistance of their Liverpool friends. (Applause.)

He wished to thank most cordially the Vice-Chairmen of the Association, Mr. M. E. Duffett, Mr. N. N. Bird and Mr. W. H. Elder as well as Mr. F. H. Rouse, their Hon. Secretary and Treasurer, for the great assistance they had accorded to him during the year, whilst the thanks of all the members were due to their Secretary, Mr. B. G. Arthur, whose advice and assistance at all times had been most valuable. Mr. Arthur's Assistant, Miss Foley, had rendered excellent service to the Association and had a good knowledge of the forwarding agents business. (Applause.)

Mr. F. H. Rouse (Hon. Treasurer) then presented the Statement of Accounts for the year ending 31st December last, and after he had explained various items the Chairman said he was sure members would agree, considering the Association was only three years old, that they had got through, so far as finance was concerned, in a really remarkable manner.

The Chairman then formally moved the adoption of the Report and Accounts.

The resolution was seconded by Mr. G. Perry and carried unanimously.

### Election of Chairman.

Mr. A. W. Heard said that at a meeting of the Council held that morning he had reminded those present that last year he asked to be relieved of the Chairmanship but his request was turned down incontinently. He suggested and he felt sure he was right in doing so, that it was time new blood was imparted to the Chair and the election of a younger man would be beneficial to the Association. Perhaps a man could be found for the post who lived nearer the centre of affairs than he did in South Wales.

Mr. M. E. Duffett (a Vice-Chairman of the Association) said that Mr. Heard had served them so well that even supposing they could find another gentleman to follow him no good purpose could possibly be served by making a change. The members could not do better than ask Mr. Heard to be good enough to occupy the Chair during the coming year. He had much pleasure in proposing the re-election of Mr. Heard.

The resolution was seconded and carried with great enthusiasm.

Mr. Heard thanked the members for the expression of their continued confidence in him. He looked upon his re-election to the Chair as a great compliment, but it did not alter his opinion that the members could have taken some other action which would have proved more beneficial to the Association, and he hoped that during the coming year members would reconsider the suggestion he had made.

#### ELECTION OF VICE-CHAIRMEN.

The Chairman said he had great pleasure in proposing that the three Vice-Chairmen, Mr. M. E. Duffett (J. D. Hewett & Co., Ltd., London); Mr. W. H. Elder (W. H. Elder (Shipping), Ltd., Hull) and Mr. Norman N. Bird (Herbert Watson & Co., Ltd., Manchester) be re-elected for the ensuing year.

These gentlemen had rendered yeoman service to the Association and had been his most loyal coadjutors. Members could not do better than re-elect them.

Mr. G. Perry seconded the resolution which was carried with acclamation.

**Election of Council.** The Chairman said that under

Digitized by Google

their Articles and Memorandum of Association the Council should number not less than six nor more than twenty-one, excluding the officers of the Association, and allowing for two resignations from the Council during the year, namely, those of Mr. K. F. Harker (Harker, Shield & Co., Ltd., Hull) and Mr. W. H. James (James & Hodder, Bristol) each of whom had resigned owing to pressure of business, there were now thirteen members of the Council.

Under the constitution of the Association one-third of the Council retired each year, but as this was the first year of their Incorporation the suggestion had been made that as the present Council had carried out their work so well they should be nominated for re-election. If any members had lost confidence in any of the existing Council now was their opportunity to say so. He did not suggest that they should, until the work became more onerous, fill up the two seats on the Council caused by the retirements he had mentioned. The present Council were very assiduous in their attendance and they could get through the work notwithstanding the unlucky number. (Laughter.)

He had much pleasure in proposing that the following gentlemen be re-elected to the Council for the ensuing year:—Messrs. T. Heyman (Morison, Pollexfen & Blair, Ltd., Birmingham); G. W. Robertson (Robertson, Buckley & Co., Ltd., Liverpool); J. O. Wood (T. F. Wood & Co., Ltd., York); F. J. Gerson (Rosenberg, Loewe & Co., Succrs., Ltd., London); C. E. Sanderson (Sanderson's Express, Ltd., Nottingham); A. Faulkner (Crowe & Co. (London), Ltd., Manchester); W. O'Brien (G. W. Sheldon & Co., Ltd., Liverpool); A. MacCulloch (MacCulloch, McLellan & Pollok, Glasgow); J. B. Ballantyne (J. B. Ballantyne & Co., London); E. W. Turvey (Nunzi & Co., Ltd., London); J. B. Taylor (Immediate Transportation Co., Ltd., London); John B. Bower (F. Bower & Co., Liverpool) and H. Harrison (Oughtred & Harrison, Ltd., Hull). The first four gentlemen named to serve for one year, the next four for two years and the remaining five for three years.

The resolution was seconded by Mr. G. Perry and carried unanimously.

The Chairman said that any gentleman on completion of his term of office as Member of the Council, could offer himself for re-election to the Council.

**Election of Hon. Secretary and Treasurer.** The Chairman said he felt that members after hearing the admirable way in which Mr. F. H. Rouse (The American Express Co., Inc.) had put forward the Statement of Accounts for the past year, could have no two opinions regarding the proposition it was now his pleasure to bring forward, viz:—that it was absolutely necessary that Mr. Rouse should remain their Hon. Treasurer and Secretary. (Applause.)

Mr. G. Perry seconded the resolution which was carried unanimously.

**Election of Secretary.** The Chairman said that their Secretary was Mr. B. G. Arthur, M.B.E., and Miss Foley was his very able assistant. (Applause.) They all knew the wonderful capacity of Mr. Arthur and the work of the Association had been carried out by him in a very satisfactory way. He did not hesitate to say that members should ask Mr. Arthur to continue his duties as Secretary for the coming year.

The resolution was seconded and carried unanimously.

Messrs. W. B. Keen & Co., C.A., of London, were re-elected auditors for the ensuing year at the same remuneration as previously.

**Annual Meeting, 1932.** Discussion took place as to the venue of the Annual General Meeting in 1932.

The Chairman said that the Council had considered the matter from the point of view of strengthening the membership of the Association and had decided to recommend that the next Annual General Meeting should be held in Hull. Hull members were in a somewhat difficult position with regard to Humber Ports, and the holding of the annual meeting there would encourage the Shipping and Forwarding Agents at the Humber Ports to forge ahead. He proposed that the next annual General Meeting of the British Association of Shipping and Forwarding Agents be held at Hull. With regard to the date, the Council at first thought that the meeting should be held in January as usual, but firstly there was a little difficulty in getting the accounts audited so early in the year, and secondly if next year's meeting was held a little later than in 1933 they could fix their annual meeting to coincide with the meeting of the International Federation of Forwarding Organisations, which in that year would be held in this country. The meeting in Hull next year he proposed, should be held some time in March, the date to be fixed later.

Mr. J. B. Taylor (Immediate Transportation Co., Ltd.) supported the proposition and indicated how members of the Association could take the opportunity when at Hull of doing something worth while to enhance the prestige of the Association and to increase the membership.

The resolution was seconded and carried unanimously.

Mr. Norman N. Bird proposed a hearty vote of thanks to Mr. A. W. Heard for the admirable work he had done and was doing in the interests of the Association. It was Mr. Heard's activities that had placed the British Association of Shipping and Forwarding Agents in the position it occupied to-day, which was one of great usefulness. Not only did it function as a National body but it was the connecting link between the Shipping and Forwarding organisations in London, Manchester and Hull. He did not think that their Chairman had missed one meeting of the Council since the inception of the Association, and as Mr. Heard lived in South Wales he must have created a record. (Loud applause). Those on the Council deeply appreciated the hard work done by Mr. Heard, and it was only on an occasion such as the Annual Meeting of the Association that members could record their very best thanks to the Chariman for what he had done. (Loud applause.)

Mr. A. W. Heard, who was received with acclamation, thanked the members sincerly for passing a vote of thanks to him. Now that he had the opportunity he would like to say a little with regard to *The World's Carriers and Carrying Trades' Review* which was the official journal of the Association. The work done by that journal on behalf of the Association since its inception had been invaluable and they had been given great help by the Editor, Mr. E. W. Willis. He felt that in *The World's Carriers* they had an ally of inestimable value and that the sincere thanks of the Association were due to the Editor. (Applause.)

## Northern Road Transport Owners' Association.

THE Northern Road Transport Owners' Association, has been formed to protect, encourage and develop the operators' interest.

It is the aim of the Association:—

(a) To promote the interests of members in relation to their business of Motor Coach and Motor Vehicle Operators, and to safeguard and protect them in respect thereof. In particular to make representations to all or any Licensing or other Authority for Legislation Licences, concessions and facilities which may be calculated to promote or improve the services and business of members either collectively or individually.

(b) To advise members relative to the efficient operation of their services, and to promote economy therein, the general co-ordination of motor coach and motor vehicle services, the revision of routes, fares, and upon all matters directly affecting the carrying on of the business of Motor Coach and Motor Vehicle Operators.

(c) To collect, compile, exchange and distribute among members information, reports, statistics, opinions and decisions in relation to any of the said businesses, and to promote discussions upon subjects calculated to further the interests of members.

(d) To provide and assist members of the Association either collectively or individually, and whether by finance or otherwise, in respect of any litigation or other legal matters affecting their businesses, and to settle disputes arising between members relative to their businesses.

The Association owes its existence to a Meeting of bus Operators held in Newcastle-on-Tyne, during the early part of October, last, called for the purpose of urging united action in connection with the Newcastle-on-Tyne Corporation's proposals regarding municipal bus stations.

The immediate plans of the Association apart from local action in connection with bus stations, are to pilot its members through the difficult stages of the Road Traffic Act. The Association fully realises the gravity and far-reaching effect of this Act, in so far as public service vehicles are concerned, and views with no small concern the difficulties ahead when the final regulations, controlling public service vehicles, are put into force, and it will be the endeavour of the Association to counsel and assist its members through that period.

The Secretary is Mr. A. Norman Brown, and the offices of the Association are at 12a, Northumberland Street, Newcastle-on-Tyne.

# London Shipping and Forwarding Agents' Conference.

## Annual General Meeting.

THE Annual General Meeting of the London Shipping and Forwarding Agents' Conference was held at the offices of the Association, 1-3, Oxford Court, Cannon Street, London, E.C.4, on February 3rd last.

The President of the Conference, **MR. M. E. DUFFETT** (J. D. Hewett & Co., Ltd.), presided and amongst those present were:—

Mr. B. D. Brigg (Hon. Auditor), Mr. E. A. Aves (Hon. Treasurer), Messrs. B. K. Gardiner (Carter Paterson & Co., Ltd.), S. F. R. Smith (E. W. Taylor & Co. (Forwdg.), Ltd.), J. Walker and J. B. Taylor (Immediate Transportation Co., Ltd.), F. J. Gerson (Rosenberg, Loewe & Co. Succrs., Ltd.), G. Perry (British Commercial Transport Co., Ltd.), E. W. Turvey (Nunzi & Co., Ltd.), W. Woollett (Woollett Airey & Co., Ltd.), W. L. Mann (Savage, Mann & Rowe, Ltd.), W. O'Brien and H. Gilbert (G. W. Sheldon & Co., Ltd.), H. T. Parkin (Crowe & Co. London, Ltd.), C. H. Burke (Van Oppen & Co., Ltd.), E. N. Westfield (Chas. Atkins & Nisbet, Ltd.) and C. McEwan (Thos. Cook & Son, Ltd.).

In attendance: The Acting Secretary.

The Minutes of the last Annual General Meeting held on January 14th, 1930, and of the Ordinary General Meeting held on July 21st, 1930, having been circulated to members, were taken as read and signed.

### Election of President.

When the question of the election of President for the ensuing year came on for discussion, Mr. M. E. Duffett said that he had served the Conference in that capacity for many years and felt somewhat akin to tramways which it was now said were becoming obsolete and should be superseded by motor buses. He considered it was time for the members to nominate someone else to occupy the Presidential Chair.

Mr. J. B. Taylor (Immediate Transportation Co., Ltd.) proposed the re-election of Mr. M. E. Duffett as President for the ensuing year. Mr. Duffett had steered the ship most successfully and they did not want to drop their pilot at this point in the history of the Conference. (Loud applause.)

Mr. E. W. Turvey (Nunzi & Co., Ltd.), seconding the resolution, said he was perfectly sure that members could not do better than to re-elect Mr. Duffett.

The resolution was carried with acclamation.

The President thanked the members for their continued confidence in him. He reminded the members, however, that it was his duty to advise them to take such action as he considered was for the good of the Conference, and he certainly did think that they would have been wise to have made a change in the Presidency. At the same time if the members felt that he must carry on he would continue to do the best he could. (Applause.)

Mr. E. A. Aves was re-elected Hon. Treasurer for the ensuing year.

Mr. B. D. Brigg (W. A. J. Tillerary & Co., Ltd.) was re-elected Hon. Auditor.

It was with regret that the meeting received the resignations from the Council of the following gentlemen:—Mr. F. H. S. Rouse (American Express Co., Inc.), who wrote to the Conference stating that new duties had been assigned to him by his Company; Mr. H. K. Coppendale, who for a long time has represented Messrs. Morison, Pollexfen & Blair, Ltd., on the Conference, and Mr. H. Gilbert (G. W. Sheldon & Co., Ltd.), who intimated that although he did not wish to be nominated again to the Council he would continue to attend the meetings of the American Section.

The following members of the Committee were re-elected for the ensuing year:—Messrs. J. B. Ballantyne (J. B. Ballantyne & Co.), H. A. Crowe (Crowe & Co. (London), Ltd.), F. J. Gerson (Rosenburg, Loewe & Co. (Succrs.), Ltd.), C. McEwan (Thos. Cook & Son, Ltd.), W. Narracott (Van Oppen & Co., Ltd.), G. Perry (British Commercial Transport Co., Ltd.), L. G. Stockwell (Stockwell & Co., Ltd.), E. W. Turvey (Nunzi & Co., Ltd.), W. Woollett (Woollett, Airey & Co., Ltd.), and E. N. Westfield (Chas. Atkins & Nisbet, Ltd.).

In addition the following gentlemen were elected to serve on the Council:—Messrs. W. Beckmann (World Transport Agency, Ltd.), S. F. R. Smith (E. W. Taylor & Co. (Forwdg), Ltd.), Mr. Mann (Savage, Mann & Rowe, Ltd.), and Mr. Walker (Immediate Transportation Co., Ltd.).

**Chairmen of Sections for the year 1931.** The President announced that the following gentlemen had been elected Chairmen of Sections of the Conference for the ensuing year:—Air Section.—Not yet elected. Mr. E. N. Westfield (Chas. Atkin & Nisbet, Ltd.) is the present Chairman. American Section.—Mr. G. Perry (British Commercial Transport Co., Ltd.); Vice-Chairman, Mr. H. Gilbert (G. W. Sheldon & Co., Ltd.). French Section.—Mr. L. G. Stockwell (Stockwell & Co., Ltd.). German Section.—Mr. F. J. Gerson (Rosenburg, Loewe & Co. (Succrs.), Ltd.).

Mr. B. G. Arthur, M.B.E., was re-elected Secretary.

### ANNUAL REPORT.

**The President** moved the adoption of the Annual Report of the Executive Council for the year 1930.

The Report states that the Conference has continued to function under the same principles as in previous years and Mr. M. E. Duffett has continued to represent the Conference on the Council of the London Chamber of Commerce and on the British National Committee of the International Chamber of Commerce.

The Conference relinquished its membership of the International Federation of Forwarding Organisations at the end of 1928 and was superseded by the British Association of Shipping and Forwarding Agents to which body the London Conference is affiliated. Through the medium of the British Association of Shipping and Forwarding Agents very valuable assistance is still being afforded the Conference in international affairs, both as regards questions of general policy and the protection of members' interests. From time to time members have occasion to draw attention to minor grievances against their clients abroad (such as, for example, long outstanding accounts), and through the intervention of the International Federation effective assistance is very often rendered in such cases. On the other hand, such service is reciprocated as far as possible when advice is received from the International Federation that any of their London clients are in default.

The Report deals with the various Sections of the Conference.

**Air Section.** Imperial Airways, Ltd., have expressed their strong desire to encourage Shipping and Forwarding Agents to assist air transport, and with this in mind are prepared to grant facilities to those Agents who go to the expense of setting up their own organisations at the Aerodrome, which they are not prepared to extend to other Agents.

**American Section.** The membership of this Section is open to all members of the Conference, who may rest assured that matters of importance to those engaged in business between U.S.A. and Canada are being well and closely watched.

The Section is in very friendly and close touch with the New York Freight Forwarders and Brokers' Association, which is in touch with other similar Associations in the U.S.A., and matters of mutual interest both to members of the London Conference and the various American Associations are thereby exchanged. The Pacific Coast Freight Forwarders and Brokers' Association is another important organisation in San Francisco, and here again a reciprocal and lively interest obtains as between the working of the Association in question and the American Section of the Conference.

**French Section.** The regular monthly meetings of this Section have been particularly well attended, and the various matters brought forward for discussion have been pursued in a very enthusiastic manner. Much of the time of the Section has been occupied in the preliminary discussions of matters which in fact have concerned the members of the Conference in general and which have been subsequently transferred to the Council for definite action.

**German Section.** There has not been occasion for special activity in the German Section during the past year, but the following general questions were deliberated upon and made the subject of recommendations to the Council, viz.:—(a) The removal of the duties by the Chancellor of the Exchequer and the agreement of a fixed scale of charges to be applied for Customs entry and clearance of free goods. (b) A scheme of Forwarding Insurance for adoption in England, on the lines of the scheme at present in force in Germany.

Mr. J. B. Taylor seconded the adoption of the Annual Report, which was carried unanimously.

The Report will be circulated to all members.

Mr. E. A. Aves, the Hon. Treasurer, presented the accounts for the past year.

Mr. B. D. Brigg, the Hon. Auditor, urged members to

Digitized by Google

take more interest in the work of the Conference, to support the President and so stop him from suggesting that the time had come for him to vacate the Chair. As a Conference they were able to negotiate with powerful groups and get very necessary work done and that meant money to them all.

The accounts were adopted unanimously.

Mr. H. Gilbert (G. W. Sheldon & Co., Ltd.) appealed to members to support the American Section of the Conference and he outlined some of the achievements of this Section during the past year.

The President said he felt that if members would but take more interest in the work of the Conference they would be able to accomplish much more than they had achieved up to the present. So many men were inclined to sit on the fence, do nothing themselves and cry "Why does not somebody do something." But they did not do it—they sat tight and expected other people to pull the chestnuts out of the fire. That was not fair. If any member who was in a difficulty would bring it to the attention of the Conference then the whole membership could consider the matter and come to a decision in the interests of all.

Mr. F. J. Gerson, Chairman of the German Section of the Conference, said he would be glad to receive any questions from members which could with advantage to all be made the subject of debate by the German Section.

Mr. J. B. Taylor raised the question of a member being charged a transfer fee on the passing of a delivery order to another member. The matter was discussed, and in the result it was resolved that it was desirable that no fee should be charged for such transaction carried out between two members of the Conference, but otherwise a minimum charge of 2/6 should be made.

The meeting then terminated.

# Liverpool Shipping and Forwarding Agents' Association.

## Annual Dinner.

THERE was a confident tone in all the speeches delivered at the annual dinner of the Liverpool Shipping and Forwarding Agents' Association, held at Liverpool, on January 17th. Whilst the continued industrial depression was deplored, some of the principal guests thought it was not without its hopeful aspects. Careful analyses were made of the causes of bad trade and the steps that should be taken to facilitate the return to normal.

The principal guests were: The Lord Mayor of Liverpool, Mr. G. M. Gillett, M.P., Parliamentary Secretary Department of Overseas Trade, Mr. Philip Holland, American Consul, Mr. T. J. D. Large, O.B.E., Liverpool Customs, Lieut. Col. F. H. Kempe, M.C., Postmaster of Liverpool, Major J. Albert Eckes, T.D., Mr. H. P. Lumb, Mr. G. Leedam, Mr. F. R. Hauxwell, Mr. G. C. Horton, Mr. J. Mitchell-Jones and Mr. James Jude, C.C.

Mr. G. M. Gillett, M.P., Parliamentary secretary of the Department of Overseas Trade, after a reference to last year's trade returns which showed a decline of imports to the amount of £176,000,000, and of exports to £159,000,000, said one of the first tasks to which he applied himself on taking ministerial charge of the Department of Overseas Trade, was to see how he could make of the greatest value to the export trade, the highly efficient machine which it fell to him to use. We were living in times of tremendous change in our industrial system, he said, and it was possible that we might even be at the birth of a new era. Without going into the very thorny and difficult problems of monetary policy, one of the things that it was most essential to consider was whether some of the depression might not be due to faults of our own.

"We don't want to allow ourselves to get depressed because of the disheartening figures I have mentioned, but we want to review the position and ask ourselves 'Can we find a remedy for the evils that are causing us distress.' If you work for a good time, there is no reason why a good time should not come. Everything in trade was teaching us that organization and combination were essential for victory."

Mr. Gillett then gave particulars of three trade commissions, one to South Africa, another to China and Japan, and the third to South America, each of which conducted investigations on behalf of traders of all kinds. Two suggestions were made of what might be done in order to help the overseas trade. The first was in the way of group selling, a system which had been already developed by trade rivals in other parts of the world, and the other was the suggestion of the master cutler of Sheffield that the industry should have in South America, a fully qualified expert as there own trade representative in order to keep in touch with the needs of that great market.

"Good trade can be obtained notwithstanding all that is said about the burdens placed upon industry at this end, if manufacturers would make the goods the market required and improve their selling organizations. Industries must know the exact fancies of the importer or consumer and must then combine, where they make non-competitive lines, to capture the trade. With regard to having special representatives on behalf of particular industries to act as unofficial specialist trade commissioners, the government was prepared to help in every practical way and even to consider the question of some financial assistance. Put in another form he believed the policy of our export trade in many cases should be:—(1) expert market investigation; (2) organization of group selling; and (3) the maintenance of trade experts abroad on behalf of particular industries.

The Lord Mayor of Liverpool said there was no section of the community to whom the trade and commerce of Liverpool were more vital than to the shipping and forwarding agents. He could not help but feel pleased that the question of how Lancashire trade could be improved was being taken up with gusto, both by the Liverpool and Manchester Chambers of Commerce. Obviously any improvement in the industrial conditions of the county would react to the benefit of the whole community. He believed that the Conference of Mayors of the various municipalities would yield a useful result.

Mayor J. A. Eckes, T.D., said the duty of Government is to persuade trade; it is ours to exploit it.

The trade of Liverpool in the past year had not escaped the combination of influences which have so severely checked enterprise in every direction. It was peculiarly dependent on a broad reciprocal movement between home and overseas. That movement has been sadly checked as we all know. The fall in exports was disconcerting. Although allowance must be made for the remarkable decline in values in the past 12 months, there was unavoidable discomfort in knowing that compared with the previous year our exports of wholly manufactured goods were in value, £134,000,000 less in value. Cotton textiles, woollen textiles, iron and steel manufacturers and coal, all continued to show further and marked declines.

"Whilst Liverpool is a mercantile centre concerned with the whole of Great Britain's home and overseas trade, the port is particularly exposed to the depression of the chief basic industries, which operate in the country immediately adjacent to the North West seaboard. Unemployment and restricted spending in that area spreads its definite influence to the markets and distributing point of ingress and egress. If we consider the values of exports in the past year as a whole and relate the loss in that trade nationally, to that of Liverpool, the value of goods going out through the port last year cannot have been less, speaking generally, that about £40,000,000.

"What this loss represents directly to Liverpool is highly conjectural, but taking into account handling transport and all the services incidental to shipping and despatch it has been a serious item to be withdrawn from Liverpool's everyday life. Add to this the general absence of activity in the markets through a lifeless cotton industry, the disorganization of timber and grain imports from Russia, the changes introduced into purchasing and marketing, following amalgamations and concentrations in trading groups, the lowness of freights, the amount of laid up tonnage, the want of cargoes, inter-port competition, employment and taxation, and we have before us a picture of the difficulties which have confronted us.

"Strange and conspicuous among the reduced totals which confront us is the report of the Mersey Docks and Harbour Board that last year was a record tonnage year with 21,314,820 tons of shipping paying rates for the use of the port.

"Liverpool is depressed but not dejected. We in Liverpool still have unbounded confidence. The Docks, wherever possible, are being modernized and extended, we are making provision for unlimited and cheap supplies of electric current for all purposes for years ahead, we are modernizing our

Digitized by Google

housing and our roads, and underneath the Mersey we are constructing a marvel of modern engineering. This Tunnel in itself is, I believe, to play a dominant part in the future of the port. Liverpool will, through its agency, cease to be a cul-de-sac and become a dominating commercial centre on a great highway."

"The facilities given by the Railway Companies to the Port of Liverpool are unique. Along the Dock Line there are 15 goods stations and yards with very fine warehouse accommodation. Each station is well equipped with crane power, and in spite of the depression the Railway Companies have kept all their equipment and depots in Liverpool in good order, ready to deal efficiently with an increase in business. Certain speeding up of the Goods Trains has also taken place in recent years.

"How much longer we are destined to endure the discomfort of depressed trade I cannot venture to say. But I do say with confidence that when the change comes we shall not be found unprepared, nor wanting in our capacity to add impetus to the move forward by lending every aid to the carrying of British goods overseas."

Lieut.-Col. F. H. Kempe, M.C., who proposed "The Liverpool Shipping and Forwarding Agents' Association" said every phase of business was now highly specialised and the old private merchant man had been largely displaced by the shipping company. There was need for a body of experts to advise traders as to the best and advantageous means by which they could ship their goods; that service was provided by the Association. Its business was to help shippers to get their goods out of the country and into other countries by the best possible means. The expert shipping and forwarding agent rendered valuable service to the shippers, to the shipping companies, and the port, and were consequently a big factor in the commercial life of Liverpool. Lieut.-Col. Kempe quoted statistics to illustrate the enormous progress of the mercantile interests of the port in the last century.

Replying, Mr. G. C. Horton, chairman of the Liverpool Shipping and Forwarding Agents' Association, said:—

We are, I think, victims of a conglomeration of adverse circumstances acting and re-acting on each other. Frenzied finance, national and local extravagence, excessive production, the fall in prices not passed on to the consumer, great combines, loss of the personal element and touch. The remedy or remedies seem more difficult to state than even to discover the root causes; but undoubtedly there must be a severe reduction in national and local expenses if we are again to be able to compete successfully with our foreign competitors. Another essential is increased buying of British commodities by foreign countries. The South American markets have always been of peculiar interest to Liverpool and with the right propaganda, and the proper attention to the requirements of prospective customers there should be no reason why England cannot again become the principal source of supply to those markets.

"The main object of the Shipping and Forwarding Agents' Association is to strengthen the chain which connects the shipper with the consignee, with the port of Liverpool the principal link in that chain. We endeavour to achieve that object by emphasising the advantages that the port of Liverpool offer, and also by courteous negotiation to remove any disadvantages which are brought to our notice from time to time.

To the representatives of the local Consular Corps, we suggested that they emphasise to their governments that their Customs officials be not too arbitrary in interpreting the requirements at destination.

"As an example I would state that a member of our Association was recently fined because he declared on a Consular invoice 'Firebricks' instead of 'Fireclay Bricks.'

"We hear a lot of the necessity for optimism, but we must be careful that it does not delude us into a false position that we *must* come out on top. There is no guarantee that we *must*, more than optimism is required—very severe application, coupled with clear deep thinking and the earnest co-operation of all, employer and employees."

Responding to the toast to "The Guests," which was ably proposed by Mr. J. Mitchell-Jones, Mr. Philip Holland who is the president of the Liverpool Consular Corps said he was beginning to believe that unless one is of the esoteric, shipping and forwarding are shrouded in mystery.

"Your motto is, 'We do for you what you cannot well do for yourself, and we do it better.' The businessman who attends to his own shipping, unless his business is sufficiently large to have a special shipping department, is somewhat in the same category as the man who is his own lawyer or physician, he usually has a fool for his client or patient.

"A shipping and forwarding agent is to merchandize transport what a bicycle is in human transport. Through a shipping and forwarding agent, an exporter can deliver his foreign sales at less cost than he can, acting as his own agent.

"I regard you as an indispensable link in the chain of international trade. No class of men are better informed on transportation channels and cost. You take upon yourselves the petty annoyances which beset commerce. You assume the pettifogging worries of the big shipper, and make it possible for the small purchaser to do business in the world markets. You take as it were, the interference out of international trade broadcasting."

# Liverpool C.M.U.A.

**13th Annual Meeting.**

MEMBERS in the Liverpool Area of the Commercial Motor Users' Association held their 13th annual general meeting at the office of the Secretary, Mr. C. Dudley Whitnall, A.C.A., A.S.A.A., on Thursday, February 12th. Here are a few extracts from the principal matters dealt with in the annual report of the Committee, which appears over the signature of the Chairman, Mr. A. C. Bloomer:—

**Water for Steam Wagons.** This scheme continues to operate successfully. Unfortunately a great deal of damage continues to be done to the service boxes. This state of affairs necessitates constant vigilance on the part of the various water authorities who are parties to the scheme. The Committee note with concern that the number of prosecutions against drivers is on the increase. Members owning steam vehicles will appreciate how necessary it is that water should be available when required, and they are urged to bring to the notice of the Committee, any cases of wilful damage that come to their knowledge.

**Natural Water Supplies.** Particular attention has been given to the question of interference by local authorities with natural water supplies in cases of road reconstruction. As a result, assurances have been received from the Ministry of Transport that where natural water supplies previously existed, everything possible will be done by the authorities concerned to retain these.

**Loads on Mersey Ferry Approaches.** In the early part of the year the Committee took up with the Mersey Docks and Harbour Board the question of maximum permissible loads on the floating roadways at Liverpool and Birkenhead. It was pointed out that the limit of 18 tons did not permit of full advantage being taken of the laden weights allowed by law, and that the restrictions constituted a severe handicap to commercial motor users of the ferries. However, the Committee was informed that the maximum weight of 18 tons allowed on the floating roadways had received the approval of the Minister of Transport, who had agreed with the Mersey Docks and Harbour Board that the weights allowed could not with safety be increased.

**Mersey Ferry Rates.** The attention of the Committee was drawn to the fact that, whereas the Wallasey Ferries pass on the relief obtained by them under the De-Rating Act, 1929, proportionately to all commercial users, the Birkenhead Ferries pass on the relief only where monthly credit accounts of at least £5 are opened. It does not appear generally to be known that the relief (at the present time 12½ per cent.) may also be obtained by the purchase of prepaid freight tickets. The Committee reports that, following strong representations by them, the Birkenhead Ferries Management have now intimated their willingness to issue such tickets in minimum amounts of £1.

**Road Traffic Act.** Perhaps the most outstanding feature of the Road Traffic Act is that which imposes a limitation on drivers' hours. The fact that the Minister of Transport has postponed the operation of this part of the Act from time to time, suggests that to limit drivers' hours is not so simple a matter as would at first appear. Members would be glad to know that at the present time the Association is making very determined efforts to obtain some relaxation in the onerous conditions of Clause 19.

**Membership.** The membership in Liverpool has been well maintained during the past year. The need for commercial motor users to be properly organised is more apparent that it has ever been. The concessions obtained during the year in connection with the Road Traffic Act are, unfortunately, not apparent on the surface, but none the less they have amply justified the existence of the C.M.U.A.

# News from the Ports.

**Manchester Shipping and Forwarding Agents' Conference.**—At the time of writing arrangements are under consideration for the annual meeting of the Manchester Shipping and Forwarding Agents' Conference which is due to be held this month.

**Manchester Ship Canal Traffic.** — From the monthly statistics which have been furnished us by the Manchester Ship Canal Company, it is pleasing to read that traffic receipts during the month of December were the highest for six months, being £118,986 compared with £123,870 in December, 1929.

**Personal.**—Mr. Alfred Watkin, Chairman of Lloyd's Packing Warehouses and a Director of Manchester Liners, has been elected Chairman of the Manchester Ship Canal Company to succeed the late Capt. William Charles Frederick Bacon, head of Sivewright, Bacon and Co., shipping brokers, and Director of other shipping firms. Capt. Bacon was also Vice-Chairman of the Manchester Docks and Warehouse Extension Committee.

**Master Porterage.**—Arrangements are being made by the White Star Line of Liverpool to transfer the work of loading cargoes on their liners from their own permanent staff to local master porters. This steamship company has carried out its own cargo loading work for more than 50 years.

**Newcastle's Projected Quay Extensions.**—The members of Newcastle Corporation Trade and Commerce Committee, headed by its Chairman, Ald. Walter Lee, and including the Lord Mayor (Ald. David Adams), made a thorough inspection of the quay on February 2nd, devoting particular attention to the proposed extension, 750 ft. long, preliminary work on which has already been put in hand. The City Engineer, Major W. J. Steele, explained a complete set of plans of the proposed work, the special object of which is to provide deep-water accommodation for big steamers.

**Fall in Ferry Receipts.**—It was reported to the Tyne Commission at its last meeting that the number of passengers using its three ferries, which serve North and South Shields, had decreased by no fewer than 204,000. Receipts for the past year were down by £4,000, mainly due to the reduction of fares; but 30,000 more motor vehicles were carried in 1930 than in the previous year.

**Promoted.**—Lieutenant-Commander W. A. Williamson, R.D., R.N.R., who has been promoted Superintendent of the City Line of steamers, Glasgow, is a son of Mr. W. Williamson, solicitor, Antrim (near Belfast).

**Shipping Agents' Competition.**—It may be remembered that at the annual meeting of the Liverpool Shipping and Forwarding Agents' Association, bitter complaints were made of unfair competition by steamship agents against legitimate shipping and forwarding agents. The chief ground of complaint was that the representatives of the steamship owners were using their commission to bolster up forwarding business. This matter is now being taken up by the Council of the Liverpool Shipping and Forwarding Agents Association with the Chairman of the Liverpool Steamship Owners' Association, Mr. Clarke, of Larrinaga and Co., Ltd.

**The Work of the Forwarding Agent.**—Mr. S. Jude, Secretary of the Liverpool Shipping and Forwarding Agents' Association, on February 2nd, delivered a lecture to the members of the Liverpool Traffic Club, which exists for the promotion of traffic knowledge, on "Shipping and Forwarding in Liverpool." Mr. Jude dealt comprehensively with the technique of transport and dispatch, and made it quite plain that there was more in the functions of shipping and forwarding than met the eye. It may be remembered that recently Mr. Jude gave a similar lecture to the Hull Traffic Association.

**New American Liners.**—Work on the first of the new 30,000 ton liners being built for the United States Lines at the Camden plant of the New York Shipbuilding Company is progressing according to schedule, it was said at the London offices of the steamship company recently. Approximately 1,600 men are engaged in the construction work. The liner will be 705 feet long with a beam of 86 feet. With a speed of twenty knots she will enter the New York, Cherbourg and Southampton run temporarily with the "Leviathan" later to be withdrawn when she can be replaced by a larger and faster ship.

**Progress at the Port of Dublin.**—The year 1930 was a period of progress and development at the port of Dublin. The very successful working of the trade and commerce of the port last year was referred to at a recent meeting of the Dublin Port and Docks Board. Interesting facts and figures were given, which showed that the registered tonnage of vessels that had entered Dublin during 1930 totalled 2,456,704 tons, a tonnage that constituted a record for the port, and was an increase of 116,070 tons over the year 1929. Mr. Charles McGloughlin was re-elected Chairman of the Port and Docks Board.

**Another Ship to be Cut into Three.**—The Anglo-American Oil Company's Tanker, "Saranac," sailed last month for the Tyne, to be cut into three and to have a new middle section of 4,000 tons displacement inserted, by Palmers Shipbuilding Company, Ltd., who so successfully performed a similar operation on her sister ship, "Cadillac," last year. The "Saranac" is a vessel of 17,000 tons, and since she was built in 1918, has carried more than 375 million gallons of Pratts products to this country.

**Southampton Docks.** — With the exception of the "Majestic," which re-enters service on March 18th, each of the big six engaged on the North Atlantic passenger service between Southampton and New York will have resumed operations, after the winter overhaul, by the end of February. The 1931 passenger season will witness the introduction of several important features, notably the inauguration of joint sailing schedules by continental lines using Southampton. The addition of the Rotterdam Lloyd's latest motor-ship, the "Dempo," to the Java trade in March will allow a speeding-up to be effected on this route whilst the commissioning of the new Canadian Pacific liner, "Empress of Britain," 42,500 tons, in June will mark a new epoch so far as shipping communication with Canada is concerned. Pleasure cruising, according to the programmes of some of the companies whose ships are regularly based at Southampton, will again figure prominently in the shipping activities of the Docks during 1931. The Orient Line have decided to allocate three vessels, the "Orontes," "Oronsay" and "Orford" to such service this year as compared with two similarly engaged in 1930. Closely following upon the decision of the Southern Railway Company to build the new graving dock, intended for the reception of the mammoth 73,000 ton Cunarder, upon a site adjacent to the present dock extensions at Millbrook, preliminary excavation work has already been commenced. It is intended that the new dock shall be completed in readiness to receive the new Cunarder towards the end of 1933 and it will be appreciated that a tremendous task must be accomplished in constructing the world's largest graving dock, measuring 1,200 feet in length and 135 feet in width within a period of less than three years.

**White Star Line.** — The White Star Line have scheduled for this year over 500 North Atlantic sailings alone to and from six ports in the British Isles. The vessels operating these sailing include the new motor vessel, "Britannic," the ship of 1930, whose immediate popularity in the six months of her life, with the traveling public has been phenomenal; and the "Majestic" whose 56,621 tonnage gives her the distinction of being the world's largest liner. In addition to these sailings several White Star liners will be engaged in Winter and Summer Holiday cruises to the North Cape, Norwegian Fjords and Atlantic Islands. Of the building programme of the Company the vessel which at present creates the greatest amount of interest is the "Georgic" the sister vessel of the "Britannic" the White Star Line's first and very successful experiment in motor shipping. When completed the "Georgic," which will have a tonnage of about 27,000, will accommodate 1,500 passengers in three classes, Cabin, Tourist Third Cabin, and Third Class, and she will be engaged on the Liverpool-New York service, alongside the "Britannic."

**The Fishguard-Rosslare Route.**—The steamship service between the ports of Fishguard, in Wales, and Rosslare, in the County Wexford, is to be augmented in due time by the Great Western Railway Company, of England, whose transport services in passengers and goods between London and South Wales, and Cork and the South of Ireland via those two ports is increasing. The Company intend placing two new steamers on this popular and convenient route, and the order for the construction of these has already been placed with the Birkenhead firm of shipbuilders, Messrs. Cammell, Laird & Co.

**Tyne Tunnel Proposal.**—The proposal to build a bridge between North and South Shields being now deemed impracticable, the joint sub-committee definitely favours a tunnel scheme for joining the boroughs. It is hoped to obtain a substantial grant from the Ministry of Transport.

Digitized by Google

**P.L.A. Monthly.**—The February number of the Magazine of the Port of London Authority contains some very interesting articles. Mr. A. G. Linney, the Editor, has found several curious old manuscript books in which a dockmaster at Surrey Entrance Lock (Surrey Commercial Docks) kept a diary throughout the year 1865, and in this issue Mr. Linney reproduces a photograph of several of John McArthur's diary entries, and says:—"The Journal is contained in two exercise books, bound in old-fashioned mottled covers, and virtually every day of the year 1865 is included. Handwriting in those days was no slap-dash business: with John McArthur it was indeed penmanship, carried out with a fine nib, down strokes thicker and upstrokes fine, capitals given neat flourishes, every character fully formed, few contractions, and each day's entry ruled off with a double line of red ink. It is obviously the work of a man who was painstaking and methodical in recording accurately what he considered to be the necessary daily details of his routine."

**Port of Bristol Official Handbook for 1931.**—The Port of Bristol—which in these days includes not only the City Docks but also the larger rivermouth docks at Avonmouth and Portishead—has a history extending back over two thousand years. Bristol has always remained the market and distributing centre for grain, provisions and other goods for the West of England, and the Port under the enterprising management of the City Authorities has developed other important departments of industry, as is illustrated in the official handbook of the Port which contains a wealth of information and is beautifully illustrated. The General Manager and Chief Engineer is Mr. Thomas A. Peace, and the Assistant General Manager is Mr. Frank Brown. The head office is at Queen Square, Bristol.

**Clyde Navigation Trust.**—Trade at the port for the past month has been very quiet on the export side. There has been, however, a particularly heavy incoming traffic. With the falling off in the export trade during the past six months the Clyde Trust have been most active in opening up business connections in the various dominions with Scottish manufacturers, and negotiations are now proceeding in connection with some 50 or 60 commodities manufactured in Scotland, with a view to manufacturers being represented by real live firms abroad. The ultimate object being the building up of their export trade. Speaking at the Glasgow Publicity Club on the 23rd January, Mr. Harold Ford, Commercial Manager, Clyde Navigation Trust, referred to the proposed Glasgow Development Board saying that in his view Glasgow had fallen a long way behind other parts in not paying sufficient attention to its commercial development, and had been rather prone to rely on a resumption of prosperity in its basic industries. The question of attracting new industries was no new idea, and he stated that he had submitted a similar proposal to the Clyde Trust 15 months ago, and threw out the hint that he was now actually engaged on a scheme for submission to the Trust shortly for the development of a portion of the Shieldhall estate, in the vicinity of the New Dock to be used as an industrial estate.

**Aberdeen Harbour Revenue.**—The report of the Finance Committee, submitted to the Aberdeen Harbour Commissioners on January 12th, shows a surplus of £32,000 for the financial year ending September 30th, 1930. The total ordinary revenue amounts to £152,947 being a decrease of £4,150 upon that of the previous year. The statement on imports and exports shows that 1,060,532 tons of goods were imported being an increase of 2,684, while the goods exported totalled 146,643 tons, a decrease of 10,407 tons. The tonnage of trading vessels which entered the harbour was 965,035 tons, being an increase of 26,604 tons, while the tonnage of fishing vessels is given at 1,344,565 tons, an increase of 90,533 tons compared with the previous year.

**Clyde Harbour Charges.**—Further rebates on charges leviable at Glasgow Harbour have been decided upon as a result of de-rating relief. The committee's report stated that owing to the continual decrease in the volume of some of the goods in receipt of rebates from charges, mainly coal, iron ore, and iron and steel, it was apparent that the total estimated rebates would fall short of the total de-rating relief to be granted to the Trustees. That total had now been practically confirmed at a little over £88,000, and the committee recommended that additional percentage rebates be granted as from January 1st to September 30th, 1931, subject to review at any time. It is estimated that the present rebates and the additional rebates would result in a total relief of £86,799, the effect of the additional rebates being relief to the extent of £2,727 on iron and steel goods, etc.; £4,357 on graving docks, and £7,962 on all vessels other than new vessels.

**Bo'ness Dock Trade.**—An official statement of trade at Bo'ness Dock shows that there arrived during the course of last year 480 vessels with a total registered tonnage of 304,215 tons, compared with 537 vessels of 296,747 tons for 1929. Although fewer ships arrived the registered tonnage is up, showing that larger vessels are finding their way to the port.

**Not Despondent.**—Mr. J. A. Eckes, of Langstaff, Erembert and Co., shipping and forwarding agents, who is Chairman of the Liverpool Chamber of Commerce, in a speech at Liverpool asked "Can our export trade be regained?" A tariff efficiently administered in this country, he said, was bound to bring in some revenue and he made the suggestion that the revenue from the tariff, should we get one, should be ear-marked for the assistance of the export trade. Rationalisation was now being spoken of as the cure for all our industrial ills. If rationalisation meant unity and co-operation he agreed; but if it meant huge combines monopolising trade he was opposed. The great curse of many combines was the loss of the personal touch. It was to the merchants that we must look to push our offensive home. He was not despondent about our export trade if it was tackled properly.

## Port of London Authority.

**London's Annual Shipping—another Record.** Provisional figures show that 58,083,575 net register tons of shipping used the Port of London during 1930. This represents an increase of over 500,000 net register tons over the total for 1929 and is a record for any calendar year in the history of the Port of London.

**P.L.A. Display at British Empire Trade Exhibition, Buenos Aires.** The Blue Star s.s "Avila Star," which left London on January 16th, has on board a number of exhibits which are being sent out in prepartion for the forthcoming British Empire Trade Exhibition at Buenos Aires, to be opened by H.R.H. The Prince of Wales on the 14th March. The exhibits include a number of unique dioramas which the Port of London Authority have had specially prepared to illustrate the many-sided activities in the Port of London. The dioramas are on a scale not attempted before and include views of the Pool of London from London Bridge, the Royal Victoria & Albert and King George V. Docks, the Port at Tilbury, a meat discharging berth, and unloading grain at the Millwall Granary. The Authority are erecting an attractive Pavilion in the Engineering and Shipping Hall in the Exhibition grounds.

**Port of London Authority as School Teachers.** During 1930 nearly 6,000 school children and students were afforded facilities to view London's great dock and warehouse systems. The Port Authority provided guides and instructive talks were given on London's shipping and trade. These visits constitute a practical lesson in commercial geography and impress the scholar with the magnitude of the Empire's greatest Port and the part it plays in the handling and distribution of commerce to and from all parts of the world. The Authority have received many expressions of appreciation from teachers as to the far-reaching educative value these visits afford to school children.

**Port of London Authority Election, 1931. "Official" Panel of "Goods" Representatives.** At a meeting convened by the London Chamber of Commerce, with Sir Geoffrey Clarke (Deputy Chairman) in the Chair, held on January 30th, attended by the representatives of twenty-five Organisations (including seven Trade Sections of the Chamber) whose members are payers of rates on goods to the Port of London Authority, it was decided to recommend the electors to vote for the following eight "Goods" candidates:—

Benn, Captain Sir Ian Hamilton, Bt., C.B., D.S.O., T.D.
Cory-Wright, Sir Arthur Cory, Bt., J.P.
Davis, Arthur Charles.
Guthrie, Charles Seton Sinclair.
Hodge, Cecil Wilfred.
McLeod, Sir Charles Campbell, Bt.
Murray, Archibald.
Wiles, The Rt. Hon. Thomas, P.C.

The eight "Goods" candidates mentioned above are the present sitting members, who received the support of the Trades Associations at the previous election in 1928.

# Railway Notes and News.

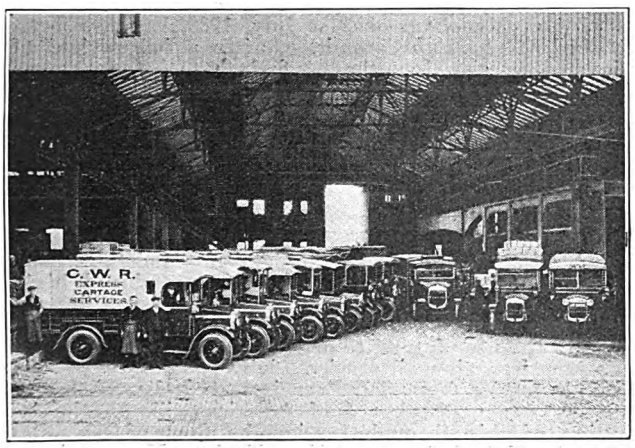
**The Railway Barometer.**—The Railway Traffic Receipts of the four Group Railway Companies have now been published for the first 4 weeks of 1931 compared with the same period in 1930, and are as under:—

| | 1931 | 1930 |
|---|---|---|
| | £ | £ |
| Passengers, Parcels, etc. | 4,541,000 | 4,812,000 |
| Merchandise, etc. ... ... | 3,993,000 | 4,755,000 |
| Coal, Coke, etc. ... ... | 2,677,000 | 2,939,000 |
| | 11,211,000 | 12,506,000 |

The disputes in the South Wales Coal Fields and the Lancashire Cotton Industry have adversely affected the 1931 receipts, and it should also be borne in mind that the period of 1930 with which comparison is made was prior to the present state of general depression of trade in the country. The decrease if compared with the first four weeks of 1929 was £1,213,000.

**L.N.E.R. Magazine for February.**—Among the principal articles in the February number of the London and North Eastern Railway Magazine are the following:—"The Stores Department," by A. P. Ross, Chief Stores Superintendent; "Are Railways Essential?" A question debated and answered at York; "The First Aid Movement on Railways"; "King's Cross Christmas Traffic"; "The Carlisle and Silloth Railway." As usual there are some excellent illustrations.

**"Thornycroft" Vans for the G.W.R.**—Our illustration shows a fleet of Thornycroft vans in the service of the



"THORNYCROFT" VANS FOR THE GREAT WESTERN RAILWAY

Great Western Railway at the Cardiff Goods Depot, where they are employed in connection with their "Railhead" Delivery Scheme. Traffic is received at the Company's various "railheads" whence it is distributed by motor vehicles to its various destinations in the surrounding districts. The Great Western Railway have been users of Thornycroft vehicles since 1913.

**G.W.R. Contracts.**—The Great Western Railway have placed the following contracts with outside firms to the value of £27,500. These include works in connection with the £1,000,000 Paddington Rebuilding Scheme—at Bishops Road, where the station is to be remodelled and enlarged to deal with the whole of the local services, and increasing suburban traffic, and at Westbourne Park, where electric power signalling is to be installed. Earthwork, retaining walls and other work at Bishops Road Station, Paddington, Cleveland Bridge & Engineering Co., Ltd., Darlington; provision and installing of electric power signalling at Westbourne Bridge, Paddington, General Railway Signal Co., Ltd., London; reconstruction and widening of Bath Road Bridge over Windsor Branch near Slough Station, D. G. Somerville & Co., Ltd., London; supply and erection of a refuse destructor at Sudbrook Pumping Station, Heenan & Froude, Ltd., Worcester; supply and erection of two electric 5-ton goods lifts for South Lambeth Warehouse, Wm. Wadsworth & Sons, Ltd., Bolton; work in connection with renewal of Board of Trade Passenger Certificate and Lloyds Special Survey No. 3 of the steam tender "Sir Walter Raleigh," Bickle Engineering Co., Ltd., Plymouth; supply and erection of two 1-ton three 30-cwt. transporter cranes for Paignton, St. Austell and South Lambeth goods sheds and one 6-ton electric overhead travelling crane for Swindon, Wharton Crane & Hoist Co., Ltd., Reddish; demolition of buildings at Bristol, Wapping Wharf, J. & P. Zammitt, Llanelly.

**Southern Railway Magazine.**—The January issue of the Southern Railway Magazine contains another interesting contribution to the series of articles entitled "Road Transport Companies in Association with the S.R." The activities of the Southdown Motor Services, Ltd., are dealt with and the route diagram gives an excellent idea of the ramifications of the Company. As usual, this issue of the S.R. magazine contains some excellent illustrations and the whole of the letterpress makes interesting reading.

**Proposed New Railway in Quebec.**—We have received news from the Office of the High Commissioner of Canada, The Canadian Building, Trafalgar Square, London, S.W.1, to the effect that application has been made to the Quebec Legislature for the incorporation of the Kakabonga Colonisation Railway, which is intended to connect the agricultural, mining and timber regions of Abitibi and Timiskaming with the southern part of the Province of Quebec. Starting from a point in the western Quebec mining area near Rouyn, the proposed line would skirt the headwaters of the Ottawa, Gatineau and Lièvre Rivers, thence branching south-eastward in the direction of St. Michel des Saints and on to a junction with existing lines serving the counties on the north shore of the St. Lawrence. The line would be about 325 miles in length, providing a new direct connection between the north-western part of the Province and the cities of Montreal and Quebec.

**G.W.R. Magazine for February.**—The following news items have been culled from the February issue of the Great Western Railway Magazine:—It is estimated that the greater part of the £355,000 decrease in the G.W.R. revenue in the first three weeks of the year, as compared with 1930, was due to the coal stoppage in South Wales. In addition a further £85,000 decrease was recorded in Dock receipts. For nearly a hundred years, the G.W.R. has led the way in the locomotive world, and a remarkable feature is that since 1837—96 years—there have been but five Chief Mechanical Engineers. Each has been a man with vision and foresight who has left his mark on the world of locomotive construction. To-day the Company possesses in its "King" Class the 30 most powerful passenger locomotives in Britain and no greater tribute could be paid to its present day supremacy, than the fact that more than one railroad in America and other countries has copied some of the features of this fine example of locomotive practice which embraces grace, speed and power. In speed the G.W.R. has led the field, and to-day there are 40 expresses booked to run on the G.W. system from distances ranging from 53 to 173¾ miles, and totalling in the aggregate 4,063 miles, at "start to stop" speeds at 55 to 66.2 m.p.h.

**L.N.E.R. Contracts.**—The L.N.E.R. report that the following contracts have been placed:—The Clyde Crane & Engineering Co., Mossend, Lanarkshire—four 3-ton crank operated level luffing jib portal cranes for Grimsby, Royal Dock; Fielding & Platt, Ltd., Gloucester—one hydraulic coal hoist for 20-ton wagons for Hull, Humber Dock; John F. Anderson, 33, Summer Street, Aberdeen—works in connection with alterations to bedrooms and bathrooms at Palace Hotel, Aberdeen; Messrs. John Lant, Ltd., 90, Pilgrim Street, Newcastle-on-Tyne—construction of subway under Redcar East Halt; Furness Shipbuilding Co., Haverton-Hill-on-Tees, Durham—rebuilding bridge over River Esk destroyed by floods; Sentinel Waggon Works, S.W.1—five Sentinel locomotives.

**L.M.S. and Todmorden Bus Services.**—The L.M.S. Railway announce that they have entered into an arrangement with the Todmorden Corporation for the joint operation of the omnibus undertaking previously operated by the Corporation. The Todmorden omnibus undertaking was one of the first, if not *the* first, municipal omnibus business to be established in this country, having been started in 1907. The arrangement which has just been concluded is on somewhat the same lines as that already in force with the Sheffield, Halifax and Huddersfield Corporations. Virtually the L.M.S. Railway has adopted in a partnership scheme the Corporation services in the area concerned instead of putting on buses of their own. The undertaking will be controlled by a joint committee on which the Railway and the Corporation will be equally represented. Special attention is to be given to the co-ordination of road and rail transport within the area of operation. At present some 36 omnibuses are operating a route mileage of 48 miles with an annual omnibus mileage of about 1,000,000.

# Air Transport Notes.

**"Bristol" Aero Engines.**—The "Bristol" Jupiter Radial aircooled engine is designed and manufactured by The Bristol Aeroplane Co., Ltd., at Filton, Bristol, and is also constructed under licence all over the world. The second issue of the *Bristol Review* contains information on the progress made in every field in connection with "Bristol" engine products. This issue deals (*inter alia*) with the new type of geared Jupiter engines; future "Bristol" engine programme; recent factory developments; the Record Cape and Back Flight; fuel economy with Jupiter engines, and Jupiter engined aircraft at home and abroad.

**Future of the Aeroplane.**—Sir Alan J. Cobham gave a lecture at Liverpool on January 28th, in the course of which he said that we are the world's largest exporters of aircraft. When we had the landing grounds then there would be a revolution in transportation in this country. We could not have the flying there should be and would be until we had air ports. They would make the aeroplane an instrument of utility. Just as we led the world in shipping, so should we lead the world in air transport.

**Manchester Air port.**—The sum of £12,000 is to be spent over the next five years by the Manchester Corporation Airport Committee on enlarging the aerodrome and for providing a control tower and a meteorological department. The question of the Corporation's financial interest in the proposed new services to the Isle of Man and other districts will be discussed at an early meeting.

**Tyneside Air Project.**—Messrs. Orange Bros., of Bedlington, pioneers of the London-Newcastle bus services, have under consideration an ambitious scheme for daily air services between those two centres. Mr. Joseph Orange, one of the principals, stated that he would like to see two services a day each way, one in the morning and the other in the afternoon, each plane carrying about 10 passengers. The journey could, he says, be accomplished within three hours. Mr. Orange was for two years an airplane instructor during the War, and would probably pilot a machine himself, while another brother and some of their drivers might train to secure pilots' certificates.

**Five Years' Air Traffic.**—The air traffic returns for the last five years show that the season 1928-9 still holds the record for the number of cross-Channel flights, passengers carried and total mileage, the number of passengers per machine being just over 8. Figures for the last 11 months of 1930 show a slight decline both in the number of flights and passengers carried, but the average number of passengers per flight was over nine. The bulk of the work of Imperial Airways was again carried out by the Armstrong Whitworth Argosies. The fleet was launched in 1926 and increased three years later, the latest figures showing the total distance flown as 1,636,180 miles for a flying time of 18,165 hours 48 minutes. As 1,000 hours are equal to 250 days, the machines have spent over 750 days in the air! Comparing the last 11 months of 1930 with the previous 12 months the Argosies flew 540,975 miles as against 602,475 miles.

**The Growth of Aerial Transport.**—One of the greatest of our modern romances is the rapid growth which is taking place in commercial aviation. When, during 1919, the first British air expresses were flying daily between London and Paris, there were not more than about 3,000 miles of aerial routes throughout Europe. To-day the figure for Europe stands at approximately 60,000 miles, while throughout the world there are now more than 136,000 miles of high-speed aerial ways. It was in 1924, so far as Britain is concerned, that we reached the landmark of the establishment of Imperial Airways, and the progress of British air-transport, since the Company began operations, is told by statistics now available. One of the aims has been to increase steadily, by improvements in aircraft and organisation, the all-the-year-round dependability of the Imperial Airways Services. How this has been achieved may be judged from the table appended:—

| Year. | Percentage of flights completed to schedule. |
|---|---|
| 1924-25 | 75 |
| 1925-26 | 85 |
| 1926-27 | 92 |
| 1927-28 | 93.39 |
| 1928-29 | 93.40 |
| 1929-30 | 94.18 |

Since the inception of the Company its passenger traffic has increased remarkably. During 1924 the total number of travellers carried was 11,170. By 1926 this had grown to 16,800, while by 1929-1930 the figure had gone up to 27,600. Altogether, since 1924, Imperial Airways have carried 166,000 passengers, and have flown 6,727,143 miles.

The growth in air-mails is equally sustained, as will be seen from the table appended, giving the latest figures for mail carried in the aircraft of Imperial Airways:—

| Year. | Tons. |
|---|---|
| 1924-25 | 21 |
| 1925-26 | 29 |
| 1926-27 | 39 |
| 1927-28 | 40 |
| 1928-29 | 51 |
| 1929-30 | 60 |

In the transport by aeroplane of urgent mechandise there has also been a most encouraging growth. Whereas in 1919, when aerial transport began, only a small number of parcels were carried between London and Paris by any one machine, it is no uncommon thing, now, when walking through the freight sheds at the London air-station, to find in them many tons of urgent merchandise either just arrived from the Continent, or about to be despatched by air. During a recent period of nine months nearly 600 tons of freight were air-borne in and out of Croydon in the machines of Imperial Airways. Altogether, since they began flying in 1924, the aircraft of the Company have carried 5,790 tons of goods between London, the Continent and India.

**Accident to Aeroplane G-AAZK at Meopham. Report of the Aeronautical Research Committee.**—The Report of the Accidents Investigation Sub-Committee of the Aeronautical Research Committee on the accident to aeroplane G-AAZK at Meopham on 21st July, 1930, has now been published. The Sub-Committee, after a full review of various alternative hypotheses, find that the most probable primary cause of the disaster was a phenomenon described as "buffeting"—a species of irregular oscillation—which caused a breakage of the tail unit in the first instance. The Aeronautical Research Committee have endorsed this finding. The consequential action involved is now under consideration.

**12,000 Miles Air and Ocean Freight Service.**—Arrangements have recently been completed between Imperial Airways, the Cunard Steamship Company, and the White Star Line, for the institution of a new combined high-speed air and ocean freight service which is at first to extend from New York via London to India. It is also hoped, in the near future, to arrange connections with the trans-American air-mail service, giving a 12,000 miles air-ocean-air service from San Francisco to India. A parcel from the western seaboard of America will—on the institution of this through service—be flown 3,000 miles across the United States to New York. Here, twice a week, connections will be established with White Star and Cunard eastbound Royal Mail liners, such as the "Olympic" or "Aquitania." After its 3,000 miles ocean passage in one of these vessels, the parcel will be transferred to an Armstrong-Siddeley air-liner of Imperial Airways for its journey above Europe to Athens. Then, after an aerial voyage above the Mediterranean in a large 3-engined Short-Jupiter flying boat, the parcel will be transferred again to a big De Havilland-Jupiter land-plane for its final stages across the Iraq desert to Baghdad, the Persian Gulf and India. By this new super-speed air and ocean route a parcel will be conveyed from San Francisco to India in not more than 14 days, while the time of transit from New York to India will be only 11 days. A valuable extension of this air-ocean freight service will be inaugurated early next year when the Imperial Airways England-South Africa route is instituted. This will open up not only an accelerated service to South Africa but will show a very great saving in the time of transit of urgent parcels from the entire American continent, north and south, to the rapidly developing British possessions along the east coast of Africa.

**China-Germany Air Service.**—A Nanking message says that it is understood that a trial flight [illegible] to Berlin, in connection with the proposed [illegible] service between China and Europe, will [illegible] the end of February. A corporation is [illegible] to deal with this service and it is learned [illegible] Government will nominate the heads of [illegible] transportation departments while German aviation interests will nominate the head of the navigation department and an assistant in the financial department.

*REUTERS TRADE SERVICE.—By special arrangement with Reuters Trade Service we are publishing news items from all parts of the world dealing with transport matters.*

# Law Cases.

## MOTOR COACHES IN LONDON.
## RULE NISI AGAINST THE MINISTER OF TRANSPORT.

King's Bench Divisional Court: The Lord Chief Justice, Mr. Justice Avory, and Mr. Justice Macnaghten.

ON January 28th, on behalf of Skylark Motor Coach Co., Ltd., of Acton, an exparte application was made for a rule *nisi* to the Minister of Transport (Mr. Herbert Morrison) directing him to show cause why a writ should not issue to prohibit him from making certain regulations to prevent motor coaches entering, and using the roads of, certain areas in the Metropolis.

Mr. Comyns Carr, K.C., and Mr. P. B. Showan, on the instructions of Mr. J. R. Cort Bathurst, appeared to make the application.

Mr. Carr at once read an affidavit by Mr. Charles Dobbs, a director of the Skylark Motor Coach Co., Ltd., which read as follows:—

"The Company holds 19 metropolitan stage carriage licences, each of which authorises the Company to use a coach to ply for hire as a metropolitan stage carriage for one year. The licences expire on various dates between February, 1931, and January, 1932. They are not expressed to be subject to any condition other than that they are to be 'subject to any order made by His Majesty's principal Secretary of State by virtue of the Metropolitan Public Carriage Act, 1869, and the London Cab and Stage Carriage Act, 1907.' The licences are not expressed to be subject to the provisions of the London Traffic Act, 1924, nor to conditions as to approved routes and the maintenance of a regular service.

"The Company has operated coaches in accordance with similar licences since December, 1928, plying for hire in the Metropolitan area, and outside, on regular services to and from Upper Regent Street, W., and Guildford, Hertford, Dorking and other towns. The coaches have always started from Upper Regent Street where the Company, in conjunction with another company, have a booking office where passengers can be picked up and put down. On December 19th, 1930, the Minister of Transport gave notice in the *London Gazette*, under the Rules Publication Act, 1893, that he proposed, after the expiration of at least 40 days, to make regulations under Section 10 of the London Traffic Act, 1924, regulating the use of motor coaches within a prescribed area. The proposed regulations—which are entitled the London Traffic (Regulation of Public Service Vehicles) Regulations, 1931—provide, in effect, that motor coaches shall not, at any time, on any week-day, be on any street within the inner area of London, and that they shall not be on any street in the outer area only at certain prescribed hours, which are quite useless to the Company from a practical point of view. Upper Regent Street is within the outer area and just on the border of the inner area.

"Coaches of the Company going northwards pass through the outer area and those going southwards pass through both areas. The draft regulations purport to permit access by prescribed routes to three existing motor coach stations inside the outer area, but the coaches of my Company have no right to use any of those stations. The Company's coaches come within the definition of an 'omnibus' in Section 16 of the London Traffic Act, 1924, as being 'char-a-bancs or other carriages plying for hire, or used to carry passengers at separate fares,' but they are not omnibuses licensed subject to conditions that they may only ply for hire on approved routes, or that they must maintain a regular service within Section 6 of the Act.

"Section 7 of the Act provides for the special forms of regulation which the Minister is empowered to make as to restricting the operation of 'omnibuses.' By Section 10 of the Act the Minister must, before making any regulations under that Section, refer the matter to the Advisory Committee, including the 'additional members' for their advice and report and, if the regulations would [illegible] on the police, he must consult the Slough Sta[illegible]. The 'ordinary members' of the Advisory supply and c[illegible] consist of representatives of local Pumping Stat[illegible] police, and persons appointed by the supply and ere[illegible]sport. The 'additional members' represent the [illegible] of labour and those of persons providing means of transport and users of vehicles. The Motor Coach industry was not represented on the Committee, but omnibus proprietors were represented by two of the 'additional members.' The London General Omnibus Co., Ltd., have recently formed a new company called Green Line Coaches, Ltd., which, in spite of warnings by the Minister of Transport, has placed on the streets numerous new coaches operating from the zone from which the draft regulations sought to bar motor coaches.

"It is submitted that the Minister of Transport cannot make regulations which would deprive the Skylark Motor Coach Company of a substantial part of the benefit of its licences during the currency of them, at least without invoking the powers conferred on the Minister by Section 10 (2) of the Act of 1924 which has not been done in the draft regulations. So far as can be ascertained, no applications have been made to the Minister by the highway authorities as mentioned in Section 46 (9) of the Road Traffic Act, 1930, in which was vested any of the streets included in the inner or outer banned areas in the draft regulations.

"Notwithstanding the publication of the proposed regulations, Green Line Coaches, Ltd., have recently opened an extensive garage for coaches in the inner area of the proposed prohibited zone and numerous coaches have begun to operate therefrom. That station is not expressed in the draft regulations to be one of the exempted stations to which coaches might have access. From statements, however, that have appeared in the public Press and otherwise, there is reason to apprehend that it is the intention of the Minister so to modify the regulations as to include that station in the exemption, thus giving the Green Line Company a preference against the Skylark Company which would be even more disastrous to the latter than were the regulations as originally drafted.

"The rule, therefore, is sought on the six grounds, as follows:—

(1) That the Skylark Company hold unexpired licences authorising them to ply for hire without any limitations or conditions;
(2) that the coaches, as omnibuses within the London Traffic Act, 1924, can only be restricted (if at all) by regulations made under Section 7 of that Act;
(3) that the duty imposed on the Minister of receiving advice from the full Advisory Committee has not been complied with;
(4) that no application has been made by any highway authority concerned as provided by Section 46 (9) of the Road Traffic Act, 1930;
(5) that the proposed regulations are in excess of the powers conferred on the Minister by Section 10 and Schedule (III) (2) of the Act in that they do not purport to exclude a specified class, or classes, of vehicles as a whole from the prohibited area, but only such vehicles within the class as are not permitted to use the exempted starting points, and thus the regulations illegally discriminate between members of the same class; and
(6) that the consideration, by the Advisory Committee and the Minister, of special cases with a view to the exemption of the coaches of certain proprietors from the effect of the proposed regulations is in excess of the powers of the Committee and of the Minister and is calculated to prefer one operator to another of the same class."

Mr. Comyns Carr: It is difficult to reconcile many of the provisions of the London Traffic Act, 1924, because, over and over again, it gives powers to the Minister of Transport which are so wide that he can deal with something in half-a-dozen different ways; but now that the Act of 1930 has been passed without repealing the Act of 1924, confusion has become worse confounded. The Act of 1930 gives the Minister different powers, all inconsistent with one another, of doing the same thing. If the Minister had intended to abrogate the Acts under which the Skylark Company's licences have been granted, he should say so expressly, for such an intention cannot be implied.

Mr. Justice Avory: It seems reasonable at least that the public should have some notice that an Act of Parliament has been suspended.

The Court granted the rule which will come up for argument by Counsel for the Minister and the Skylark Company in due course.

* * * *

CASE TO BE HEARD ON FEBRUARY 25TH.

ON February 12th, an application was made to the Court by Mr. W. Banstead, (on behalf of the Attorney General and the Minister of Transport) that a special day should be fixed for the hearing of the arguments in the *rule*, and that those arguments should not be too long delayed. Counsel said the Minister was anxious to have the matter settled because of the fact that motor coaches were using the City in greater numbers every day.

Digitized by Google

Mr. Comyns Carr, K.C. (for the Skylark Co.) said he understood that the Minister was still filing evidence, and he (counsel) desired to scrutinise that evidence before it came before the Court and if necessary, answer it.

The Court fixed the hearing of the case for Wednesday, February 25th, next.

## CARRIAGE OF FURNITURE.

THE question as to whether a railway company was entitled to charge a higher rate for the carriage of furniture, was decided by Mr. Registrar Bros, in the Southwark County Court, when the Southern Railway Co., sued A. Cohen, of 95, Graham Road, Dalston, E., furniture manufacturer, to recover £6 6s. 2d. carriage charge.

Mr. Taylor, solicitor for the Company said they had had previous dealings with the defendant, and the claim in this case was for sending wood overmantels on different dates. The company were contending that they were entitled to charge per ton minimum, as the furniture in question was brittle and fragile and came under Class 20 of the schedule. The result of this was that the furniture was put in a box truck by itself, and then packed thoroughly with straw, to prevent any possible damage through shunting, there was no room for any other goods. The defendant, however, was contending that he should only be charged on the weight basis. The defendant in this case was present when the furniture was packed, and in fact assisted in doing so. If the goods were not packed in the way they were, some might have been broken, and the Company would have been liable. The overmantels were sent on three dates and the charge was the same.

Two checkers gave evidence from Nine Elms Station, from where the furniture was despatched, that it was packed with straw, and roped for safety in a truck by itself. The goods in question were fragile, as they had glass mirrors in them. After packing, there was no room for any other goods to go in the truck. They looked as though they were made of American white wood, and it was thought they were for new houses being built at Millbrook, where they were consigned. It was agreed that they had packed them for the defendant on previous occasions, but the checkers were unable to say what the charges were then.

John Edwards gave particulars of the mileage to Millbrook, which he said was 77, and the packing was Class 20 for furniture. Under the Act, the Company were entitled to charge the minimum rate.

The defendant said that he tendered £1 10s. 7d. at Millbrook, which should have been the charge on the weight basis, but that it was refused, and William Pugh said that the charges were payable in London—Nine Elms. They would not be invoiced to Millbrook, who would therefore not know what the charges were.

Mr. Registrar Bros, in giving judgment, said that if the defendant sent goods of a fragile nature by the railway, he was bound by the regulations as laid down by the Minister of Transport, and also the Railway Act, 1921. If therefore he consigned goods, he had to abide by the regulations and charges, and he would give judgment for the plaintiffs, for the amount claimed, and costs.

## GARAGES AND DERATING.

AT a recent meeting of the Colchester Area Assessment Committee, Major-General Sir H. L. Croker presiding, the Mersea, Colchester and District Transport and Bus Company, Ltd., appealed against an assessment of £62 and £50 in respect of their garage, workshop, etc., in High Street, West Mersea.

A representative of the Company said that in June last, it was decided by Mr. Justice Avory and other Judges that garages where practically the whole of the work was done should be derated. In their garages, they did all repairs, motors, marine engines, farm tractors, lorries, buses, etc.

The rating officer said they could not classify the place as an industrial hereditament. The Company had a very big garage, where they garaged buses which ran between Mersea and Colchester. There were also four garages in the same yard, which they let off to anyone. They also did commission work and general repairs. For those reasons, the rating authority could not bring them in as an industrial hereditament.

The Revenue officer, Mr. Loe, said the case quoted by the Transport Company was not comparable with the appeal in question. That case was being taken to the House of Lords. The main object of the garage was the storage and maintenance of their fleet of omnibuses.

The Transport Company's representative said they were motor and marine engineers, haulage contractors, and bus proprietors. Naturally, they did not send their vehicles anywhere else for repair.

The appeal was dismissed and the assessment confirmed.

## LIABILITY OF CARRIERS.

IN the Northern Ireland High Court of Appeal on December 18th, last, Lord Justice Andrews delivered judgment in the matter of Ethel Carr, Windsor Avenue, Belfast, against the London, Midland & Scottish Railway Co., claiming £20 for the loss of luggage when she was travelling on one of the company's trains. The facts were not in dispute. Lord Justice Andrews said the plaintiff was returining, with her mother, from a Continental holiday, and on June 27th, reached Euston station, London, shortly after 5 o'clock. Their luggage consisted of two boxes, which they directed a porter to label and put in the van of the 6 o'clock train for Heysham, and also two dressing cases and a parcel which were to be placed in a carriage in which they had reserved seats. All the luggage had labels bearing their names. The porter carried out his instructions, and the ladies left the carriage, which was otherwise empty, without closing the door behind them, and proceeded to the bookstall on the platform. When they returned to the compartment after being away for a period not exceeding seven minutes, the plaintiff's dressing case had disappeared, and had not since been found. The admitted value was £14 7s. 3d.

Proceeding, the Lord Justice said the case raised issues of considerable importance, and his decision must rest on well settled principles. In general, a railway company were common carriers of such passengers' personal luggage as they were bound by Statute to carry free of charge, though they were not common carriers of the passengers. As such they were insurers for the safe carriage and delivery of the articles entrusted to them, subject to well established exceptions if the loss arose from the Act of God, the King's enemies, inherent vice in the article, or contributory negligence by the owner. This law had been handed down from the day of stage coaches. It was in such a case that Justice Chamber said, "If a man travels on a stage coach, and takes his portmanteau with him, though he has his eye on it, yet the carrier is not absolved from his responsibility, but will be liable if the portmanteau is lost." In the case before him the Recorder of Belfast had given the plaintiff a decree for £14 7s. 3d., with £3 6s. 9d. costs, and having heard the evidence in the appeal brought by the defendants, he was not satisfied that any act of the plaintiff had been really negligent. Still less was he satisfied that such negligence caused the loss. There was no duty cast upon passengers to remain in a carriage during the whole of a journey. They could go to the dining room without being negligent, and why, then, was it negligent for them to go for a brief period to a platform bookstall? He held that the decision of the Recorder was correct, and he affirmed it, with costs.

For plaintiff, Mr. W. O. Hume (instructed by Mr. J. Morris M'Kee); for defendants, Mr. E. S. Murphy, K.C., M.P., and Mr. W. M. Miller (instructed by Messrs. C. & J. Black).

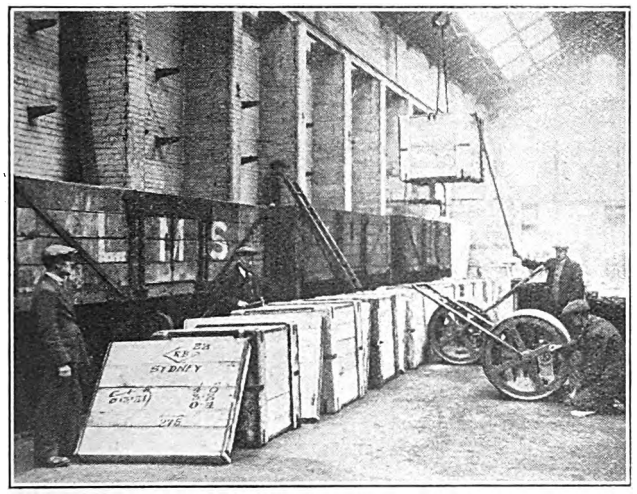
# News from all Parts.

**"Marshall" Manumit Motor Rollers en route for Australia.**—Our illustration shows part of a large consignment of "Marshall" Manumit Motor Rollers leaving the works of Marshall, Sons & Co., Ltd., Britannia Iron Works, Gainsborough, on their way to Australia. This roller is the result of many years experimental work in endeavouring to produce a light-weight motor roller in simple and cheap form. The roller is made in two sizes,



A BATCH OF MARSHALL "MANUMIT" MOTOR ROLLERS EN ROUTE TO AUSTRALIA.

nominally 12 cwts. with 2 h.p. petrol engine and 16 cwts. with 3½ h.p. petrol engine.

**Motor Coaches for Transporting Buyers Visiting London Section of the British Industries Fair.**—A five minute service of motor coaches is to be run between the Albert Hall, White City and Olympia for the convenience of buyers visiting the London Section of the British Industries Fair. The vehicles will be 31-seater A.E.C. "Regal" chassis with new coachwork and will be provided by Thos. Tilling.

**Institution of Petroleum Technologists.**—A General Meeting of the Institution of Petroleum Technologists will be held at the House of the Royal Society of Arts, John Street, Adelphi, London, W.C.2, at 5.30 p.m. on March 10th next.

**Institute of Transport. Ordinary Meeting.**—There will be an ordinary meeting of the Institute of Transport at the Institution of Electrical Engineers, London, at 5.30 p.m. on March 9th, when Mr. C. R. Byrom, O.B.E. (former member of Council), will speak on "The effect of signalling on track capacity."

**Dublin Carriers' Association.**—At the Annual General Meeting of the Dublin Carriers' Association, held on January 7th last, Mr. Randolph Stewart (General Manager, J. Wallis & Sons), was elected President for the current year in succession to Mr. Thos. H. Richardson.

**Municipal Tramways and Transport Association.**—The next annual conference of the Municipal Tramways and Transport Association will be held at Southampton on June 24th, 25th and 26th.

**C.M.U.A. Annual Luncheon.**—The Commercial Motor Users' Association will hold their annual luncheon at the Savoy Hotel, London, on March 25th next.

**Shire Horse Society.**—The fifty-second Shire Horse Show will be held at the Royal Agricultural Hall on Tuesday, February 24th, and the two following days. On the first two days the Show opens at 9 a.m. and judging commences at 10 a.m. The Stallion and Gelding classes will be judged on the first day, and the Mare classes and Produce Groups on the Wednesday, with the Judging of the Championships at about 2.30 on that afternoon. On Thursday the Show opens at 8.30 a.m. Stallions, Mares and Geldings entered for the Auction will parade at 9 a.m., and the Sale will commence at 10 a.m. The Commercial Classes will be judged at 2 p.m. on that day. At a recent meeting of the Council of the Shire Horse Society it was intimated that His Majesty The King hoped to attend the Show on the Wednesday afternoon when the judging for the Championships will take place.

**Another Leyland Depot in the West Country.**—Pursuing its policy of establishing its own Service Depots for the benefit of its users, Leyland Motors, Limited, of Leyland, Lancs., will shortly open a further Depot near Plymouth. The building of this Depot is now nearing completion and it is hoped that, by the time this issue of our journal is in print, it will be in a position to offer the usual service facilities. It is actually situated at Plympton on the main road from Plymouth to Exeter. The address is Marsh Mills, Plympton, and the telephone number is Plympton 202.

ONE OF THE A.E.C. REGAL COACHES REFERRED TO IN TEXT.

**Institute of Transport.**—The eleventh dinner of the Institute of Transport will be held on Thursday, March 5th next, at the Connaught Rooms, Great Queen Street, London. The President will occupy the Chair and a distinguished company is expected, including the Chairman and members of the Royal Commission on Transport. Proposals have been made that Graduate and Student Societies for Nottingham and District and Southampton and District should be sanctioned by the Council. Non-corporate members who favour either of the projects are invited to communicate with the Secretary of the Institute at 15, Savoy Street, London, W.C.2.

**Liverpool Traffic Club.**—There will be a meeting of the Liverpool Traffic Club at the White Cafe, Cook Street, Liverpool, on March 2nd next at 7.30 p.m., when Mr. B. H. M. Hewett will lecture on "The Mersey Tunnel."

**New Pirelli Tyre Depot Opened in Leeds.**—In order to cope with their rapidly increasing business in Yorkshire, and to continue to give quick and efficient service, Pirelli, Ltd., London Office, Pirelli House, 144, Queen Victoria Street, London, E.C.4, the well-known tyre manufacturers, have opened a new depot at 19, Upper Mill Hill, Leeds. Goods and Service entrance, Basinghall Street. Telegrams: "Pirellicon, Leeds." Telephone: Leeds 22731. Mr. F. E. Ellis, who for many years has been closely associated with the tyre industry in Yorkshire, has been appointed Depot Manager.

Digitized by Google

**Institute of Transport.**—The third Lecture on "The Administration of Transport Undertakings" will be delivered by Sir Lynden Macassey, K.B.E., K.C. (Past-President of the Institute of Transport), who will deal with "The State in relation to Transport," on Tuesday, February 17th next, at 6.0 p.m. in the Lecture Theatre of the Institution of Electrical Engineers, Savoy Place, Victoria Embankment, W.C.2. Admission is Free.

**The C.M.U.A. Journal.**—The six numbers of the C.M.U.A. Journal issued during 1930 have been handsomely bound. We have received a copy of this Volume IV. and reference to any of the very important matters dealt with by the Association during the past year is thus made easy.

**A Record.**—Mr. G. E. Gilbey, of Gilbey & Sons, Haulage, Removal and Storage Contractors, Wakefield, has been unanimously re-elected President of the Wakefield and District Chamber of Trade for the third year. We are informed that this creates a record as no one has previously held the office for more than two years.

**Ballast, Sand & Allied Trades Association.**—The following resolution was passed by the Central Committee of the Ballast, Sand & Allied Trades Association at a meeting held on January 12th last. "That this Committee withdraws the five per cent. certified allowance towards consolidation in transit and the basis of measure, on and after the 2nd February, 1931, shall be Association loading line at the pit. The condition referring to the five per cent. on the Association pink ticket shall, on and after that date, be deleted." The offices of the Association are at 124, Tottenham Court Road, London, W.1.

AN E.V. TYPE DENNIS RECENTLY ADDED TO THE FLEET OF THE SHREDDED WHEAT CO., LTD. BODYWORK BY H. G. CREASEY & SONS.

**A "Dennis" for Shredded Wheat.**—We illustrate the latest addition to the fleet of delivery vans in the service of The Shredded Wheat Co., Ltd., Welwyn Garden City, Herts. The chassis is a Dennis E.V. type. The body, built by H. G. Creasey & Sons, of Knebworth, Hertfordshire, is constructed with sundeala panelling and lined throughout with plywood. The cab for the driver's mate is fitted on the near side with an opening for communication with the driver. The colours are red, yellow and black. The vehicle has a carrying capacity of 225 cases of Shredded Wheat, nett load 3½ tons.

**Regents Park Parade of Van Horses.**—Lord Daresbury announced at a recent meeting of the London Van Horse Parade Society that the Right Hon. the Lord Mayor and Lady Mayoress of London, accompanied by the Sheriffs, will attend the next Parade of Van Horses in Regents Park, London, on Easter Monday, April 6th, and will present the awards. Due to the increasing entries at the Parades, twelve judges will this year officiate, among whom will be such well known horselovers as Lord Daresbury, Lt.-Col. Percy Laurie, Sir George Hastings, Sir Hugh Turnbull, Sir William Acland, etc. The Secretary of the Society is Mr. R. A. Brown and the offices are at 12, Hanover Square, London, W.1.

**Goodyear at Buenos Aires.**—Production has begun at the eighth tyre factory of The Goodyear Tyre & Rubber Company, at Buenos Aires, Argentina. The Company has three factories in the United States, and the new factory is the fifth Goodyear plant outside the United States, there being already two in Canada, and one in Australia, in addition to the Wolverhampton factory, but the Buenos Aires establishment is the first in which English is not spoken. Mr. Fred Purchase, of Bushbury Lane, and an employee of the Wolverhampton plant, is one of those chosen to help to train the Argentine labour. The new South American factory will have a capacity of 1,000 tyres and tubes per day and will include approximately 400 employees.

**Motor Coach Times.**—The Second Winter Edition of the Roadway Time Table (No. 12), dated the 16th January, published at 1/- by Roadway Time Tables, Bookings & Publications, Limited, 1, Warwick Street, London, W.1, discloses numerous instances of modified through running times to comply with the Road Traffic Act. Some 4,020 Services are included, the Express Section requiring 25 pages of index, and the General Section 83 pages. The tables themselves occupy 900 pages. It is understood that, in order to meet the requirements of the public, some of the big motor coach companies are contemplating the provision of cars carrying six or seven passengers, to which vehicles no arbitrary speed limits apply, thus ensuring a quicker service for long-distance journeys. Owing to the smaller capacity of these cars, it is probable that a higher fare scale will rule than by the ordinary full size motor coach.

**A Portable Tank.**—Morris Commercial Cars, Ltd., Soho, Birmingham, have sent us the photograph which we reproduce illustrating a departure from the usual practice of oil transport. Here the 500 gallon tank is portable, it being mounted on six small wheels resting on a platform of the usual loading height. The tank is secured by mechanical locking device and, as a safety precaution, chocks are fixed against the forward and rear sets of wheels. A pump is fitted for discharging and filling when required. The chassis is a Morris-Commercial 50-cwt.

A MORRIS-COMMERCIAL EQUIPPED WITH A 500-GALLON PORTABLE TANK FOR CONVEYING OIL.

"Leader." It is claimed that an advantage of this method of transport is that liquid loads can be picked up by lorries at railhead for local distribution should such arrangement be convenient and economical.

**Tilling and British Automobile Traction,** Ltd.—Tilling and British Automobile Traction, Ltd., reports a total income for 1930 of £272,771 11s. 5d. After deducting expenses and interest and other charges, the net balance was £217,059 12s. 6d. Interest in additional omnibus undertakings in the provinces have been acquired during the year. Mr. Walter Wolsey has resigned his seat on the Board in consequence of retirement from active business. Mr. S. Kennedy has been appointed a director.

**F.W. & R.A. New Members.**—The following firms have been elected to membership of the Furniture Warehousemen & Removers' Association:—Messrs. Howard Robinson, Ltd., 75 & 76, Grand Parade, Brighton; Tom Roberts, 3, Rockingham Street, Barnsley; Arthur Potts, Stanley Road, Aberystwyth; Furley & Hassan, Oakham, Rutland; Iretons, Ltd., Alfred Road, Margate, and J. Carpenter & Son, 71, Bickersteth Road, London, S.W.17.

**The Institute of the Motor Trade (Incorporated).**—The Eleventh Examination of the Institute of the Motor Trade will be held in London and the Provincial Centres on April 10th, commencing at 10 a.m. The Council are offering Gold, Silver and Bronze Medals for the three candidates securing the highest number of marks in the 1931 Examinations (April and October). Candidates desirous of presenting themselves must give notice to the Secretary on or before the 9th March, 1931. Full particulars and Entry Forms can be obtained on application to the Secretary, The Institute of the Motor Trade (Inc.), 157, Great Portland Street, London, W.1.

**A Shropshire Power Farming Demonstration.**—Work in preparation for spring sowing will be a feature of a demonstration of tractors and power farming equipment to be held at the Harper Adams Agricultural College,

Digitized by Google

Newport, Shropshire, on Tuesday and Wednesday, March 10th and 11th. The operations will include ploughing, cultivating and harrowing; while the capabilities of the horticultural tractor, particularly in connection with the hoeing of row crops, will be shown. It is expected that certain mole draining outfits will also be present. A representative entry is already in prospect and further details will be sent by the Engineering Department of the College to anyone interested.

**Saurer Vehicles to be Built in England.**—Sir W. G. Armstrong Whitworth & Co., Ltd., Scotswood Works, Newcastle-on-Tyne, have entered into an agreement with the Saurer Company of Switzerland to build diesel-engined motor lorries in this country. With this object in view a new company has been formed and registered, under the title of Armstrong-Saurer Company. The Saurer Commercial Vehicle Co., Ltd., of London, the representatives of the Swiss firm, are well known to road transport contractors in this country and the news that these vehicles, fitted with diesel engines, are to be made by the well known Armstrong Whitworth firm is a matter of particular interest to them.

**Sentinel Waggon Works Report.**—The Report by the Directors of the Sentinel Waggon Works, Ltd., of Shrewsbury, to be submitted to the Eleventh Ordinary General Meeting of shareholders to be held in London on February 17th, states that taking into account the widespread depression in trade, the Directors consider the results not unsatisfactory. The new models are thoroughly established, and the Company's position as makers of highly economical transport vehicles was never higher. While general trade shows no sign of early improvement, the prospects of further advances in the firm's products at which they are continuously working, together with the effects of severe economies which the bad times have forced on them, enable the Directors to look forward to better results should trade conditions not worsen further. The profit from trading for the year after meeting interest, directors' fees, etc., is £48,473 11s. 5d.

**The Institute of Transport to Debate the Final Report of the Royal Commission on Transport.**—The Council of the Institute of Transport announces that it has allocated the Ordinary Meeting to be held on April 13th next to a debate upon the Final Report of the Royal Commission on Transport. The meeting will be held in the Lecture Theatre of the Institution of Electrical Engineers, Victoria Embankment, W.C.2 (adjoining the Savoy Hotel) and will commence at 5.30 p.m. Applications by non-members of the Institute for tickets of admission to the meeting should be addressed to the Secretary of the Institute of Transport, 15 Savoy Street, London, W.C.2.

**Jubilee Banquet of the London Chamber of Commerce.**—His Royal Highness, The Prince George, has graciously consented to be the principal guest at the Jubilee Banquet of the London Chamber of Commerce, on the 19th of May next, when the President, Lord Herbert Scott, will be in the Chair. The Banquet will take place at Guildhall, the use of which has been kindly granted by the City Corporation.

**Woodbridge International Removal Service.**—During 1930, Woodbridge & Co., Ltd., the well-known International Removers whose London office is at 88, Fenchurch Street, London, E.C.3, created a new record in the handling of loaded lift vans. During the year the firm were entrusted with removals from Mexico to Madeira, France to America, France to Italy, France to Switzerland, Switzerland to France, Portugal to France. The remarkable development in the use of the firm's "White Line" vans for overseas removals is evidenced by the fact that, in 1930, these vans covered a total distance of over 350,000 miles, as against approximate totals of 250,000 miles during each of the previous two years. This distance is difficult to imagine, but the fact that it is nearly fifteen times the world's circumference gives a fair idea of what it means.

**"Sentinel" Six-Wheeled 3-way Tipping Waggons for Cartage Company.**— The "Sentinel" Waggon Works, Limited, of Shrewsbury, inform us that they have recently completed an order for twelve of their six-wheeled three-way tipping waggons for the St. Mary's Wharf Cartage Co., Ltd., of Paddington. These vehicles will be used for the transport of clay excavated during the construction of the new tunnels which will form the extension of the Piccadilly tube from Finsbury Park to Cockfosters. It it understood that during the execution of this work no less than 300,000 yards of "spoil" will have to be removed from the construction shafts to the dumps at Brimsdown.

**Institution of Automobile Engineers.**—The Daimler Premium for the Session 1929-30 has been awarded by the Council of the Institution of Automobile Engineers to Mr. S. W. Nixon, late of the Luton Graduates Branch, for his paper entitled "The Compression-Ignition Automobile Engine." It is interesting to note that of the twelve Certifying Officers appointed by the Ministry of Transport under the Road Traffic Act, nine are either Members or Associate Members of the Institution of Automobile Engineers. The address of the Institute is Watergate House, Adelphi, London, W.C.2.

**A Generous Gesture. The Argentine Government Gives Free Protection for British Patents.** — A very generous gesture has been made by the Argentine Provisional Government in a decree recently issued. All British Patented inventions and designs registered by Exhibitors as showing at the British Empire Trade Exhibition in Buenos Aires are automatically protected in the Argentine Republic from the date of the decree until three years after the closing of the Exhibition. The lengthy period of protection is of obvious value to all exhibitors, more especially as the formalities to be complied with to obtain such protection have been reduced to the barest possible minimum.

**Road Transport and Taxation Costs.**—Messrs. Venn & McPherson, Ltd., Newport, Mon., have addressed the following to their customers:—"We should like our customers to know the heavy proportion of our charges which is paid in direct taxation. On the tonnage handled by us in 1930, this amounted to 1/4¾ per ton. It is generally recognised that the cost of public roads should be chiefly borne by the motor users, but the combined effect of the petrol tax and road licence duties is that the industry is paying much more than the cost of roads. The transport of raw materials and food produce is being taxed for General Revenue Purposes."

**A Mammoth Touring Club.**—The Touring Club Italiano, one of the most important touring organisations in Europe, has now reached a membership of over 400,000, comprising motorists, cyclists, alpinists, and indeed all varieties of tourists. This Italian Club is allied to The Automobile Association, whose members are granted certain privileges and facilities when touring in Italy.

**The Travel Association of Great Britain and Ireland.**—The quarterly report of the Travel Association of Great Britain and Ireland is a fair indication of the varied and widespread activities of this national body which is making known the attractions and interests which await the visitor to the British Isles. New features of the Association's work are the steps it is taking to issue newsreel films, both talking and silent, in which the chief annual recurring events of a year are presented graphically to the world; posters, now in preparation, reproducing the most attractive of the enlarged photographs which have had such a success overseas and additional greeting cards for Scandinavia, Switzerland, Austria, and Belgium. The offices of the Association are at Kinnaird House, 1, Pall Mall East, London, S.W.1.

**Big Figures.**—During the year 1930 the Ford Motor Company in this country consumed as much as 224,758 cubic feet of wood—the equivalent of a small forest—in constructional purposes. These figures do not include wood used for non-productive purposes.

**Royal Patronage Extended to The National Horse Association of Great Britain.**—The President of the National Horse Association of Great Britain, Sir Archibald Weigall, K.C.M.G., announced recently that His Royal Highness The Prince of Wales, K.G., has honoured the Association by graciously consenting to become its Patron.

**Motor Speed Limits. Local Restrictions still in Operation.**—In view of the recent abolition of the 20 mile speed limit for private motor cars and motor cycles, the Automobile Association is receiving numerous enquiries from motorists who are uncertain as to the continuance or otherwise of the local speed limits of 10 or 5 m.p.h. Section 122 of the Road Traffic Act provides that these local restrictions shall expire at the end of 1931 unless they are continued for a longer period by an Order issued by the Minister of Transport. The speed limits in the Royal and other Parks are still in force.

**Automatic Traffic Signals.**—A list of the towns in Great Britain where automatic traffic signals are in operation has been compiled by the Royal Automobile Club and copies are obtainable on application to the Secretary, R.A.C., Pall Mall, London, S.W.1. At present there are sixty-three towns where such signals are working and in the majority of cases the three light system—red meaning STOP, green meaning GO, and orange being a warning that the light is about to change—is employed. In most cases also, traffic is only permitted to turn right or left when the green light is showing, but as failure to obey these signals is now an offence under the Road Traffic Act, the R.A.C. warns drivers to look out for these signals at all times and to act strictly in accordance with the lights displayed, never proceeding until they are satisfied that it is in order for them to do so.

**Motor Bus that Runs on Oil.**—A Diesel-engined motor bus which uses fuel oil instead of petrol is to be run experimentally for a week by the Brooklyn-Manhattan Transit Corporation, says Reuter's New York correspondent.

## MERSEYSIDE.

**Short Cart and Motor Owners.**—The 22nd annual general meeting of members of the Liverpool and District Short Cart and Motor Owners' Association, of which Mr. C. Harvey is chairman, was held at the office of the secretary, Mr. W. F. Ewbank, on Tuesday, 3rd February. Taking all things into consideration, the Association has had a fairly good year.

**Change of Address.**—"Karriers" Parcel Delivery Service has removed from Strand Street to Peters Lane (off Church Street), Liverpool. Here there is a ground floor space of 500 square yards surrounded by a lorry high platform, with about 1,500 square yards of floor space.

**Trade Lost Through Inadequate Transport.**—At the annual dinner of the West Lancashire and Cheshire Division of the M.A.A. and M.T.A., Mr. R. P. Fletcher said the opening of the Mersey Tunnel would bring a great influx of traffic from the North Midlands, Lancashire, Yorkshire and Wales. For more than a generation this district had lost a tremendous amount of trade through lack of adequate transport facilities.

**Cartage Traffic.**—The joint railway companies owning the Bebington and New Ferry Stations, Cheshire, have decided to undertake their own carting, which for many years has been in the hands of a local firm. The company's delivery arrangements, which will be by motor lorries in place of the horse vehicles previously used, will cover the same area as previously, with extensions which bring in the district at the Higher Bebington end.

**Commer Agents.**—Messrs. J. Pullan and Co., Ltd., of Renshaw Street and Upper Hill Street, Liverpool, have been appointed by Commer Cars, Ltd., as distributing agents for the Liverpool, Widnes, Prescott, Ormskirk and Southport areas.

**Horse Hire in North Wales.**—Llandudno Council Works Committee received only one tender for the hire of horses and carts for the year. This was from Mr. R. Kidd and was:—One horse, cart and man, per day. 14s. 6d.; two horses and cart and man, per day, 21s. 6d. This was accepted.

**Future of Birkenhead Vehicular Ferry.**—In view of the rapid progress which has been made towards the completion of the new Mersey Tunnel, discussions have been taking place between the Joint Tunnel Committee and the Birkenhead Ferries Committee as to the future of the Birkenhead vehicular ferry service. Last year just over 1,000,000 vehicles were carried by ferryboat between Liverpool and Birkenhead. Under the Act which authorised the construction of the tunnel, Birkenhead can either continue the ferry as at present, or transfer the whole or part of the service to the Mersey Tunnel Joint Committee. The discussions between the two authorities are still in progress.

## MANCHESTER.

**Traffic Commissioner Gets Busy.** — Mr. William Chamberlain, the chairman of the North Western Traffic Commissioners, is accommodated in offices at 9, Gore Street, off Piccadilly, Manchester. The first task of the Commissioners is to collect the data regarding the existing road passenger services that they have to co-ordinate and direct. A questionnaire has been devised for this purpose and is now bringing in replies.

**New Motor Bus Station.**—Manchester already has an up-to-date and efficiently administered motor bus station in Lower Mosley Street, operated in the joint interests of several of the large private motor bus companies, and now a proposal is made to establish another station for the municipal joint motor bus services. A site in Parker Street, which runs behind Piccadilly, has been mentioned as a suitable venue for a station. The scheme is now being investigated.

**Bought Out.**—The motor bus services of the Blackburn Bus Co., Ltd., have been bought by the Blackburn Corporation for £17,500. Before this, the Company had granted the Corporation the option of purchasing on March 31st the whole of their interests including ten buses. The Corporation has decided to buy nine more Leyland buses.

**Voting in Transport Canteen.**—Councillor Harry Fairclough, of Warrington, takes a live interest in transport matters and recently he called at the transport canteen on the Liverpool Road where he knew he would find men who drove through other towns at all stages of visibility, to get their opinions on the respective merits of flood lighting and pillar lighting of roads. He asked the drivers to vote on whether flood lamps or pillar lamps were the better. Eleven hands went up for flood lamps and two for pillar lamps. Councillor Fairclough mentioned this experience at the January Town Council meeting and pointed out that half the money spent by the Corporation on the lighting of roads was wasted because pillar lamps threw their light on to small areas, causing sudden changes of lighting intensity, which made things difficult for the motor driver.

**Decisive Forward Step.**—Cheadle and Gatley U.D.C., of whose transport committee Mr. H. Howard Robinson (secretary of the Manchester Transport Owners' Association) is chairman, has lately been giving much attention to finding a solution of local traffic difficulties and has sanctioned the proposal of the Stockport Corporation to substitute motor buses for the trams on the route between Stockport and Gatley. This is a heavily trafficked route and Mr. Robinson was one of the parties in the negotiations which have resulted in the forward move by the Stockport authority. A decisive argument was the effect which the trams had on slowing down other road traffic. The changeover is being made gradually and we understand that the full quota of motor buses will be in service by the end of March. Everybody will agree that the withdrawal of the trams in the Cheadle and Gatley area will be of great benefit to the traffic passing through High Street, Cheadle, to Cheshire.

## MIDLANDS.

**Walsall's Extended Bus Accommodation.**—New extensions of buildings for bus accommodation, at a cost of £4,000, have just been opened by Walsall Corporation. This fleet has grown rapidly in Walsall and district. Ninety-one vehicles are now in commission and seventeen new ones will be delivered by the makers in March.

**Long Distance Services.**—Preparations are now nearly completed by the Midland "Red" and other big omnibus firms in the Midlands for greatly extending long distance services during the coming season.

**S.W.R. and L.M.S. Co-operate.**—Arrangements have now been made for operating the two railway stations (S.W.R. and L.M.S.) at Evesham under joint control. The two stations are in close proximity and the arrangement should tend to economy. The S.W.R. has the biggest passenger traffic at Evesham and the L.M.S. the most goods. Under the new arrangement it is understood that while one station master will take charge of both stations the other will become goods agent. The actual change is expected to take place shortly.

## HULL.

**Hull's Proposed Aerodrome.**—Hull is disappointed at the lack of success of its municipal aerodrome. Much has been said of the prospects of Hull as an airport, and the Corporation showed great enterprise in being the first municipality to lay out an aerodrome, but more than a year has elapsed since its opening and no tangible business has yet resulted. Except for a little pleasure flying no use has been made of it. The great ideal is to make Hull the centre for air traffic to and from Northern Europe and with this object in view the Corporation is going to invite representatives of those countries to a conference to be held in Hull in October, when an air pageant is going to be one of the features of a Civic Week similar to that held two years ago.

**Proposed Humber Bridge.**—As the time for the hearing of the Humber Bridge Bill approaches the strength of the opposition becomes more evident. Nearly twenty petitions have been lodged against it and it is certain the fight before the Parliamentary Committees will be strenuous. The Solicitor to the Humber Conservancy Board has pointed out what he describes as many objectionable features in the bill. From the point of view of the Conservancy the bill is almost more objectionable because of its omissions than of its commissions. There is a total absence of the protective clauses one expects to find and which will have to be inserted if the bill goes through.

## NORTH-EAST COAST.

**Must City Trams Go?**—Alderman Richard Mayne, chairman of Newcastle Corporation's Transport Committee, was interviewed by the writer in regard to the Royal Commission on Transport's expression of opinion that tramways, if not an obsolete form of transport, are, at all events in a state of obsolescence. He recalled that on January 22nd of last year his Committee presented a report to the City Council setting forth its policy in regard to the transport undertaking, and then said that, while they had no thought of recommending the general abolition of the existing system of tramways, they did not propose any extension of the track. They proposed to adopt other forms of transport when and where desirable, but were "convinced that on most routes trams are still the best and most economical form of transport." Nothing had since occurred, said Alderman Mayne, to change their views. Trams were still necessary in Newcastle; but by the time the original loans on their system were

Digitized by Google

paid off, in four or five years probably, they would be able to consider whether buses could earn sufficient to pay all charges. He had an open mind as to trackless trolleys, added the genial Alderman.

**Big Bus Deal.**—The Northern General Transport Co., Ltd., has bought all the issued shares of the Sunderland and District Omnibus Co., Ltd., at 11s. per share, that offer having been accepted by more than 94 per cent. of the shareholders. The capital was £100,000 in 5/- shares. This fact was announced by Alderman Frank Nicholson at the annual meeting of the Sunderland Co., when a prosperous state of affairs was disclosed, and a dividend of 10 per cent., less tax, was declared. The two companies had been working on friendly terms during the past year. One material factor in the increased profits was admitted to be the achievement of better relations with the company's chief competitors.

**Dividend on Road Travel?**—Regular bus passengers in certain parts of Northumberland who are also members of Co-operative Societies may possibly be able to secure a dividend on their road travel if a scheme mooted by Mr. T. Allen, of Messrs. T. Allen & Sons, Blyth, materializes. Mr. Allen is chairman of the Northern Road Transport Owners' Association, and he made a public offer recently to discuss the point with representatives of Co-operative Societies.

**Obituary.**—Mr. John McKellar, who for thirty years was assistant manager of Newcastle Corporation Tramways, has passed away at Paisley. Mr. Fred Wyndham, 37 years with Newcastle Co-operative Society, and latterly traffic manager, has also died.

**Road Traffic Act.**—The chairman of the Northern Traffic Commissioners, Mr. Henry Riches, has opened headquarters in Grey Street, Newcastle, and is working energetically on necessary preliminaries.

**Road Traffic Act.**—Mr. A. C. Osborn (Curtis & Sons, Ltd.), Portsmouth, President of the Furniture Warehousemen and Removers' Association, visited Newcastle lately, and, in company with his immediate predecessor, Mr. A. E. Millard, of that city, attended a meeting of the Transport Committee of Newcastle and Gateshead Chamber of Commerce to discuss problems arising out of the Road Traffic Act. Mr. Osborn mentioned that his Association intended approaching the Ministry with a view to getting certain modifications in the Act as it applied to commercial vehicles.

## SOUTH WALES.

**Western Welsh Omnibuses, Ltd.**—Presiding at the annual dinner of the Western Welsh Omnibuses, Ltd., held at Cardiff on January 29th, Mr. A. Gray, the general manager, was supported by many members of allied businesses, including Mr. T. G. Richardson (manager, Rhondda tramways), Mr. W. James (Messrs. Lewis and James, Western Valleys), Mr. Harry Barrett (manager, Western Valleys), Mr. R. Fitzgerald (Dunlops), Mr. A. B. Phillips (British Petroleum), Mr. W. Flowers (Shell), Mr. J. Keane (Glico), Mr. D. O. Sara (Anglo-American), Mr. J. Hannay (Red Line), and Mr. R. J. Pugsley (chairman of the Cardiff Publicity Club), who responded for the visitors. Over 100 guests joined in the subsequent dancing.

**Cardiff's Improved Bus Services.**—The Cardiff Corporation, criticised a few years ago for the extension of two lines of tramways, are now concentrating on an improved bus service all round. In addition to more frequently used city routes, facilities (on transfer) have been secured for travellers to Ystrad Mynach, Pontllanfraith, Blackwood, and Markham, for the Western Valley, changing at Caerphilly. Messrs. T. & J. Lewis have had a regular service between Cardiff and the Western Valley for a long time. The outer suburbs of Cardiff are also included in the improved services.

## NORTHERN IRELAND.

**Railway Appointments.**—Mr. M. S. Speir, M.C., J.P., has been appointed manager and secretary of the London, Midland and Scottish (Northern Counties Committee) Railway, Belfast, and Mr. William Getty, traffic controller, has been appointed operating superintendent. Mr. Speir, who lives in Glasgow, started his career with the Midland Company, and then went to the Caledonian Line. On the grouping he became attached to the staff of the L.M.S., and after the war was appointed superintendent of the Northern Division. Mr. Getty has been in the Northern Counties service throughout his career.

**Motor Legislation Committee for Northern Ireland.**—A Motor Legislation Committee has been formed in Northern Ireland to protect the interests of motor users. The chairman of the Committee is Captain S. J. Hutchinson, LL.D., J.P., the hon. secretary is Mr. H. Cecil Orr, and the hon. treasurer is Mr. James M'Crea, M.Inst.T. The following are the elected representatives of the bodies mentioned:—Mr. H. Cecil Orr, Automobile Association, of which he is the area secretary in Northern Ireland; Captain Hutchinson, Motor Agents' and Motor Trade Associations; Mr. M'Crea, Route Bus Owners' Association; Mr. A. Melville M'Clure, Heavy Commercial Vehicle Interests and Motor Hirers' Association; and Mr. D. A. Boyd, Ulster centre of the Motor Cycle Union of Ireland. The Northern Ireland Committee will act in a similar manner to the London Committee.

**President of Bus Owners' Association.**—Mr. James M'Crea, M.Inst.T., managing director of the Belfast Omnibus Co., has been elected president of the Route Bus Owners' Association of Northern Ireland, in succession to Mr. William Chamberlain, appointed chairman of Traffic Commissioners for the North-West area of England.

**Elected Chairman of the Belfast Division of the M.T.A.**—Mr. P. C. Welsh, Ulster manager of the Dunlop Rubber Co., Ltd., has been elected chairman of the Belfast division of the Motor Trade Association. Mr. Welsh has been a quarter of a century in the Dunlop Company's service. He left Dublin in 1916 to become sub-manager in Belfast, and in 1924 was promoted manager.

**Fares Anomalies.**—The Road Transport Fares Tribunal of Northern Ireland, of which Sir Lynden Macassey is chairman, has been notified that members of the Route Bus Owners' Association of Northern Ireland, and the railway companies operating road passenger services in Northern Ireland, intend to make application for a revision of fares to remove numerous anomalies which are now said to exist, and a general increase as will place the road passenger transport undertakings on a reasonable self-subsidising, economic basis.

**New Garage and Show Rooms.**—Messrs. W. H. Reay & Co., motor engineers and salesmen, Belfast, are building a new garage, fronted by extensive showrooms, on the Ormeau Road, a leading thoroughfare in Belfast.

## IRISH FREE STATE.

**Restoration of Canal Services at Limerick.**—Steps are being taken for the restoration of canal services between Limerick and Killaloe on the river Shannon. The Harbour Board of Limerick and the Grand Canal Company of Ireland are interesting themselves in the matter and good results are anticipated from the co-operation. The transport of goods has remained interrupted during the past two years owing to the construction of the Shannon power scheme. Mr. J. R. Phillips, the General Manager of the Grand Canal Co., paid a visit to Limerick recently and attended a meeting of the Harbour Board on the subject. The Board has repeatedly complained of the loss of trade occasioned to Limerick through the closing of this waterway which provided cheap and convenient transit facilities.

**Irish Free State's Motor Trade in 1930.**—The trade statistics of the Irish Free State for the eleven months ended November 30th, 1930, were issued on January 17th last, and from the figures given it appeared that up to 1,186 commercial motors, valued at £191,347, were imported from January to November, 1930, as compared with 974, of a value of £173,564, imported during the first eleven months of 1929. Motor cycles to the number of 839, and valued at £27,450, were imported last year, as against 894, of the value of £31,702, in the 1929 period. Touring motor cars to the number of 7,076, valued at £985,773, were imported during the first eleven months of 1930, as compared with 7,162, valued at £1,095,639, in the 1929 period. Chassis for motor cars to the number of 628, valued at £127,676, were imported in 1930, as against 699, valued at £130,028, in the corresponding period of 1929. Motor tractor parts to the value of £780,983 were imported last year, as compared with £716,423 in the previous year. The export of tractors increased in number and value. There were 15,865 tractors exported during the first eleven months of 1930, valued at £1,650,377, compared with 6,642, valued at £691,599, exported during the corresponding period in 1929. The value of tractor parts exported increased from £825,163 in 1929 to £879,789 in 1930, and exports of motor car parts were valued at £103,716 in 1930, as against £44,631 during the previous year's eleven months period.

**Merchandise from Great Britain to the Irish Free State, and Consignors' Receipts to Carriers.**—At a meeting of the Council of the Cork Chamber of Commerce last month, it was decided to recommend all members to give only qualified receipts to carriers or transport companies when it is impracticable or very inconvenient to examine consignments of merchandise coming from Great Britain. It was ascertained by the Council that several members of the Chamber had made it the rule in case of non-examination of contents of cases, boxes, etc., of goods to qualify the carriers' receipt of adding the words "Not Examined"

# National Advisory Council of Public Service Vehicle Owners' Associations.

## Second Preliminary Conference.

THE second preliminary conference of the National Advisory Council of Public Service Vehicle Owners' Associations was held at the offices of the Motor Agents' Union, 157, Great Portland Street, London, W., on February 10th.

The Chair was taken by Mr. M. Logette (G. B. Motor Tours).

The Chairman in the course of his remarks as to the views of various Associations regarding the formation of the National Advisory Council, mentioned that the Blackpool Coach Owners' Association were represented there that day. The Birmingham Motor Coach Owners' Association had also communicated with the Council. The Monmouth Association and the Eastbourne Motor Coach Association (Small Owners) were represented. Mr. C. B. Jenkins of the Nuneaton and District Association had communicated with him asking if he could represent Commander C. J. Pearce, of the Midland Area Bus Owners' Association, Leicester, who had met with an accident, and he had agreed to this. There had also been a letter from the Northern Road Transport Association, Newcastle, in which they agreed to become members of the National Body, but their delegate was unable to attend because of illness.

He asked whether all the delegates had put the proposals before their respective Associations, and all the delegates replied that this had been done and all were in the affirmative with the exception of Northampton, who said that they had been unable to get complete agreement on the question, but they were attending because they considered they were likely to join.

The rules were discussed, they having been drawn up in draft form by a Rule Committee appointed at the first meeting held on January 13th.

It was decided that voting by proxy should not be allowed, and that there should be one vote for each delegate only. It was pointed out that if voting by proxy was permitted, it would tend to diminish the interest in the meetings and also a delegate with probably four votes would cast the whole four in one direction, whereas if the delegates were present there might not be a unanimous opinion.

Mr. Dobbs said that the Motor Hirers' Association had gone to some considerable trouble and expense to try to get the National body formed and he suggested that they should get promises from at least six Associations before the next meeting was held.

It was eventually decided that Mr. Dobbs' suggestion should be adopted.

The Blackpool and South Wales representatives intimated that so far as they personally were concerned, they were in complete agreement with the suggested National Body, but they would have to consult their individual members. If these two Associations decide to join, it would bring the number up to the required six associations. The representatives of both Associations expressed their appreciation of the work of the Motor Hirers' Association, who had been working in the background for the benefit of the industry as a whole.

# Possibilities of the Diesel Engine.

## Institute of Transport Discussion.

AT the January meeting of the Manchester and Liverpool Section of the Institute of Transport, an interesting address on the application of Diesel engines to road transport was given by Mr. W. H. Goddard, A.M.I.Mech.E. Mr. R. W. Royle presided. After the lecture, which was generously illustrated with lantern slides, numerous questions were asked and answered.

Mr. Goddard reviewed the progress of the Diesel engined vehicle in this country in the last two or three years and said that Manchester, Leeds and Sheffield were already running experimental buses which, it was estimated, would show a saving over petrol buses of £250 to £350 per annum. The economy in fuel costs was 80 to 85 per cent. For long distance goods haulage the Diesel engine was ideal. It had a high thermal efficiency and was especially economical on partial loads. What transport people and the community generally required, said Mr. Goddard, was a simple, reliable and economical power unit, which will last out about 100,000 miles without a general overhaul, give little trouble in maintenance and have a long life. To make a Diesel engine perform exactly like the latest high speed petrol engine is not the right way to approach the ideal. Sanity and commonsense aided by official regulations will see that road transport speeds gradually settle down to speeds which are reasonable and economical and this is where the Diesel can hold its own.

In one section of his paper, Mr. Goddard dealt with the point of engine speeds and explained why it is impracticable for extraordinarily high speeds to be achieved with the Diesel power unit. With the normal four-stroke petrol engine, the time available for mixing the petrol and air is as follows:—at 1,000 r.p.m., .06 second; 1,500, .04 second; 2,000, .03 second; 3,000, .02 second. With a Diesel engine assuming 30 degrees of the crank circle as that occupied for the injection of fuel oil, we have:—at 1,000 r.p.m., .005 second; at 1,500 r.p.m., .003 second; at 3,000 r.p.m., .0016 second. Thus at 1,500 r.p.m. petrol has 1/25th of a second and the Diesel only 1/300th of a second. There is, and there must be, a minimum limit of time in which to atomise the fuel oil and completely mix it with the hot compressed air so that every bit of the oxygen in the air charge is interested, to form a proper and thoroughly combustible firing charge. Exactly what that limit is no one knows at the present time. To run a Diesel engine at 3,000 r.p.m. reduced the time for mixing the charge to 1/600th of a second, which does not appear sufficient for such an operation. In Mr. Goddard's opinion, 1,500 to 1,800 revolutions per minute is ample for the Diesel engine, although an ungoverned Diesel road engine has run up to 3,000 r.p.m. In that case the fuel consumption rose to an inefficient figure and there was a falling off in torque.

In the discussion, reference was made to the possibility of a tax being put on Diesel engine oil should the consumption increase to any great extent. Mr. Goddard explained that even if the Chancellor of the Exchequer was faced with a loss of revenue from the petrol tax and he reimbursed himself by putting an impost on gas and crude oils, the Diesel engined vehicle could shoulder the burden and still have something to spare when it came to a comparison in ton mile costings.

At the meeting of the Manchester, Liverpool and District Section of the Institute, held at Manchester on February 6th, Mr. C. J. Hyde Trutch, B.Sc., read a paper on "The Diesel Engine and the Railways."

# Answers to Inquiries.

SKIDDING OF MOTOR VEHICLES.

**Question:**—Has it ever been held in a Court of Law that an accident caused through the skidding of a vehicle was an act of God?

**Answer:**—As far as we know it has never been held in a Court of Law that an accident caused through the skidding of any vehicle was an act of God and we do not see how in any event such a claim could be substantiated. A case was heard in 1909 in which the plaintiff was injured owing to a motor omnibus skidding. Damages were claimed (1) on the ground that the driver of the omnibus did not use proper care in driving; (2) that the owners of the omnibus were negligent in allowing it to ply when the streets were in such a condition that the vehicle might become unmanageable. In the county court the jury found for the plaintiff but the Judge entered judgment for the defendants, holding that the fact that an omnibus skidded taken by itself was not evidence on which it could be found that its owners were negligent or caused a nuisance. On appeal the Divisional Court disagreed with the County Court Judge and ordered judgment to be entered for the plaintiff. On further appeal, the Appeal Court, by a majority, reversed the judgment of the Divisional Court, Lord Justice Vaughan Williams being of opinion that the fact that the owners of the omnibus placed it on the road to ply was not evidence of negligence or nuisance in view of the fact that motor omnibuses had been running on the street for several years. Another member of the Appeal Court said that the mere occurrence of such an accident was not in itself evidence of negligence.

So far as we know this is still a leading case on the question of skidding and would appear to mean that in deciding whether there is negligence on the part of the owner of a skidding vehicle something beyond the mere occurrence of an accident must be shown in order to shift the onus of proof from a plaintiff to a defendant.

**Morgan Hastings & Co., Ltd.**—We understand that this firm, who are placing on the British market the Stewart Truck, have removed to more commodious premises at 212, New King's Road, Fulham, S.W.6.

# Liverpool Short Cart and Motor Owners.

## 22nd Annual Meeting.

WAYS and means of increasing the membership of the Association, particularly the motor section, was the subject of a discussion at the twenty second annual meeting of the Liverpool and District Short Cart and Motor Owners' Association held at the office of the secretary (Mr. W. F. Ewbank) on Tuesday, February 3rd.

Mr. C. Harvey, who presided over a good attendance of members, invited suggestions for increasing the membership; if the subscriptions were too high, a proposal could be made that they should be lowered or a rebate given, and it would receive consideration at the next committee meeting.

Mr. J. Leece said that what was certainly wanted was a strong motor section through which negotiations could be conducted with large motor hirers. Then possibly arrangements could be made that would be to the advantage of individual members of the Association.

The Secretary (Mr. F. S. Jones) said the Corporation recognised the Association and was prepared to meet and discuss matters with its representatives.

The chairman remarked that at various times representatives of the Association had exchanged views on rates and conditions of hire for horse drawn vehicles with the Corporation. Owners of horse vehicles who were members of the Association now received the agreed rates for the use of their vehicles and horses and that arrangement, he thought, worked very satisfactory, but the motor owners received anything from £2 to £2 17s. 6d. per day for the hire of their vehicles. They did not know where they stood because they had no stipulated rates; the Corporation recognised the Association in regard to horse hire, but not in regard to motors. For many years there had been a considerable amount of bartering between hirers and motor owners.

Mr. H. Prescott pointed out that horse owners had been able to go forth and get reasonable pay for both single horses and teams. Why should it not be possible to do the same for the motor owners? He was in favour of all the facts being got together with a view to representations being made to the right people for the recognition of uniform rates for motor hire.

Although agreeing with the spirit of this suggestion, the chairman said they could not overlook the fact of their being a lot of unattached motor owners who were working for rates which could not be justified on economic grounds. It is no use going to clients at the present time when cutting is so widespread. If these outsiders could be got into the Association, he was sure it would be possible to make adjustments that would be of all round benefit.

Members thought that the Association should make approaches to the Corporation in order to bring about better conditions.

On the proposition of Mr. J. Leece, it was decided to make a canvass of non-association hauliers, most of the members present volunteering to participate in the work. It was also agreed to hold an extraordinary general meeting in March next, to which the interviewees would be invited.

In presenting the balance sheet, Mr. J. J. McKnight, the hon. treasurer, said the finances were very much the same as in the previous year. The Association had fully held its own, income being fairly evenly adjusted to expenditure.

The chairman, briefly reporting on the year's working, said he had done as much as possible to further the interests of the Association. A good deal of work had been done by the National Road Transport Employers' Federation to which the Association was affiliated, and by the Conference of Liverpool and District Road Transport Employers on which they had representation. The membership had been maintained, which was satisfactory having regard to the state of trade which had caused anxiety to both horse and motor owners. The vice-chairman, treasurer, secretary and the committee were deserving of the thanks of the Association for their valuable services in the interests of the short cart and motor owners.

Mr. J. H. Halliday proposed, and Mr. F. Wilkinson seconded, the re-election of Mr. C. Harvey as president of the Association. Carried unanimously.

Thanking the members for their renewed confidence, Mr. Harvey said that if horse and motor owners had the same zeal for co-operation as they had for competition, they would not experience half the trouble they were doing. The Association existed in their collective interests.

Mr. H. Carruthers was re-elected vice-chairman, and Mr. J. J. McKnight, hon. treasurer. Mr. McKnight said that on looking up the books, he had found he had just completed ten years service with the Association.

Mr. W. F. Ewbank, who was represented by Mr. F. S. Jones, was re-elected secretary. Messrs. Gilbert Jones and H. Carruthers were appointed auditors. Mr. J. Leece, of Leece Motors, Liverpool, was elected to the Committee, which otherwise was re-elected en bloc.

# Liverpool Transport Employers' Conference.

## Principle of the Accumulative Week Adopted.

ALL the Liverpool transport associations during the past month, have had under consideration the restoration of the agreement between the Liverpool and District Road Transport Employers' Conference and the Liverpool and District Carters' and Motormen's Union. The most important feature of the agreement is the introduction of the principle of the accumulative week system, which was due to be introduced as from February 1st, the date originally fixed for the operation of clause 19 of the Road Traffic Act.

The Liverpool associations represented on the Conference are:—the Liverpool and District Cart and Motor Owners' Association, the Liverpool and District Short Cart and Motor Owners' Association, Motor Transport Employers' Federation, Seed, Oil and Cake Trade Association, and the following trades:—flour millers, wholesale grocers and coal merchants.

The adoption of the accumulative week system will apply to motormen engaged on up country transport and will bring Liverpool conditions more into line with those operating in other centres. All the conditions in the old agreement remain unaltered, with the exception of the addition of the optional accumulative system detailed below.

Concerning conditions of employment of motormen engaged on up-country work, i.e., outside the ten mile area, it is provided:—

(a) That Employers shall have the option of engaging weekly men on an Accumulative Basis, viz., men shall be guaranteed a minimum of 48 hours per week, exclusive of meal times but inclusive of garage duty. All time worked shall contribute to the 48-hour week (except Sunday work, which shall remain on the present agreed terms). Time worked in excess of the 48 hours to be paid for as follows—the first 6 hours at day-hourly rates and all additional hours at time-and-a-quarter. Periods for rest and refreshments not exceeding one-and-a-half hours per day to be allowed.

Men not to be called upon to work for less than 8 hours, except on Saturdays of for the purpose of completing a full working week, when the minimum shall be 4 hours.

(b) That, in the case of men engaged partly on local transport and partly on distance transport, only hours worked between the hours of 7 a.m. and 7 p.m. on local transport shall contribute towards the 48-hour week. All time worked outside these hours on local transport to be paid for at the existing overtime rates, and to be independent of the 48-hour week.

(c) Men called upon to be away from home over night, or to stand down during the day outside their home town, to be paid Subsistence Allowance of not less than 6s. In the case of two combined periods of standing down away from home, the allowance to be not less than 12s.

(d) That firms adopting this optional arrangement give the men concerned a week's holiday with pay annually between 1st May and 31st October, after one year's continuous service and provided that the employee has not been absent from his employment for more than seven days in the year without reasonable cause or previous notification.

Employees with six months, and less than twelve months, service to be given 3 days' holiday with pay.

Any employee on being discharged through no fault of his own, and not having been given the holidays to which he may be entitled, shall be paid a sum equivalent to the number of days' holiday forfeited.

# County Court Judgments.

THE following returns from the Registry of County Courts' Judgments, Whitehall, have been received relating to judgments entered up in the respective County Courts of England and Wales. Publication does not imply inability to pay. Many judgments may have been settled between the parties or paid. Judgments settled otherwise than through the Court may appear unless "satisfaction" is entered up within twenty-one days from judgment or allocatur. Registered judgments are not necessarily for debts. They may be for damages or otherwise, they may relate to actions *bona fide* contested between the parties, or they may be against defendants, liable in a representative capacity, and not personally; but no distinction is made on the register. Judgments are not returned to registry if satisfied in Court books within twenty-one days.

Marsh & Mynott, 18, Montreal Square, Cambridge, haulage contractors. £30/16/5. October 20th.

# Facts and Figures in Road Transport.

ON September 30th, 1930, there were in Great Britain 2,287,325 mechanically propelled road vehicles licensed. Of these 1,056,214 were cars taxed on horse power, 724,319 motor cycles, 344,672 goods vehicles and 101,130 hackney vehicles. These figures are most interesting in view of recent railway companies' reports and the final report of the Royal Commission on Transport. The drop in railway revenues is attributed largely to road competition and no doubt it is true. The Royal Commission had this point well in mind when drawing up their report: in fact we can hardly see why it was necessary for the Commission to take evidence from so many authoritative persons on transport subjects, to arrive at the conclusions they did. Still, the report was very well drawn up, very voluminous and, as Sir Arthur S. T. Griffith-Boscawen stated in his address at the annual dinner of the Institute of Transport, the report was received with really monotonous approval and in fact many of its recommendations had already been passed into law. We think that perhaps some of the recommendations were already law before the recommendations made their appearance, but this is not the subject of our present commentary. It is this: the Government and its satellites are busily engaged, using every effort in fact, to obtain such control on road transport, that they may be able to force traffic back on to the railways. We do not wish to discuss here whether the object is laudable or not; what we wish to do is to analyse the above figures to see to what extent control is possible or necessary, and how far restrictive control can be imposed without interfering with the rights of the citizens. (By "control" in this article, we mean in respect to use and not condition or design.) The road, it must be remembered, is practically the only bit of Great Britain on which every citizen, from the lowest to the highest, has the right to move freely. The pedestrian it is true, has already had his liberty in this respect considerably curtailed, not by law but by "force of arms" so to speak, that is to say he moves along the road at risk of life and limb and he cries out for protection. He has a right to protection no doubt, but the country, for financial reasons, cannot afford to give it him completely by providing adequate footpaths along all roads. If it could do this there might reasonably be a law passed to prevent the pedestrian using the carriageways. Until adequate footpaths are provided the pedestrian must retain his priority right to the road, although he does not always get the better of the argument that the motor vehicle must make way for him! The pedestrian may wish to become a motorist himself, but is unable to purchase a vehicle, in which case he can get his share of the use of the highway by using a public passenger vehicle, so long as he is permitted. Now, examining the above figures and referring to the Ministry of Transport's report "Road Vehicles—Great Britain" from which the figures are taken, we find there are only 101,130 hackney vehicles in Great Britain, of which 48,483 have a seating capacity not exceeding 8 persons and there are 11,018 vehicles which have a seating capacity exceeding 8 and not exceeding 14, together making a total of 59,501 vehicles. The 48,483 vehicles are, no doubt, for the most part taxicabs, whilst the 11,018 come almost under the same category. Vehicles carrying more than 14 passengers but not more than 20 number 8,181 and these, as we all know, are quite modest vehicles in regard to size, not greatly exceeding that of a large private touring car. We come now to vehicles carrying more than 20 persons but not more than 32, which are undoubtedly the motor coaches proper; but of these there are under 21,000, surely few enough about which to make such an extraordinary fuss! They serve the outlying districts remote from towns and remote from railways or reasonable railway services, and, as we have

Digitized by Google

stated, they are few enough for the service required of them. The rest of the vehicles, those carrying more than 32 passengers and up to 64 passengers, are undoubtedly motor buses, both single and double deck, and their number is 26,785. The number of these is certainly likely to increase and in fact must increase if the public is to be adequately served. The above figures relating to hackney vehicles are well worth considering and any fair minded person cannot help but conclude that attempts to restrict and hamper with irksome conditions, such passenger services, are vicious in the extreme. Obviously but a small percentage of such vehicles are in competition with rail transport and practically none of them in direct competition because they have created new transport patrons. Referring now to cars taxed on horse power: of these there are upwards of a million. These constitute the true railway competition—these and the additional three-quarters of a million motor cycles. How are these going to be controlled? They are already taxed several times heavier than those in any other country. These then may be ruled out of control considerations, and they represent considerably more than two thirds of the total of motor vehicles in Great Britain. The tax upon them may be increased but there is no legitimate reason why it should be, because instead of the revenue collected from them being paid into the Road Fund and used for road construction and improvement, part of the revenue is paid into the Exchequer to be used for other purposes. Then let us consider goods vehicles: there are something less than 350,000 of these, of which 142,529 are of less than one ton capacity, obviously tradesman's delivery vans having replaced horses. There are 143,114 vehicles of between 1 ton and 3 tons capacity, which if not actually used for local services only, certainly do not go very far afield. This leaves about 56,000 vehicles, exclusive of agricultural vans and lorries, of from three tons and upwards carrying capacity, a comparatively small percentage of which are used for long distance transport. Then which of these are to be the subject of control? We doubt if 10 per cent. of them are owned by the haulage contractor, who is a long suffering person filling a definite public need. If his vehicles are taxed so that they are ruled off the road, some 5,600 of them, is it going to be for the benefit of the public and are railway revenues going to soar again as high as at the end of the last century? We think not; but if all the heavy goods vehicles now in service, the majority of which are owned by private firms, are to be the subject of prohibitive taxation, will not the industry rebel against such legislation and show that a very great percentage of such industry depends for its existence upon the service these road motor vehicles are giving them?

It is evident from the above figures that there are not more than from 25,000 to 30,000 vehicles amenable to control—it is probably even a generous estimate—being about 21,000 motor coaches and about 5,000 to 6,000 goods vehicles owned by transport contractors, but it by no means follows that all such goods vehicles are indeed used for long distance traffic. The Government is more particularly concerned with the control of the motor coach traffic and it is mainly for such control that twelve traffic commissioners have been appointed, that is one traffic commissioner for each 1,700 vehicles. As a large number of these vehicles are owned by local authorities who do not require Government assistance in any branch of their organisations, we imagine the traffic commissioners' duties are likely to be somewhat of a sinecure. At least there does not seem to be any great need for their services when the situation is carefully considered. Another accusation that is continually hurled against road transport, is that the ever-increasing number of vehicles and the ever-increasing weight per unit, are together cutting the roads to pieces; but if one examines the Ministry of Transport Report on the Administration of the Road Fund it will be found that the contrary is the case. In the year 1925 the total motor licences in Great Britain was 1,537,340, of which 224,287 were in respect of goods vehicles. In that year the total expenditure per mile of ordinary maintenance and repairs of Class 1 and Class 2 roads and bridges in Great Britain was £626 and £341 respectively. In 1929 there were 2,163,076 motor vehicles licensed (an increase of 627,736) of which 313,634 were goods vehicles and the expenditure per mile of Class I and Class 2 roads was £562 and £356 respectively, showing a reduction in maintenance costs of £64 per mile for Class 1 roads and an increase in the cost of Class 2 roads maintenance of £15 per mile. According to those who argue that the increasing motor traffic entails additional road expenditure there should have been an increase of road maintenance costs of about 40 per cent. instead of a reduction. It is as well to bear in mind that road improvement means lower maintenance costs and the Ministry of Transport figures show that maintenance costs per mile reached their peak in the year 1924-25 when the total expenditure on Class 1 and Class 2 roads amounted to just over £20,000,000. For the succeeding years the expenditure was below £20,000,000 until last year when it was £20,241,000. These figures seem to show that however much the traffic increases in the future, the maintenance costs will increase very little and the revenue collected from motor taxation will come nearer to covering the expenditure. The figures show plainly that there is no valid reason for imposing further legislation with the object of impeding development of road transport, also that the controllable part of the road transport industry is such a very small percentage of the total road traffic that it can make but very little difference to railway earnings, whereas the motor industry and the road construction and maintenance industry together must provide a far greater amount of rail traffic than they have taken away from the railways.

## Transport and the State.

Students of transport must have watched with growing concern the steady growth of Government control, which has marked the relationship between Transport and the National Government during and since the end of the War. We all owe a debt of gratitude to Sir Lynden L. Macassey, a past-president of the Institute of Transport, for his masterly lecture on this subject, given to the Metropolitan Transport students on February 17th last. We publish a brief report of this lecture in this issue but owing to the regulations of the Institute of Transport, it is not possible to do justice to a paper of this character. We commend the lecture, which will appear *in-extenso* in the journal of the Institute, to every member for very careful reading and consideration. Those who have followed the reports which have appeared in this journal month by month, for many years past, will have seen how, little by little, the control exercised by the Government has been tightened and has become more rigid, till the boasted right of the Englishman to carry on his business in his own way, without interference, provided he does it honestly, has become a thing of the past. Dealing first of all with the subject in broad outlines, particularly as it affects concessions for transport undertakings in other countries, Sir Lynden then proceeds to show how this relationship has evolved in Great Britain and a very interesting section of the lecture deals with the early days of English railways, showing how gradually the position had been changing up to the time of the War.

It is only after the War, however, when road transport had become a serious competitor of railway transport that we find legislation being passed which entirely changed the transport outlook. We then find for the first time, the phrase "controlled monopoly" coming into use, employed, we believe, first of all by the present Minister of Transport in his speech at the dinner of the

Digitized by Google

Municipal Tramways and Transport Association Congress, held at Yarmouth in 1929. To-day we find this attitude carried still further and the Minister of Transport endowed with powers, not only to control but to prohibit certain classes of traffic from using roads or districts where there is congestion.

In the third section of the paper Sir Lynden asks what should be the relationship between the state and transport, and his closely reasoned argument leads him against his inclination and judgment to the view, that nationalisation of all forms of transport must be visualised as a possibility of the future. He is of the opinion that the results of state ownership and state management in foreign countries and in our Dominions are not such as to induce us lightly to abandon the policy of private ownership and private management. At the same time he draws attention to the almost insuperable burden imposed on our railways by the Government in the Railways Act 1921 and admits that the permanence of the financial basis of the Act is plainly imperilled. The next step, amongst those who advocate nationalisation, will be to declare, that as the railway officers cannot conduct their undertakings efficiently and at a profit, it is the duty of the State to take them over and run them, making good any loss, out of public funds. This is the danger that everyone who has studied the subject finds confronting us, and it will certainly not be practicable to take over our railways without nationalising the entire transport of the country at the same time. It is for this reason that we have all along deprecated any steps taken by the road transport industry to ask for further control or regulation, even against unscrupulous and uneconomic competition. A careful study of Sir Lynden Macassey's lecture should help us to see where transport is drifting and to take steps before it is too late to avoid further Government control which would leave the industry fettered and helpless.

## Motor Hirers and the Coach Ban.

We publish on pages 261 and 262 of this issue a full report of the appeal by the Minister of Transport against the rule issued in the High Court in connection with the proposed ban on motor coaches in the Central London area. On appeal the Minister won the day, judgment being given in his favour, but some interesting points were brought out by counsel in his argument on behalf of the Skylark Coach Co. and these deserve the very careful consideration of all independent passenger transport operators. As we go to press we learn that the case is being carried still further and that an appeal has been lodged against the decision so that the important point in dispute will have further expert legal consideration. The Minister of Transport is acting on the advice of the London and Home Counties Traffic Advisory Committee, and it was pointed out that two of the members of this body were very considerably interested in the question and had in fact given evidence on behalf of the concerns they represent before the rest of the Committee, afterwards taking their places as members of the committee which had to make a decision and advise the Minister of Transport. This raises one of those exceedingly difficult questions, because naturally, the men best qualified to serve on such an advisory committee are those who are actively engaged in the business of passenger and goods transport and who by their long experience are qualified to give the Minister advice. On the other hand, occasions must happen when their business interests are involved and it is difficult to see how they can be strictly impartial in their outlook on the question at issue. It has been stated in the press that the Minister is proposing to modify the proposed rule as the result of interviews which he has had with the various organisations concerned but no official announcement has been made on this point. In this connection the report appearing in this issue of the Motor Hirers' and Coach Services Association dinner, shows that at any rate the members are not downhearted and it is another instance of adversity bringing the members together to fight for their common interests and to sink, at any rate for the time being, their individual point of view and the keen competition which is a feature of all transport undertakings.

## Long Distance Road Haulage Association.

The efforts which were made to find an association with which the Long Distance Road Hauliers could link up having proved unsuccessful, it was decided at a meeting of those interested in long distance road transport to form a separate Association and the inaugural meeting of this new body was held and is fully reported in another part of this issue. It was made clear that the new Association, while determined to put forward in every way its own special interests, would work in harmony and collaboration with other associations connected with road transport, and this should be quite practicable through the Standing Joint Committee of Mechanical Road Transport Associations. We shall watch with friendly interest the work of this Association and shall give full reports of its meeting and the work which it carries on, as has been our practice with road transport associations of all kinds and in every branch of the industry.

## Garages and Derating.

The judgment of the House of Lords allowing an appeal by the Revenue Officer against an order made by the Recorder of Middlesbrough, that certain garage premises at Middlesbrough should be derated under the Rating and Valuation (Apportionment) Act, 1928, will have been received with much disappointment by all garage owners. The building in question was built of brick and had a concrete floor. The floor space was chiefly occupied by an office and place for washing cars; a workshop with plant machinery and power suitable for repair work; inspection pits; space for garaging cars, etc., and at the front of the premises were windows exposing small accessories for sale, and outside the premises were petrol pumps for the supply of petrol to the public. Much the larger part of the premises and practically the whole of the working time of the occupier and his employees were devoted to repair work. In the King's Bench Division, Mr. Justice Talbot and Mr. Justice Finlay were of opinion that the premises fell to be derated and that the Recorder of Middlesbrough was right, but Mr. Justice Avory, dissenting, said there were features in the case which proved that the premises came within the category of a retail shop; thus by a majority the Court dismissed the Revenue Officer's appeal, and, later, the Court of Appeal unanimously affirmed the majority judgment of the King's Bench Divisional Court including the hereditament in the special list. Lord Dunedin in delivering judgment in the House of Lords, allowing the appeal by the Revenue Officer, said that the decision must necessarily affect the position under the Act of 1928, of those establishments which were common objects of the roadside, and in which repairs to cars could be effected and petrol obtained. The hereditament in question was primarily occupied and used for the purposes of a retail shop and therefore it was not an industrial hereditament within the meaning of the Act of 1928. The appeal accordingly succeeded. This judgment settles the vexed question of the derating of garages and repair shops, and no derating relief can now be hoped for under the Rating and Valuation (Apportionment) Act, of 1928.

# The Operation of Inland Transport.

## A Complete Alteration Required.

By W. R. Bater
(Director, William Bater & Sons, Ltd., Skewen.)

THIS Article is intended to deal primarily with the urgent need of a complete alteration in the policy for the operation of Inland Transport in this Country. Under the present system, transport is much too slow and expensive to give British industry the cheap service the geographical compactness of our workshop should enable it to do. I have no hesitation to say that the circumstances responsible for the failure to provide cheap and efficient transport are also responsible for the difficulty experienced by most of our old established industries to maintain their ascendancy in the world's markets.

It is generally accepted that the pioneers of British Industry in the Victorian period were responsible for the prosperity and great wealth of the Empire. I have come to the conclusion that the same generation is also responsible for the difficulties with which we are confronted at the present time. Our industries were built up with the firm conviction that the same methods and processes would always prevail. The development has been simple expansion or elaboration of the original methods and the training of the men destined to follow on was on the same narrow and conservative lines, with the result that those in control up to the present time, in Government finance and industry, have never given a thought to the possibility of having to abandon the inviolable laws, methods and processes which were the foundation of their education and training. The unfortunate result is that we have dispersed most of the wealth amassed in the Victorian period in the most elaborate factories, plant and systems which are now proving to be nothing more useful than monuments of the past.

I will now endeavour to show how the same circumstances have affected Transport. The development of Road Transport by the railway companies of Great Britain is, to say the least, an admission that they are unable to meet present day requirements with the rail system. Why is this? Is it not because their locomotives and trains are a simple elaboration of Stephenson's Rocket and train? Why is Road Transport attaining this ascendency? Because the modern motor vehicle is not a glorified traction engine or a simple elaboration of the first mechanical road vehicle. For an illustration of this, it is only necessary to make a comparison of the exhibits at the Railway Centenary Exhibition. All that can be claimed for the Royal Scot is that it is an elaboration of the first conception of a locomotive embodying the original principles with a few modern refinements. Turn to another exhibit, Messrs. Thornycroft's first road wagon, and you will find that there is nothing of this conception left in a 1930 Thornycroft motor vehicle, either in design or engineering practice.

It cannot be said that the railway engineers and craftsmen are not among the first rank in the Country. What, then, is the explanation for the production of such an obsolete monstrosity as the modern locomotive? It is the lack of courage necessary to depart from fixed principles that is responsible, but this circumstance would not have prevailed if railway influence in our successive governments had not been able to achieve the definite restriction of road transport and the elimination of all competition that would have forced changes when they became due.

In the evolution of railways after the building of a self-propelled vehicle, the obvious next step was to turn the achievement to commercial advantage and with the limitations of early locomotives, the only way to do this was to build coaches and trucks to be hauled by the locomotives. As the power units became more efficient, so it became possible to haul longer trains and by the improvement of track, greater speeds become possible, all of which is natural development leading up to greater usefulness and efficiency.

The increased weight and speed of trains called for rules and regulations for their safe operation, the most important of these being the Block system, which prevents more than one train being in any section at the same time. This system is very necessary for the operation of trains but as the trade of the Country increased, it was found to have a very restricting influence on the volume of traffic that could be dealt with, and the only method of coping with the expansion of trade and the consequent demand for transport facilities, was to build larger locomotives to haul longer and more cumbersome trains so that a greater amount of traffic or goods could be moving in each protected section of the railway lines at a time. As far back as 30 years ago, the railway companies found they could not deal with sudden increases in the volume of traffic in spite of the longer trains and the division of their lines into a greater number of shorter protected sections, and to my knowledge, strict adherence to the rules of the Block System was impossible in many places.

By the construction of auxiliary and loop lines it has become possible to operate a greater number of trains and to adhere to the rules and regulations for their safe operation, but the sheltering of the extra trains off the main running lines turned out to be a very retrograde step as far as speed and mobility are concerned. It has, in fact, made loitering by the wayside a profitable pastime for railway operatives who feel so disposed.

The weight of a modern train is anything from 250 to 500 tons and if anything goes wrong, this enormous weight is responsible for the serious destruction which usually attends a railway accident. It is therefore quite out of the question to consider the operation of trains without rigidly observing the rules of the Block System, but if light self-propelled cars travelling as separate units were substituted for trains, they could be operated with perfect safety without any such restriction and with the great advantage of complete mobility.

What, then, is the obvious remedy to enable British railways to take advantage of the compact island in which they operate, to return to a state of prosperity and give the industries and general public the cheap and efficient transport service they are geographically entitled to? The answer is to abandon all material, rules and regulations that will not lend themselves to complete mobility. For the short distances between trading centres, and the proximity of the seaboard to all parts of the Country, I know of no traffic that demands a continuance of the train system other than coal for shipment. Even this traffic could be dealt with by the small 20-ton separate unit if a means could be found for storing the output of collieries other than in railway wagons. Under existing circumstances, coal trains would have to be dealt with at night and be run direct from the collieries to storage sidings at the docks, to be sorted out there, away from the main arterial lines. From 6 a.m. to 12 midnight the main lines should be teeming with fast self-propelled coaches, vans and wagons following each other without any regard for the rules of the Block System and controlled only by the present signalling system at such

Digitized by Google

points as they have to be diverted off the main lines for loading and unloading, or change of direction at a junction.

By *control* I mean that the necessary switchgear to make diversions from the main lines into goods yards and auxiliary lines, and back again to the main lines, should be locked and covered by signals operated by a switch or signalman.

Some of the many advantages of this mobile system are :—Each railcar through its operator, knows what its load is composed of and where it has to be delivered. The movement made is always in forward direction; all shunting is dispensed with; one special wagon for abnormal loads could be coupled to a railcar at any time provided that it is fitted with brake gear operated from the railcar. The switchman (only required to protect junctions and the entry and exits of stations and goods yards) can instantly and without any enquiry of the position of other railcars, divert a car on to or off the main running lines. All delay to obtain line clear ahead and to keep sections open for important express trains is entirely obviated. Instead of passenger trains holding up freight trains for hours in refuge sidings and avoiding lines, the passenger railcars would obtain their priority by adhering to the main running lines; freight cars would invariably take the auxiliary or avoiding lines wherever they are made available. By the openings given as a result of this arrangement and the possibility of passenger cars having higher gear ratios, they would automatically obtain higher average speeds and pass freight cars going in the same direction on the auxiliary lines. The cost of the delays under the present system to give express and passenger trains priority and line clear, must amount to an enormous annual loss both to the Railway Companies and their customers.

The following example is how I visualise the railcar system in operation :—A freight car leaves London with a 5-ton consignment for Cardiff, 5 cwts. for Reading and 1 ton for Swindon. It runs to Reading at a speed determined by the volume of traffic in the same direction and on arrival, signifies by a code of syren blasts, that diversion to goods platform is desired. The switchman instantly complies, and the goods platform is reached without delay. The 5 cwt. consignment is discharged and railcar driver is advised that a 10-ton consignment is available for Cardiff. This is immediately loaded up and the car proceeds to the signal covering main line points. By the use of the syren code, the switchman is informed that exit to main line is required; he sets main line exit signal at danger and when satisfied that oncoming main line traffic has been checked, the goods exit signal is lowered to right-away and the points to main line opened. The freight car then obtains a position on the main line and the switchman reverses the operation, closing the goods exit and clearing the main line. All these switch movements can be made from a point of observation, and they are for immediate movements of traffic which do not require the switchman to keep his brain tuned up like a professional chess player, in case, by a temporary lapse of memory, he should make some irreparable mistake.

The freight car is now on the way to Swindon where the same procedure of control as at Reading, is in operation. The 1-ton consignment is discharged and there is, perchance, a 5-ton consignment waiting for Cardiff, which is loaded up. This car is now fully loaded with 20 tons from Swindon and automatically becomes an express car to destination; nothing can possibly impede its progress other than the very temporary stoppages that will occur when preceding cars arrive at stations of call en route. The volume of traffic would, however, have to be very heavy to make such stoppages amount to anything compared to the delays occasioned by the acceptance and clearance of trains under the present system.

The movement I have endeavoured to illustrate is incessant; there is no waiting for a consignment that is not ready; the next car will soon be along for this. Clearances are effected of large and small consignments at frequent intervals of the day and the journeys of the cars are governed by the destination of the largest consignment available at time of arrival. Instead of the consignments having to be sorted and marshalled for the convenience of the train, the freight cars automatically adjust themselves to the calls and direction of the consignments. Furthermore, they are automatically attracted to and kept operating between points where the traffic demands facilities, and not to the direction of timetables and fixed schedules of direction whether there is traffic to be dealt with or not.

When I first conceived this scheme in 1922, I favoured the adoption of steam engined units similar to the Sentinel-Cammell coach, which has since been designed and put into service on some branch lines. Having regard to the great improvements made in the design and performance of internal combustion engines and the comparatively low tractive effort required to run on steel rail tracks, I am of the opinion that petrol-electric or diesel electric power units would prove to be much more practicable and economical. Freight vans and wagons to carry 20 tons and coaches to seat 100 passengers could be designed and constructed within a weight limit of 10 tons unladen. They should have a much lower centre of gravity than the present day locomotives and also be fitted with more sensitive buffers, either hydraulic or pneumatic as a precaution against errors of judgment in the operation of a procession of railcars travelling at high speeds.

Critics of this article will say that such a revolutionary change of method would be attended with too much risk and danger. It is only necessary however, to observe commonplace, everyday practice on our roads to find high powered motor cars travelling in procession mile after mile at average speeds considerably over 40 miles per hour, with comparative safety. On the roads, cars have to be steered and the movement of every other vehicle and pedestrian, keenly observed. They are not fitted with buffers, either, and it is seldom that a serious accident occurs except at cross roads where a clear view is obscured.

The possibility of a head-on collision between railcars travelling in opposite directions is as remote as it is under the present rail system. Quite normal men are physically and mentally capable of steering and controlling moving objects at speed over 200 miles per hour; what then, can be the danger or difficulty of operating with perfect safety, the system I have explained in the foregoing, at speeds well over the highest that is practicable with the present railway rolling stock? All experienced drivers will agree that the safe limits of speed are determined only by the efficiency of control or the ability to pull up.

We hear of road-cum-rail car experiments and it is possible that the difficulties to be overcome to evolve a vehicle that will operate successfully both on the road and on rail, will be surmounted, but from my experience of the collection and distribution of merchandise, this method will not prove to be economical, if practicable. The door to door service of road transport is only economical over very local areas and in small loads with fast light vehicles. The difficulty lies in the fact that it is seldom possible to collect in one place, a load large enough to be economical for long distances and when it comes to the delivery of a paying long-distance load, the number of separate deliveries and the different directions to points of delivery, are usually so many that it proves to be more economical to split the consignment into several light vehicles. When there is a continuous flow of bulk loads, the economy effected by splitting them for

Digitized by Google

delivery is very obvious and saves much time as well as the waste of costly vehicle miles.

The container system which is so highly boosted by the railway companies, is quite useful for special loads which demand door to door facilities and is a means of saving traders the expense of packing, but it is much too cumbersome for general purposes for the reason explained in the foregoing paragraph. I am sure the container system does not pay the railway companies under their present system of train operation, because the special arrangements made to give this traffic priority are much too expensive and if they were handling the volume of traffic they should be, they could never afford the time expended to give this system the attention it now receives. If the railcar system was in operation, the container system could be worked more efficiently and would automatically become express traffic to destination without any special arrangements.

It needs very little thought to come to the conclusion that road transport vehicles having to operate on rubber tyred wheels, should not be able to compete successfully with vehicles equipped with steel tyred wheels to run on steel roadways. I think I have also made it clear that there is not so much in the door to door delivery advantage of road transport as the railway companies wish to make out when excusing themselves for loss of traffic to road transport contractors. What then, is the reason for the ascendency of road transport and the necessity for legislation to maintain the balance of the increasing efficiency of road transport over the inefficiency of rail transport? Or the necessity for the imposition of oppressive taxation to retard the progress of road transport services and provide de-rating and other indirect subsidies for railways, benefits in which road transport undertakings are unable to participate, although they provide the revenue for them.

All these decadent influences are piled upon the path of progress when the industries of the Country are crying aloud for cheaper and more efficient transport. Is it not obvious that the present system of railway operation, however efficient the organisation may be, is totally unsuitable on this little island and that this is the cause of the chaotic state of Inland Transport in this Country at the present time?

With every increase of taxation, the Road Transport Industry has had to increase its efficiency to meet the extra impositions, by higher speeds and greater carrying capacity per vehicle. To assist the manufacturing side of the Industry, the Ministry of Transport make amendments of the Motor Car Acts to make increased speeds and greater carrying capacity legal. On the other hand, they propose to organize an army of special road patrols equipped with new laws and regulations which these patrols will misconstrue, to incite the persecution of the operating side of the Industry and thereby endeavour to justify their own existence. The fact that Road Transport operators have saved the Country in more than one national emergency and proved themselves to be most loyal subjects, will have no influence towards the mitigation of the penalties imposed to provide an incidental source of revenue.

Another reason for the decline of railway traffic is that no organisation depending on profits for its existence, can afford to be discourteous and indifferent to the reasonable demands of its customers at any time, as the railway companies have been. They have attempted to restrict the progress of road transport by closing their goods yards and docks properties against their customers except for a very limited time each day. By the curtailment of hours available for unloading, they made revenue by charging demurrage accrued on their obsolete rolling stock and instead of giving facilities for traffic to flow into and out of their goods yards freely, it has been clogged and restricted at both ends. The result is that traffic that would still be sent by rail for the main journey to destination, has been diverted entirely to the roads. This unwise method of conducting their business grew upon railway managers and officials when they had more business than their immobile system could deal with. It may not be known generally that the railway systems could not deal efficiently with all the transport requirements of the Country even at the present time, because the more necessary it is to speed up under the present railway methods, the more impossible of accomplishment it becomes.

We hear of a Board of Railway Directors recently voting the expenditure of £250,000 on the installation of an automatic signalling system for the safe operation of trains. Without reference to statistics, I hazard the estimate that this sum expended on railcars operated on the continuous mobile system I propose, would enable this Company to deal with a much greater volume of traffic per day than they are handling at the present time. By the wholesale transfer of men from redundant positions to be operators on the railcars, greater efficiency with a considerable reduction in operating costs would be attained. Instead of closing up branch lines, the railway companies would soon be opening up new ones to bring themselves more into touch with their customers' requirements, especially relating to agricultural districts.

The efficient operation of our railways on the lines I propose, would, I am sure, lead to the reduction of both freight rates and passenger fares. The necessity to maintain the balance between road and rail (to keep traffic on the railways) by further increasing the motor vehicle taxation, would not arise. A remission of the present taxation would enable road transport users and contractors to operate lighter vehicles on more local transport, very possibly to feed the railway systems. If the railway companies decided to do all the collecting and delivering themselves, it would absorb some of the labour employed in road transport at present, if not the capital provided by private undertakings. Under the existing methods of railway operation and the continual increases of motor taxation that will be required to meet the cost of the bureaucratic control of road transport, I fail to see how capital employed in either railway or road transport undertakings can possibly earn a satisfactory return.

The capital required to make the proposed changes would easily be obtained from the sale of the unsuitable rolling stock and locomotives to countries where there is room to operate trains. In the interests of Railway Stock holders, the incorporation of British Railways (Overseas), Ltd., to provide transport facilities in one or more of the Dominions, with the redundant railway operators and material made available, is a suggestion worthy of very earnest consideration.

## A New Sentinel Instruction Booklet.

We have received from the "Sentinel" Waggon Works, Limited, of Shrewsbury, a copy of their illustrated pocket book containing over 80 pages of information which we feel will be most helpful to drivers of "Sentinel" D.G. Waggons—4, 6 and 8 wheeled—and also to those who are responsible for their upkeep. The first section of the book contains a number of hints to drivers which will assist them in the care of their waggons, and enable them to get the best results from them. The second section is devoted to the maintenance of "Sentinel" D.G. Waggons, and will be of great value not only to the driver who has to undertake his own running repairs, but also to the mechanic who is in charge of a fleet. In addition to these two main sections, the book contains a list of names of coals which are considered suitable for use in "Sentinels." There is also a list giving the names and addresses of over 300 Coal Merchants in all parts of the country, who stock coals of a suitable quality. The price of the pocket book, which has just been published and is bound in a stout cloth cover, is 2s. 6d. post free, and copies may be obtained from the Publicity Department, "Sentinel" Waggon Works, Ltd., Shrewsbury.

# The Institute of Transport.

## Annual Dinner.

THE eleventh dinner of the Institute of Transport was held at the Connaught Rooms, London, on March 5th last.

**THE HON. SIR ARTHUR STANLEY, G.B.E., C.B., M.V.O.**, the President of the Institute, was in the Chair, and amongst those present were:—

**The Rt. Hon. Lord Ponsonby of Shulbrede (Parliamentary Secretary to the Ministry of Transport); The Rt. Hon. Sir Arthur S. T. Griffith-Boscawen (Chairman of the Royal Commission on Transport); His Excellency Signor Antonio Chiaramonte-Bordonaro, G.B.E. (The Italian Ambassador); Sir Josiah C. Stamp, G.B.E. (Immediate Past-President, Institute of Transport); The Rt. Hon. Lord Ashfield of Southwell (Past-President, Institute of Transport); The Rt. Hon. the Earl Howe, C.B.E., V.D., Sir Ernest V. Hiley, K.B.E.; Sir Matthew G. Wallace, Bart.; Col. Sir Joseph Nall, D.S.O., T.D., D.L. (Past-President, Institute of Transport); Mr. Frank Pick; Mr. C. C. Paterson, O.B.E. (President, Institution of Electrical Engineers); Major Isidore Salmon, C.B.E., M.P.; Mr. Roger T. Smith (Past-President, Institute of Transport) and Mrs. Roger T. Smith; Sir Robert Donald, G.B.E.; Mr. R. J. Howley, C.B.E. (Vice-President, Institute of Transport); Sir George W. Humphreys, K.B.E. (President, Institution of Civil Engineers); Mr. G. Cole Deacon (Secretary, Railway Companies Association); Sir Herbert Austin, K.B.E. (President, Institution of Automobile Engineers); Lt.-Col. E. Kitson Clark, T.D. (President, Institution of Mechanical Engineers); Mr. E. H. Blake (President, Society of Motor Manufacturers and Traders); Mr. R. Fane de Salis (President, Canal Association); Sir Alfred Read, J.P.; Sir Cyril Hurcomb, K.B.E., C.B.; Sir F. Austen Hadow, C.V.O.; Major-Gen. S. S. Long, C.B.; Mr. W. H. Gaunt, O.B.E. and Mrs. W. H. Gaunt, J.P.; Lt.-Col. F. C. Shelmerdine, O.B.E.; Mr. F. Handley Page, C.B.E. (Chairman, Society of British Aircraft Constructors); Mr. F. G. Royal-Dawson; Lt.-Col. A. Hacking, D.S.O., M.C.; Mr. A. W. Arthurton; Mr. A. L. Barber (Vice-President, Institute of Transport); Major E. G. E. Beaumont, O.B.E.; Mr. F. Churchill; Mr. H. M. Cleminson (General Manager, Chamber of Shipping of the United Kingdom); Mr. J. L. Clewes; Mr. Ashton Davies, O.B.E.; Mr. E. Ford, O.B.E.; Mr. W. F. French; Mr. A. Winter Gray (Secretary, Institute of Transport); Mr. S. S. Guy; Mr. R. E. Herdman, D.L., J.P. (President, Dock and Harbour Authorities Association); Sir Clement D. M. Hindley, K.C.I.E. and Lady Hindley; Sir Henry P. Maybury, G.B.E., C.B. (Past-President, Institute of Transport); Mr. J. B. Osler, O.B.E.; Lt.-Col. J. A. A. Pickard, D.S.O.; Mr. O. C. Power and Sir George W. Truscott, Bart.**

The Royal toasts of His Majesty The King, Patron of The Institute of Transport, Her Majesty The Queen, H.R.H. The Prince of Wales, Honorary President of the Institute of Transport, and the other members of the Royal Family, were submitted from the Chair and enthusiastically and loyally honoured.

THE HON. SIR ARTHUR STANLEY, G.B.E., C.B., M.V.O.,
PRESIDENT,
INSTITUTE OF TRANSPORT.

**THE RT. HON. SIR ARTHUR S. T. GRIFFITH-BOSCAWEN** (Chairman of the Royal Commission on Transport) proposed the toast of "The Institute of Transport."

He said he was very glad to have the honour of proposing the toast and he thanked the company for their very kind reception which was the more gratifying as he knew that as Chairman of the recent Royal Commission on Transport he must have trodden upon the corns of a good many. (Laughter.) But after all he was only one of twelve unanimous culprits. Personally, he thought of his late colleagues not so much as culprits but as good companions. (Applause.)

Sir Arthur then referred to the late Sir George Gibb's observation at the inauguration of the Institute that "transport was not merely a key industry but the industry which kept the keys of all the other industries."

Referring to the reports of the recent Royal Commission he said that the Commission's first two reports had been received with a unanimity which was almost monotonous, and nearly all the suggestions had now become law. Their final report had also been very well received generally, but from criticisms he had read it appeared that when they came to deal with railway questions they were all wrong. (Laughter.) His friends, interested in commercial vehicles, were equally complimentary but the idea of putting higher taxation on heavy vehicles was a complete blunder. (Laughter.) Its reception reminded him of economy debates in the House of Commons, where everybody was in favour of economy in general but also of some particular form of extravagance. The explanation of course was that they, like the Institute of Transport, were not concerned with promoting the interests of any one particular form of transport, but had endeavoured to see how they could all best contribute, each in its own way, to the national welfare. He would venture to lay down certain general principles. First, however much they owed to the railways, which so far as he could see must remain for many years to come the principal form of transport, the nation could not artificially bolster them or any other form of transport up to the detriment of newer forms of transport. If we had adopted that plan when railways were first invented we should still be riding in stage coaches and sending all our goods by pack horse or canal. The motor bus, the motor coach and the motor lorry had come to stay, and were contributing to the national welfare.

The next principle was that the nation should hold the balance fairly between the various forms of transport. Here, the railways had had a legitimate grievance; they had been denied access to the roads for some years, and they had had imposed on them strict but perfectly proper labour conditions which had not been imposed on their road competitors. If the Commissioners' recommendations were carried out this grievance would disappear; it had already done so as regards omnibuses and he hoped it would as regards commercial vehicles too.

The third principle was that we could not afford reckless and wasteful competition. Such competition existed at one time between various railway companies, but was now confined to a comparatively few competitive points; he urged the companies to do away with it here by pooling their traffic. We had seen it on the roads too, rival buses competing with each other and with tramways and rail services. He hoped that the new system of licensing omnibuses and the establishment of the Area Commissioners would put an end to this. The aim should be monopoly controlled in the interest of the public.

He entirely supported the Minister of Transport's plan (and he desired to pay a tribute to the energy and ability of the present Minister) for uniting under a public trust the passenger services in London, but he hoped it would be possible to include the suburban services of the main line railways in the scheme.

With regard to heavy goods traffic on roads and the suggested increase of taxation on the heavier lorries, the question to be decided was this—was it to the national interest to spend enormous sums of money in constructing new roads and maintaining existing roads in order to divert to the roads from the railways and canals (which in some cases could still play a useful part) traffic which could perfectly well be carried by them? Personally, he thought not.

This led to his last principle, that so far as possible all the available transport agencies should be co-ordinated in the national interest. He confessed that he did not see any positive method whereby this could be accomplished at the moment. Some people, including three of his colleagues, thought that just as the London passenger services were to be united under a trust, so all transport agencies throughout the Kingdom might be so united. Their President, Sir Arthur Stanley, had hinted at such a possibility in his inaugural address last autumn. He himself thought that the time might come for such a change, but he was sure that the nation was not ripe for it at present. For the time being we must rely on what Sir Josiah Stamp called "the natural selection of traffic facilities" aided by the establishment of an Advisory Council to the Ministry of Transport, which the Commission had recommended and which he hoped would be set up.

Referring to the recent death of Earl Russell, Sir Arthur said he was a man of great calm and ability who was signally successful in handling the Road Traffic Bill when it was passing through the House of Lords.

Digitized by Google

He concluded by paying a warm tribute to the work of the Institute which pooled its knowledge and co-ordinated its activities, and to the great services of the President in particular. He said that he had known Sir Arthur Stanley for many years; they had fought together in the House of Commons, and at the end of the war they collaborated together in endeavouring to find hospital facilities for discharged and disabled men. (Loud applause.)

**THE HON. SIR ARTHUR STANLEY, G.B.E., C.B., M.V.O.,** the President of the Institute, responding, thanked Sir Arthur Griffith-Boscawen very sincerley for the generous tribute he had paid to him and the organisation he happened to belong to for the little they were able to do at the end of the War, when our men deserved so much. He would only say that it would have been impossible to have done what was done had it not been for the splendid help and loyal co-operation received from Sir Arthur Griffith-Boscawen. (Applause.)

The members of the Institute of Transport were very proud to have with them the Chairman of the Royal Commission on Transport. He thought it was the first instance on record that a Royal Commission had had some of its recommendations actually carried out whilst the Commission itself was still sitting. He believed that the Reports of the Commission held the record as best sellers, but he would remind Sir Arthur Griffith-Boscawen that the best sellers were generally works of fiction. (Loud laughter.)

The Institute represented every kind of transport, in the air, on the land, on the sea and under the sea, and he believed even that the members of the Institute sometimes indulged in flights of imagination. (Laughter.)

He liked the Reports of the Royal Commission on Transport and a lot they contained made very interesting reading. It was particularly kind of Sir Arthur Griffith-Boscawen, to have quoted a few sentences out of that monumental document which had the dignified name of his (Sir Arthur Stanley's) Presidential address to the Institute of Transport, and probably the part quoted was that part with which he himself was less in agreement. (Loud laughter.)

He totally disagreed with everybody who complained about the congestion of our roads. Personally, he believed that the roads were ample for the traffic they had to carry. He could not go into the whole argument that evening, but when they had a number of people converging upon a certain spot at a certain time, they were bound to have congestion. If they all wanted to go into the City to make money at eleven o'clock in the morning there would be congestion and probably those who got lost would be the best off. (Laughter.)

All the members of the Institute were interested in some form of transport. Many had witnessed the wonderful transformation in the means and form of transport in recent years and he did not see why the members should not pride themselves on what they had been able to accomplish. If the next generation could do half as well as transport men had done in the last thirty years they would have every reason to be proud with themselves, as members of the Institute were proud of themselves. (Applause.)

**SIR JOSIAH STAMP, G.B.E.,** Immediate Past-President of the Institute, proposed the toast of "Our Guests" and said that the Institute of Transport had always been singularly fortunate in its guests, and had always had very distinguished and representative gentlemen at their annual dinner.

The Royal Commission on Transport had had the good fortune of seeing many of its recommendations actually become the law of the land, while the Commission was still sitting. He agreed with much that the Commissioners had said in their Reports—*but.* (Loud laughter.)

We should be exceedingly careful how and to what extent we pit the public purse against private capital.

The railways were always being invited to say whether they were well managed or not, and railway management was brought under the microscope when the railways went to the Rates Tribunal one was asked the question whether the management was all right, and they had annual shareholders meetings and even there, sometimes, there were management questions to be answered. (Laughter.)

**HIS EXCELLENCY SIGNOR ANTONIO CHIARAMONTE-BORDONARO, G.B.E.** (The Italian Ambassador) made the first response. He said he was already aware that a large party of members of the Institute of Transport was to make a tour of inspection of Italian transport undertakings and centres about the end of May, and he was glad to hear how the initiative of the Institute, very much welcomed in Italy, was taking the most promising proportions and that about 200 members might be expected to join the party.

He understood that the members of the Institute would specially be interested in railway transport undertakings in Italy, and that the managing body of the Italian State Railways would be in charge of the guests. Italian railways had made amazing progress in the last seven or eight years, and he believed that in no continental country were trains nowadays more punctual than in Italy.

Besides transport by train, the members of the Institute would be shown the motor roads—autostrade—almost unique in Europe, the new great aerodromes, the works in the sea ports, the increasing importance of Italian merchant ships and of Italian liners for transport passengers.

He wished before sitting down, to take the opportunity to say a word of public admiration and gratefulness for the great success the Secretary of State for Foreign Affairs and the First Lord of the Admiralty had obtained the week before in their quick journey to Rome and Paris. Mr. Arthur Henderson and Mr. Albert Alexander had rendered a great service indeed to European Peace and to the cause of Disarmament. (Loud Applause.) In making out of what was partly a naval disagreement such a successful Five Powers' Agreement, they have deserved the gratitude of the world. He was glad to congratulate them and to thank them on behalf of his Country. (Applause.)

**THE RT. HON. LORD PONSONBY OF SHULBREDE** (Parliamentary Secretary to the Ministry of Transport) made the second response to the Toast. He said: "One word with regard to my predecessor in the post which I hold. Earl Russell's sudden and unexpected death has been a great blow to many of us. He was a pioneer in motoring and always took the keenest interest in all matters concerning transport. His management of the Road Traffic Bill in the House of Lords, which was both tactful and skilful, drew the admiration of all who heard him in these debates. The Government have lost a Minister of great ability and many of us have lost a very congenial and companionable friend."

He thought he might say that they in the Ministry of Transport thought that the Ministry was one of the most important and most popular Ministries of to-day. Talk about abolishing the Ministry of Transport, he believed that in a few years time there would be a Secretary of State for Transport.

Continuing, Lord Ponsonby said that it was hardly necessary to emphasise in such a gathering the immense importance of transportation to our economic well-being; the number of persons engaged in transport services of some kind would total, together with ancillaries, about one million and a half, and would represent some ten per cent. of the employed population. On the efficiency of that service depended not only their own livelihood but in a very direct way the livelihood of the remainder of the population. The Institute of Transport was representative of the persons who held many of the key positions in the economic structure and he was sure that the members would appreciate the very valuable work that the Royal Commission on Transport had rendered in placing before them unanimous findings on many of the problems that confronted the members of the Institute in their daily work.

The Government had attempted to show its appreciation of the work of the Commission by adopting substantially all the recommendations contained in the first two reports, and embodying those recommendations in the Road Traffic Act.

The Third Report applied not only to road users but to all transport undertakings. With regard to railways, much had appeared in the Press of the criticisms passed thereon, and while the railway companies had stoutly defended themselves, he thought that to concentrate on the criticism was to get the report rather in a false perspective. It was clear that the Commissioners fully appreciated the importance of the railway system and that on the whole their observations reflected very favourably on the past and present activities of the railway managements. He hoped that would satisfy Sir Josiah Stamp. (Laughter.)

While there was a recommendation for the improvement of existing highways, rather than the construction of new ones, the Report favoured the construction of bye-passes around the towns with the double object of relieving congestion and preserving from demolition some of the streets of our older towns, which radiated the history of the nation. Specially constructed "motorways" were he thought rightly condemned.

Perhaps he might digress for a moment to refer to a report that appeared recently, that the Ministry of Transport had a tendency to demand extravagantly expensive construction and re-construction of roads. He should like flatly to contradict that suggestion, and to state, that it was the definite policy of the Ministry to ensure that road works should be carried out as economically as possible, with due regard to the needs of the traffic and where possible to the use of British materials.

The finding of the Commissioners that tramcars were obsolescent had aroused hot discussion; but while tramcars still carry hundreds of millions of passengers each year it could not be denied that there was a tendency for tramways,

Digitized by Google

whether municipally or privately owned, to be superseded by trackless trolleys or omnibuses.

In dealing with the comprehensive co-ordination of transport, the Commission frankly admitted their difficulties; and although on the subject of co-ordination of all forms of transport they made only one recommendation for immediate application, viz., the appointment of an Advisory Council, their recorded views and opinions were of the greatest interest and in this connection he thought he should specially mention the courageous attempt of three of the Commissioners in an additional note to visualise the traffic requirements of 20 or 30 years hence.

The main report indicated four directions in which co-ordination might take place—nationalisation, rationalisation, a combination of these forms, and a national Trust. It would be fruitless for him to forecast the trend of events, but co-ordination in some shape seemed bound to evolve and to produce a closer unity than at present existed. Those who were interested in transport would closely follow its progress to that end, and as the members of the Institute were among those who would influence its progress it was their duty carefully to study their policies in relation to the needs of transport and of the nation as a whole.

The Commissioners had discussed and indicated the broad lines of policy; the Government by the Road Traffic Act had done something to consolidate the basis of a transport policy, and while the Minister and his officials had very carefully examined the recommendations in the Third Report, it was still too early to indicate what official action might usefully be taken with regard to them.

The next step lay with the general body of transport undertakers. Organised in such an Institute, which was peculiarly well qualified to bring together the practical experience of different types of undertakers, they should examine the recommendations, see how far they were sound, put into effect those which would be advantageous and proceed in the spirit of public service laid down by the Commissioners; in such a course he could assure them of the hearty co-operation of the Department with which he was connected. (Applause.)

He thanked His Excellency the Italian Ambassador for the way in which he had referred to his two colleagues in the Government, the Foreign Secretary and the First Lord of the Admiralty and he took the opportunity to assure His Excellency of the continued close friendship of this country with Italy. He hoped that the new steps taken would lead to the future peace of Europe. (Applause.)

**SIR HENRY P. MAYBURY, G.B.E., K.C.M.G., C.B.** (Past-President of the Institute), proposed the health of the Chairman.

He said that reference had been made to the great work which Sir Arthur Stanley had done during the War. Those services were immense and prodigious, and when the complete history of the Great War came to be written the name of their Chairman would take a very high place. (Loud applause.)

The members of the Institute of Transport had been extremely fortunate in having Sir Arthur as their President. (Applause.) He had the great qualities of leadership, great commonsense and great fairness, was a gentleman who had been associated with transport from the very beginning of things, and was the head of that great National institution the R.A.C. As long as Sir Arthur Stanley lived he would be a source of inspiration and guidance to the members of the Institute of Transport. (Loud applause.)

The toast was received with great enthusiasm, the company singing "For he's a jolly good fellow."

**SIR ARTHUR STANLEY,** acknowledging the toast, said he was being accorded thanks he did not deserve. The thanks were deserved by the very excellent Secretary of the Institute, Mr. Winter Gray. (Loud applause.) He did not ask the company to sing to Mr. Winter Gray—he had heard them sing once. (Loud laughter.) In the name of all present he would pass the thanks on to Mr. Winter Gray and to his small but very excellent staff. (Applause.)

## Institute of Transport.

The following gentlemen were recently elected to membership of the Institute of Transport:—

Members.

| | |
|---|---|
| Bretnall, Frederick William | Solicitor, New South Wales Government Railways. |
| Cherry, John Arnold ..... | Chairman of the Commissioners, Port of Rangoon. |
| Griffith, George Herbert, C.B.E. | General Manager, Pullman Car Co., Ltd. |
| Hattersley, Harold Woollard | Managing Director, Karrier Motors, Ltd. (Huddersfield). |
| Ranken, Robert Limond ..... | Chief Civil Engineer, New South Wales Government Railways. |

Associate Members.

| | |
|---|---|
| Bayliss, Ernest William ..... | Secretary and Commercial Manager, Severn and Canal Carrying Co., Ltd. |
| Godsmark, Harry Citford ..... | Deputy General Manager, Nottingham Corporation Passenger Transport Department. |
| Lee, Richard William ..... | Omnibus Traffic Superintendent, Newcastle-upon-Tyne Transport and Electricity Undertaking. |
| Trutch, Charles Joseph Hyde | Sir W. G. Armstrong Whitworth (Engineers), Ltd. (London). |

## Commercial Motor Users and Limitation of Drivers' Hours.

The annual meeting of the North Eastern Division of the Commercial Motor Users' Association was held at Leeds, last month.

The annual report, stated that on the whole the amendments to the motor law made by the Road Traffic Act were good, but there were a few objectionable features, the chief of which was Section 19, which limited the hours of duty of vehicle drivers. As the clause now stood, it was practically impossible for many vehicle users to carry on their businesses, and they hoped that the Minister of Transport would make certain concessions for which the Association had asked.

Mr. J. France, who presided, said that motor users already contributed very largely to the taxation of the country, and could not pay more.

Mr. F. G. Bristow, the General Secretary of the Commercial Motor Users' Association, referring to Section 19 of the Road Traffic Act, said that in many instances drivers had to spend long hours at docks, the seaside, or in the country, resting and often sleeping in the vehicle. Some thirty or forty organisations were at present conferring with the trade unions to secure agreement regarding an alteration of the hours laid down in the Act. They were within measurable distance of reaching agreement which would probably secure an improvement of this section.

Mr. C. le M. Gosselin, the president of the Association, dealt with the Report of the Royal Commission on Transport. He agreed with the Commissioners that it was not a good thing for the railways to be rushing with such feverish haste into road transport. It would be better if they spent the money on improving their own system of transport. The proposal to provide out of the Road Fund for the improvement of a thousand bridges a year was a drastic one. The proposal to further tax the heavier transport vehicle was an undisguised attempt to protect the interests of the railways, much of whose capital was dead.

We were fighting tooth and nail to maintain our position as an industrial nation. The contribution the transport industry could make was to keep their costs as low as possible.

## Thomas Tilling, Limited.

The accounts of Thomas Tilling, Ltd., Road Transport Contractors, for the year ending December 31st, 1930, show a profit for the year, after providing for Debenture Stock and other interest of £272,788. The dividend on the ordinary shares is maintained at 20 per cent., and in addition a bonus of 5 per cent. is to be paid. The general reserve fund receives £100,000. The carry forward is £95,294. As the special reserve fund is no longer required for the purpose for which it was created, it has been merged with the general reserve fund, and after the appropriation already referred to, this fund will amount to £606,396. The directors propose to capitalise £263,675 of this fund and to distribute it in the form of bonus shares amongst the holders of ordinary shares in the proportion of one new share to every two ordinary shares held. In order to make provision for the Bonus Issue and to allow for future possible developments, the capital of the company is to be increased to £1,750,000.

The Report states that on February 25th, last, Mr. R. M. Tilling resigned his position on the Board. Mr. Alfred R. Wagg, Chairman of Messrs. Helbert, Wagg & Company, Limited, has been appointed a Director of the Company.

# Public Service Vehicles.

## Conditions of Fitness. Licences and Certificates.

THE Public Service Vehicles (Conditions of Fitness) Regulations, 1931, have now been promulgated by the Minister of Transport and as the title implies, are concerned exclusively with coaches and buses.

The Motor Vehicles (Construction and Use) Regulations, 1931, which apply to all types of road vehicles except where stated otherwise, and which came into force on January 15th last were dealt with fully in the February issue of *The World's Carriers*. Buses and coaches must also comply with the regulations governing heavy motor cars except in specially defined cases.

Existing public service vehicles are not greatly affected by the Public Service Vehicles (Conditions of Fitness) Regulations but the following do affect them.

### AFFECTING EXISTING VEHICLES. CAME INTO FORCE ON FEBRUARY 10th, 1931.

**LADEN WEIGHT.** The total laden weight of a four-wheeled double-decked vehicle shall not exceed 10 tons or 9 tons in the case of a single-decker and the laden weight of any one axle of a four-wheeler shall not exceed two-thirds of the total weights transmitted by all the wheels. In the case of a vehicle with more than four wheels the laden weights shall not exceed 12 tons, or 4½ tons on any one axle. In calculating the total laden weight a full supply of water, oil and fuel must be included.

**STABILITY.** In the case of a single-decker fully laden and a full complement of passengers on the upper deck only in the case of a double-decker it must be possible to tilt the vehicle to either side to an angle of 28 degrees without the point at which overturning occurs being passed. In the case of a vehicle registered on or before July 1st, 1931, an angle of 27 degrees is substituted for 28 degrees.

**BRAKES.** All brakes required by any regulation to be fitted shall act directly on the wheels of the vehicle and not through the transmission gear. This regulation, however, does not apply to vehicles registered on or before January 1st, 1933.

**STEERING.** In addition to the existing regulations regarding the steering mechanism it is now laid down that dust excluding covers which would prevent ready inspection shall not be fitted to any joint or connection of the steering mechanism. All bolts and pin connections must be made so that when they are in any position other than horizontal the head of the bolt or pin shall be uppermost.

**EXHAUST PIPE.** The exhaust pipe outlet must be placed on the offside and far enough to the rear to prevent, so far as practicable, fumes from entering the vehicle.

**ENTRANCES AND EXITS.** In the case of a single-decker or in the case of the lower deck of a double-decker there shall be not less than two means of entrance and exit situated on different sides of the vehicle, the front or back being regarded as a side. One of these entrances and exits may be restricted to use in case of emergency. In the case of a stage carriage any means of entrance and exit in ordinary use shall always be on the near side, and any means of entrance and exit on the offside shall only be used in case of emergency. Provided that in the case of a vehicle having a doorless opening connecting the lower deck with a rear platform, it shall be sufficient compliance with this regulation if there is access to such platform from both the near and rear side.

No flap-seat or other seat shall be fitted in such a way that when in use it may obstruct access to any entrance or exit.

In the case of a double-decker with a permanent top with an enclosed stairway some alternative means of exit from the upper deck must be provided, such exit not being on the same side as the normal exit. Where the normal means of exit from the upper deck coincides with the means of exit from the lower deck the clear width of the joint exit shall not be less than 36 inches. All exit doors shall be capable of being opened by one operation of the locking mechanism.

Every entrance or exit must be not less than 21 inches in width and if fitted with a door shall be so arranged that when the door is open there shall be a clear space of no less dimensions. In the case of an emergency exit, however, it will be sufficient if the width of the doorway is 21 inches and there is a clear space leading to it of no less dimensions than those of a gangway. If access is provided to the rear platform from the back of the vehicle the clear space available must not be less than 18 inches. In the case of a double-decker the emergency exit shall be not less than 5 ft. by 18 in.

Vehicles registered on or before January 1st, 1932, provided that there is one entrance and exit on the near side and in rear of the rear wheels, and the width of the clear opening is not less than 18 inches will be deemed to comply with the regulations.

**GANGWAYS.** There shall be unobstructed accessibility to every seat from some entrance; and in the case of a stage carriage fitted with a permanent top there shall also be unobstructed internal accessibility to every seat.

The width of every gangway shall be not less than 12 inches up to a height of 2 ft. 6 in. from the floor and not less than 14 in. above that.

**LIGHTING.** Adequate artificial lighting must be provided for the illumination of any deck fitted with a permanent top and in the case of an open double-decker at least one lamp must be provided near to the top of the staircase.

**DRIVER'S CAB.** The driver's cab must be designed to give adequate leg and headroom and the controls must be placed so that they can be easily reached and quickly operated. The driver must be afforded adequate protection during inclement weather, and where an entirely enclosed compartment is provided for the driver there must be adequate ventilation without the necessity for opening the front windscreen and light from the internal illumination of the vehicle must be prevented from incommoding the driver.

Where a vehicle is fitted with a front glass windscreen an efficient automatic windscreen wiper must be fitted and the windscreen must be capable of being opened so as to give the driver a clear view ahead.

**GENERAL CONSTRUCTION.** All bodywork must be soundly constructed of suitable and well finished materials and in good and serviceable condition.

MUST BE EQUIPPED WITH PNEUMATIC TYRES.

Every vehicle registered for the first time under the Roads Act, 1920, on or after February 10th, 1931, shall be equipped with pneumatic tyres.

### THE FOLLOWING REGULATIONS WILL NOT APPLY TO VEHICLES REGISTERED UNDER THE ROADS ACT, 1920, ON OR BEFORE JANUARY 1st, 1932.

**OVERALL LENGTH.** The overall length of a four-wheeled double-decker shall not exceed 26 feet.

**HEIGHT.** No single-decker shall exceed 10 ft. 6 in. in height and no double-decker 15 ft. in height. The height from the ground to the highest point of the roof of the lower deck of a double-decked vehicle shall not exceed 9 ft. 3 in.

**SIDE OVERHANG.** In the case of a stage carriage no part of the vehicle shall project laterally more than 6 in. beyond the outer face of the outer tyre on the rear wheel on the same side of the vehicle.

**SPRINGS.** Transverse springs if fitted at the rear of the vehicle shall be fitted only as supplemental to longitudinal springs, and in any case where transverse springs are fitted the system of springing shall be so designed that there is no excessive body sway. The rear longitudinal springs shall be attached to or bear upon the rear axle or axle casing as near to the road wheels as reasonably

Digitized by Google

possible, and the distance from outside to outside of such springs shall be not less than 50 per cent. of the overall width of the vehicle. In the case of a vehicle which is fitted only with a transverse spring or springs at the front, the distance from outside to outside of the rear springs shall be not less than 53 per cent. of the overall width of the vehicle. Where longitudinal springs are fitted at the front of the vehicle they shall be as wide apart as possible and the distance from outside to outside of such springs shall be not less than 42 per cent. of the overall width in the case of double-decked vehicles and not less than 37 per cent. of the overall width in the case of single-decked vehicles, provided that if the distance between the rear springs from outside to outside is 53 per cent. or more of the overall width of the vehicle the minimum distance between the front springs as provided above may be reduced by 1 inch.

**STEPS, PLATFORMS AND STAIRS.** The lowest step for the ordinary entrance to the vehicle when empty shall not be more than 17 inches or less than 10 inches above the ground. Non-slip treads shall be fitted to every step of every doorway.

Fixed steps shall be not less than 9 inches wide, and in no case shall the steps project laterally beyond the front wings.

In the case of a double-decker the horizontal distance from the riser of the top step to the vertical plane passing through the back of the rearmost seat on that side of the vehicle excluding any grab rail which does not project more than 3 in. from the back of the seat shall be not less than 26 in.

**GANGWAYS.** In the case of a single-decked vehicle and the lower deck of a double-decker the head-room shall not be less than 5 ft. 3 in. if the seating capacity does not exceed 14, and not less than 5 ft. 10 in. if the seating capacity exceeds 14. The height inside the top deck of a double-decker must not be less than 5 ft. 8 in.

**SEATS AND SEATING CAPACITY.** Where seats are placed lengthwise the surface of any portion of the seat, against which the back of the passenger is to rest, shall be at least 54 inches from the surface of the corresponding portion of the seat facing it. Cross or transverse seats shall be so fitted that when facing in the same direction, a clear space of at least 26 inches shall be provided in front of the back of each seat at all points measured along the top of the seat back.

**TURNING CIRCLE.** A vehicle shall be so constructed as to be capable of turning in either direction in a circle not exceeding in diameter 60 feet in the case of a vehicle the overall length of which does not exceed 26 feet, and 66 feet if the overall length exceeds 26 feet.

**CLEARANCE.** A vehicle shall be so constructed that no portion thereof within the limits hereinafter specified, shall be nearer to the ground than 10 inches. The limits shall extend in length from the foremost part of the vehicle (excluding the starting handle and the body work) for the distance of, in the case of a four-wheeler, 14 ft. 6 in., in the case of a six-wheeler, 13 feet, or in the case of a vehicle the foremost driving axle of which is less than 14 ft. 6 in., or 13 ft., as the case may be, in rear of the foremost part of the vehicle up to, but not including the driving axle, and shall extend in width for a distance on either side of the centre line of the vehicle of not less than one-third of the distance between the centre lines of the tracks of the front wheels.

### THE FOLLOWING REGULATIONS WILL COME INTO FORCE ON JANUARY 1st, 1932.

**GUARD RAILS.** If the wheels on either side of a vehicle have a clear space of more than 2 feet between the nearest points, a guard rail running board or similar device must be fixed to guard such space effectively to within at least 9 inches of the ground.

**FUEL TANKS, ETC.** All fuel tanks shall be suitably encased or screened and shall not be placed under any part of any gangway which is within 2 feet of any entrance or exit of a single-decker or of the lower deck of a double-decker. All carburetters and apparatus associated therewith shall be so placed that no fuel leaking therefrom shall fall upon any part or fitting which is capable of igniting it or into any receptacle where it might accumulate.

**TRANSMISSION SHAFTS.** Open transmission shafts must be protected so as to reduce the risk of damage to other parts of the vehicle in the event of the shaft breaking.

**STEPS, PLATFORMS AND STAIRS.** In the case of a double-decker the outer stringer of an outside staircase shall be so constructed or a band placed as to act as a screen to persons ascending or descending, and the height of the outer guard rail shall be at least 3 ft. 3 in. above the front of the tread of each step.

**VENTILATION.** There shall be adequate ventilation without the necessity for opening the main windows.

* * * *

# Licences and Certificates.

The Public Service Vehicles (Licences and Certificates) Provisional Regulations, 1931, became operative on February 9th last, and should be read in conjunction with the Public Service Vehicles (Transitory Provisions) Order, 1931, particulars of which were published in the February issue of *The World's Carriers* and tells operators how to obtain licences.

In the particulars appended, "licence" means a public service vehicle licence or a road service licence; "Certificate" means a certificate of fitness or a certificate of conformity to an approved type vehicle.

No licence, backing or certificate shall be issued until the appropriate fee is paid.

If the holder of a licence or a backing changes his address during its currency, he must notify such change to the Traffic Commissioners by whom it was granted within seven days, and must at the same time send the licence or backing to the office of such Commissioners for endorsement. The holder must produce the licence, backing or certificate for examination at his principal place of business when required so to do by any police constable, public service vehicle examiner or by any person authorised by the Traffic Commissioners. If a licence, backing or a certificate is lost, destroyed or defaced the holder must forthwith notify the Commissioners who shall on payment of 2s. 6d. issue a duplicate. Where it has been defaced the duplicate shall be issued only after the surrender of the original.

If a licence ceases to have effect or in the event of the suspension or revocation of a licence, a backing or a certificate, the holder must within five days of being notified, send it to the Commissioners for retention during suspension or cancellation as the case may be and the Commissioners shall return it to the holder on the removal of a suspension.

Notice of the death of a holder of a licence or backing shall forthwith be sent to the Commissioners, but if application for a new licence or backing is made within fourteen days of the death the legal personal representative of such person shall be deemed to be the holder for such period as shall be necessary to enable the application to be dealt with.

All appeals to the Minister of Transport against the grant, refusal, suspension or revocation of a licence, backing or certificate or against any condition or variation must be made in writing within one month of the date of the decision appealed against and shall state the grounds on which the appeal is made. A copy of every such appeal shall be sent at the same time to the Traffic Commissioners concerned and to the applicant and, in the case of an appeal by an applicant, to any person who lodged an objection.

Every application to the Commissioners for a vehicle to be inspected by a certifying officer, with a view to the removal of the suspension of a public service vehicle licence which a public service vehicle examiner refuses to remove, shall be made in writing and must state the grounds on which the application is made.

### PUBLIC SERVICE VEHICLE LICENCES.

In the following, unless the context otherwise requires, "licence" means a public service vehicle licence.

Every application for a licence shall be made to the Traffic Commissioners on a form to be obtained from them on demand.

The fee for a licence is £3 in respect of each vehicle.

The holder of every licence for which application was made before the vehicle has been registered under the Roads Act, 1920, shall, upon the vehicle being so

Digitized by Google

registered, notify the Commissioners of the identification mark and send them the licence to be endorsed accordingly. On the first issue of a licence the Traffic Commissioners will issue to the applicant a plate which will remain the property of the Minister of Transport and the plate must be fixed in a conspicuous position outside on the back of the vehicle at a height not exceeding 4 feet from the ground to the top of the plate and as close to the near side as possible. The plate must be kept from obstruction and on the revocation, suspension or expiry of the licence it must be returned forthwith to the Commissioners. On the removal of a suspension the Commissioners will return the plate to the holder of the licence. If a plate is lost or defaced a fresh one will be issued. If the holder of a licence ceases to be the owner of the vehicle he must return the licence to the Commissioners for cancellation.

### CERTIFICATES OF FITNESS.

Application for a Certificate of Fitness must be made to the Commissioners for the Traffic Area in which the vehicle is available for inspection on a form to be obtained from them on demand. The fee for a certificate is £3. No certificate of fitness shall become invalid by reason of changes in ownership of the vehicle during the currency of the certificate.

### APPROVAL AS A TYPE VEHICLE.

The question of obtaining the approval of a vehicle as a type vehicle is one chiefly for chassis manufacturers and coachbuilders.

Every application for approval as a type vehicle must be made in writing to the Minister of Transport accompanied by two sets of working drawings or blue prints and such detailed specifications and calculations as the Minister may require, and every facility must be given to the Minister for the inspection and testing of the vehicle.

The fee for the approval of a vehicle as a type vehicle will be £25.

Where an application for approval as a type vehicle is for a vehicle which conforms substantially with one already approved as a type vehicle, the application may be made by way of reference to such type and the fee in this case will be £10.

### CERTIFICATES OF CONFORMITY TO A TYPE VEHICLE.

An application for a certificate that a vehicle conforms in design, construction and equipment with a vehicle which has been approved by the Minister of Transport as a type vehicle, may be made to the Commissioners for the Traffic Area in which the vehicle is available for inspection on a form to be obtained from them on demand. The application must be accompanied by a declaration that a vehicle does so conform which must be made by the manufacturer of the vehicle or by any person authorised by him. Where the chassis and body have been manufactured and built by different persons, both must make the declaration.

The fee for a certificate of conformity to a type vehicle will be £1 in respect of each vehicle certified.

The holder of a certificate of conformity to type for which application was made before the vehicle has been registered under the Roads Act, 1920, must, upon the vehicle being registered, notify the Commissioners from whom the certificate was received of the identification mark allotted to the vehicle and send the certificate to them to be endorsed accordingly.

### ROAD SERVICE LICENCES.

An application for a Road Service Licence or a Backing must be made to the Traffic Commissioners on a form to be obtained from them on demand, and an application must be sent to them to reach them not less than eight weeks before the date on which it is desired that the licence or backing shall take effect. The Commissioners may, however, deal with any application although it was not received by them within the time prescribed.

Every application must be accompanied by a notice for insertion in the statement to be issued by the Commissioners. The notice must state the name and address of the applicant, whether the service is to be one of express carriages or of stage carriages, the terminal points of the service, the route within the traffic area sufficient to identify the roads to be traversed, and the period or periods of the year during which the service is to be operated, and, by reference where possible to published time-tables, the frequency of the service in general terms, and in the case of all services of express carriages and of all services in the City of London and the Metropolitan Police District requiring a road service licence the notice shall also state the points at which passengers are to be taken up or set down.

In the case of excursions and tours at an inclusive return fare only, the above provisions shall not apply and the notice must state in respect of each group of such excursions and tours originating from one point, the name and address of the applicant, the point from which the group of excursions or tours will originate, a description of the route of each excursion or tour sufficient to identify the roads to be traversed, a general description of the whole route where the excursion or tour passes through more than one traffic area, the period or periods of the year during which each excursion or tour is to be operated, the maximum number of vehicles to be employed on the group of excursions or tours on any one day, and whether it is proposed to run other excursions or tours on special occasions which cannot be specified at the time of application.

It will be a sufficient compliance with the Regulations in the case of applications by the same applicant for road service licences to continue services operated during the past year in accordance with published time-tables for a single notice to be furnished giving the name and address of the applicant, a list of all the services proposed to be continued with a short description of each and showing any modifications of the previously published time-tables.

The Commissioners will issue weekly or fortnightly a statement containing (a) notices of applications; (b) the dates and places of the public sittings and the applications they propose to hear at each sitting and the applications they propose next to consider; and (c) the decisions which have been arrived at on applications and not notified in a previous issue. These statements may be inspected at the offices of the Commissioners and copies will be supplied to any persons requiring them at a price not exceeding one shilling each.

The fee for a Road Service Licence will be £1 and for a Backing 10s.

A road service licence or backing will, unless previously revoked, continue in force up till and including one of the following dates which occurs next before the expiration of one year from the date on which the licence takes effect—the last day of February, the last day of June and the last day of November in each year.

If the Commissioners wish to vary the conditions attached to a licence or a backing they must give notice to the holder, and if the holder desires to object to the proposed variation he must within seven days give notice in writing to the Commissioners of the grounds of his objection. The holder must in any event send the licence or backing to the Commissioners within the seven days. The Commissioners after considering any objection will make any necessary endorsement and return the licence or backing to the holder.

The provisions of the Road Service Licences' Regulations will not, unless the Commissioners require otherwise, apply in the case of an application to run a service for some special purpose on an occasion to be specified in the application or during a restricted period not exceeding one week, provided that in the opinion of the Commissioners the need for such service could not reasonably have been foreseen in time for the Regulations to have been complied with. The fee for such special licence, if granted, will be 5s., and for a backing 2s. 6d.

The names and addresses of the Traffic Commissioners from whom forms of application for all licences can be obtained, were printed in the February issue of *The World's Carriers.*

## Road Traffic Act, 1930. Part IV.

### Public Service Vehicles (Transitory Provisions.)

ON the 9th February, the Minister of Transport made the Public Service Vehicles (Transitory Provisions) Order, 1931, for the purpose of enabling the change-over from the present licensing system to that provided for under the Road Traffic Act to be effected.*

* Details of this Order were published on page 190, of our February issue.—Editor.

From information which has been received from the Traffic Commissioners, it now appears that the number of vehicles at present operating without licences to ply for hire is greater than could have been anticipated, and that the work involved in their examination prior to the issue of Certificates of Fitness and Public Service Vehicle Licences cannot be completed by the 1st April, the date

Digitized by Google

on which it is proposed that the new system of licensing shall come into operation. Somewhat similar conditions also obtain in the case of drivers and conductors who do not now hold licences to act as such.

In these circumstances, the Minister has made a further Order amending the terms of the original Order so as to provide:—

1. That where an owner makes application to the Commissioners for a public service vehicle licence before 31st March, he may, whether that vehicle is now licensed to ply for hire or not, continue to use it as a contract carriage or on an authorised service until his application has been dealt with.
2. That a driver or conductor who makes application to the Commissioners for a licence before 31st March, may continue to act as driver or conductor until his application has been dealt with provided that:—
   (a) he is licensed to act as a driver or conductor by one of the existing licensing authorities on 31st March; or
   (b) if he is not so licensed, he has been regularly employed as a driver or conductor since 1st January, 1931.

The provisions of the original Order dealing with the operation of services are also amended to make provision for such modification of services which are wholly or partly within the Metropolitan Police District as may be necessitated by any Orders or Regulations made by the Minister under the London Traffic Act, 1924.

It will be noted that the amending Order does not in any way minimise the necessity for applications for all licences being made at the earliest possible moment.

* * * *

## Public Service Vehicles.

Representations have been made to the Minister of Transport that under the Public Service Vehicles (Licences and Certificates) Provisional Regulations, 1931, difficulties will arise in connection with public service vehicle licences where an operator desires to use a public service vehicle hired for a short period from another operator.

To meet this difficulty the Minister proposes to amend the Regulations so as to provide that the Traffic Commissioners may, on application, if they are satisfied that the person hiring the vehicle is a fit person to hold such a licence, declare that person to be the holder of the public service vehicle licence in respect of the hired vehicle for such period within the currency of the licence as they may determine.

No fee will be charged in respect of such a declaration nor will application have to be made on any particular form.

It should be pointed out that the person to whom the vehicle is let on hire will not be able to use it as a stage carriage or an express carriage except in operating a service which he is authorised to run either under a road service licence held by him or under the provisions of the Public Service Vehicles (Transitory Provisions) Order, 1931.

## Motor Coaches in London.

The Minister of Transport on March 3rd received a deputation from the Motor Hirers' and Coach Services' Association, the Booking Agents' Association of Great Britain, Messrs. Highways, Limited, and Messrs. Coach Travels, Limited, in response to a request from these bodies that they might have an opportunity of making representations to the Minister with regard to his proposals for the control of the operation of motor coaches in Central London.

Messrs. M. Logette, E. Monkman, G. Nowell and C. Dobbs (on behalf of the Motor Hirers' and Coach Services' Association); Mr. C. J. Adams (on behalf of the Booking Agents' Association of Great Britain); Mr. W. Featonby (on behalf of Messrs. Coach Travels, Limited); and Mr. E. W. Morris (on behalf of Messrs. Highways, Limited), expressed their views on the subject of the proposed London Traffic (Public Service Vehicles) Regulations of which notice was given in the "London Gazette" and in the Press on the 19th December, 1930, and Mr. Herbert Morrison in reply stated that the representations made by the deputation would receive his careful consideration.

## In Parliament.

**Aerodromes.**—In the course of a reply to a question put to him in the House of Commons **Mr. Montague** said that there are at present 122 licensed civil aerodromes of all kinds in Great Britain and Northern Ireland. With regard to municipal aerodromes, eight towns—Blackpool, Bristol, Hull, Ipswich, Liverpool, Manchester, Nottingham and Plymouth—have established aerodromes; six towns—Carlisle, Leicester, Portsmouth, Sheffield, Southampton, and Stoke-on-Trent—have purchased sites for aerodromes; 18 towns are negotiating for the purchase of sites and twelve other towns have reserved sites for aerodromes in their town planning schemes.

**Motor Coaches in London. Mr. Marjoribanks** asked the Minister of Transport how many communications he had received from owners of motor coaches and chars-a-banc plying between the provinces and London with regard to his proposed traffic regulations; and whether he would inquire as to the number of persons directly employed by such owners, whether companies, firms or individuals? **Mr. Herbert Morrison** (Minister of Transport) said that representations had been received from 95 operators of motor coaches and chars-a-banc plying between the provinces and London. While he should duly take into account all relevant considerations, he did not at present see any necessity for instituting special inquiries.

**London Traffic.** Asked what progress had been made with the scheme for the general co-ordination of transport and traffic in and around London; and how soon he expected to be able to introduce legislation on the subject? **Mr. Herbert Morrison** said he hoped to introduce the Bill of which he had already given notice at an early date.

**Tramcar Signals.** Asked if he was prepared to consider the inclusion of a rule in the proposed highway code that all tramcars, electric or steam, travelling upon a public highway, should display a stop warning? **Mr. Herbert Morrison** said he did not think that he could appropriately include in the highway code any rule which would purport to affect the construction or equipment of vehicles.

**Driving Licences. Mr. Day** asked the Minister of Transport the approximate number of holders of driving licences issued during the 12 months ended to the last convenient date, and the revenue received in respect of such licences; and how many persons had had their applications for driving licences refused through their inability to comply with the recent legislative conditions? **The Minister of Transport** (Mr. Herbert Morrison) said that the number of driving licences issued from 1st December, 1929, to 30th November, 1930, was 2,809,583, and the revenue received therefrom was £702,396. He had no information as to the number of applications for such licences which had been refused.

**Farmers' Third-Party Risks. Captain Cazalet** asked the Minister of Transport whether he was aware that it was necessary under the recent Road Traffic Regulation Bill for a farmer desiring to move a tractor from one field to another, which necessitated a short journey along a road, to take out an insurance policy against third-party risk for the tractor; and whether he would introduce legislation to mitigate this burden imposed on farmers? **Mr. Morrison** said he could not see his way to introduce amending legislation with a view to exempting from the provisions of Part II of the Road Traffic Act, 1930, farmers who used motor vehicles upon the public road. He understood, however, that agricultural vehicles used to a very limited extent upon the public roads might be insured against third-party risks in respect of such use at specially low rates.

**Speedometers for Public Service Vehicles. Sir W. Brass** asked the Minister of Transport whether, in order that passengers in public service vehicles might know at what speed the vehicle was travelling, he would consider making an order under the Road Traffic Act for all such vehicles to carry efficient speedometers with dials placed in such a position as to be plainly visible to the passengers? **Mr. Herbert Morrison** said he had no evidence of any general desire on the part of passengers in public service vehicles to know the precise speed of the vehicle in which they were travelling, and he was not satisfied that, on the grounds of public safety, regulations for the purpose mentioned were necessary.

# The Relationship of States to Transport.

**SIR LYNDEN L. MACASSEY, K.B.E., K.C., LL.D.,** a Past-President of the Institute of Transport, gave the third of a series of special lectures for Metropolitan Transport Students, delivered under the auspices of the Institute of Transport at a meeting held in London, on February 17th, last.

Taking for his subject "The Relationship of States to Transport," the Lecturer, in the course of his remarks regarding the relationship as evolved in Great Britain, said that competition always led in the end to amalgamations and combinations. When, after the war, the government passed the Railways Act, 1921, there was accorded at long last national recognition of the principle that railway transport could most efficiently and effectively be provided for the public under conditions of regulated monopoly, so far as there ever could be any effective monopoly of railway transport with railways originally laid out in many cases as competing lines. When, later, road transport had begun seriously to compete with railway transport, Parliament in 1928, authorised the railway companies themselves to institute road transport services, both for passengers and goods.

But competition still prevailed between passenger services operated on roads by tramways, trolley vehicles, or motor omnibuses, except in some of the great municipalities where the Corporation, being the owner of the tramways, refused, as the licensing authority, to licence motor omnibuses to compete with the tramways.

In respect of goods traffic, competition still flourished unrestrained, both between railways and carriers on the roads and between the road carriers themselves to a degree that was utterly wasteful and uneconomic and which presumably was to be allowed to continue until such damage and loss had been inflicted on the competitors as would force the acceptance of some arrangement limiting, if not eliminating, the competition.

### What should be the Relationship.

"What in general should be the relationship of a State to transport?" Let him emphasise that no universal proposition could be laid down. What exercised the greatest influence on the nature of the relationship between a State and its national transport system was the national temperament combined with the national history.

The original rule in Great Britain was, in railway business as in other business, "as much scope for private enterprise and as little Government as possible." But the characteristic of modern English railway policy had been the gradually growing restriction on private initiative and enterprise through increasing State control.

All services of public utility, e.g., the supply of gas, water, electricity, and transport must for the sake of efficiency be (1) monopolies: and most would agree, if they were prepared to accept the lessons of experience, that they must be for the protection of the public, (2) controlled or regulated monopolies. There was two practical considerations. First, they must be comprehensive and cover effectively the whole area of supply. This could not be attained under conditions of competition. Private competitors would always pick the most profitable routes and leave neglected the unprofitable. It was only therefore by attaching to the right to use what were profitable routes, the obligation to serve routes that were unprofitable and yet must be served, that comprehensiveness of service could be secured and founded on an economic basis. Monopoly of service, or supply, was the only effective way of attaining this objective. Secondly, charges could not be varied according to the individual cost of providing or affording each particular service or supply. There must be a uniform basis of charge, which, by making "fat routes" pay for "lean routes," provided the necessary economic income. This could best be effected under some system of controlled monopoly.

It was only recently that we in Great Britain were realising what continental countries had recognised and practiced long ago, that the supply of transport was governed by precisely the same considerations as the supply of gas, water, or electricity, or any other public commodity.

### Present Tendencies in Great Britain.

"Is there any case for the relationship of the State to transport in Great Britain becoming one of 'public ownership and operation'? So far as industry generally was concerned, he started, personally speaking, with a strong view, based he thought on sufficient evidence and arguments against the State undertaking any kind of industrial enterprise. As an economist, and not a politician, he approached the general question of whether the State in Great Britain should embark in industry.

*Firstly,* in Great Britain one was bound to assume, having regard to the genius of the people, the national temperament and the average Englishman's sub-conscious outlook, that *prima-facia* private enterprise and individual freedom in economic life was the true rule of progress.

*Secondly,* when certain particular public economic needs must urgently be met and it was proved, beyond all question, that those needs could not be met under the normal procedure of private enterprise, then he suggested any reasonable assistance by the State to enable private enterprise to meet those needs was preferable to the State itself going into industry to meet them.

*Thirdly,* if in the end it was incumbent on the State to start or take over an industry to meet an urgent public economic need, one could only hope for the best and be prepared for the worst. The real test was would the community probably lose more by not having the need met, than it would certainly lose by having the meeting of it undertaken by the government.

But he recognised that, within the sphere of a monopoly, conditions were more favourable to State enterprise than would be the case if the conditions, under which the State enterprise had to be carried on, were competitive. If the State was supplying a *commodity of public utility,* under monopoly conditions, its customers would not, in his view, be so well supplied as they would be if they were supplied by reasonably efficient private enterprise operating under the same conditions. On the other hand, they would probably be better supplied by the State under monopoly conditions than they would be if supplied with the same commodity, by two or more private companies, or persons keenly competing with one another for the supply. So we might, and indeed were bound to, say this. That for State enterprise, if we are driven to it as an economic necessity, or have it forced upon us as a political principle, the field of transport is one of the few favourable spheres available for its operation.

The crucial question was: Are any State railways as efficiently managed and worked as they would be under private enterprise? In his opinion the results of State ownership and State management in foreign countries and our Dominions were not such as to induce us lightly to abandon the policy of private ownership and private management which up till now has been the policy in Great Britain. Up till the war, he would have said that State ownership and State working would only come in England, if at all, as part of the programme of some political party, without any compelling economic pressure such as existed in foreign countries and in our Dominions. But events since the war made him now considerably less dogmatic. As he interpreted current conditions and tendencies, there seemed to be considerable probability of nationalisation, at no distant date, of railways in Great Britain.

English railway management, and English railway officials, he did not hesitate to say, were the most efficient in the world, having regard to the conditions under which they had to conduct railway transport, conditions incomparably more difficult than in any other country, the inevitable legacy of pioneer work. On them, the government of 1921 had imposed a burden almost insuperable. As the government saw it, every financial difficulty inherent in their grouping system would be handsomely met by immense economies that would be effected by grouping. But few of those economies had materialised, in spite of the almost super-human efforts of railway managements and railway officers to achieve them. They were largely figments of the political mind.

While economic uncertainty was developing in regard to the future of railway private enterprise in Great Britain, there were circumstances, now coming into prominence, which were destined to exercise a potent effect in determining whether English railways would eventually be nationalised or not. There was a growing and an intelligible inclination on the part of traders, local authorities, and passengers to refuse to admit that because certain facilities of transit or transport could not be provided on an economic basis, that was a conclusive argument against their being provided. In other words, there was a steadily increasing tendency in many sections of the community to insist that facilities of transit and of transport should be provided, even at an economic loss, if they were necessary in the general interests of industry, or to meet some pressing social need. To any economist, like himself, that was a dangerous contention. No self-subsisting commercial concern could long continue in business if its annual budget was not balanced. But governments did not always regard themselves as subject to such salutary limitations. They could, as in fact they did

Digitized by Google

in many countries, make up by contributions from national taxation what they lost on the working of a State undertaking. It was very obvious to any casual observer here in Great Britain, that, just as it had always been in continental countries and in some of our Dominions, there was now a conviction pervading many classes that it was right to regard transport as something vital to the welfare and progress of the nation, and that where it was essential and could only be provided at a loss, the State should provide it and make good the loss out of national funds. Certainly if unremunerative facilities of transport were to be afforded, and be it noted they were to-day being provided by many municipal transport undertakings by recourse to the local rates, they could only be provided under a regime of nationalisation. At one time nationalisation in Great Britain was purely a political object; it represented merely a type of social regimentation, postulated by some schools of political thought. Now there was massing behind it definite economic pressure, the existence of which had to be recognised, however much economic arguments were against it.

# Scottish Commercial Motor Users' Association.

## Annual Meeting.

Members of the Scottish Commercial Motor Users' Association held their 10th annual general meeting in the Central Station Hotel, Glasgow, on Wednesday, February 18th. Mr. E. Graham Guest, J.P., M.A., presided, and was supported by Bailie W. J. Thomson, J.P., Mr. Jas. C. Caldwell, Mr. John W. Loudon, and others.

In his opening remarks the Chairman referred to the sound position of the Association, at the same time stressing the need for increased membership. The need for strong bodies like the C.M.U.A. was seen in the Road Traffic Act, particularly in the case of driving hours because the Act expressly laid down that the Minister could only vary those hours if a joint representation of masters and men was made. The men got together in their unions, and the masters must get together and there was no good reason why a commercial motor user should not join an association.

Mr. John W. Loudon said the association was in a better condition than it had ever been despite the great industrial depression. The Road Traffic Act had been the most important matter which the National Council had had under consideration. It had been hard work going through the various Committee's reports, recommendations, draft regulations, etc., but they had received great help from the London Commercial Motor Users' Association, and particularly from Mr. Bristow. The outstanding Clause in the Act was Clause 19, and it had necessitated President Guest's almost continuous attendance in London of late.

The outstanding case of the year was the opposition to the Glasgow Provisional Order which desired wide monopoly powers for the Glasgow Corporation. The results of the Association's efforts in resisting the Bill were looked upon with satisfaction. They were still pursuing their efforts to obtain a reduction in taxation, and a Memorandum was in course of preparation for submission to the Chancellor of the Exchequer showing the serious extent of the present motor taxation and petrol tax.

### The Road Traffic Act.

Referring to the Road Traffic Act, the Chairman (Mr. Graham Guest) said that Clause 19, dealing with the time for which drivers of certain vehicles might remain continuously on duty, was a difficult Clause, and so far no settlement had been made regarding it. The driver was limited to 5½ continuous driving hours, and he must have half an hour's time for rest and refreshment, and then he could drive continuously for another 5½ hours after which he must have 10 hours rest.

In the case of many commercial motor users the man was not driving continuously for 5½ hours, as for example, furniture removers, dock trade and other centres. But, unfortunately, the Act said that any time spent on the vehicle by the driver in any other capacity shall be reckoned as time spent in driving. That made it almost impossible for some of the traders to carry on their business.

This matter was discussed by a Committee in Parliament and it was then stated that a proviso would be made, and took the form of Sub-Section 3.—"The Minister may, on the application of a joint industrial council, conciliation board, or other similar bodies, or on a joint application by such organisations, representative of employers and workpeople in the industry, as the Minister of Labour may certify to be proper bodies to make such an application, and after referring the matter to the Industrial Court for advice, by order, vary the periods of time prescribed in this Section, provided that he is of opinion that such variation is not likely to be detrimental to the public safety."

After the Act was passed a large number of committee meetings were held. Some 40 different associations met in London and discussed this matter which shows that all those who had anything to do with commercial motor users were alive to the importance of this particular regulation. A suggestion was made to the Minister that he should increase the hours from 5 to 8, and cut down the rest time at night. The Minister, after listening, said that the Act was passed solely for the benefit of the public, and anything proposed must not be detrimental to the safety of the public. The Minister informed them that he could not treat with either the Associations or the Unions separately. They would have to approach him jointly and agreed. Meetings of sub-committees between associations and unions had been held. The associations asked for an 8-hour continuous duty including time for rest and refreshment in any 24 hours. The unions, however, proposed to increase the rest hours from 10 to 11. When the committees retired to consult their parent bodies, a section of the masters in England would not agree to the extension of the rest hours from 10 to 11. That was the position at the present time.

Bailie W. J. Thomson, speaking on the Act, expressed the opinion that it was unfortunate that an Act passed chiefly in the interests of safety should be used as a means of bringing in a fair wages clause and hours of work. In the early days when they were helping in making up the recommendations for the basis of the Bill, it was never even hinted to them that the question of hours or wages would be introduced. Another point was the wide powers granted to the Minister to make regulations. He did not think there was another Act which granted such powers.

Several points of interest were brought out in the discussion which followed.

One member pointed out that there were a good many trades in Scotland where the men were not in any union. It was not that they objected to the Union ideas, but because they failed to see what benefits could be derived by joining. His firm's business was a seasonable trade, and the men were driving continuously but had long waits in between such as when calling on a number of shops, and the men do not see why they should be tied down to such a short day.

A very interesting point regarding the conditions in Aberdeen was raised by another member. The problem they had in Aberdeen, he said, might be of interest. The trawling industry was a very important one in Aberdeen, and it was often the case that in a matter of two days they had perhaps 40 trawlers to deal with. That meant night and day work. The ice and coal companies had simply got to work all the time the trawlers were in, and they claim therefore that unless they have a free hand on the days the vessels arrive, it would be impossible for them to run their business. Any restriction in this direction would certainly result in the trawlers going elsewhere. Another point was that neither the ice companies nor the collieries could afford to double their staff for those particular days. He was at a loss to understand how they could deal with the Union question because the men were not in a union.

The General Secretary said that the point just raised had not been mentioned before, and had Aberdeen been alive they would have brought it to the forefront earlier. It showed the need for increased membership and active interest in the Association. In Edinburgh they had practically all the main firms, while Glasgow had a smaller membership than the Capital, and Aberdeen was very poor indeed.

# Long Distance Road Haulage Association.

## Inaugural Meeting.

A WELL-ATTENDED meeting of those engaged or concerned in the long distance haulage of goods by road, freight exchanges and clearing houses, was held at Winchester House, Old Broad Street, London, E.C., on February 18th, and a resolution was passed which brought into being the Long Distance Road Haulage Association.

It will be remembered that in May last a Long Distance Road Haulage Committee of Inquiry was set up to inquire into the special problems of this section of road transport, and to report. The Report of the Committee was brought forward for discussion at a meeting held in London on December 16th last, when a new Committee was appointed to approach existing associations to see if proper representation could be given to those concerned with long distance road haulage, or, failing this, the Committee was empowered to proceed with the formation of an active association to watch and foster the interests of long distance hauliers.

In passing, it may be mentioned that important evidence was tendered to the Royal Commission on Transport by Sir Maxwell Hicks, C.B.E., Chairman of the original Committee, in which he dealt with the problems of long distance road haulage.

At the meeting held on February 18th at which the Long Distance Road Haulage Association came into existence, **MR. E. C. MARSTON** (M.R.S., Ltd.) was unanimously voted to the chair.

**The Chairman** briefly reviewed the activities of the Committee appointed in December last, in-so-far as they had been directed to ascertaining whether proper representation for long distance hauliers could be found within any existing association. He said that the Motor Hirers' Association and the Commercial Motor Users' Association had been approached. It was pointed out by the Motor Hirers' Association that their members were concerned mainly with the carriage of passengers. The Commercial Motor Users' Association had been asked by the Committee (1) whether the C.M.U.A. was willing to support the proposal for the licensing of long distance hauliers and clearing houses; (2) whether the C.M.U.A. was prepared to deal with the stabilisation of rates for conveyance by road. The replies to these questions were definitely in the negative. Thirdly, the Committee suggested to the C.M.U.A. that, say, three gentlemen engaged in long distance haulage should be nominated by the Committee for appointment to the National Council of the C.M.U.A., but the C.M.U.A. replied that in view of their constitution they could not co-opt representatives from outside bodies, and that the C.M.U.A. could not see its way at present to form a special long distance road haulage sub-committee.

The Chairman said that at the time these negotiations were proceeding the C.M.U.A. were attending Conferences at the Ministry of Transport in regard to Clause 19 of the Road Traffic Act dealing with the limitation of drivers hours, and Mr. F. G. Bristow, the General Secretary of the C.M.U.A., had been good enough to say that if the Long Distance Haulage Committee would prepare a memorandum on Clause 19 he would see that it was brought to the attention of the Minister of Transport. The Committee had prepared a memorandum and had forwarded it to Mr. Bristow.

Continuing, the Chairman said that it was demonstrated clearly that existing Associations could not help the long distance hauliers very much, and that if that section of the industry was to be effective they would have to form their own association.

It was proposed to go right ahead and register their own Association which he believed would become a virile one.

The primary objects of the Association would be:—

(1) To organise the industry and possess a representative body which can voice the requirements of the industry.
(2) To resist attacks from any quarter.
(3) To undertake necessary propaganda and counter-propaganda.
(4) To form a link and friendly meeting place for the many scattered units.

Long distance road transport had emerged, or was emerging, from its pioneer days, and was now recognised to be an important industry. Its voice should be heard. It would be the work of the Association to put before the public and traders the importance of road transport from the point of view of our national welfare, as well as to protect the interests of those engaged in that part of the road transport industry.

They had been supplied with ample evidence recently of the way in which legislation could be passed without the voice of those engaged in long distance haulage being heard. There had been no one to put their case forward. They had to combat propaganda emanating from the railway companies which, no doubt, had the effect gradually of making the public believe that road transport was doing this and that; was being subsidised and was damaging the roads. The Association must engage in counter-propaganda.

He attached considerable importance to the object of the Association which aimed at the formation of a link and friendly meeting place for the many scattered units of the long distance haulage industry. Probably many of their troubles could be traced to the fact that during recent years few of those engaged in the industry had met together in friendly discussion. When they did gather together they found that no one was nearly so bad as sometimes painted, and if within the Association they got together in friendly meeting to discuss their several problems, it would prove most helpful to the trade itself as well as to the individual.

Quite recently the members of the Committee had the privilege of meeting Mr. Bevin, the Secretary of the National Transport Workers Union, and, later on, they were having further discussions with him. Mr. Bevin had said that they were prepared to discuss with the long distance hauliers as a body, any reasonable suggestions in regard to the limitation of drivers hours. Mr. Bevin had given the Committee the impression that he was of opinion there had not previously been any organised body engaged in goods transport which could discuss Clause 19.

Referring to the Memorandum and Articles of Association that had been drawn up, the Chairman said that the Committee had devoted a large amount of time to the work. The Committee had given very careful consideration to the question whether membership of the Association should be open to Clearing Houses or whether it should be confined solely to operators. The Committee felt that as the Clearing Houses took a very important part on the question of rates and had considerable say with regard to owner drivers, that Clearing Houses should be invited to apply for membership and they would be welcomed.

**MR. L. W. JOYNSON-HICKS,** the Association's Solicitor, was then invited by the Chairman to call the attention of the meeting to various matters in the draft Memorandum and Articles of Association.

Mr. Joynson-Hicks pointed out that the intention was to incorporate the Association without the word "Limited." It was proposed that the name of the Association should be "The Long Distance Road Haulage Association." The income and property of the Association would be applied solely towards the promotion of the objects of the Association. The Association would not be a profit-making undertaking; any profit which might accrue would go back into the coffers of the Association.

Membership of the Association would be open to such persons, firms or bodies, corporate or incorporate engaged in or concerned or interested in the long distance haulage of goods by road as might be elected to membership by the Council. Long distance haulage was defined as being the haulage of goods by road over distances in excess of thirty miles. The amount of the annual subscription was left for determination by the Council.

The Council will consist of not less than thirteen nor more than twenty-six members.

Thirteen members will be elected by the subscribers to the Memorandum. The Council, as soon as it is formed, will divide the country into thirteen regional areas and each regional area will be entitled to put forward an application for the appointment of a Regional Committee

Digitized by Google

and each Regional Committee when formed, will have the right to elect a member to the Council of the Association. With the thirteen original members elected by the subscribers to the Memorandum and the thirteen regional members the Committee would have the full number of 26.

No member of the Council will receive any remuneration or payment. A Chairman of the Association will be elected each year.

The Chairman then formally moved that the draft Memorandum and Articles of Association be approved. The resolution was seconded, and the Chairman announced that the meeting was open to discuss the Memorandum and Articles before the resolution was put to the vote.

The following were some of the questions put to the Chair and answered:—

| Question. | Answer. |
|---|---|
| If a man had one vote for each vehicle the more vehicles he had the more power he would have in the Association. Should it not be one man one vote? | In the ordinary way a question would be put to the vote and decided on a show of hands. All would have equal power. If a poll was demanded voting would be in accordance with the amount of subscription paid by the voter. The maximum subscription to be paid for any number of vehicles was proposed at twenty-five guineas. |
| What would be the position of a member who felt disinclined to abide by a ruling of the Association? Could he resign without any obligation attaching to him? | Yes. |
| If at the end of twelve months a member considered the Association was not doing him any good and he did not pay a further subscription did he automatically cease membership or did he continue to rank as a shareholder? | He could resign without any liability other than any unpaid subscription due at the time of his resignation. |
| Was it proposed to give members legal assistance in the event of prosecution? | This would be a matter for the Council. If the proceedings raised an important question of principle or policy the Council would in all probability decide to support the member proceeded against. |
| Was membership open to long distance hauliers who contracted for the railway companies? | This was a question for the Council, who would consider each application for membership on its merits. |

The proposition that the draft Memorandum and Articles of Association be adopted was then put to the meeting and carried.

The following resolution was then put to the meeting, seconded and carried:—

> That the following gentlemen be and they are hereby authorised to subscribe their names to the Memorandum and Articles of Association and that such signatories elect themselves as members of the Council of the Association:—Mr. W. Donaldson Wright (Transport Department, Nottingham Chamber of Commerce), Major M. W. Dring (Managing Director, Northern Motor Utilities, Ltd.), Mr. L. W. Gupwell (A. J. Gupwell, Ltd.), Mr. J. A. Bright (Southern Roadways, Ltd.), Mr. E. C. Marston (M.R.S., Ltd.), Mr. E. B. Hutchinson (Hon. Secretary), Mr. R. W. Sewill (London and Southern Counties Transport Co., Ltd.), Mr. Kneller (Kneller and Chandler, Ltd., Transport Contractors, Bishopsgate, London), Mr. A. C. Marston, and Mr. J. F. Nicholls (McNamara & Co. (1921), Ltd.).

Discussion arose on the question whether Clearing Houses should be eligible for membership.

The Chairman reiterated the views of the Committee on this point and eventually he proposed:—

> That the Council have power in their discretion to admit to the Association any person, firm or body engaged in or concerned in the long distance haulage of goods by road.

The resolution was seconded and carried, and Major Thomas (Carey, Davis & Thomas, Ltd., Motor Contractors, Kingsland Road, London, E.) was elected as a member of the Council as a third representative of Clearing Houses.

The Chairman said that machinery would at once be started to get the regional areas going and members in these areas would be communicated with and urged to band themselves together and form regional committees. As they knew, Traffic Commissioners had been appointed under the Road Traffic Act and it was the idea of the Council that the areas to be formed by the Association should correspond with the areas of the Traffic Commissioners especially if there was to be any question of the Commissioners licensing haulage contractors.

In reply to a question whether it was intended that the Association should absorb any similar existing local Associations, the Chairman said it should be the policy of the Association to offer to absorb such Associations as by so doing they could accomplish much more.

They would later appoint a permanent Secretary and establish Association offices. Mr. E. B. Hutchinson had hitherto acted as their Hon. Secretary but he could not do the work permanently.

**Mr. J. A. Bright** referred to an article which appeared recently in the Press which forecasted that the Chancellor of the Exchequer would increase the petrol tax and reduce the vehicle tax. He said that four pence on the petrol tax represented between five and ten per cent. on the cost of transport. He urged those in the industry to oppose any such proposals and to get busy individually and communicate with their local Members of Parliament.

**Mr. E. B. Hutchinson** said that the meeting had been called to bring into existence an Association which would help one and all engaged in long distance haulage. They must pull together and help each other. Proposals might be made by the authorities to tax them more severely and other interests might have something adverse to say to them. They must stand together and present a united front, and by so doing they would make the industry strong and healthy and better able to resist any attacks that might be made upon them.

**Mr. W. Donaldson Wright** proposed a hearty vote of thanks to Mr. E. C. Marston for presiding, and in the course of his remarks urged those engaged in the industry to join the Association and to make it strong not only numerically but financially in order that the Association could be made efficient and carry on extensive propaganda.

The Chairman, acknowledging the vote of thanks, said he hoped that the Association would quickly prove itself and it would if the Committee knew that they had at their back those who were engaged in the long distance haulage industry.

Any further details regarding the Association, and forms of application for membership, may be obtained from the Hon. Secretary, Mr. E. B. Hutchinson, Lloyds Bank Chambers, Vicar Lane, Leeds.

## Two Hundred Buses Needed?

CONSIDERABLE interest has been created in Newcastle by a scheme for the early and entire substitution of motor buses for tramcars in the streets of that city. This is suggested by Councillor Walter C. Percival, chairman of the Bus-operating Sub-Committee of Newcastle Corporation Transport Committee. He considers this to be a practical proposition, provided that the public is prepared to pay fares not more than 15 per cent. above the current tram fares for a period of five years. The outstanding capital debt, he says, could be paid off in a comparatively short period, and the city equipped with an up-to-date form of transport. The Corporation's bus undertaking is flourishing as compared with the tramways; and Councillor Percival urges that 200 new buses should be purchased at a cost of £357,000. The chairman of the Transport Committee, Ald. Richard Mayne, believes, however, that trams are still necessary in Newcastle.

# Coachmakers and Coach Harness Makers.

## Livery Dinner of the Worshipful Company.

WHEN we wrote about the Worshipful Company of Coachmakers and Coach Harness Makers of London in 1904, we little thought that we should be present at a dinner of the Company when the Senior Warden would state that it was the ambition of the Company to become the Transport Company of London. Yet this was the statement of Mr. Sidney Norris. Twenty-six years ago the Coachmakers' business was still a flourishing one as the motor vehicle was only just beginning to make its appearance in any numbers on our streets. It speaks well for those who have guided the affairs of the Worshipful Company that they have moved with the times, and now represent every aspect of transport by road, and by air where the internal combustion engine is used.

The Livery dinner held on February 24th, at Carpenters Hall, Throgmorton Avenue, was presided over by the Master Mr. W. Lawton Goodman, who was supported by Mr. Sidney Norris, Senior Warden, Mr. A. F. Parish, Renter Warden and Mr. S. F. Connolly, Junior Warden. A large assembly of members did honour to the Lord Mayor and the Sheriffs and other distinguished guests. Amongst others present were: Sir Edward Manville, Immediate Past Master, Lord Blanesburgh, Lord Aberconway, Lord Ampthill, Sir Herbert Austin, Sir Harold Bowden, Admiral Sir William Reginald Hall, Sir Edward Iliffe, Mr. C. le M. Gosselin, Mr. Walter Welch, Sir William Letts, Major General Evan Gibb, F. Handley Page, P. R. Turner, W. Bonallack, Christopher Dodson, E. A. Dussek, W. S. Hale, Sir Walter Schroder, Past Master, C. M. C. Instone, Lt.-Col. J. Sealy Clarke, Commdr. H. Perrin, E. S. Shapnell-Smith, Col. J. S. Matthew, J. D. Siddeley, G. J. Shave, C. W. Reeve, F. W. Robson, J. G. Reece, H. Shankland, and the clerk, Mr. Henry Smith.

MR. W. LAWTON GOODMAN, MASTER, THE WORSHIPFUL COMPANY OF COACHMAKERS AND COACH HARNESS MAKERS.

The Master in proposing the toast of "The Lord Mayor, the Sheriffs and the Corporation" said he would first express on behalf of their Livery how greatly they appreciated the honour bestowed upon them by the Lord Mayor, Sheriffs and Members of the City Corporation by their presence.

Unlike many City Companies, they had never lost touch with their trade. It had always been the duty and privilege of the Coachmakers Company to see that the Lord Mayor's Coach was safe, ready and fit for use, hence the derivation of the ancient saying "Keep the Coach well oiled," a specific phrase one frequently heard in various pathways of life, used to indicate conviviality and fraternity. They had been served by men ever alert to the changing varieties of travel, transport, construction and speed. As an illustration of the trend of the times, history records that a journey by Royal Mail Coach—"The Edinburgh Express" in 1797, took 43 hours from London to Edinburgh. In 1930, the same distance took: by motor car, 10 hours; by non-stop railway express, 8¼ hours; by aeroplane, 3 hours; whilst the other day an aeroplane, carrying goods from London to Paris, accomplished the journey in 1 hr. 20 mins. These were actual facts already accomplished. Nature had provided them free with the limitless blue sky and seven seas, and, notwithstanding the wonderful achievements of Sir Malcolm Campbell on his "Blue Bird" and his "Baby" Austin—of which we are all immensely proud and tender him our warmest congratulations—when it comes to speed the flying barges of the air have it. In this connection, might he say how proud they were to number amongst their Liverymen, Sir Herbert Austin, and congratulate him on the wonderful performance of his "baby" car when driven by Sir Malcolm Campbell.

In a small country like Britain he had little doubt that the tramcar and railway steam engine would, in time, disappear altogether like the old stage coach. It would, of course, always be necessary to provide arterial roads for local traffic, but in these days of rapid progress it was quite possible to visualize the next generation travelling from New York to London in sleeping berths by aeroplane, leaving New York at night and arriving in London next morning, a 16 hours flight, or London to Edinburgh in two hours. These remarks might be considered prophetic by those who were not in touch with present day progress, but to him they were all possibilities of the future. In view of these possibilities they were fortunate to include amongst their members, Mr. J. D. Siddeley, Mr. Handley Page, and their newest Liveryman, Mr. C. A. Fairey, President of the Society of Aeronautical Constructors, which indicated that they had endeavoured to live up to their tradition of always following the trend of the times and keeping in touch with modern transport and progress, thus upholding their duty as a Guild to their Trade.

The Lord Mayor acknowledged the toast in suitable terms.

THE HOUSES OF PARLIAMENT.

This toast was proposed by Mr. A. H. Pollen, a Past Master of the Company, and Lord Aberconway and Mr. D. G. Somerville, M.P. replied.

THE WORSHIPFUL COMPANY.

This toast was proposed by Lord Blanesburgh, and in replying Mr. Sidney Norris, the Senior Warden, said that their ambition was to make their Company the Livery Company of Transport. They had made great strides in this direction and during the past few years they had added to the Livery, representatives of every phase of transport.

At the close of his speech he paid a tribute to the great qualities of their Clerks in the past and to Mr. Henry Smith the present holder of the office.

The toast of "The Guests" was proposed by Mr. J. D. Siddeley, and responded to by Admiral Sir W. R. Hall.

# London Van Horse Parade.

UNDER the patronage of His Majesty The King, with the Earl of Lonsdale, K.G., as President, The Twenty-Third Annual Parade of the London Van Horse Parade Society, will be held in the Inner Circle, Regent's Park, on Easter Monday, April 6th. As heretofore, the Parade will be open to single and pair horse vans, while a class for barge horses to be led and shown in working gear will again be included. A First-Class Award entitles the driver of a single horse vehicle, or the attendant of a barge horse, to a money prize of 15s. In the case of pair horse vehicles, the award carries with it a prize of £1. A Second-Class Award entitles a driver or attendant to 7s. 6d. (10s. in the case of pairs). A Third-Class Award entitles a driver or attendant to 3s. 6d. (5s. in the case of pairs). In addition, the Royal Society for the Prevention of Cruelty to Animals have intimated their intention of awarding a Brass Merit Badge to all recipients of First-Class Awards. The Society will award Certificates of Merit to horse foremen who are responsible for four turn-outs of sufficient merit exhibited at the Parade. It should be borne in mind that as long as a horse is well-looked after, properly groomed, and the harness and van are clean, it is possible for every driver entering the Parade to secure a First-Class Award and the R.S.P.C.A. Merit Badge. Full particulars may be obtained from the Secretary, Mr. R. A. Brown, 12, Hanover Square, London, W.1, from whom entry forms and all other particulars may be obtained.

# Motor Hirers and Coach Services' Association.

## First Annual Dinner.

THE first Annual Dinner of the Motor Hirers and Coach Services' Association, held at the Connaught Rooms, London, on February 19th last, proved to be a very enjoyable and successful function.

**Mr. H. T. RICKARDS,** the very popular President of the Association, who was in the Chair, was accompanied by Mrs. Rickards.

**Mr. A. S. COMYNS CARR, K.C.,** proposed the toast of the Association and said that to-day the Association might claim to represent all the independent operators of the country, whether they were running private hire vehicles, contract carriages, excursion tours or long and short distance coach services, and, outside London, all stage carriage services. He was glad to know that the Association was officially recognised as a body entitled to speak on behalf of all the various sections of the motor trade he had mentioned. Other sections of the trade were closely associated with and interested in the activities of the Motor Hirers and Coach Services' Association. Manufacturers and traders whose business it was to supply the needs of the independent coach operators had a close interest in the continued existence of members of the Association, because combines were apt to squeeze out the independent trader, both supplier and operator, and that was a point which, in any appeal made by the Association for the support of other sections of the trade should not be overlooked.

The Association had 350 direct members and nearly another thousand members through affiliated organisations, and that was a body of men entitled to, and he was sure would receive, a respectful hearing in official quarters and elsewhere.

In the year 1667 the horse coach did the journey between London and Bath in three days. Things had changed since then, and now a motor coach could run on railway lines, and if manufacturers would build one that could take to the water one could go to Monte Carlo without changing vehicles. (Laughter.)

### PROGRESS MUST NOT BE IMPEDED.

In the course of a reference to transport legislation, past and present, Mr. Comyns Carr said that he was sometimes afraid that Parliaments of to-day spent some time in devising means whereby a stop could be put on progress in the interests of vested interests some of which to-day were a little behind the times. We were trying to fit the traffic of the twentieth century into eighteenth century streets. Some of those present would remember the Biblical quotation which pointed out how difficult it was for a camel to pass through the eye of a needle. It seemed to him that there were two possible solutions of our traffic problem, to shave the camel or to enlarge the needle. (Laughter.) Of the two solutions enlarging the needle seemed to him better than shaving the camel, but unfortunately that view did not seem to commend itself to a section of the community. Our London of to-day was ill-planned for the needs of modern traffic, and if we had begun 20 years ago to replan it we should not have the many problems facing us to-day, and if we did not begin now to replan we should have the same problems, only ten times more severe, to face twenty years hence. We should begin to plan with broad vision, visualising what the future would be like. The position in London was typical of nearly all the principal towns in this country.

### WHY BAN THE MOTOR COACH?

We must make room for progress, and if at present it was necessary to restrict traffic then he failed to see why the particular form which provided the largest convenience for the greatest number of people should have to give way to other forms of transport. (Hear, hear.) There were other than motor coach operators who could be pushed out first and with less damage to the community.

He was sure that the representatives of the Association would find the officials at the Ministry of Transport willing to listen to the reasonable suggestions of the coach operators. If in the administration of the new Road Traffic Act, if it was yet in force or if there were any means of bringing it into force (laughter), they found something to criticise, there was a great deal in it to welcome. It was an improvement upon the patchwork and disorganised system which had preceded it. (Applause.)

**Mr. M. LOGETTE** responded, and said he was sure members would agree with him when he said "To-night's the night." (Applause.)

It was the first time in the history of the Association that members had had an opportunity of extending hospitality to some of the permanent and highly responsible officials of the Ministry of Transport, in which department Mr. J. S. Pool Godsell held an honoured position. In case any present did not know what was a "permanent" official, he might say he was a gentleman they heard so much about who governed the country from Whitehall. (Laughter.) Ministers would come and go, but permanent officials went on for ever, even surviving the Road Traffic Act. (Laughter.)

The Association received letters from the Ministry of Transport beginning "I am directed by the Minister to inform you . . . ." As the letters were usually written above the signature of Mr. Pool Godsell was it not perhaps he who directed the Minister to direct him to inform them. (Laughter.)

The advent of the Road Traffic Act placed coach operators for the first time under what they hoped would prove to be fair and just control. He wished to make special reference to the patience and courtesy shown always by Mr. Pool Godsell and his colleagues at the Ministry of Transport to the representatives of the Association who had attended conferences at the Ministry. (Applause.) Those gentlemen made every endeavour to understand the difficulties of the operators. Although the Ministry of Transport had not given the operators all they wanted yet they must be thankful for small if expensive mercies. (Laughter.) The coaching industry was already overburdened with taxation.

The Association had a strong and active Committee, ready to co-operate with all concerned in bringing the Road Traffic Act into full operation with the least possible inconvenience to the public and to themselves.

Their President, Mr. H. T. Rickards, was known to all as the founder of the Association. (Loud applause.) Mr. Eric Monkman was their statistical expert and could tell the difference between a licensed and an unlicensed vehicle. (Laughter.) Mr. Lowe was another of their stalwarts and the only man in the coaching industry who had succeeded in finding out the real meaning of plying for hire. (Laughter.) Then they had Mr. Nowell—he was one of the bad boys of the family. (Loud laughter.) Mr. Nowell always spoke in Committee at the wrong moment and he thought perhaps he was once a disciple of Lenin and Trotsky. (Renewed laughter.)

Recently the Association found it necessary to obtain the services of a full-time Secretary, and in a very short time Mr. D. Piercy had succeeded admirably in picking up the reins, and he believed that all previous membership records had since been broken. (Loud applause.) The services of many other stalwart supporters of the Association were greatly appreciated.

The Association still had very difficult tasks ahead, and their common object and policy must be to get on with the job, remembering always the advice given them on a previous occasion, "If we do not hang together we shall hang separately."

### PRESENTATION TO MR. R. P. BAILEY.

**Mr. H. T. RICKARDS,** the President of the Association, then rose, and turning to Mr. R. P. Bailey, who was a guest of the Association, said: "In the name of the Association I have very much pleasure in handing you this silver salver as a mark of our very great appreciation of the services which you rendered to the Association during your period of office as Secretary. To Mrs. Bailey we present this bouquet. We should like you to place this salver on your sideboard and when you look at it we hope you will remember us and the time we have spent together." (Loud applause.)

It was obvious that the presentation came as a complete surprise to Mr. Bailey, who said he was at a loss how best to express his thanks and those of Mrs. Bailey for the kindness of the members in acknowledging so handsomely the small services he had been able to render. He would always value the gift. (Applause.)

### A "VOLGA" BUSMAN.

**Mr. G. NOWELL,** proposing the toast of "The Visitors," said he was very agreeably surprised to find that they had with them that evening their old friends

Digitized by Google

from the Ministry of Transport. They had come practically into the centre of the inner area of the banned zone, and the only thing he hoped was that they had set a good example and had come in a vehicle containing eight seats or less. (Laughter.)

Mr. Logette had said something to the effect that in days gone by he (Mr. Nowell) was a disciple of Lenin and Trotsky. He would like Mr. Logette to remember that he himself was but a "Volga Busman." (Loud laughter.)

The coach operators were engaged in a big fight and had their backs to the wall, and were doing everything they could to save their industry from becoming extinct or curtailed.

ORGANISATION.

They had done their best to build up an industry and to give the public the benefit of luxury travel at cheap fares. He maintained that the coach operators had taken a leaf out of the book of the railway companies. If one wished to make a journey by rail and wanted a ticket one had to go to one of the main railway stations or to one of the very few and scattered railway booking agents, whereas, in the case of the motor coach industry, it did not matter where one went, whether to one of the big London stores or to a small tobacconist or confectioners, there they could get a ticket. The coach trade was brought to the door of the public. He did suggest that they had done their utmost to bring the coaching industry up to proper and modern standards. Unfortunately, although they had worked very hard, they found they were faced with very big opposition, but members felt sure that the absolutely fair and impartial Ministry of Transport we had at the present time would not see any of the smaller operators penalised owing to the fact that they were small operators and did not belong to any large combine. He took the opportunity of appealing to the Ministry of Transport to see that the coaching business was not penalised by the imposition of too much restrictive legislation in London.

BIG FIGURES IN THE COACHING INDUSTRY.

Broadly speaking, the independent coach operators in this country, of which the Association claimed to be the mouthpiece, owned some 15,000 coaches, representing a capital of over £22,500,000, and the operators employed over 60,000 men and paid out approximately £180,000 per week in wages or £9,500,000 per annum. This did not include railway and municipal services. He did suggest that it was an industry well worthy of being looked after and saving from the point of view of employment alone.

The members of the Association joined with him in extending a very hearty welcome to Mr. J. S. Pool Godsell, O.B.E., and Mr. E. B. Hart, of the Ministry of Transport. They also welcomed most cordially Mr. A. S. Comyns Carr, K.C., and Mr. J. R. Cort Bathurst who had been such pillars of strength to the Association. He would like also to extend a special welcome to Vice-Admiral Taylor, M.P., who had done such a lot for them in Parliament, to Mr. A. E. Cave, J.P., of the Motor Legislation Committee, to Mr. F. G. Bristow, the General Secretary of the Commercial Motor Users' Association, and to Lt.-Col. D. C. M'Lagan, D.S.O., of the Society of Motor Manufacturers and Traders.

**Mr. J. S. POOL GODSELL, O.B.E.**, of the Ministry of Transport, responding, referred to the value of organisations such as the Motor Hirers and Coach Services' Association to conduct negotiations with the Ministry of Transport. The Ministry in their attempts to unravel the traffic tangle had received assistance from every branch of the motor industry. Of course the Ministry could not meet all the demands made upon them by the various interests, but what they could do and had tried to do was to take the various interests into consultation and get to know their difficulties.

It had been his good fortune to meet the representatives of the Motor Hirers and Coach Services' Association, and he would like to pay particular tribute to Mr. M. Logette. The conversations the Ministry had had with the representatives of their Association had been most helpful.

TRANSPORT MUST BE REGULATED.

He was certain that the Minister of Transport had no intention of cramping the development of the motor industry, but we could not afford to-day to widen the streets of London, and all forms of transport must therefore be subject to regulation.

THE PRESIDENT.

**Mr. ERIC MONKMAN** proposed the health of the Chairman, and said what a great rock and pillar of strength Mr. H. T. Rickards, their President, had been to the Association. Their industry was going through difficult times and he did not know any other man in London who could hold the balance so well between those who were engaged in short distance, long distance, excursion tours, stage carriages, etc. (Applause.)

The toast was received with great enthusiasm the company singing "For he's a jolly good fellow."

**THE CHAIRMAN** acknowledging the toast, said it was the first Annual Dinner of the Association and he sincerely hoped it would not be the last.

## Liverpool Motor Bus Services.

AN important agreement has been negotiated by the Liverpool Corporation and the Ribble Motor Services, Ltd. and Crosville Motor Services, Ltd., for the operation of road services in and around Liverpool.

It will operate for five years from the date of its commencement.

The City Council on March 4th, was asked to confirm the agreement on a report by the Town Clerk in which he states: "In view of the statutory powers obtained by the Railway Companies, they are now in a position, should the Corporation decline to enter into an agreement such as is now proposed, to apply themselves to the Traffic Commissioners for licences to ply for hire in and around Liverpool, and to continue their present services which include those of the Ribble, Crosville, Ideal and Nor-West Motor Companies and the Merseyside Touring Co., Ltd.

"From the Corporation's point of view it is eminently desirable that some sort of an agreement of this nature should be entered into prior to the new Traffic Commissioners taking office on the 1st April, next. The Corporation would then be in a strong position and would be able to go before the Traffic Commissioners along with the Railway Company, to appeal against any applications which may be received by the Commissioners for licences to operate any other local passenger transport services either within or into the city or its outskirts."

All passenger traffic in Liverpool, Bootle and Speke is admitted to be the sole responsibility of the Liverpool Corporation.

There is an outer belt three miles from the city boundary on the eastern side including Litherland but excluding Waterloo, Crosby and Widnes, where the services shall be joint services operated by the Ribble and Crosville Companies, on behalf of those Campanies and the Liverpool Corporation. The Liverpool Corporation will bear the working expenses, and share in the receipts. Average working expenses will be payable to the Ribble Motor Services, Ltd., or the Crosville Motor Services plus 3d. per mile to cover interest charges and depreciation, but not be more than 15 per cent. above 1s. per mile for single deck buses and 1s. 2d. for double deck buses. All passenger road transport outside the city and outer belt zones and the common zone to be left to the railway and their associated omnibus companies to provide.

## Fleet of 634 Motor Buses.

MR. CLAUDE CROSLAND TAYLOR, general manager of Crosville Motor Services, Chester, speaking at the opening of the employees' new social club at Chester, said that day was the 20th anniversary of his arrival in Chester. There was then only one motor bus. Crosville now had a fleet of 634 buses and employed 2,300 persons. About a dozen motor bus undertakings had been absorbed in the last 12 months and their services now ran from Holyhead to the Potteries, down to Cardiganshire and, in the north, as far as Liverpool. The directors of the Crosville Company have made a loan of £250 to the employees towards furnishing and equipping the club rooms, have paid the fees for legal service, have met the cost of the electric lighting and have printed the code of rules. Mrs. Mary Crosland Taylor and others connected with the Crosville Company have made gifts to the club.

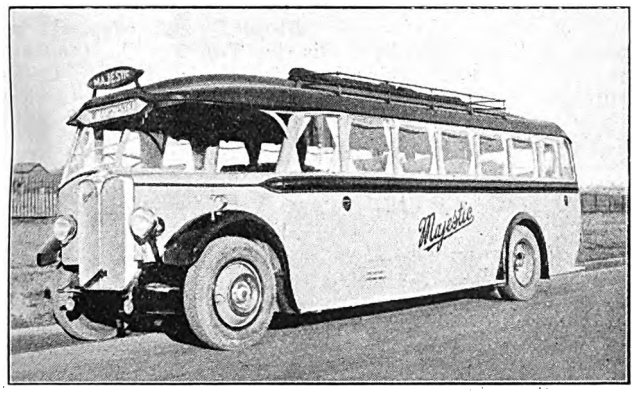
# Motor Coach and Bus Notes.

**Carlisle to Run its Own Buses.**—Carlisle City Council, at a special meeting on March 5th, decided, by 24 votes to 9, to establish a municipal bus service. The Ribble Bus Co. had offered to purchase the Carlisle tramway system and to establish a unified system of motor buses, but this was strongly opposed by local bus proprietors. The municipal scheme includes the purchase and abolition of the Carlisle trams, the acquisition of the Carlisle and District Motor Services, Ltd., and Richard Percival, Ltd., and entering into negotiations for the purchase of the remaining services in the city.

**Buses Replace Trams.**—Scarborough Town Council has decided to buy the Scarborough tramways for £19,500, scrap the rails, and enter into an agreement for a complete service of buses in the town.

**An All-Metal "Regal."**—The Associated Equipment Co., Ltd., Southall, Middlesex, has sent us the accompanying photograph of one of their 28-seater "Regal" coaches supplied by Arlington Motors, Ponders End, London, W., to the Majestic Express Motors, Ltd., of Manchester. The feature of the coach is that it has an all-metal body, both the exterior panelling and framework being of steel. The bodywork is by Messrs. Meltz & Son, of Ealing, and is distinctly individual in design. It has a staggered front



ONE OF THE MAJESTIC EXPRESS MOTORS' ALL-METAL A.E.C. "REGAL" COACHES.

bulkhead, a number of curves in the roof and panelling and a broad belt rail which runs from the front to the rear of the vehicle on each side. The rear panel is also considerably staggered towards the roof, and contains one large and two small windows. The interior is fitted with five sets of high backed seats which are specially designed for long distance travel, on the one side, and four sets on the other. Over each of the wheel arches is a single seat set so that the occupant faces slightly towards the front of the coach. Behind is the double seat and at the rear five seats in line. Windows are all of the Rawlings drop pattern and passenger comfort is provided by a heating installation. The coaches are to be employed by the Majestic Motors, Ltd., on their Manchester-London daily service which has been operated for some considerable time.

**New Motor Bus Station.**—At a joint meeting of representatives of the Manchester Transport and other municipal committees, consideration was given to a scheme for providing a central bus station in the heart of Manchester, intended not only to meet the needs of the Transport Committee for some years to come, but to contribute materially to the relief of traffic congestion in Piccadilly. The site of the proposed station is in Parker Street. The scheme will be investigated at separate meetings of the committee's concerned.

**Lancs. United Transport Changes.**—In the 26th annual report of the Lancashire United Transport and Power Co., Ltd., who operate a big fleet of motor buses from headquarters at Atherton, it is stated that the conversion of the first section of tramways for the operation of trolley vehicles over a route of ten miles has been completed and the route between Atherton via Hindley to Ashton-in-Makerfield is open for traffic. The directors are so far satisfied with the results obtained. The second section from Atherton via Worsley, Swinton, Walkden and Little Hulton to Farnworth, a distance of 14½ miles, is at present being converted and it is hoped that this route will be completed by the end of June. In order to provide for the cost of the conversion to the trolley vehicle system, it will be necessary for the company to raise capital during the current year. Traffic receipts for the year ending 31st December amounted to £384,806, an increase of £23,832, the increase being mainly due to the further development of the motor bus services.

**New Buses.**—Six new super buses are being added to the fleet of the Safety Coach (Red Band) Services in Jersey.

**Buses Gaining Favour.**—While the Sunderland Corporation tram receipts still reveal a falling off, the buses are steadily gaining favour. In January, 1930, the buses carried 407,059 passengers, the receipts being £1,817, while during January, 1931, 697,612 passengers used the buses, paying £3,090. The trams carried 2,245,303 people, and took £9,216, a drop of 302,664 passengers and £1,190 in fares.

**Long Limousine Run.**—An hourly service of motor coaches between Glasgow and London, running via Newcastle and the Lakes alternately, may be inaugurated shortly. The longest daily limousine service, run under the same auspices, would be from Glasgow, via Newcastle, to London and Southampton.

**Carlisle Motor Services.**—Carlisle Chief Constable reports that there are 47 motor omnibus services plying for hire within the city. Of these, 13 are purely local services, that is, services plying from the centre of the city to points within, or just beyond the city boundary. There are 32 buses licensed for the local services, but with the exception of week-ends, the usual daily number of vehicles in use is 30.

**Co-ordination of Bus Services.**—The Watch Committee of the Bolton Corporation has approved arrangements with the Ribble Motor Services, Ltd., for the co-ordination of the bus services between Bolton, Egerton, Darwen and Blackburn.

**Bus Regulations.**—The North-East Coast Area Regional Advisory Committee on Traffic has decided to notify bus companies that all buses must be run strictly to timetable and that all destination indicators must show the correct destination before the departure of the vehicles.

**Crossley Orders.**—Crossley Motors, Ltd., Gorton, Manchester, have just received an order from the Aberdeen Corporation Tramways for seven 6-cylinder single deck coach chassis. This is the third repeat order they have received from the Aberdeen Corporation and it makes a total of twenty-two Crossley machines for Aberdeen.

**Proposed Fusion of Fylde Services.**—Another conference, attended by representatives of the Blackpool Corporation and the L.M.S. Railway Company, has taken place at Blackpool to discuss the fusion of motor bus services of Blackpool and the Fylde Coast, and the avoidance of overlapping and wasteful journeys.

**North Wales Motor Bus Services.**—Great developments in the transport services to and from Llandudno are expected this summer as the result of the numerous applications for licences which have been granted by the licensing authority to companies which propose to make Llandudno either the terminus or place of call in projected long distance road services. The Council intends to provide a parking ground to hold 200 motor coaches.

**A Good Start.**—In the forty-five weeks the Chester Corporation has been operating motor buses, it is estimated that a net profit of £5,000 has been made. The fleet consists of ten single deck and ten double deck motor buses.

**Profitable Motor Buses.**—Wallasey Corporation is employing profits from the motor buses to reimburse its losses on the tramways, which are being gradually superseded. The year's income from the buses, mainly double decker Leylands, is estimated at £116,655 and expenditure at £102,495, leaving, with a surplus of £5,479 brought forward last year, a net total for disposal of £19,639. Of this £12,000 goes to relief of the tramway account.

**More Buses for Bolton.**—Bolton Tramways Committee has accepted the tender of Leyland Motors, Ltd., for the supply of ten motor bus chassis. The question of the bodies to be fitted has been referred to a sub-committee.

**Paris Surface Transport.**—In the last three months of 1930, Paris omnibuses and electric trams carried 239,000,000 passengers and travelled more than 40,000,000 kilometres.

Digitized by Google

**Warsaw to Paris Bus Service.** — In connection with the signing of a Polish-French arrangement for the establishment of motor bus communication between Warsaw and Paris, via Berlin, Reuter's Trade Service learns that the buses will be fitted with seats that can easily be converted into beds, like a wagon-lit. The Warsaw-Paris service will be inaugurated on April 27th, when a group of tourists will leave to visit the Colonial Exhibition at Paris.

**Licences Transferred.**—At the Watch Committee of the Watford Corporation, it was reported that the Watford Co-operative Omnibus Co. had disposed of their business to Mr. Benjamin Holt to whom the Committee agreed to transfer licences.

**Brighton Motor Coach Station.**—Brighton Watch Committee has asked the Chief Constable to report as to the provision of a central station for motor coach passengers.

**Licences Granted.**

The Licensing Committee of the Dartford U.D.C. has granted eight licences to Orange Coaches (Chatham), subject to proposed stopping places in Dartford being situate on the Princes Road and not in the town and to the route being via Bexley Bye-pass (Rochester Way).

The Watch Committee of the Sheffield Corporation has granted an application of Mr. Henry Grocock for a licence to ply for hire in connection with an authorised service Sheffield to Bridlington and Scarborough.

The Watch Committee of the Sheffield Corporation has granted an application by Mr. S. B. Hogg, of Sheffield, for licences for motor buses on a service from Sheffield to Great Yarmouth.

The Licensing Committee of the Otley U.D.C. has granted permission to the West Yorkshire Road Car Co., Ltd., to run a bus service from Otley to Timble.

The Watch Committee of the Walsall Corporation has granted licences to ply for hire in Walsall to Messrs. Wood Bros., Ltd., of Blackpool, in respect of a proposed new bus service from Newcastle-under-Lyme to Birmingham.

At the Watch Committee of the Cheltenham Corporation, a letter was received from the South Wales Express, stating that they had been running a London to Swansea Service, through Cheltenham, for the past two years, and making application for four licences for buses which were licensed by the various towns on this route and also applying for the transfer of eleven licences held by the Queen Line and Baldock Motor Transport, Ltd. The Committee recommended granting the application.

The Watch Committee of the Chesterfield Corporation has granted licences to Mr. D. Dimbleby to ply for hire daily between Chesterfield and Ashover.

The Watch Committee of the Chesterfield Corporation has granted licences to the East Midland Motor Services, Ltd., to ply for hire in Chesterfield on their Sheffield to London route.

The Licensing Committee of the Bournemouth Corporation has granted permission to Highways (Bournemouth), Ltd., to utilise two licences granted last year for use in respect of the Bournemouth-Birmingham service for the Bournemouth-London service.

At the Watch Committee of the Merthyr Corporation, the Town Clerk reported that in accordance with the request of the Ministry of Transport, licences for three buses had been issued to the Rhondda Tramways Co., Ltd., for the Merthyr to Cardiff services, subject to the usual conditions, which included prohibition against the picking up and setting down of passengers within the borough of Merthyr Tydfil.

The Watch Committee of the Chorley Corporation has granted licences to Mrs. M. E. Green to ply for hire in connection with a service of express buses between Manchester and Blackpool.

At the Watch Committee of the Cheltenham Corporation, Mr. McCormick attended and applied on behalf of the Cheltenham District Traction Co. for consent to run a bus service from St. Paul's Road to Leckhampton. Consent was given, the Corporation reserving power to withdraw the consent and also reserving power to allow other buses on this route.

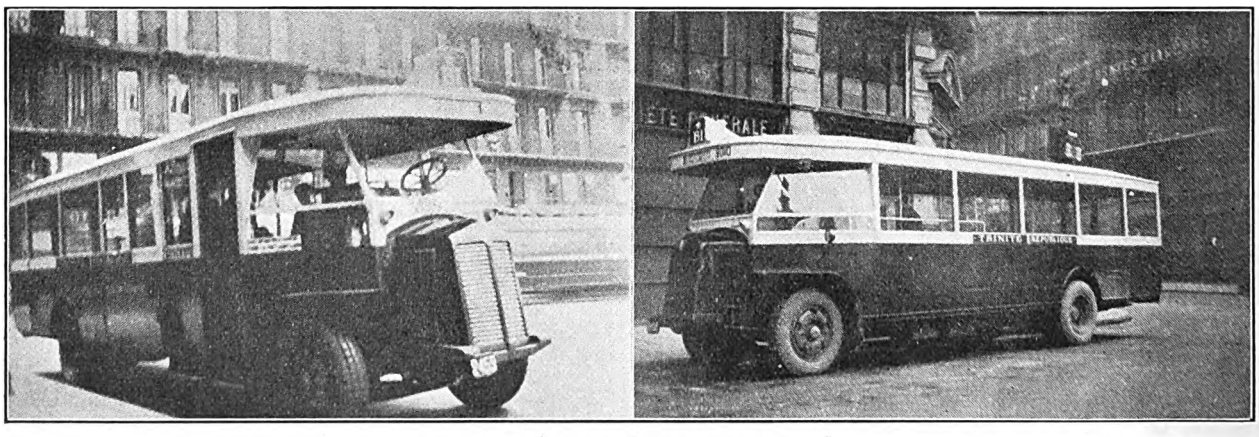
## A New Type of Bus for Paris.

The past few days has seen the introduction, by the "Société des Transports en Commun de la Région Parisienne," of a new type of bus for service on the Paris streets, in an effort to reduce the cost of passenger transport. These buses, which are of the one man operating type, are mounted on 25/55 h.p. 4 cylinder Renault chassis, fitted with 38 in. by 8 in. pneumatic tyres.

The body work has been designed and carried out by the company in their own workshops. Each bus has a total capacity of 38, 26 seated and 12 standing up. There are separate doors for entrance and exit, which are worked by compressed air, the control levers being placed conveniently by the side of the driver. Immediately in front of the passenger, on entering, are placed the two machines for the obliteration of the tickets, which may be either of the normal or special workman's weekly type. The tickets are easily inserted by the intending passenger and the obliteration carried out by a movement of a lever.

To use this new service it is necessary to be provided with tickets before entering the bus. These tickets may be obtained from the companies offices or from conductors on other routes or else out of slot machines which have been placed at the more important stopping places along this new route. The fare is 60 cent. for the whole distance of approximately 2 km. 500 c. or nearly an equivalent rate of ¾d. per mile.

For short routes where there is a flat rate fare this new system has many advantages, but whether it will prove adaptable to the longer routes remains yet to be seen.



Photos.] NEW 25/55 H.P. RENAULT BUS IN PARIS. [World's Carriers.

LEFT: NEAR-SIDE VIEW, SHOWING DOORS FOR ENTRANCE AND EXIT, FORMER OPEN AND LATTER SHUT JUST REAR OF FRONT AXLE; RIGHT: THREE-QUARTER OFF-SIDE VIEW.

**Mail Transport Re-organisation.**—By May 1st, the Liverpool postal authorities will have completed the re-organisation of its transport services, the most important change being the operation of an independent fleet of vehicles instead of handing the work over to motor haulage contractors.

**Institution of Petroleum Technologists.**—The Annual General Meeting of the Institution of Petroleum Technologists will be held at the House of the Royal Society of Arts, John Street, Adelphi, London, W.C.2, at 5.30 p.m., on March 31st. The offices of the Institution are at Aldine House, Bedford Street, Strand, London, W.C.2.

# London Traffic.

## Proposed London Traffic (Oxford Street) Regulations.

THE Minister of Transport has had under consideration the traffic conditions in Oxford Street and the steps which might be taken to increase the safety of vehicles and pedestrians and to reduce the present congestion and delay in that thoroughfare. He has decided that these objects can best be promoted by the installation of traffic control signals and by certain restrictions upon traffic movements. He has accordingly decided to introduce a system of traffic control by light signals in Oxford Street between Marble Arch and St. Giles' Circus. The system will aim at co-ordinating the movement of traffic at each street intersection so as to enable a continuous flow of traffic to take place throughout the whole length of the thoroughfare at a predetermined speed. It is proposed that the signals should be of the "three-way" type.

A study of the analysis of the volume and flow of traffic at different times in Oxford Street and adjacent thoroughfares, and of the types and direction of vehicles of which the traffic is composed at each intersection, has shown, the Ministry points out, that it would be impracticable to introduce a signalling scheme with any hope of success unless certain movements of traffic are prohibited and certain restrictions placed upon vehicles waiting in the streets.

The Minister, therefore, proposes to make Regulations, not earlier than May 1st, in regard to traffic in Oxford Street and certain thoroughfares in the neighbourhood, with a view to:—(a) restricting waiting vehicles; (b) prohibiting, in certain circumstances, various classes of slow moving traffic; (c) prohibiting turning round in the street; (d) converting certain streets into "one-way" streets, and (e) eliminating right-hand turns at certain road junctions.

It is proposed to give effect to these Regulations a few weeks before the traffic control signals are brought into operation in order that persons affected may become accustomed to the revised arrangements.

Any person acting in contravention of any of the provisions of the Regulations, unless he so acts upon the direction or with the permission of a Police Constable in uniform, will be liable to a fine not exceeding £5.

Copies of the draft Regulations, price 2d., can be obtained from the Ministry of Transport, and any representations in regard to the draft Regulations must be made in writing to the Secretary, Ministry of Transport, 7, Whitehall Gardens, S.W.1, not later than April 1st.

In the scheduled area the proposed Regulations provide, *inter alia*,

(i) That between the hours of 12 noon and 7 p.m. on Monday to Friday and 12 noon to 3 p.m. on Saturday, vehicles may not wait in any scheduled street for a longer time than is necessary for persons to board or alight therefrom;

(ii) That in any case the loading and unloading of vehicles can be reasonably undertaken in a side street outside the scheduled area it shall not be affected in a scheduled street.

(iii) That where the loading and unloading must be performed in a scheduled street a vehicle shall not stand for a longer period than fifteen minutes.

The Regulations also propose to place under control certain practices in connection with the loading and unloading of vehicles which cause obstruction to traffic, e.g., depositing goods on the footway and carriageway, the use of ropes, chains, etc., across or over the carriageway or footway, and the passing of goods from hand to hand across the footway or carriageway.

Certain exceptions are made in respect of vehicles employed on building operations and exceptions are also provided in favour of persons in charge of vehicles used in connection with the removal of obstructions to traffic or urgent repairs to the streets, pipes, mains or under-ground conveniences.

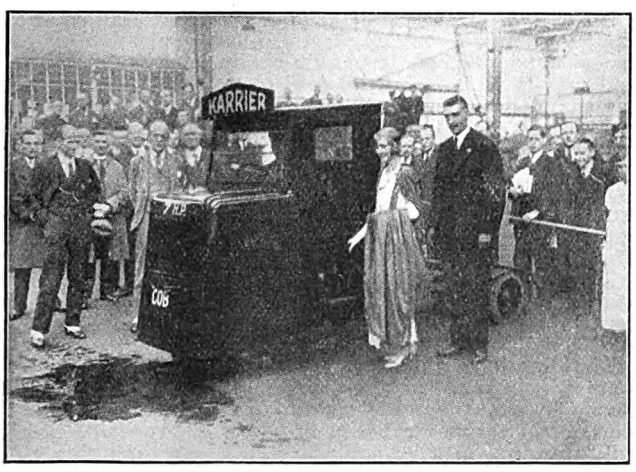
PROHIBITION OF SLOW-MOVING TRAFFIC.

It is proposed that during the prescribed hours no owner or driver of any vehicle: (a) for the time being restricted by Section 10 of the Road Traffic Act, 1930, or any Regulations made thereunder to a speed of less than 8 miles per hour, or (b) drawn by horses or other animals, or (c) drawn or propelled by hand shall cause or permit such vehicle to be in any street or part of a street within the scheduled area unless the vehicle is proceeding (1) to a destination within the scheduled area, or (2) to a destination outside the scheduled area to which there is no access for such vehicle except through part of the scheduled area.

Provided that nothing in this Regulation shall apply to prevent any vehicle crossing any street or part of a street within the scheduled area at any road junction where crossing is not prohibited by the Regulations.

# Railway Queen's Visit to Huddersfield.

FOR the information of our readers, the railway Queen, who holds office for twelve months only, is selected from photographs of railway employees daughters who are between the ages of twelve and sixteen. The railway Queen stands for peace, industrially and internationally, and it is her duty to endeavour to stimulate a spirit of goodwill, amongst the railwaymen of some other country with a view to combining for the abolition of war. Each railway Queen is requested by the retiring Queen to endeavour to obtain a link for her chain of office from the railwaymen of another country. In previous years, links have been obtained from the railwaymen of France, Holland and Germany and the present Queen who was selected from 400 candidates by the Lady Mayoress of Manchester, the President of the Royal Manchester Institute and Mr. T. C. Dugdale, the eminent portrait painter, is to visit Austria during her period of office. During her visit to Huddersfield, on February 20th-22nd, inclusive, amongst other factories visited was that of Karrier Commercial Motor Vehicles, which visit was particularly appropriate in view of the close co-operation between this firm and leading railway companies. The Queen was accompanied by the following railway officials; Mr. T. Topping, J.P., Mr. Brereton, Station Master, C. E. Fry, Passenger Agent, and Mr. J. W. Longhorn, Goods Agent and her Secretary, Mr. H. H. Neilson, and the local area Secretary Mr. J. E. Lawton, was received at the Karrier Works by Col. Pickering, D.S.O., T.D., J.P., on behalf of the directors and the following officials of Karrier Motors, Ltd.:—Mr. W. E. Dewhurst, secretary; R. Dean Averns, chief engineer; Mr. J. H. Arton, works manager, and N. Akroyd, publicity manager. After the introduction there followed a tour of the works. Later in the morning, before the whole of the works staff, Miss Dumelow perfomed the ceremony of christening the first production model of the Karrier "Cob" a three-wheel tractor which has been designed and built for the express purpose of replacing the draught horse, and which is considered by the railway companies as likely to have a far reaching effect in improving their local delivery services. Following the presentation to the Queen and her attendants of boxes of chocolates and souvenirs of the visit in the form of booklets describing the works, the Queen left between cheering crowds of employees.



THE NATIONAL RAILWAY QUEEN, MISS L. DUMELOW, OF DERBY, WITH COL. PICKERING, D.S.O., T.D., J.P., DIRECTOR OF KARRIER MOTORS, LTD., ALONGSIDE THE "COB" THREE-WHEEL TRACTOR AFTER THE CHRISTENING CEREMONY.

# Transport in Scotland.

**Bus Routes in Glasgow. Important Judgment.**—In an action raised by the Lanarkshire Traction Company against the Magistrates' Committee of the Corporation of Glasgow for the purpose of having their rights in relation to the running of omnibuses within the City of Glasgow, with or without certificates, judgment for the Company was given by Lord Mackay in the Court of Session. Lord Mackay held that the pursuers were entitled to provide, work and use omnibuses within the City of Glasgow to a distance of five miles from any point on the Company's tramways as existing at December 20th, 1929, and that without the necessity of obtaining certificates for the omnibuses under the Glasgow Police Act, 1866. His Lordship said that in his opinion the pursuers, taking the most general ground, were entitled to challenge the Magistrates' Committee, for that was their opponent, to show the Court under what authority they proposed to impose the necessity of a certificate issuing from that Committee upon a public utility body centred outside Glasgow and having Parliamentary franchise to extend their runs into Glasgow. They were also entitled, in his opinion, to put the onus on the Committee to show wherein resided their power to impose, not so much, conditions in general, but conditions of the nature of those attacked. The general onus was remarkably reinforced by the fact that for many years all such vehicles ran without such demands. The objectionable conditions were:—(a), and most forcibly, the delimitation of a central area in Glasgow wherein all running, or possession of stations, or taking up or setting down of passengers was forbidden: in short, what the defenders described as an endeavour "to isolate an area in the centre of the city from the operations of the long-distance buses"; (b) the regulation of the exact routes to be followed, and the stopping places to be permitted within the five mile area. In his judgment, not only for the period from 1866 to 1888, but for the period from 1888 up to March 1st, 1930, the pursuers were on various grounds entirely exempt from taking out certificates with the obnoxious conditions. From the point of view of an operative declarator here and now a certain difficulty was created by the peculiar provisions of the Glasgow Corporation Act of 1929. He thought it would be more correct to express his conclusion as regarded the short period since March 1st, 1930, if he put it alternatively. Either upon two of the lines of thought the pursuers' vehicles were not the proper subject of application for a certificate at all, or, alternatively, if they did not fall formerly under the necessity of a certificate, that certificate in their case was not properly tendered if it contained the obnoxious conditions referred to, for such matters as were there introduced, could and should be effected by by-law only.

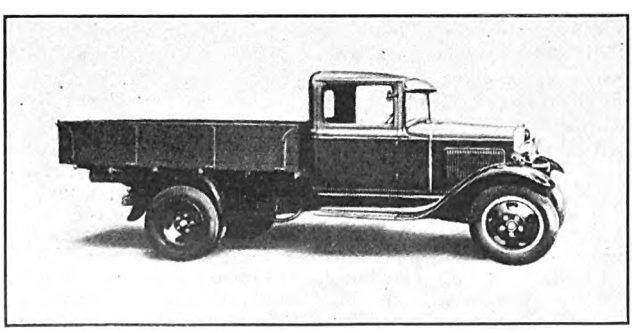
**Glasgow's Bus Bodybuilding Scheme Rejected.**—By a narrow majority a special meeting of the Transport Committee of Glasgow Corporation refused approval to a proposal advanced by Councillor P. J. Dollan, that a committee of five be elected to work out a scheme for a municipal company, whose function would be to build bus bodies at Coplawhill. The Chairman pointed out that the Corporation had unanimously agreed to apply for powers to build buses, which have already been granted to four other cities in England—Liverpool, Manchester, Southampton and Sheffield. The General Manager, Mr. McKinnon, expressed the opinion that bus bodies could be built by the department better and cheaper than by private companies.

**Scottish Motor Traction Co., Ltd. Annual Meeting.**—At the annual meeting of the Scottish Motor Traction Company held last month in Edinburgh, a dividend of 10 per cent., less tax, on the Ordinary shares was approved. The Chairman, Mr. A. J. Paterson, pointed out that they had been able to write off the whole of the preliminary expenses, amounting to £11,829, in this, the first account submitted to the shareholders and to make a beginning in writing off goodwill. He further stated that the agreement entered into with the railway companies in August, 1929, had worked out satisfactorily and amicably. The reports and accounts were adopted and the carrying forward of the balance of £21,026 to the current account was approved.

**Commercial Users and the Road Traffic Act.**—Under the auspices of the Scottish Commercial Motor Users' Association, addresses were given in Aberdeen on Monday, February 23rd, on the New Road Traffic Act as it affects users of commercial vehicles. The principal speakers were Mr. E. Graham Guest and Mr. John W. Loudon, who dealt with such questions as reckless driving, the responsibility for damages to a road through extraordinary traffic, drunkenness whilst in charge of a vehicle, and the number of hours to be worked by employee drivers.

# The Ford 30-cwt. Truck on Trial.

By invitation of the Ford Motor Co., Ltd., Trafford Park, Manchester, our representative recently took a trial run on the Ford 30-cwt. truck. The journey covered some seventy-five miles of typical road, including several considerable hills recognised as suitable hills for trial purposes; also the vehicle's handiness in congested traffic was demonstrated. There was nothing to complain about



THE 30-CWT. FORD TRUCK, TWIN REAR WHEELS.

in any respect concerning the behaviour of the vehicle and we can confidently recommend it to our readers who require a vehicle of such capacity at moderate cost, as being suitable in every way. The chassis with 131½ in. wheelbase costs £174 single tyres all round, £181 10s. with twin rear wheels. The long wheelbase model (157 in. wheelbase) costs £190 and the passenger chassis £195.

The vehicle has excellent acceleration and particularly easy control. The following is a brief specification:—

The engine is a four cylinder en bloc casting. Bore: 3.875 in. Stroke: 4.25 in. Brake horse power: 40 at 2,200 r.p.m. It has a detachable cylinder head. Camshaft is driven through helical toothed gear. The pistons are of aluminium alloy. Lubrication is by pump, splash and gravity feed. Gravity feed to the main bearings and camshaft bearings. Submerged gear oil pump surrounded by large filter gauze. Connecting rods, gudgeon pins and cylinder walls are splash lubricated from troughs under the big ends. Cooling is pump assisted thermo-syphon. The carburetter is the Ford gravity feed type from Terne Plate steel tank under scuttle. The tank capacity is 9 gallons. Three petrol filters are provided. The front end of the engine is carried on a spring support.

The ignition system is the Ford petrol type with manual spark control giving 20° advance. The starter motor generator and battery are Ford, the latter being of 6-volts and 80-amp. hour capacity.

The lighting system consists of black finished head lamps with rustless steel rims, fitted with fluted anti-dazzle lenses. Parabolic side lamps with rustless steel rims. An automatic "stop" light is incorporated in the tail lamp. The gear box and engine are built integral. The gear box provides four speeds and a reverse, taking its drive from the engine through a single plate specially dished driving disc. The rear axle is of steel construction with three-quarter floating spiral bevels.

The foot brake acts on all four wheels and the hand brake in rear wheel drums. The wheels are steel disc. Twin wheels on rear are optional. Steering is the Jemmer three-quarter irreversible. The front spring is transverse semi-elliptic and the rear springs full cantilever.

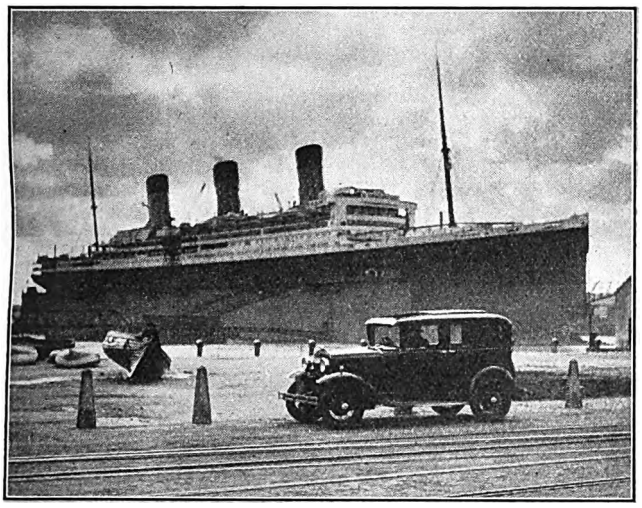
# News from the Ports.

**Large Increase in United States Shipping.**—American shipbuilding during 1930 practically doubled in tonnage over 1929, says Reuter's Washington correspondent. The Department of Commerce has estimated the total of world shipbuilding for last year at 2,889,000 gross tons. The United States contributed 246,687 tons, attaining second place among world countries. Great Britain and Ireland held first place with ship launchings of 1,478,563 tons. In the past few years an active propaganda for a powerful American mercantile marine has been carried on by shipping interests and "Big Navy" advocates, who declare that the United States can never equal Great Britain upon the sea until the former has an equal number of fast liners which would be converted into commerce raiders in time of war.

**Ocean Majesty.** — Our illustration shows the trans-Atlantic liner, "Majestic," in the floating dock at Southampton. There is a strong contrast between the immense bulk of the ocean monster and the Ford Saloon in the foreground, each being remarkable in its own sphere.



S.S. "MAJESTIC" AT SOUTHAMPTON—FORD SALOON IN FOREGROUND.

**P. & O. Cruises, 1931.**—The P. & O. Steam Navigation Company, 122, Leadenhall Street, London, E.C.3, have issued illustrated Cruise Booklets detailing Northern and Southern Cruises to be made by the "Ranchi" and "Viceroy of India" during the coming season. Attention is directed to the fact that, since the issue of the preliminary itineraries Booklet, Cruise "K" (August 22nd—September 4th) has been re-cast and will now start from Southampton for Vigo, Gibraltar, Alicante, Palma, Algiers, Cadiz and Arosa Bay. Cruise "J" will terminate at Southampton instead of London, leaving Rotterdam at 4 p.m. instead of 7 p.m., on Friday, August 21st.
